When ground and fed to cattle, it is of great value. We have fed it in conjunction with a full feed of corn, and I think it conducive to great thrift. The animals gain considerably faster than if fed corn alone. It is also excellent feed for milk cows. If ground or soaked and fed to hogs, it is one of the best feeds. Young pigs thrive on far better than on corn and practically as well as on middlings. When fed to hogs, however, the best results are obtained by mixing it ground with oil meal or tankage. Barley analyzes much the same as corn, and is considered quite heating, but in its general effect upon stock, we have not found it to be exactly like corn, in some instances being not so good a feed and in others being far better.

Any good corn ground will raise good barley. We plow the ground very early, harrow and disk to reduce to a good,

year. It is important to cut early, as the grain shatters easily. July 12 is about the average harvest time with us. The yield when one bushel per acre is used, is usually from 20 to 40 bushels per acre. If sown for grain alone at the rate of two bushels per acre, it is from 30 to 50 bushels per acre. We handle the grain just as wheat, both in cutting and threshing.

CURING CLOVER FOR HAY.

All the varieties of clover, except alfalfa, are best cut for hay when in full bloom. Here and there a head may have turned brown. If cut earlier, the crop is difficult to cure, nor will it contain a maximum of nutriment. If cut later it loses much in palatability. Alfalfa should be cut a little earlier, or just when it is nicely coming into bloom, as if cut later the shedding of the leaves in the curing is likely to be large.

All clovers are much injured by exposure to rain or dew. They will also lose much if cured in the swath, without being frequently stirred with the tedder; that is, it will take serious injury if cured in the swath as it fell from the mower. If cured thus, it will lose in aroma and palatability, through the breaking of leaves and, consequently, in feeding value. To avoid these losses, clover is more frequently cured in the cock. When cured thus, it preserves the bright green color, the aroma and the tint of the blossoms, it is less liable to heat in the mow or stack and is greatly relished by live stock when fed to them.

To cure it thus, it is usually tedded once or twice after it has lost some of its moisture. It is then raked as soon as it is dried enough to rake easily, and put up into cocks. When the quantity to be cured is not large, caps are sometimes used to cover the cocks to shield the rain when the weather is showery. These are simply square strips of some kind of material that will shed rain, weighted at the corners to keep them from blowing away. The clover remains in the cocks for two or three days, or until it has gone through the sweating process. Exposure to two or three showers of rain falling at intervals while partially cured in the swath or windrow will greatly injure clover hay.

When the area to be harvested is large, clover is sometimes cured in the swath. When thus cured it is stirred with the tedder often enough to aid in curing quickly. It is then raked into windrows and drawn from these to the place of storage. In good weather clover may be cured thus so as to make fairly good hay, but not so good as is made by the other method of curing. It is much more expeditiously made, but there is some loss in leaves, in color and in palatability.

Some farmers cure clover by allowing it to wilt a little after it is cut, and then drawing and storing it in a large mow. They claim that it must be entirely free from rain or dew when thus stored. This plan of curing clover has been successfully practised by some farmers for many years; others who have tried it have failed, which makes it evident that when stored thus, close attention must be given to all the details essential to success.

Clover may also be cured in the silo. While some have succeeded in making good silage, in many cases it has not proved satisfactory. The time may come when the conditions to be observed in making good silage from clover will be such that the element of hazard in making the same will be removed. In the meantime, it will usually be more satisfactory to cure clover in the ordinary way.

Grasses cure more easily and more quickly than clovers. Consequently, when these are grown together, so that the grasses form a considerable proportion of the hay, the methods followed in curing the grasses will answer also for the clovers. The influence that grasses thus exert on the growing of clovers furnishes a weighty reason for growing them together.

Location maps of a Mackenzie and Mann road from Sudbury to Keshabine near Port Arthur have been filed. The road is to be 560 miles and will connect the C. N. R. with the James Bay Railway.

MONSTER SHOE SALE.

1000 pair of Shoes are now on sale, bought from one of the leading shoe factories in Canada, at a very low rate on the dollar.

THE BEST FLOUR. DAFOE'S NONESUCH DAFOE'S MANITOBA PATENT

By numerous tests by the best Bakers the above mentioned grades have been proven to be the best Flours in the market.

When buying Flour ask for Dafoe's, and patronize your home mill, thereby producing Bran and Shorts that you can purchase cheaper than the product of the Western mills, which has to be transported thousands of miles at great expense, and usually, when it reaches you, of inferior quality.

The grocer complains if the farmer or the mechanic sends to Toronto or to outside points for an article he can get at the home store just as good, but he does not hesitate to buy Flour from mills hundreds of miles away, and sell you an inferior Flour for more money than you can purchase the home product for, every bag of which is guaranteed.

CHOICE CORN MEAL and BUCK-WHEAT FLOUR always on hand.

FEED GRINDING a specialty, with the best feed mills known to the trade.

A full stock of the best ANTHRACITE COAL. Also in the market for the purchase of all kinds of Grain.

Ask for prices at the big Mill before purchasing your Flour, Feed or Coal.

Entertainment at Odessa.

On Thursday, June 21st, an entertainment will be given in Odessa in aid of the Odessa Public Library. Miss Ladell, Reader, and Mr. Geo. Fox Violinist, will be the attraction.

Parish of Camden.

The response to the Ascensiontide appeal for Domestic Missions was, Camden East \$7.94; Yarker \$10.73, and Newburgh \$3.63, total \$22.00, with I hope more to hear from as the work of Missions in the North West of Canada is of the most importance. Rev. C. E. S. Radcliffe extends his thanks to his Parishioners for their liberality, only about \$10.00 is needed now to make up the assessment of \$85.00 in full.

The Right Reverend Dr. Mills, Bishop of Ontario, will visit the Parish Sunday July 1st, Newburgh, St. John's—10.30. a. m.; Camden East, St. Luke's—3 p. m. and Yarker, St. Anthony's—7.30 p. m. He will confirm at Camden East and Yarker (D. V.)—Diocese Synod meets at Kingston June 12th, Delegates, Camden East, Mrs. T. R. Mowbray; Yarker, Mr. B. S. O'Loughlin; and Newburgh, Mr. T. F. Shorey.

The Women's Auxiliary Diocese of Ontario, hold their annual meeting at Belleville this year. Delegates from Yarker, Mrs. Albert Benjamin and Mrs. J. C. Connolly; Camden East, Mrs. A. McWilliams and Miss Saunders; Newburgh, Mrs. C. H. Finkle and Mrs. Austin Aylesworth.

Fish and Game Protection.

A fairly representative meeting was held in the town hall, on Saturday afternoon, for the purpose of forming a branch of the Provincial Fish and Game Protective Association. Mr. A. Kelly Evans, Toronto gave a very instructive address, comparing the Great Lake fisheries of forty years ago with the present state of affairs, and showing the importance of this industry to all Canadians, and showing how the lakes may be re-stocked.

The Speaker also compared the state of the fisheries in Maine and Ontario. Fifteen years ago the fisheries of Maine were depleted, but with properly enforced laws the Maine fisheries are now one of the chief sources of the State's wealth.

Mr. Adams, of Toronto, followed with an instructive address, dealing with the protection of birds and game, the object of society and various matters connected with the enforcement of game laws. After hearing the addresses a branch association was formed, Mr. Wm. Smith being elected president, and Mr. A. Alexander, Secy-Treas. The balance of the officers to be elected at another meeting to be called at an early date.

Eagle Hill Public School—Report for May.

SYMINGTON'S

South Side Dundas Street, Napanee, Ont.

At The Downtown Office of the
NAPANEE CANNING CO., Limited,

The sensational rural comedy drama "Joshua Simpkins," will be produced at Brisco Opera House, Thursday, June 14th. The play contains an interesting and intelligible plot, but it is not allowed to interfere with the fun, which is said to be in abundance. During the run of the play some startling scenes and situations are seen, the principal of which is said to be the saw mill, in the third act, shown in complete operation, cutting up real timber. The saw used is the genuine article, same as usually seen in large country saw-mills. An excellent band and fine orchestra accompany this attraction. The band will parade at noon, when some good music may be looked for, all being dressed as farmers.

ENTERPRISE.

Rev. Mr. Emsley, Napanee, preached a very eloquent sermon in the Methodist Church on May 27th in behalf of the Ladies' Auxiliary.

Miss Rose Peters, who has been visiting friends here, is now visiting at her father's, R. H. Peters, Odessa.

Dr. Chas. A. Wagar, spent Saturday and Sunday with his parents here. He leaves shortly for Rochester where he has secured a position in a hospital.

Dr. A. B. Carscallen spent the 24th in Toronto.

Miss Hattie Wagar is visiting friends at Thomasburg.

Messrs. Jethro Card and Thomas Clancy have had their houses painted improving their appearance considerably.

A large number from here attended the R. C. mission last week at Chipewewa.

Miss Sadie Huffman is improving.

Mrs. Sidney Wagar is visiting a few days in Napanee.

Mrs. Mary Lockwood has returned after spending three weeks in Watertown visiting friends.

Mr. J. Loucks has the contract of painting Tim Kenney's residence.

Mr. Geo. Rombough spent Saturday in town.

Mr. Almon Card and family left Tuesday morning for Wagar and Penwick's camp.

As S. KIMMERLY has just got in a car of Potatoes, Roses, Hebbsons, Seed Peas and Mandscheuri Barley in stock and all kinds of garden and field seeds. I buy clean Timothy Seed, Vetches for sale.

Mr. Lou Vandewater has started a parcel express and delivery business. Lou has been in the business before and has always given good satisfaction. Parcels entrusted to him are always delivered in good order.

J. Campbell Strange, assistant post office inspector, was in Flint on last week making a transfer of the post office from J. W. Alkenbrack, to William Bentley, Mr. Alkenbrack, who had the office for nineteen years, intends leaving for the west.

Good reading is so cheap now that you cannot afford to be without it. If you have less than half a dozen good farm papers coming to your address you have not enough. Keep reading up your business, and study the market and save in your buying and selling.

Well, old Kingston done well on Thursday last by voting so strongly in favor of the by-law for the electric light plant. There is "pluck" left in the town yet and the above incident is one that gives encouragement to a bright future in store for Kingston's coming prosperity.—Kingston Freeman.

On Saturday evening last Harry, son of Mr. Ham Loucks, had his leg broken at the Merry-go-round. The proprietor Mr. Sagar, was giving the children a free ride and the Loucks boy tried to jump on while the Merry-go-round was running, with the result his leg was broken. He is recovering nicely however.

John R. Jewell, one of the most respected residents of Dorland, passed away on Sunday last, aged sixty-six years and four months. Deceased had been in poor health for a considerable time and confined to his bed for a number of weeks. Besides his widow, two sons, Mr. W. J. Jewell, Napanee, and Wesley Jewell, at home, and three daughters, Mrs. Vandewaters, Bellevue, Ohio, Mrs. Oliver, Cleveland, O. and Miss Hattie Jewell at home, mourn his loss.

The return baseball match between Newburgh and Napanee Juniors was played, Saturday afternoon last, in the Driving Park. The day was ideal for such sport and quite a crowd of admirers of the game were present. Ever since the match at Newburgh a couple of weeks ago, the Newburgh team was puffed up with their pride over their victory which was eighteen to four, and they came to Napanee confident of winning by even a larger score. They certainly put up a good game and played their prettiest, but our boys were the victors by a score of six to four.

Mr. Fred R. Ming, brother of Councillor Herman Ming and E. Ming, V. S., of Napanee, has been nominated as a candidate for Senator, at Petoskey, Mich., after the hottest fight ever known in the district. The Detroit Journal says of Mr. Ming:—Dr. Fred R. Ming, veterinary surgeon, fruit grower, livestock dealer, dealer in farm machinery, former factory boy, stevedore, school teacher, police chief, fire chief, sheriff, and representative, was one of the strongest men in the house for 1905. Now he is a candidate for the senate.

Mr. Ming had ideas that he had formed himself, and was able, by force of mind rather than diplomacy, to secure serious consideration for measures which might have made another man a subject for jokes.

READY-MADE CLOTHING ARE NOT SHAPE RETAINING.

You know, who have tried. It is in shape retaining qualities next in importance, after Fit, that our Ordered Clothing excels.

It's the careful work and good material we put in the inner hidden parts which makes it so.

JAMES WALTERS,

Merchant Tailor, Napanee.

TAMWORTH.

Most all grain and root crops were suffering for rain and the grain in some places, was dried up especially where the soil was shallow, but we had a fine shower last night, which will relieve the strain for a time and all indications point to more to-night.

Our town is progressing very well. Miss Coulter has her residence all ready for the rooms. W. A. Fuller is laying his floor and putting in shelving in his new store. Carscallen and Wagar are erecting a frame barn just outside the town, for a drive house.

E. Dawson has veneered his house with brick, making an improvement, he is also erecting a kitchen.

Our main sidewalks are in a bad condition, and something should be done by our council to improve them, as enough taxes are collected to have them in good shape, if properly applied.

Boards for sidewalks are a thing of the past, and should not be used as they do not last any length of time, and are of no service.

The English congregation intend holding a Strawberry Festival on the rectory lawn, June 30th, and extend a welcome and enjoy the evening. Brass bands and other amusements on the grounds, tickets 25c, can be had at the gate on the 30th or from members.

DIAMOND DYES

Will Dye any Article of Clothing from Feathers to Stockings.

The Only Package Dyes That Make Fast and Unfading Colors.

Feathers, ribbons, silk ties, dress silks, shirt waists, dresses, costumes, capes, jackets and shawls can be dyed at home with Diamond Dyes so that they will look like new. Try a package of the Diamond Dyes, and see what a bright, beautiful non-fading color it will make, with but little trouble.

Diamond Dyes are the greatest money savers of the age, as many a woman with one or two ten cent package of these dyes has dyed her old dress a lovely and fashionable color so as to save the expense of a new one. Partly worn clothing can be made over for the little ones, and by dyeing it with Diamond Dyes no one would recognize that the dresses and suits were not new.

Diamond Dyes are adapted to many uses besides simply dyeing old clothing. Diamond Dyes give new life and useful-

In Black, Tan and White, sizes 9 and 9½, Open Work and Plain, Lisle and Cotton, also Childrens Hose, Black, sizes from 4½ to 7½, in Plain and Ribbed.

DEAD MEN'S SHOES.

Peculiar Beliefs About Them That Exist in the Old World.

"Dead men's shoes" is a common expression, but means much in many parts of the old world, where the boots of the dead are accorded much importance.

In Scotland, in the northern parts of England, in Scandinavia, as well as in Hungary, Croatia and Roumania, the utmost care is taken among the lower classes that each corpse is provided with a pair of good shoes before being laid into the ground. If the dead person happens to be a tramp and to have been found dead barefooted there will always be some charitable soul to furnish a pair of good boots for interment along with the corpse.

An inspector of police in Scotland has been known to purchase of his own accord a new pair of boots and to place them in the grave, reopened for the purpose, of a murdered stranger who had been inadvertently interred barefooted the day before.

This practice, which likewise prevails among the Tsiganes as well as in many parts of Asia, is attributable to the belief that unless the dead are well shod when buried their ghosts come back to haunt the locality where they breathed their last in search of a pair of boots.

The shoes are popularly supposed to be needed to pass in comfort and safety the broad plains which the departed soul must traverse before it can reach paradise. Among some nations these plains are declared to be covered with furzes, thorns and morasses, while other races say that they consist of burning sands. These plains of suffering are popularly credited with forming a sort of antechamber to hell. It is for this reason that the boots of the dead are called "hell shoes" in Norway, Sweden, Finland and Denmark.

STRIKING EYEGLASSES.

No Law Which Declares It an Aggravated Offense.

It is the common opinion that for striking a man with glasses on there is a severer penalty than for striking him under similar circumstances when he is not wearing glasses. Careful search, however, does not bring forth any statutory provision which declares the offense greater when the man who is struck wears glasses. The prevalence of this idea is due, no doubt, to the probability of the judge in such cases giving the convicted the extreme penalty. The legal term for assault under such circumstances is "mayhem," signifying that the assailant has in one way or another deprived his victim of the power of defending himself.

During an altercation from which a struggle is apt to ensue any one wearing glasses would be wise to remove them, unobserved if possible, however, because if noticed it might act as a signal to begin hostilities.

Many think that glasses would be a source of general protection in these cases and often take advantage on that ground, but this is wrong, because no court would hold it worse to strike a

Our price Thursday at 9.30 a.m. 12½c yd.

BE DIFFERENT.

It is a wholesome desire—this longing for an individuality of your own, it expresses itself in Housefurnishings as well as in anything else. As a store organization we feel perfectly justified in doing all we can to gather together the newest, the most stylish, the most exclusive, the most distinctive articles pertaining to Housefurnishings and Floor Coverings that we possibly can find. In fact when selecting goods, we are painfully particular in this respect, come to-day and have a glance at our Carpet and Housefurnishing Stocks, our Lace Curtains or Tapestry Curtains, our Draperies or Furniture Coverings. We will put up your Curtains, we will drape your drape. Select it to-day. Consult the carpet man he will give you estimates, and remember we are exclusive in every respect.

Dress Fabrics for Summer.

There's hardly a thing that a woman could wish for in the matter of Dress for summer that we haven't got. We've spared neither time, talent, nor expense in gathering together from the four corners of the fashion world the things that are prettiest, most fashionable and most useful. Come and see us to-day, we are fully prepared to meet your requirements in Wool and Cotton Dress Goods of the most fashionable nature.

MADILL BROS.

Gettin' Wisdom

is a comparatively easy task if you start it while you are young. Don't allow your children's eyes to be ruined for all time because "they look too 'dud' with glasses on."

We'll tell you the truth as to whether they need glasses or not, and charge you nothing for the telling.

Headaches in children are suspicious. We are also the best people to guarantee the quality of our frames, it being part of our jewelry business to acquire that ability and knowledge.

Painting White.

If you intend painting white either inside or outside use Sherwin-Williams Gloss White. It will cover more surface, wear longer, remain whiter, and cost you less than any other white paint. It will not chalk off like Pure White Lead. Ask us for prices before painting. The Medical Hall.—Fred L. Hooper, Sole agent for Napanee.

signal to begin hostilities. Many think that glasses would be a source of general protection in these crises and often take advantage on that ground, but this is wrong, because no court would hold it worse to strike a man with glasses than one without unless the assailant struck directly at his opponent's eyes, with the intent to wound or maim him, and whether one were hit elsewhere than on the eye-glasses would not enter the case at all. —Jewelers' Circular-Weekly.

When Spencer Traveled.

When Herbert Spencer went on a long railway journey it was his practice to have reserved for him a first class compartment. Across the carriage he used to have a hammock swung, in which he traveled to avoid the vibration and concussion. There was something funny in the spectacle of the staid philosopher traveling in this fashion, and so it appeared to the people who witnessed the preparations for his departure. The inquisitives were soon disappointed, for as soon as Spencer recognized that he was being made the object of unsolicited attention he would snort out in stentorian tones to the porters—he used to have four to look after him—"Draw down those blinds!"

Origin of Ox Tail Soup.

During the reign of terror in Paris in 1793 many of the nobility were reduced to starvation and beggary. The abbatoirs sent their hides fresh to the tanneries without removing the tails, and in cleaning them the tails were thrown away. One of the noble beggars asked for a tail, and it was willingly given to him. He took it to his lodging and made (what is now famous) the first dish of ox tail soup. He told others of his good luck, and they annoyed the tanners so much that a price was put upon them.

Ambition.

Ambition becomes displeasing when it is once satiated. There is a reaction, and as our spirit till our last sigh is always aiming toward some object it falls back on itself, having nothing else on which to rest, and having reached the summit it longs to descend.—Cornille.

Easy Work.

First Transient—If you had got to go into business, what line would you choose? Second Ditto—I'd open an employment agency. It would be so nice to be getting other people to work without having any temptation to do any yourself.

Still Time.

Burroughs—Say, old man, there was a time when you promised to share your last dollar with me.

Richley—That's all right. I haven't got down to it yet.

Though the sun scorches us sometimes and gives us the headache, we do not refuse to acknowledge that we stand in need of his warmth.—De Mornay.

Use Prism Brand Floor Enamel. It dries quickly, has a varnish gloss, and is true to Color. The Medical Hall.—Fred L. Hooper, sole agent for Napanee.

NOTICE—is hereby given that the Municipal Council of the Township of Richmond, to be held at the regular meeting to be held on the First Monday in August to introduce a By-Law for the closing of the road running east and west across lot No. 5 in the 2nd concession of Richmond, between the Grand Trunk Railway and the Belleville road and that all parties interested are requested to take due notice and govern themselves accordingly.

(1) The north part with the buildings containing 140 acres more or less, and (2) the south part containing 100 acres more or less, on which there is a good barn.

Napanee Branch.

UNITED STATES MEAT TRADE

It Has Received the Ugliest Knock In Its History.

A despatch from Paris says: It is learned that the Commissary-General's denial of the statement that Chicago foodstuffs are supplied to the French army is incorrect. The fact is that 20,000 cans of this food were landed at Havre, and sent thence to Bordeaux, where the meat was recanned, marked with French labels, and sold as French.

One of the largest Paris caterers says that his customers were refusing to take American canned goods. Consequently he intends to cease importing them.

Ogden Armour, in an interview on Wednesday, said that, whatever might happen elsewhere, his yards are above reproach. Nevertheless, he acknowledged that the trade had received the ugliest knock in its history.

JOHN BURNS TAKES A HAND.

A despatch from London says: The Chronicle says that Mr. John Burns, as president of the Local Government Board, has been closely watching developments in the canned meat matter. As soon as the aspect became serious he summoned a meeting of the medical health officers of the London County Council, the city corporation, and the 28 metropolitan boroughs, and consulted with them as to whether anything further could be done to secure an adequate inspection of canned goods. He also instructed Chief Medical Officer Buchanan to prepare a report. This has been done, and the report will be available to the members when Parliament meets next week after the Whitsuntide holiday.

It is stated that steps are being taken to get the Foreign Office to take diplomatic action in the matter.

DISEASED FROZEN HOGS.

A despatch from London says: Mr. Terrett, chief meat inspector at the Smithfield market, says that numbers of frozen hogs arrive from the United States in a shockingly diseased condition, yet bearing the Government inspection seal. He does not believe that any Government inspector would be foolish enough to pass hogs in such condition. The wonder is how the seals get attached to them. Mr. Terrett adds that it is impossible for the inspectors here to

discover while the hogs are frozen whether or not they are healthy. Buyers are warned that they purchase at their own risk. If, when the hogs are thawed, they are found to be diseased they are immediately seized.

A newspaper here sent a reporter to make a surprise visit to the makers of canned delicacies and inspect their processes. One leading firm accepted the challenge with alacrity, and passed the ordeal to the utmost satisfaction of the reporter, who was regaled with various tid-bits. Another firm asked the newspaper representative to call at a more convenient time, while another absolutely refused "to have anything whatever to do with any newspaper."

WOULD IMPOSE EMBARGO.

A despatch from Ottawa says: Dr. Chisholm (East Huron) will call the attention of Parliament to the shocking revelations in connection with the sanitary conditions of the Chicago packing-houses, and will ask if it is the intention of the Government to prohibit the importation of canned meats and meat extracts from the United States, not only in the interests of the public health, but also to assist the farming, stock-raising and packing industries of Canada.

LOSSES WILL BE GREAT.

A despatch from Kansas City, Mo., says: It is estimated that the business done by the packing houses located here will suffer to the extent of \$10,000,000 as a result of the agitation in connection with the President's crusade against "doctored" meats. Reports of the various plants seen on Thursday agreed with the estimates in the telegraphic despatches that the business of the whole country would show a loss of at least \$150,000,000.

"I don't think," said Charles W. Armour on Thursday, "the estimate of \$150,000,000 loss to the packers in the whole country is exaggerated. This is only a shrinkage of about ten per cent. on the total volume of the business done, which, I think, is easily one and one-half billion dollars in all branches of the trade. We have complaints already from England that the canned meat trade is decreasing. It is easy to scare people five thousand miles away."

To \$3.60; second clears, \$2.45 to \$2.55. Bran—in bulk, \$12.25 to \$15.30.

CATTLE MARKET.

Toronto, June 12.—Trading at the city market this morning was brisk, despite the fact that the run was unusually heavy, totalling over 100 cars of stock. Export cattle—Choice, \$4.90 to \$5.20; medium to good, \$4.50 to \$4.75; bulls, \$3.50 to \$4.00; cows, \$2.75 to \$4.25. Butchers' Cattle—Picked lots, \$4.60 to \$4.90; good to choice, \$4.40 to \$4.60; fair to good, \$3.75 to \$4; common, \$2.50 to \$3; cows, \$3 to \$4; bulls, \$3.25 to \$4; canners, \$1.50 to \$2.

Stockers and Feeders—Short-keep feeders, \$4.75 to \$4.85; heavy feeders, \$4.40 to \$4.90; medium, \$2.50 to \$3.50; bulls, \$2 to \$2.75; good stockers run at \$3.75 to \$4; light at \$3.25 to \$3.70 rough, common, \$2 to \$2.75, and bulls at \$1.75 to \$2.50.

Milk Cows—The range of prices offering is unchanged at \$30 to \$60 each. Calves—Prices are unchanged at 3½c to 6c per lb.

Sheep and Lambs—Shorn export ewes are quoted at \$4 to \$4.25; unshorn at \$4.50 to \$4.75, shorn bucks at \$3 to \$3.50, unshorn at \$3.50 to \$4. Yearling lambs were lower at \$6 to \$6.50, and

DOMINION PARLIAMENT

RENT FOR BUILDINGS.

Mr. Northrup was informed that the Government had paid to Woods, Limited, for rent in 1903-4, \$1,200 for the Queen Street building, and \$5,580 for the Slater Street building. In 1904-5, \$6,225 and \$11,040 respectively for the same buildings. In 1905-6, up to March 30, the sums paid were \$3,975 and \$11,040. The total rent paid during these periods was \$39,400.

DREDGE FIELDING.

Mr. Taylor was informed that the dredge Fielding had been estimated to cost \$350,000, but had actually cost \$405,314. She was now excavating at Yarmouth, N.S., 1,000 cubic yards a day.

BEEF CATTLE INDUSTRY.

Mr. Schaffner was told by Mr. Fisher that the Government had received communications regarding the unsatisfactory condition of the beef cattle industry in Manitoba and the West, as a result of which the farmers were not receiving a normal price for beef sold to wholesale dealers. The matter was under consideration.

ROCKY MOUNTAIN PARK ACT.

Mr. Oliver's Bill to Amend the Rocky Mountain Park Act was taken up in committee. The proposal of the amendment is to allow land to be sold in the park, instead of leased, as heretofore. A mining town named Canmore has sprung up, in a section of which the park was extended, and the object of the Act is to allow people to own the land on which their houses are built. Mr. Oliver said there would be building regulations and open competition for the lots. The bill was reported and stands for a third reading.

LIGHTHOUSE AT BRONTE.

Mr. Henderson (Halt) asked to have a small lighthouse placed on the wharf at Bronte. This place is the headquarters of the cisco herring fishing on Lake Ontario. In the autumn the fishermen have to go to their nets 15 miles out in the lake, and they have no light to guide them home.

Mr. Brodeur said he believed there was a report on file against the proposal. He would look into the matter and if it was found advisable he would recommend the work.

Mr. Henderson said that if there was a report against the proposal, the officer who made it must have considered it from the point of navigation only.

NEW SIGHTS FOR RIFLES.

In reply to a question by Col. Worthington it was stated that the Government had contracted in April last with the Sutherland Rifle Sight Co., of Westville, N.S., for 36,000 Sutherland combination back sights, to be used on the Lee-Enfield and Lee-Enfield rifles, the sights having been approved by a board of officers. It had not yet been considered whether or not this sight would be used on the Ross rifle.

SUPPLY OF FORAGE.

Mr. Macdonnell (South Toronto) was informed that Moses Hunter and the Wm. McCann Milling Company tendered for the supply of forage for the Niagara camp for this season. The price was the same in each case, namely, 25 cents per ration, and the contract was given to Moses Hunter.

GRANTS TO VETERANS OF 1885.

Mr. Oliver's bill to make further provision respecting grants of land to members of the militia force on active service in the North-West was put through committee, and stands for a third reading. The members of the militia who served at that time were entitled to grants of 320 acres each, and most of them had already been allotted, but there were still a few unallotted. As the time for making the allotments has expired, it has been decided to make provision for doing so, and this is the object of the bill.

MOUNTED POLICE.

In supply Sir Wilfrid Laurier, in reply to Mr. Foster, said that there are

BRUTES AT FORT WILLIAM.

Two Men May Be Fatally Wounded With Knives.

A Fort William despatch says: Tuesday night a drunken melee took place at the coal dock among a party of foreigners, three of whom were stabbed and slashed with knives. The affray was the result of two Italians being turned out of a Finlanders' dance hall in the early part of the evening. It appeared that the two intruders had walked into the Finlanders' dance and began making free with some of the Finland ladies, which was promptly resented by the men, who ejected the strangers with anything but easy force. After the dance was over the Finlanders started for their homes. At the corner of McLaughlin and Christie streets the ejected pair and their friends were on the lookout for their victims, and pounced upon four Finlanders, who were taken by surprise. The affray lasted for only a few minutes, with the result that four Finlanders were fearfully wounded, two of whom, the doctors say, will not recover from their wounds. Restore Nantel, who was stabbed in the abdomen, and Charlie Paine, who received a stab wound in the neck and chest, are in the hospital and very weak. No hopes for the recovery of Nantel are entertained by Drs. Cook and McCarty, who are attending the injured men. The Finlanders claim they were not the worse for liquor. The scene of the tragedy was near where the Galician was clubbed to death three years ago.

A DUMB MAN SPEAKS.

Recovers Power of Speech After 21 Years of Silence.

A despatch from Chicago says: After 21 years of silence, during which time he was unable to utter an intelligible sound, Louis Mendelson suddenly recovered his power of speech on Tuesday. The return of words was as mysterious as the affliction which silenced him so long. Mendelson is 38 years old, and until Tuesday had not spoken since he was 17 years old. To the surprise of his three brothers and his friends he walked into their wholesale liquor store and said: "Hello, is this hot enough for you?"

Samuel Mendelson, one of his brothers, was so shocked by the unexpected remark that he failed to answer the question. He called his two other brothers, Jules and Anton, and to the great surprise of all three the man who had been dumb since boyhood repeated his question. The mystery perplexed all three. Louis told his brothers that "he had felt a sudden tickling in his vocal chords and the impulse to attempt to attempt speech had grown so strong that he could not resist it. When he tried, he discovered that his voice responded."

Mendelson lost his voice after an attack of fever when he was in his seventeenth year.

PREMIER SEDDON DEAD.

Died of Heart Failure on Steamer for New Zealand.

A Sydney, N. S. W., despatch says: Premier Seddon, of New Zealand, died here on Sunday night, of heart failure. The end came on board the steamer Owsley Grange, on which he had embarked in the morning to return to New Zealand. Mr. Seddon complained of feeling ill on Sunday afternoon, and slept for two hours. On awakening he rested on a couch while awaiting dinner. Suddenly he leaned his head on his wife's shoulder, saying, "Good-bye, my dear, I am going," and expired.

Mr. Seddon had been in Australia since the middle of May. He came here to consult Mr. Alfred Deakin, the Prime Minister of Australia, on important questions, mainly those concerning the New Hebrides. He visited the principal towns, making vigorous speeches and receiving deputations on various matters interesting to Australia, such as

THE WORLD'S MARKETS

REPORTS FROM THE LEADING TRADE CENTRES.

Prices of Cattle, Grain, Cheese and Other Dairy Produce at Home and Abroad.

Toronto, June 12.—Ontario wheat patents are quoted at \$3.15 in buyers' sacks outside for export. Manitoba first patents, \$4.40 to \$4.60; second patents, \$4.10, and strong bakers', \$4. Toronto. Bran is steady, being quoted at \$16 to \$16.50 outside, in bulk; shorts, \$19 outside.

Bran—Offered at \$16.50 outside, without bids.

Wheat—No. 2 white, 82c bid on C.P.R., with sellers at 85c. No. 2 red winter, 82c bid outside, and No. 2 Mixed, 82½c outside, without offerings. No. 1 Northern Manitoba offered at 85½c. Point Edward or Owen Sound, with 84½c bid Point Edward. No. 2 Northern

No. 2 white, 82c bid on C.P.R., with sellers at 85c. No. 2 red winter, 82c bid outside, and No. 2 Mixed, 82½c outside, without offerings. No. 1 Northern Manitoba offered at 85½c, Point Edward or Owen Sound, with 84½c bid Point Edward. No. 2 Northern offered at 82½c Owen Sound, with 82c bid.

Oats—No. 2 white offered outside at 38½c, with 37½c bid, and at 39½c on track, Toronto, with 39½c bid. There was also a bid of 39½c for five cars, Toronto.

Corn—No. 2 yellow offered at 59c to arrive Toronto, without bids.

COUNTRY PRODUCE.

Apples—Choice stock, \$4 to \$4.25 per barrel, and inferior qualities at \$3 to \$3.25.

Beans—Hand-picked selling at \$1.75 to \$1.80, and primes at \$1.50 to \$1.60. Honey—Strained honey quoted at 8½ to 9c per lb, and combs, \$1.50 to \$2 per dozen.

Hops—The market is dull at 14 to 17c per lb.

Hay—Car lots of No. 1 timothy are quoted at \$10 to \$10.50 on track, Toronto, and No. 2 at \$7.50 to \$8.

Straw—\$6 per ton.

Potatoes—Ontario stock, 80 to 85c per bag, and Eastern, 90 to 95c per bag on track.

Poultry. Turkeys, fresh killed, 14 to 16c; chickens, last year's, 10 to 11c; live chickens, 8 to 9c.

THE DAIRY MARKETS.

Butter—Pound rolls are quoted at 18 to 19c; large rolls, 16 to 17c, and inferior at 14 to 15c. Creamery prints sell at 21 to 22c, and solids at 15 to 20c.

Eggs—Sales at 17 to 17½c per dozen in case lots; splits, 14c.

Cheese—New are quoted at 12 to 12½c per lb.

HOG PRODUCTS.

Dressed hogs in car lots are nominal. Bacon, long clear, 12 to 12½c per lb, in case lots; mess pork, \$21 to \$21.50; short cut, \$22.

Hams—Light to medium, 14½ to 15c; do., heavy, 14c; rolls, 12 to 12½c; shoulders, 11½c; backs, 17 to 18c; breakfast bacon, 15 to 16c.

Lard—Tierces, 11½c; tubs, 11½c; pulls, 12c.

BUSINESS AT MONTREAL.

Montreal, June 12.—Grain—There was little or no inquiry for Manitoba wheat from over the cable to-day, and business was dull. The local market for oats is firm. No. 2, 43c; No. 3, 42½c; No. 4, 41½c, ex store. Flour—Manitoba spring wheat, \$4.60 to \$4.70; strong bakers, \$4.10 to \$4.20; winter wheat patents, \$4.30 to \$4.40; straight rollers, \$3.90 to \$4.10; do., in bags, \$1.85 to \$1.95; extras, \$1.50 to \$1.55. Feed—There was no change in the condition of the market for millfeed. Manitoba, in bags, \$18 to \$19; shorts, \$20 to \$21 per ton; Ontario bran, in bags, \$19.50 to \$20; shorts, \$20.50 to \$21; milled millfeed, \$21 to \$25 per ton, and straight grain, \$28 to \$29. Provisions—Barrels heavy Canadian short cut pork, \$23; light short cut, \$21.50; barrels clear fat backs, \$22.50; compound lard, 7½ to 8c; Canadian pure lard, 11½ to 12c; kettle rendered, 12½ to 13c; hams, 13½ to 15c; breakfast bacon, 17 to 18c; Windsor bacon, 15½ to 16c; fresh killed abattoir dressed hogs, \$10.50; alive, \$7.75 to \$7.85 per cwt. Eggs—New laid, 16 to 16½c per dozen. Butter—Choice creamery, 20 to 20½c. Cheese—Colored and white, 11 to 11½c.

UNITED STATES MARKETS.

St. Louis, Mo., June 12.—Wheat—Cash, 91c; June, 79½c; July, 78½c.

Duluth, June 12.—Wheat—No. 1 Northern, 82½c; No. 2 Northern, 80½c; July, 82½c; Sept., 81c.

Milwaukee, Wis., June 12.—Wheat—No. 1 Northern, 85½ to 86½c; No. 2 Northern, 83 to 85c; July, 81½c asked. Rye—No. 1, 65 to 65½c; No. 2, 56c; sample, 43 to 55c. Corn—No. 3, cash, 49½ to 51c; July, 50½c asked.

Minneapolis, Minn., June 12.—Wheat—July, 81½c; Sept., 80½c; Dec., 79½c; No. 1 hard, 83½c; No. 1 Northern, 82½c; No. 2 Northern, 81½c. Flour—First patents, \$4.35 to \$4.45; second

patents, unchanged at \$4.50 to \$4.60 each. Calves—Prices are unchanged at 3½c to 6c per lb. Sheep and Lambs—Shorn export ewes are quoted at \$4 to \$4.25; unshorn at \$4.50 to \$4.75, shorn bucks at \$3 to \$3.50, unshorn at \$3.50 to \$4. Yearling lambs were lower at \$6 to \$6.50, and spring lambs about steady at \$3 to \$5.50. Hogs—The market is quoted unchanged at \$7.40 per cwt. for choice light weights and \$7.15, fed and watered. It is reported the outlook favors lower prices.

WORLD'S LARGEST LINER.

New Cunarder Lusitania Launched at Clyde Bank.

A despatch from Glasgow says: The new Cunard turbine steamer Lusitania, the world's largest liner, was successfully launched at the Clyde bank on Thursday and was christened by Dowager Lady Inverclyde. Hundreds of visitors from all parts of the country, besides thousands of the local population, witnessed the ceremony.

The Lusitania is the first of the giant Cunards to be launched and her sister, the Mauritania, will follow her into the sea a month hence. The Lusitania is 796 feet long, her displacement is about 40,000 tons, and powerful turbine engines will drive her through the water at a sustained speed of from 24 to 25 knots. The cabin accommodations are for 550 first-class, 500 second-class, and 1,300 third-class passengers, and the crew will number about 800.

MINERS STARVE IN GERMANY.

In Many Cases Their Wages Are Only 83 Per Week.

A despatch from London says: The International Miners' Congress discussed the wage question on Thursday. The British, German and French delegates pressed the congress to adopt a scale of minimum wages. A British delegate said that the fixing of a minimum wage had proved practicable in Great Britain, and had saved \$30,000,000 a year to the British workers in times of depression. A German delegate said that the wages in Germany were the lowest of any. In some cases they were only 83 a week, while the mine officers were able to vary the workers' daily wages from 25 cents to \$2.25 at will.

STABBED WITH HAT PIN.

Man, Separating Two Quarrelling Girls, Fatally Injured.

A Kintanning, Penn., despatch says: Edward Ralston of Elders Ridge, near here, is dying from a stab with a hat pin suffered while separating two girls who were quarrelling over the result of a ball game in which partisan feeling ran high on Monday. The game was between two teams from neighboring towns. After the game the girl supporters of the defeated team attempted to take the colors away from the adherents of the victors. It was while separating two of the combatants that Ralston received the stab wound. It is not known who inflicted the injury. Physicians say Ralston cannot recover.

SMALLPOX OUTBREAKS.

Several Cases Reported to Provincial Board of Health.

A Toronto despatch says: Dr. Hodgkiss, Secretary of the Provincial Board of Health, has received word of smallpox outbreaks at Seneca, Sydenham and Dunwich, in Haldimand, Grey and Elgin counties respectively. At Sydenham there is only one case, at each of the other places several. All are of a mild type. The local authorities are taking all necessary precautions. A number of people are protesting against the enforcement of quarantine, claiming that the disease is "the Cuban itch," "the Philippine rash" or anything but smallpox. The authorities, however, are carrying out their duties undeterred by these protests.

expired. It has been decided to make provision for doing so, and this is the object of the bill.

MOUNTED POLICE.

In supply Sir Wilfrid Laurier, in reply to Mr. Foster, said that there are two hundred men of the Mounted Police in the Yukon, and that it was proposed to reduce the strength of the force if occasion permitted.

Sir Wilfrid Laurier explained the arrangement with the new Provinces of Saskatchewan and Alberta, under which 500 of the Northwest Mounted Police force of 600 would be retained in those Provinces, each of which would pay \$75,000 per annum towards the cost of the force. In connection with the work of the police Sir Wilfrid explained that they have for two years been engaged in constructing a trail to Dawson City through Canadian territory, so that should the worst come to the worst there would be means of communication with the Yukon over our own territory. Instructions to the police were that the route of trail for pack animals should be selected with a view to conversion into a wagon road in future if necessary. By means of a map Sir Wilfrid informed the House of the route so far as the trail is constructed.

SYMPTOMS OF UNREST.

Telegrams Bring Grave News From the Caucasus.

The London Times' correspondent at St. Petersburg cables as follows:—Telegrams bring grave news from the Caucasus, which appears to be on the eve of another revolution. There are ominous symptoms of unrest in the Crimea and a veritable epidemic of crime in Poland, yet courts-martial are working their hardest. A whole batch of death sentences has been recorded at Warsaw, Riga and St. Petersburg. One execution had been carried out at Warsaw, and this after the Duma's solemn appeal against further death penalties. Matters are further complicated by the alarming rumors of a spread of disaffection to the army, and even among soldiers of the guard regiments in St. Petersburg. All these facts only widen the breach between the Duma and the Government and demonstrate the impossibility of prolonging the present situation. Official contradiction of the report published on Saturday that the Goremykin Ministry had already resigned does not dispose of the belief that its resignation is imminent and the delay due solely to the difficulty of choosing an Administration capable of working with the Duma.

BRITISH TEACHERS COMING.

Five Hundred of Them to Visit Canada Next Fall and Winter.

A despatch from London says: Five hundred British teachers will visit the United States and Canada next Fall, Winter and Spring to study the educational systems of those countries. The visit was planned by Sir Alfred Mosely, the English educator and capitalist, who, in 1903, headed an educational commission which inspected, among others, the public schools of New York City, and who reported on his return to England that women teachers in the public schools were making American youths effeminate, and that they were underpaid. The teachers who will take part in the coming visit will represent all classes in the British schools. The places that they will visit will be selected by President Butler, of Columbia University.

GERMANY REDUCES NAVY.

Four More Battleships Ordered Stricken From List of Effectives.

A despatch from Berlin says: Four battleships, the Kaiser, Deutschland, Preussen, and Friedrich der Grosse, built immediately after the foundation of the German Empire, have been ordered to be stricken from the list of effective vessels of the German navy. In the course of 18 months five battleships, four, cruisers and three gunboats have been dropped from the list of effectives.

to consult Mr. Alfred Deakin, the Prime Minister of Australia, on important questions, mainly those concerning the New Hebrides. He visited the principal towns, making vigorous speeches and receiving deputations on various matters interesting to Australia, such as colonial preference and alien immigration. He made a speech at Sydney on Saturday, declaring that it was a suicidal policy for the colonies to send trade to foreign countries, thus enabling them to strengthen their navies. Trade, he said, should go to the Mother Land to assist in strengthening the British Navy.

LEAPED FROM WINDOW.

Patient at St. John's Hospital Attempts Suicide in Delirium.

A despatch from St. John, N. B., says: Walter McEathern, a young man suffering from typhoid fever at the General Hospital here, sprung from his bed on Wednesday in a sudden delirium, and before the nurses could stop him leaped from the window three storeys downward to the ground. He received severe internal injuries, and will probably die.

KNEW HOW TO

King Alfonso's Veil Outr

The Madrid correspondent of the London Telegraph sends what he claims is King Alfonso's own account of the bomb outrage as communicated by the King to courtiers a few hours after the explosion. The following are some points of the story: Their Majesties were inclining to the left side of their carriage, acknowledging the salutation of ladies on the grand stand in front of the Church of Santa Maria, when suddenly there was a noise close to the right fore wheel like a sledgehammer striking the stone pavement. Then there was a terrific detonation like the discharge of a large calibre gun.

THE CARRIAGE TREMBLED.

Like a ship tossed by waves. A strong acid odor rose, a white flash like lightning was seen beneath the carriage, and a noise was heard resembling the rasping of hundreds of files. The carriage was enveloped with smoke so dense that the King was unable to see the street and could scarcely distinguish the Queen.

Alfonso did not feel the last trace of injury, but with anxious thought that the Queen might be hurt, he took her head between his hands, kissed her and asked: "Are you wounded?" Looking fixedly at her husband, the Queen replied: "No, I am unhurt, I swear it." Alfonso then said that a bomb had been thrown. The Queen waving away the smoke with her hands, said: "So I thought, but it does not matter. I will show you that I know how to be a Queen."

The smoke began to clear away, and the carriage moved forward a few yards as the horses reared and struggled, but it again stopped and the King put his head out of the left window. He saw soldiers trying to check the horses, the

CROWD FLEEING IN TERROR.

and the people on the grand stand in the direct confusion. Believing that the effects of the explosion had been slight, the King said to those nearest to him:—"This is nothing; let us go on." Then the equestries told him that the carriage could not proceed as a horse had been killed and another injured. Through the open door the King said:—"Tell the Queen Mother and Princess Henry that we are not hurt." When the Carriage of Respect had arrived the King alighted very slowly, saluted the flag alongside, and gave his hand to the

ON THE FARM

FORMALIN FOR POTATO SCAB.

Potato scab is a fungous disease, the spores of which may remain in the land for an indefinite length of time. They may be introduced into a manure pile by feeding scab potatoes to stock, or by putting the tubers directly into the compost heap. An alkaline condition of the soil is favorable to their growth, and for this reason it is usually advised not to apply ashes or lime to soil intended for potato-growing. The application of fresh farmyard manure is also advised against, but the plowing under of a green crop tends to produce a slightly acid condition of the soil, unfavorable to the growth of the fungus. The most common way in which scab fungus is disseminated is by the use of infected seed. This should be avoided, if possible, but where necessary to use seed even scabby, it should be treated with a fungicide. Corrosive sublimate used to be recommended, but an equally good and safer means is formaldehyde gas, either in gaseous form or in the common commercial solution known as formalin. Where only a small quantity of seed potatoes are to be treated, the latter is undoubtedly better. Make up a solution, using 16 ounces of formalin to about 25 or 30 gallons of water. Soak the tubers two hours, and then spread out to dry. After drying, cut and plant in usual way, taking care not to let them touch any sack or other vessel that has been in contact with scabby potatoes, unless it has been subsequently disinfected with the formalin solution. The expense of this treatment is a trifle.

The Vermont Experimental Station is studying the treatment of potatoes by formaldehyde gas, and while they have not reached perfectly definite conclusions, they recommend the following treatment for potatoes in bins:

The bin or room where the potatoes are stored should be closed as tightly as possible. Ten ounces of formalin should be used for every 1,000 cubic feet of room, and the potatoes should be left exposed to this gas for 24 hours. The gas is generated by the action of formalin upon potassium permanganate. For this purpose, three parts by weight of potassium permanganate are mixed with eight parts of formalin in an earthen jar. The jar should have a capacity of about a gallon for each pint (16 ounces) of formalin. The required amount of permanganate should be placed in the bottom of the jar, and the needed amount of formalin poured over it. The operator should leave the room at once, taking care to close the door as tightly as possible. The retail cost of the chemicals to produce gas for 1,000 cubic feet will be about \$1.50.

SHEEP NOTES.

Musty hay is bad for sheep. Sheep like salt once a week. The demand for breeding ewes this season is without a precedent.

The Dorset is the most prolific of sheep, two lamb crops per annum being possible with ewes of this breed.

An Oregon man lost seven cents per pound on two hundred thousand pounds of wool by selling too early.

The average useful life of a sheep is seven years.

Not many ewe lambs will be marketed this season.

The best cure for worms is to prevent them by early breeding and change of pasture.

Australian sheep men, who have confined their attention heretofore to the production of fine wool, will give more attention to mutton in the future.

A rain from a well-established flock will stamp his strain unerringly upon his progeny.

The number of sheep has decreased five hundred per cent. in ten years in some sections of the central and south-

standing the great development of electric power, and the consequent lessening demand for horse power, the price of horses, such as the present market calls for is higher than ever. This state of the market surely goes to prove that there will always be a price remunerative to the raiser of good horses, and no part of this continent appears better fitted for raising fine, hardy, muscular horses than many districts in Canada.

Breeding ducks should always have access to water, as without it there is danger of the eggs being infertile, the germs weak, and the ducklings, when hatched, rather delicate, and consequently somewhat difficult to rear. We have, however, come across many cases, more especially in the States where the fowls were closely confined and allowed no water in which to swim, and yet we were assured that the eggs were perfectly fertile and the germs quite strong. On can, however, only speak from one's own experience, and mine has been that a stream or a pond, while not absolutely essential, assists very materially in obtaining the best results in hatching.

THE WATER SUPPLY.

Every cow owner should assure abundance of good water for his stock. Probably a shortage in this direction directly affects the milk flow more frequently than any thing else. The quantity visibly is shown to be affected, but how about the quality of that where the only water to be had by a thirsty herd comes from a roadside puddle or a swampy pool, stagnant and swarming with bacteria under a scorching sun. A cow's stomach is not a filter for the removal of impurities, and these are carried out with the milk not eliminated with the refuse of food. Naturally it makes quite a difference whether the more than three-fourths water contained in all milk is pure or impure. A low place in the pasture may be a breeding ground for bacteria, very likely is when filled with water, yet the cows will drink there rather than go some distance to a tank or trough, if permitted to do so. Such sag holes should be drained or filled in. If this is not done the spot should be fenced around to keep the animals out and prevent their slaking their thirst except with water which is pure and wholesome.

BRITISH DEFEAT ZULUS.

Chief and Three Hundred and Fifty Rebels Killed.

A despatch from Durban, Natal, says: Natalian forces under Cols. Mackenzie and Barker have had a severe fight with rebels in the Mome Valley. The rebels were defeated, 350 of them being killed, including the important Chief Mahlokazulu. The Natalians lost Capt. MacFarlane, of the Transvaal Rifles, and Lieut. Marsden killed and several troopers wounded. It is reported that Chief Bumbatta was wounded in the fight. The rebels fled, demoralized.

Details have been received of the attack on a rebel impi which was mobilized in the vicinity of M'teli's kraals. Operations started in the vicinity of the Elandskraal settlement with the sweeping of the Insibindi Valley down to Buffalo River. Guns were placed at points of vantage on the tops of eminences, guarded by a portion of the force under Major Wilson. Capt. Rattery with a mixed force of Carbineers, Rifles and reserves, descended the valley under cover of the guns. The approach of the force was discovered and signaled by many fires, which appeared in a few minutes throughout the country far into Zululand. The impi, consisting of upwards of 300 natives, besides small armed parties, was located within the area covered by the guns. The shell fire drove out a number of natives, and Capt. Rattery engaged the rebels, who gradually retired towards broken and thorny country. The Maxim of the Natal Mounted Infantry effectively searched the bush and dislodged the enemy. Thirty-five kraals, containing 150 huts, were burnt.

CYCLONE IN WEST ONTARIO

Buildings Were Unroofed and Trees Torn Up By the Roots

A despatch from London says: Sarnia and vicinity were swept by a terrific gale, accompanied by rain, thunder, and lightning, about 10 o'clock on Friday night. Fortunately no fatalities occurred. The roof of W. F. Lawrence and Sons' new lumber mill was blown off and about 1,500 square feet of roofing destroyed, besides the shafting and belting of the mill. A large tree at the corner of Christina and Johnston Streets was lifted out by its roots and hurled against Miss Watson's residence, smashing the windows and breaking the cornices. The chimney on Edward McDonald's new house on Queen Street, was blown down. A new house on East Davis Street was lifted from its foundation and blown over. Richard Lynch's house, on Wellington Street east, was struck by lightning and badly damaged. Telegraph lines all through the western peninsula were put out of business, trees were uprooted, chimneys blown away, and many houses wrecked.

The storm struck Chatham about 1.25 o'clock on Friday afternoon and when it had blown over dozens of the beautiful trees from which the town gets its name of the Maple City, had been uprooted. Among the buildings damaged were the Dowsley Axle Works, the Central School the Collegiate and Park Street Methodist Church. Telegraph, telephone and electric light poles and wires were laid flat all over the city and many of the manufacturing concerns were compelled to shut down for repairs.

The worst of the storm, however, was at St. Thomas, and along the Michigan Central, where it assumed the proportions of a cyclone. The Michigan Central service was interrupted, and many houses were blown down at Rodney, Highgate and Ridgetown. The traffic on the Sarnia branch of the Pere Marquette was also seriously interfered with.

At Port Stanley the storm blew a 90-foot tower on a new elevator in the creek, and the Government observatory was also blown over. It is reported that two men were killed and half a dozen badly hurt by lightning at Springfield, but as the telegraph service has been cut off it is impossible to verify the report.

HAMILTON SUFFERS.

A despatch from Hamilton says: This

city was visited on Friday afternoon about 3.30 by one of the heaviest wind and rain-storms in years. It lasted only about 20 minutes, but did more damage than a dozen previous storms. The roof of the warehouse of the International Harvester Company was blown off, causing much damage. A number of houses in various parts of the city were unroofed, and Bastien's boathouse nearly blown into the bay. Telephone and electric light wires are all down, and the city is practically in darkness. It is impossible to estimate the total damage, but it will run up into the thousands. So far as can be learned no one was seriously hurt.

At the race-track the full fury of the storm was felt. Sheets of rain swept the grand stand from one end to the other, and the gaily-dressed occupants were compelled to flee for shelter.

HURRICANE AT BRANT.

A despatch from Brantford says: A tremendous storm swept over Brantford and Brant County on Friday afternoon at 3 o'clock, doing a great deal of damage. Trees were blown across the T. H. and B. tracks and trains delayed, whilst the street car trolley lines in West Brantford were badly damaged. In the country hundreds of trees were uprooted and much damage done to crops.

DAMAGE AT THE FALLS.

A despatch from Niagara Falls, Ont., says: A terrific wind and rainstorm struck this city from the south-west on Friday afternoon. Two large brick chimneys were blown down, and two wings of the new General Hospital, under construction, crushed in. Some ten workmen got away just in time. Brickwork Contractor J. Blair, who was on one of the top storeys, was badly burned in the eyes with the lime from the falling brick. In the evening about 10 o'clock a small tornado again struck the town.

BARN BURNED IN TURNBERRY.

A despatch from Wingham says: In a terrific thunder and lightning storm which prevailed here all night three barns and their contents were burned in the Township of Turnberry.

The number of sheep has decreased five hundred per cent. in ten years in some sections of the central and southern United States.
The Merino is the first sheep mentioned in history.
Sheep return more fertility to the soil than any other farm animal.

LIVE STOCK NOTES.

It will not do to try to make the horse fit the harness. It is wiser economy to fit the harness to the horse. The horse has his shape, but you can change the harness—that is what it has buckles for. It has been shown by many careful, scientific experiments, both in this country and in Europe, that an increase in the richness of a cow's feed does not make the milk richer. If it was possible to change the test of milk by feeding the cows, we would then be able to make all the cows giving thin milk produce cream, or change a Holstein into a Jersey.
It is a remarkable fact that notwith-

ally retired towards broken and thorny country. The Maxim of the Natal Mounted Infantry effectively searched the bush and dislodged the enemy. Thirty-five kraals, containing 150 huts, were burnt.

COUNCILLORS FIGHT.

A Lively Scene in the Yarmouth, N.S., Town Council.

A Halifax, N.S., despatch says: A sensational scene occurred during Thursday night's session of the Yarmouth Town Council. Councillor Fuller made an insulting reference to Councillor Perrin. The latter immediately jumped at Fuller and was pummeling him in lively shape when Mayor Hood and the Town Clerk went to Fuller's rescue. As soon as Fuller regained his feet he made an attack on Perrin, kicking at him. The latter returned in vigorous style, until the unseemly encounter was stopped by the other Councillors. There has been bad feeling between the two for some time arising out of Perrin's charge, seeking to disqualify Fuller. The latter is a leading church member of the town. Both are doctors.

BUILDING IN QUEBEC.

Work on National Transcontinental Well Under Way.

A Montreal despatch says: Work on the Government section of the Grand Trunk Pacific Railway is now well under way. Macdonald & O'Brien, who are under contract to build one hundred miles west of Quebec, have 500 teams on the ground. Operations are being controlled from a point near Reidschap, on the Great Northern, 73 miles from Quebec. Seven or eight sub-contracts have already been given out. M. P. & J. T. Davis have started on their contract, which is to build 50 miles westward from Quebec bridge.

ROJESTVENSKY INDICTED.

Crushing Arraignment of the Officers of the Bedovi.

A despatch from St. Petersburg says: The Naval Court of Inquiry has presented an indictment against Vice-Admiral Rojestvensky, who commanded the Russian fleet at the battle of the Sea of Japan, and the officers of the torpedo boat destroyer Bedovi for surrendering to the enemy after the battle. The indictment is a crushing arraignment of the demoralization and cowardice of the officers, contrasting their conduct with that of the officers of the torpedo boat Grozny, which, in practically the same position as the Bedovi, engaged and sank a Japanese torpedo boat. The trial of the indicted officers has been fixed for July 4. The penalty is death.

LANDS FOR VETERANS.

Seven Townships Set Aside for Heroes of 1866.

A despatch from Toronto says: Hon. Frank Cochrane, Minister of Lands, Forests and Mines, has set apart six townships in Algoma on the north shore of Lake Superior back of Chapleau on the C.P.R., and one in the district of Nipissing, for the veterans of '66. The veterans are privileged now to step in and take full possession of all the lots in the townships, the names of which are D'Arcy McGee, Chewett, Cochrane, Borden and Gamey in Algoma, and Laura in Nipissing.

A KANSAS TORNADO.

Injures Eight People and Demolishes a Town.

A despatch from Hillsboro', Kan., says: Goessel was practically destroyed on Thursday by a tornado. About 80 persons were injured. The tornado laid waste a strip 200 yards wide. Several stores and twelve residences were demolished, and every house in town was damaged. The large Mennonite hospital was only slightly damaged. The injured were taken there.

Rhodes scholars to the number of 150 dined in London.

A nomadic tribe in Russia numbering 2,000 destroyed themselves when face to face with famine.

RAILWAY COMMISSIONERS.

Messrs. A. B. Ingram and H. N. Kittson to Act With Mr. Leitch.

A Toronto despatch says: Two of the commissions made necessary by the enactments of the last session of the Ontario Legislative Assembly are now complete and ready to commence the labors which will be required of them. These are the new Hydro-Electric Commission, whose functions will enable the municipalities of the province to secure electric power at an economical rate, and the Railway and Municipal Board, which has been for so long expected. At the close of a somewhat protracted meeting of the Cabinet on Thursday, Premier Whitney announced that it had been decided that the former body should be composed of Hon. Adam Beck, of London, the Minister who has been so closely identified with the power question of Ontario; Hon. J. S. Hendrie, of Hamilton, and Cecil B. Smith, who is now chairman of the Temiskaming and Northern Ontario Railway Commission, and consulting engineer of the commission of inquiry—the Hydro-Electric Commission. Hon. Mr. Beck, will naturally be the chairman of the newly founded organization. It has not been decided as yet what salary will be paid to Mr. Smith, but he will not receive any addition to the aggregate of his present remuneration.

NEW RAILWAY COMMISSION.

The gentlemen who will with James Leitch, K.C., compose the Ontario Railway and Municipal Board, are, Andrew B. Ingram, who represents East Elgin in the Dominion House of Commons, and Henry Norman Kitson, of Hamilton. The gentlemen will receive \$4,000 a year for their services on the board. Their secretary, H. T. Small, a barrister of Carleton Place, and a former resident of this city, will be paid a stipend of \$2,000 a year.

GREAT WHEAT CROP.

The Prospects Were Never Better in the West.

A Winnipeg despatch says: According to the weekly report of the C. P. R., prospects for a great wheat crop were never better throughout Western Canada, and seldom so good. In all 150 stations reported, and all were sanguine in their estimates. The rainfall has been ample, with the possible exception of a section west of Prince Albert.

Mr. R. E. Oaks, ex-manager of the Traders' Bank at Calgary, is here. Mr. Oaks has just returned from Alberta, and says that while considerable of the wheat has been a disappointment in southern Alberta, still no material loss will be suffered by the farmers, as they ploughed the land this spring and seeded with oats, and a valuable crop of these will be assured.

WORK OF AN ASSASSIN.

The Russian Chief of Police Shot and Killed.

A Bielostok, Russia, despatch says: Chief of Police Derkatchoff, against whose life several attempts have been made, was shot and killed on Sunday by several unknown persons while he was out driving. His coachman was severely wounded. At the same time the secret police were attacked in another portion of the town, one of them being wounded.

BRITISH ARMY REFORMS.

Infantry to be Reduced to 10,000 and Artillery by 48 Batteries.

A despatch from London says: The Express says it understands that the military programme of Secretary of War Haldane includes a reduction of the infantry by 10,000 and of the artillery by 48 batteries.

BE A QUEEN

rsion of the Bomb age.

Queen, who, in descending from the royal carriage, soiled her train and shoes with the blood of the horses, with which the carriage was sprinkled.

The King then noticed the dead and wounded by the side of the carriage, and exclaimed in a tone of reprobation: "What a terrible misfortune! What infamy! What great wickedness must be required to shed so much innocent blood!" The King, then giving his arm to the Queen, tried to lead her so she would not see the victims, but this was useless.

Despite the panic, the people on the balconies cheered the King and Queen. The former made signs to show that both were uninjured. After walking twenty steps to the Carriage of Respect, the King, after having seen the Queen inside, turned to the equestrians and said: "Go very slowly to the Palace." After he had entered the carriage he thought the Queen might have been hurt and was concealing it. He anxiously asked: "Tell me the truth. Are you wounded?" The Queen replied: "No, I am not wounded. I was thinking only of you."

ESCAPED BY HAIRBREADTH.

The courtier, adding his own observations, said that Queen Victoria owed her escape from injury solely to the fact that she leaned to the left of the carriage. If she had been still waving her handkerchief from the room window, as she had been doing a moment before, the bomb would assuredly have cut off her hand. All the damage was on the right side of the carriage.

When the royal couple reached the palace the King gave his hand to the Queen, and ascended the steps with ceremonious deportment, as though nothing had happened.

One of the Royal guests, congratulating him upon his escape, recalled that it was the anniversary of the attempt on his life in Paris. The King replied, with spirit: "Yes, I remember, and I notice that bombs have grown since then." His Majesty asked for exact information as to the number of victims. When he was told the number was not known, but that many were dead and wounded, he passed his hand across his forehead and said, slowly: "Now I feel what it is to be a King, and I feel it because, if I were not a King, I might have had the consolation of tears in the presence of so much blood, so many victims immolated by the madness of crime."

THE LAND OF BIG GAME

EXPEDITION INTO UPLANDS OF BRITISH EAST AFRICA.

Fascination of the Sport—Immense Quantity and Variety of the Game.

The hunting of big game is a pursuit which holds a deep fascination for those who have a taste for it. For the sake of his favorite sport the hunter is ready to turn his back on friends and on the comforts and pleasures of civilized life and to go out into the wilderness to make his home in a small tent, to live on hard scanty fare, to face loneliness, to undergo severe physical toil, to endure all extremes of weather and to encounter cheerfully hardships, sickness and the many dangers that the life involves.

A hunting tour after big game is not only pleasant from the contrast it presents to life in the busy world; it is full of fascination in itself and an expedition made in the uplands of British East Africa, where there are great tracts of empty country teeming with game, is an experience that is full of delight and that leaves a rich store of pleasant memories behind, writes E. G. J. Moyna in Macmillan's Magazine.

On the march you come on patches of swamp where you flounder knee deep along paths of slimy, washy evil smelling mud, winding between high walls of tangled reeds that grow out of black, festering water; foul, noisome, unhealthy marshes, yet interesting in a way as a type of nature in one of her primitive garbs. You cross lonely rivers, fording them breast deep at the head of your men, feeling your way with a pole, half carried off your feet by the swirling current, stumbling awkwardly over loose stones, sinking into spongy mud and wondering doubtfully if there are any crocodiles near. Or if the water be too deep to ford you see

A NATIVE MADE BRIDGE,

constructed by partially felling two trees on opposite banks so that their branches interlace across the water.

Sometimes you pass a stretch of open parklike country with gently rolling grassy slopes, dotted with shady groves in whose boughs hosts of wild pigeons flutter and coo, and watered by quiet streams flowing between banks where the long sweeping branches of graceful trees rise out of clustering masses of light green jungle foliage, and sometimes as you come over a rise, you light suddenly on the gleaming waters of some reed fringed lake, hidden away amid lonely hills. From the green swamps you hear the hoarse grunts of the hippopotamus, crocodiles are lying like dead logs, basking in the sun by the edge of the shore, the water is dotted with wild fowl, on the sandbanks there is a brilliant sheet of dazzling white and pink from the plumage of packed armies of flamingoes, and over the scene there broods a mysterious air of primitive solitude and aloofness.

Then you skirt dense forests where the ground is covered with a tossing welter of luxuriant undergrowth, the tendrils and creepers twining and intertwining between bushes and plants, swarming thickly up the trunks of the trees, falling again in cascades of swaying streamers and lacing one tree to the next till there is an impenetrable mass of matted boughs and foliage, which above the spreading branches of the mighty forest trees weave a canopy so thick that even at noonday there is dim twilight in the leafy caverns beneath. The quantity and variety of the game to be seen are really astonishing. Beasts large and small, harmless and dangerous, all living amid their natural surroundings, as they have lived for centuries, in unfettered freedom—to any one with a love of natural history they are an unending source of

INTEREST AND PLEASURE.

blends perfectly with the color of the dry grass, and the first clear sight you get of him may be a few yards distance, as he stands

CROUCHING FOR ATTACK,

his powerful body quivering with rage, his head set low over his chest. He looks the embodiment of threatening ferocity, with his fierce open mouth, cruel teeth and savage eyes, as he snarls and growls with maddened fury, twisting his tail ominously, or raising it stiffly above his back, as he does when about to charge.

A beast fully as dangerous and often harder to kill, is the buffalo. You come perhaps on his spoor in the midst of thick bush, and if the ground is at all soft his heavy weight and deeply marked feet leave a trail that is easily seen. You follow it eagerly as it winds up and down, knowing from the fresh impression that the beast cannot be far off, your fingers itching on the trigger, your eyes striving to pierce the density of the branches around; and then, perhaps, as you are growing weary and losing hope your men suddenly scatter on every side, leaping like monkeys up the prickly bushes, and the buffalo crashes furiously out of the undergrowth where you least expect to see him.

Thrilling, too, is the stalking of rhinoceros and elephant. Rhinoceros are usually found on the plains or in the more open bush, but elephants must often be followed in the depth of the forest, where the tangled foliage produces the dim gloom of cavern, adding a strange ghostly feeling to the sense of the risk that must be faced. Both rhinoceros and elephant are furnished with very thick hides and wonderful tenacity of life; they are very difficult to kill with a frontal shot, so that it is wise, if possible, to get the first shot into the brain or heart by creeping close up to them before attempting to shoot. The danger involved is somewhat lessened by the fact that they cannot see clearly over fifteen or twenty yards, but on the other hand a slight shift of the wind may bring them charging down on you.

You crawl onward with wary stealth, watching the wind anxiously, wondering as you gain the cover of a tuft of grass if you can ever hope to cross the next open patch unperceived; lying motionless, hardly daring to breathe if the animal seems to grow suspicious, feeling as you look on his huge bulk that you are ridiculously puny and feeble and that your powerful Express rifle is little more than a pop-gun, and longing for the moment for the crack solve the uneasy tension that the long stalk and wait can hardly fail to produce.

The most critical and thrilling experience is the following up of a savage wounded beast driven desperate by pursuit and maddened by its hurt. Then risks must be taken and must be made by unceasing vigilance and wariness, and perhaps the moment may come when you have to face the nerve shaking charge of the furious animal, when there is no time for thought or calculation, and your life depends on your capacity for instant decision, and quick and accurate shooting. A successful day after dangerous game is not a day that you forget.

PUZZLES FOR SCIENTISTS

Riddles Which the Wise Men Cannot Solve.

A scientist who has been travelling in Africa in search of an answer to some questions concerning rainfall gives as his opinions that the expression of imperturbable calm on the face of the Sphinx arises from the fact that she has never tried to find the answers to the riddles of nature, which have sent many men to their graves. What is gravity? is one of them. Hundreds of men have gone insane trying to answer it. Some, in fact, have gone so far as to try to disprove the theory entirely. An English naval captain wrote a book on this subject and sent it to all the learned societies in Europe.

Why cannot force be created by hu-

BLACK DIKE MILLS BAND

THE PREMIER PRIZE BAND OF GREAT BRITAIN.

Famous Yorkshire Musical Organization of Workingmen Coming to Canada this Year.

Following the visits of several army bands from the Old Country, Canada is now to hear the premier prize band of Great Britain—the famous Black Dike Mills Band.

The Black Dike Mills are situated in the village of Queensbury, which is perched on one of the hills surrounding the great manufacturing city of Bradford, Yorkshire. Here for a hundred years musical Yorkshiremen have cultivated the practice of instrumental music, and to such good purpose that the name of Black Dike is familiar as a household word from John O'Groats to Land's End. For over fifty years the great firm of John Foster & Son, whose extensive mills cover fifteen acres, and employ nearly 3,000 workpeople in the manufacture of alpaca, mohair and worsted stuffs, silks, plushes, etc., have maintained the band in a state of great proficiency. The founder of the firm was himself an enthusiastic amateur on the French horn, and his descendants have prided themselves on keeping the band up to a standard of perfection beyond which it would seem impossible to go. The bandsmen are all employed in the mills, and all expenses of maintenance, tuition, etc., are borne by the firm.

EVERY MAN AN ARTIST.

The Black Dike Band is a brass band, and we would warn those whose notion of a brass band has been derived from the common or garden sort of brass band to beware of letting their prejudice keep them from hearing Black Dike, else they may never cease regretting it, for those who have not heard Black Dike or another British prize band of the first rank can have no conception of what a brass band can achieve in the way of artistic effects. There is nothing which Black Dike cannot play with consummate ease and grace. Every man is an artist, and their executive ability is marvellous. In no other kind of band is the executive ability of brass players developed to such an extent. There is not a man in Black Dike but would be eagerly snapped up by the finest army bands in England, were he available.

HEROIC MUSIC ITS FORTE.

But though they can play the airy strains of a Strauss waltz with the grace of an orchestra, it is in grand, heroic music that the band shines most. They have astonished the greatest musicians of England and have lifted brass band playing to the highest regions of musical art. When they treat Canadians to their grand selection from the works of Beethoven, Berlioz, Spohr, Rossini, Meyerbeer, Gounod and Wagner, we predict such an enthusiastic reception as no band has hitherto received here. The late Sir Arthur Sullivan, himself born and reared in an army band, was quite carried away by Dike's playing at one of the Crystal Palace festivals. "Wagner's 'Tannhauser' was magnificent," he wrote. "I was surprised not only at the tone, but at the fire and go of the performance. In this they excelled any band I have ever heard." And similar praise has been showered upon them wherever they have played.

HAVE WON MANY CONTESTS.

As a contesting band they have stood for fifty years at the head of the movement which has made such magnificent bands as the British amateur prize bands. They have won everything worth winning. They were first at the Crystal Palace (out of 169 bands), as far back as 1866. When this festival was recently revived Dike was first again after an interval of forty years. "Cri-

has long held a position as choirmaster with much success.

Thanks to the generosity of Messrs. Foster & Sons, the band is now able to gratify its long-cherished desire to visit America, and though Mr. Gladney is quite unable to give the band more than a moiety of his services at home, Messrs. Foster have prevailed upon him to put his other bands aside for a time and to accompany their band across the seas.

The band about to visit us is only one, though the most eminent, object of Messrs. Foster & Sons' munificence. There is the junior band (taught by the aforementioned Mr. Phineas Bowers, and the nursery for the senior band), the orchestral band, the glee society, the cricket club, the gymnasium, the literary society, and a host of lesser organizations all tending to brighten and elevate the lives of their work people.

RESULT OF ROYAL VISIT

CREDENCE GIVEN TO STORIES IN THE ORIENT.

False Rumors That Have Caused the British Much Trouble in Mandalay.

A remarkable story is being told in Mandalay to account for the ravages of the plague. The city has been sorely afflicted. A month ago people were dying at the rate of sixty a day. Business was practically at a standstill, and two-thirds of the population had fled. Not the worst feature of the panic was the credence given to a widespread rumor that the pestilence was the result of the royal visit.

While their Royal Highness, it was said, were in Mandalay, the Princess had dreamed that some Burmese had tried to murder her. She told no one, the story goes, at the time, but when the royal party reached Rangoon, on the way back to India, she informed the Prince, who gave orders to the Lieutenant-Governor of the province to have a number of Burmese in Mandalay put to death. In obedience to this ruthless command men were sent up country, such is the legend, to poison the wells and strew poison about the roads; hence the terrible mortality. Even makers of soda water were bribed, it is alleged, to put poison into all bottles sold to the Burmese.

The scare, ridiculous as it may seem, says the London Evening Standard, has taken hold of the credulous natives and they have gone so far as to appoint a committee of safety, which sends out parties of young men, armed with staves and "dahs" at night, to look out for suspicious strangers. The panic has extended, we are told, to the villages in the vicinity of Mandalay, and three Europeans, who were out shooting recently, were accused by the country folk of being poisoners, and

HAD TO FLY FOR THEIR LIVES.

How stories of this kind get abroad it is seldom possible to discover, but every one who has lived in the East knows how readily they are swallowed by an ignorant and credulous people. No invention is too prosperous to find believers. Sometimes the gossip of an Indian bazaar is that the Government requires quantities of human blood wherewith to anoint the foundations of a bridge or other public building which it is about to erect. Every family in the district will be in a fever of apprehension lest its children shall be seized and murdered for the purpose. Many old travellers relate instances of such panics, which have also occurred within quite recent times.

In some parts of the Punjab people have gone in terror of the "Mummy Sahib," an atrocious European who is supposed to abstract his victims' brains through a hole bored in their skull, using the extract in the preparation of a particularly valuable and efficacious

size large and small, harmless and dangerous, all living amid their natural surroundings, as they have lived for centuries, in unfettered freedom—to any one with a love of natural history they are an unfailing source of

INTEREST AND PLEASURE.

You see a broad plain thickly dotted with antelope and gazelle; some are heavy and ungainly in form; others there are with light delicate limbs and daintily poised necks supporting prettily curved horns; and all, with the bright sunlight picking out the tints of their coats against the dull hues of the grass, give life and movement to the loneliness and monotony of the country.

Sometimes the beasts are found singly or in small groups; more often there is a large herd with a wily old buck stalking arrogantly among them, seemingly cunning enough to know that he possesses the most valuable horns, and taking the lead in swift retreat at the first warning of danger. Magnificent is the sight when a herd of graceful animals, like the impela, scents danger; a quick startled jerk of the head, a few terrific bounds, and then the whole herd rushes helter-skelter over the plain, a flying jumbled mass of lithe leaping bodies, the embodiment of easy grace and activity.

It is an endless source of interest to watch for and pick out the different characteristic features of horns and skin, to mark small differences, to watch the beasts in their natural state, and to observe their movements, habits and instincts, till you learn to know them all as old friends, from the bull-like eland with heavy spiral twisted horns, and big wildebeest with shaggy head and twitching tail, to the graceful gazelle with daintily marked coat of fawn and white, and the pretty little dik-dik, hardly larger than a young cat.

Then there are the large herds of zebra their beautiful striped skins glistening in the sunlight; the troops of tall ostriches, stalking proudly about with long, peering necks and fluffy coats of black and white feathers—the snarling, yelping packs of wolfish bushdogs; the slinking cowardly mungie hyenas; the little, fully coated jackals and the scuttling warthogs and bushpigs, armed with

CURVED GLEAMING TUSKS.

In the semi-twilight of the jungle you may catch a glimpse of the beautiful skin of a leopard as he bounds into the depths of the bush before you can fire; and as you cross a dry watercourse you may stir up a troop of lions from their noonday slumber or in the early morning, while the land is still wrapped in darkness, you may hear their coughing grunts and deep roars breaking the mysterious stillness of the plain.

As you march through scrub you may sight a rhinoceros standing sleepily under a clump of mimosa-thorn, with the rhinoceros birds keeping a watch on his neck; an animal so strangely blind that you can crawl unperceived within a few yards of him, yet so keen-scented that if he gets your wind he may come crashing furiously out of the bush and scatter your camp almost before you have realized his presence.

In the big green reed covered swamp there is the huge African buffalo wading in the mud, coming out morning and evening to feed in the open; he is when wounded perhaps, the most vicious and dangerous of all African game. And if fortune is kind you may sight a big herd of elephants on the march, forming a superb spectacle with their high, massive heads, huge, towering bodies, long, white tusks, and gigantic flapping ears. They go along over the plain in long single file, all superbly indifferent to everything around, trampling straight ahead through or over all obstacles, swaying their great trunks.

The greatest excitement, of course comes in an encounter with dangerous game. There is the thrilling consciousness of danger when you follow a lion through long grass, catching only a hearing now and then a sullen roar of anger, but never knowing exactly where he is, whether still retreating, or lying in wait for a sudden spring when you come within reach. His tawny skin

gray, is one of them, hundreds of men have gone insane trying to answer it. Some, in fact, have gone so far as to try to disprove the theory entirely. An English naval captain wrote a book on this subject and sent it to all the learned societies in Europe.

Why cannot force be created by human power? Trying to accomplish this has hastened the end of many a worthy man. Perpetual motion will be accomplished if we can discover how force is made. Keely, with his motor, who claimed to have discovered perpetual motion, was a swindler, whose delirium revealed his ingenious counterfeit of perpetual motion. If this discovery could be made it would revolutionize the world.

What source of heat supply has the planet Mars? This is another riddle. Our earth gets much more heat from the sun than does Mars, yet that planet has a beautifully mild climate. Astronomers have watched the ice cap thawing on Mars, and they have proved that water flows and clouds rise. This shows that Mars has heat. But if it is not supplied by the sun, from what source does it come?

Where the tide is born is another of nature's secrets. On the island of Paopae, in the Southern Pacific, there is every day at twelve midday and two in the afternoon high tide. Why, no one is able to explain. A scientist has been able to turn gold into silver, but no one so far has been able to make a magnet which will attract gold. Could this be accomplished its enormous value could scarcely be realized, for it would make it possible to work rock from which no known process has been able to extract gold in paying quantities.

Why it rains is a question to which no definite answer has been given. Blue sky does not necessarily mean fine weather, for there may be just as much rain overhead when the sky is clear as when the clouds hide the sun. When rain falls from a cloudless sky it is generally believed that the moisture has been brought by the wind at a great elevation. In the South Atlantic it has been known to rain for more than an hour while the sky was entirely free from clouds. In the island of Mauritius it is not at all uncommon for rain to come from a cloudless heaven. Slight showers fall during the evening when the stars are shining brightly. It is thought by some that these showers are the result of particles of ice formed in the higher region of the atmosphere melting and falling. Others attribute it to currents of warm and cold air travelling in opposite directions, with the result that the latter condenses some of the moisture in the former and causes it to fall in the form of rain.

TO THE VIOLET.

O modest flower, the lowly type
Of sweet humility,
But whose most odorous scent finds out
The place where e'er you be.

The model of fair virginhood,
Of virtue's shrinking bloom,
The debutante's especial flower,
That to her charms give room,

Despising your own fragrant worth,
And hiding 'neath your leaves,
So one must search to find you there,
Or else your scent deceives.

Why is it, with this modest mien,
No florists men can fleece
Than with your blossoms sweet and shy,
About three cents apiece?

You've learned the wisdom of the work
Pretending modest worth,
To make yourself desirable
Though you should cost the earth.

Miss Beautifirl—"Oh, but mamma objects to kissing," Jack Swift—"Well, I am not kissing your mamma, am I?"

"Doctor, I want to thank you for your splendid medicine." "It helped you, did it?" asked the doctor, very much pleased. "It helped me wonderfully." "How many bottles did you find it necessary to take?" "Oh, I didn't take any of it. My uncle took one bottle, and I'm his sole heir."

which has made such magnificent bands as the British amateur prize bands. They have won everything worth winning. They were first at the Crystal Palace (out of 169 bands), as far back as 1866. When this festival was recently revived Dike was first again after an interval of forty years. "Criticisms are out of the question," said the judges. At the great Belle Vue contests, Manchester, they have been first on no less than eleven occasions. In 1882 they were debarred as being unbeatable, having won first prize for the third year in succession in 1881. Altogether they have won 100 first prizes against the pick of the English bands. Even this does not emphasize their pre-eminence so much as the fact that at one period they won no less than seventeen first prizes at consecutive events!

THE VETERAN CONDUCTOR.

Mr. John Gladney, to whom primarily is due the great proficiency of the band, has been retained by Messrs. Foster & Sons as its professional teacher since 1888. Few Canadians who behold the alert figure of Mr. Gladney will imagine that he looks back upon nearly 60 years' career as a professional musician. But such is the fact, and there are few living musicians who can look back upon a career of such distinction. The son of an Army bandmaster of considerable note, Mr. Gladney was born in 1839, and practiced music from the cradle. When only ten years old he played piccolo (his fingers being too small for the flute) in the band of the famous ill-fated Jullien. He sat on the knee of Koenig, and to this day holds that noted cornet player as the greatest of all time. He was petted by Bottesini, and made much of by the great oboist Barrett. Since then Mr. Gladney has been constantly in touch with the greatest European artists. After attaining considerable note as a flautist he took up the clarinet and for many years he toured on that instrument with prominent Italian and English opera companies, finally settling at Manchester as principal clarinet of the Halle Orchestra—a position he filled for 25 years. During his career as a performer he played under most of the leading European conductors, including Costa, Arditi, Vianesi, Grieg, Von Bulow, Randegger, Max Bruch, Goldschmidt, Halle, Mellon, Benedict and Sullivan. Retiring from active work as a performer, Mr. Gladney took up the work of teaching the "bands of the people," and in England he is loved and revered as the "Father of Brass Bands." Thousands of British bandsmen speak with affection of John Gladney, and to have played under him is the happiest of their experiences. He has taught over 120 bands, scattered all over England, Scotland and Wales. He has won more Belle Vue first prizes than any other conductor, and twice has won first prize with the same band three years running, with Meltham Mills in 1876-7-8, and with Kingston Mills in 1886-6-7. Mr. John Gladney will accompany the Black Dike on its visit to Canada, and Canadian musicians are sure to welcome such a distinguished musician with open arms.

BANDMASTER BOWER.

Mr. Harry Bower, the resident bandmaster, is a product of the Black Dike Band, and a most accomplished musician. The Bower family have long held important positions in the Black Dike Mills, and have been connected with the band throughout its career. Mr. Bower's brother, Phineas, preceded him as bandmaster, and held that position for 21 years. Mr. Phineas Bower was a great euphonium player, second to none, amateur or professional, in his day. Pressure of official duties at the mills compelled him to retire from the band in 1895, and the band chose his brother, Mr. Harry Bower, to succeed him. How wise their choice was is proved by the ever-increasing popularity of the band during the ten years he has been in charge. Mr. Harry Bower is a very brilliant cornetist; he is also a first-class musician, having thoroughly studied the theory and practice of music in various directions. In addition to holding the position of bandmaster, he

In some parts of the Punjab people have gone in terror of the "Mummy Sahib," an atrocious European who is supposed to abstract his victims' brains through a hole bored in their skull, using the extract in the preparation of a particularly valuable and efficacious medicine. The "Mummy Sahib" is reputed to pay a fee to the Government for license to carry on his nefarious trade. Not many years ago a native official in Assam was prosecuted for circulating a report to the effect that the Government had ordered a list of marriageable girls to be compiled, in order that they might be distributed as a reward to the officers and men of a military force serving on the frontier.

In this case the origin of the rumor could be traced, and its inventor had evidently purposed to make a little money by promising, for a consideration, to withhold the names of any girls whose friends and relatives desired to save them from such a fate. As a general rule, however, the agency which starts the libel remains a mystery. Nor does any one know to this day who despatched the first of the ill omened cakes which were sent about from village to village, as a warning of trouble to come, on the eve of

THE MUTINY OF 1857.

What is certain is that horrible and malignant rumors like that current in Mandalay meet with ready acceptance, and that, once in circulation, they are not quickly eradicated. Whatever the authorities may do, it is quite likely that as long as the royal visit to Burma is remembered it will be connected with the plague, and that graybeards who are now children will be ready to explain how the affair came about.

The Eastern idea of justice is not that which prevails in the West. A Persian historian relates of the Sultan Alptegin that, when one of his followers had been found guilty of stealing poultry, he sentenced the man to death, but, relenting, ordered him to be driven through the army, with the purloined fowls, still alive, hung by their legs to his ears. The writer gives a graphic description of the tortures suffered by the thief as the birds in their fright tore at his face, and he adds: "The news of this fact having reached the ears of the people, they agreed that so upright and just a sovereign was worthy to be their ruler." It would not be surprising if the story of the poisoned wells at Mandalay came eventually to be told with the corollary that it only proved the sagacity and statecraft of the Shahzadah.

CANADA'S CHALLENGE.

Farm Produce Exports in Future to go Direct to London.

During the present year there will be a tremendous struggle between Canada and the United States for the farm produce import trade of Great Britain.

Hitherto the port of entry for the farm produce of both these countries has been Liverpool, but hereafter the Canadian Government have decided to export to London only. By so doing they will obtain a great advantage over their American rivals.

Special arrangements have been made with the Allan Line of steamships to convey the goods across, and the Allan Line has made arrangements with the Surrey Commercial Dock Co. They are now completing the largest cold storage building in the United Kingdom, whereby frozen produce can be immediately transhipped from the cold storage chambers on board the vessels to the warehouses. The new building covers an area of nine acres.

The managing director of the Allan Line said recently: "The merchants will be able to come down to the dock and inspect the goods without the slightest difficulty."

"I feel certain that the increase in the Canadian trade owing to this arrangement will be enormous."

"So sorry not to have heard your lecture last night," said the loquacious lady. "I know I missed a treat; everybody says it was great." "How did they find out?" asked Mr. Frookcoat. "The lecture, you know, was postponed."

WAR ON THE ANARCHISTS

ENGLAND CONDEMNED FOR GIVING THEM REFUGE.

Europe's Demand for Common Measures of Protection May Now be Heeded.

The odious crime at Madrid has raised again the practical problem of how society shall protect itself against its most venomous enemies, writes a London correspondent. Europe has long complained that the spread of anarchism and its virtual immunity is due to the free asylum offered to even its most vicious members by Great Britain. It was the British Government which vetoed concerted action for protection against this danger a few years ago by declining to take part in an international conference on the subject. It has therefore been said, and there is some truth in the allegation, that Great Britain has purchased immunity for the royal family and other authorities by making a tacit bargain with the most despicable criminals that infest the earth.

It is a fact that the loud mouthed creatures who openly brag of their murderous intentions in Soho and other London districts fully understand that they will be driven out of the country the moment they lift their hand against a British official. Now that they have attempted to kill an English Princess they are making the matter worse by apologizing for "the necessity" and seriously arguing like a lawyer in court that Ena ceased to be an English Princess when she became Queen of Spain. They assume, therefore, that they will be allowed to continue to plot their assassinations in London at their leisure, and they brag openly that no less than twenty of their number went from London to Madrid.

FOR THE PURPOSE OF MURDER.

Since the retirement of Chief Melville of Scotland Yard they have laughed at the attempted espionage of the London police, and for that matter they have no serious reason to fear it. The denial of the Scotland Yard officials that the Madrid plot was concocted in London cannot be accepted. The evidence that it was fully known here days before the royal wedding is overwhelming.

The question now pressing for solution is what the future policy of the British authorities toward avowed conspirators against human life who make their headquarters in this country will be. There are many signs that public sentiment, and official sentiment as well, has undergone a great change in the last few years. The police alone naturally wish to continue the present engagement because it relieves them of the terrible responsibility of preserving the lives of the King and the royal family from professional assassins.

It is urged also that the verminous crew can be suppressed only by means of laws so drastic as to violate the principles of personal liberty which Englishmen hold so dear. It is further pointed out that the expulsion of anarchists from England, or their imprisonment, say, as lunatics, would incite most determined reprisals by many unknown members of the infernal fraternity. The personal danger to King Edward would become for the time being greater than that of

ANY OTHER SOVEREIGN.

This rather selfish view furnishes no answer to the emphatic Continental protest that England has no right to grant facilities for murder abroad in order to protect herself against a coming peril. This complaint is now becoming so insistent and its reasonableness is so obvious that the Government will probably soon be compelled to assent at least to a general consultation as to how best to deal with the problem by international measures.

It would be necessary for America to play a prominent part in such a conference.

MURDER UNDER HYPNOSIS

HOW A WOMAN DROVE A MAN TO KILL HER HUSBAND.

Though the Wife Took no Part in Commission of the Crime, She Gets Heavier Penalty.

At the Rouen (France) Assizes a remarkable trial has just ended, which has resulted in the sentence of a man to five years' solitary confinement for the murder of his mistress's husband, while the woman herself, though she took no part in the actual commission of the murder, was sentenced to ten years' solitary confinement. The reason for this apparently absurdly illogical apportionment of punishment must have been that the judge was convinced that the man was the victim of the hypnotic influence exercised over him by the woman. And in view of the proof afforded by scientific investigation in recent years of the reality of this mystic power, the evidence seems to justify his opinion.

Mme. Tulle, the woman in the case, was the wife of a saloonkeeper at Bosc-Beranger, a little village of something over 100 souls, near Rouen. She is irredeemably ugly, with small, piglike eyes and a shrill voice. Pierre Ferqueres was the village blacksmith, a big, lumbering, slow-witted fellow. Both are good types of "la bete humaine," whom Zola delighted in portraying. Mme. Tulle presided over the bar while her husband spent most of his time drinking or sleeping off the effects of his potations. When Pierre imbibed he used to stand before the bar talking to the woman, and others present, in their rough fashion, chaffed him on

HIS ATTENTIONS TO HER.

"Oh, indeed," said she on one of these occasions, "he is attentive enough when there are people about, but when we are at tete-a-tete he is stricken dumb."

"So," explained Pierre, "not wanting to seem more of a fool than I am, the next time we were alone together I made love to her in earnest." Having caught him in her toils she held him fast. When he did not come often enough to the bar she would drive around in her cart to fetch him. Tulle, meanwhile, alternately boozing and slumbering, paid no heed to them. But his wife wanted him out of the way, for all that, "because," as she told Pierre, "then we could get married."

"One evening," the man told the jury, "Tulle was dozing over the table in the kitchen while we took coffee. Mme. Tulle stood up behind him, caught hold of his neckcloth, and made as if she would twist it and strangle him, looking me straight in the eyes the while. I did not move; somehow I couldn't; I seemed petrified. Then, still holding the neckcloth, she whispered to me, 'Won't you ever have the pluck to—' shrugging her shoulders."

Pierre declared, and his manner certainly impressed the jury with his sincerity, that he shrank from the idea of committing murder. On another evening there occurred a somewhat similar scene to the above. Again they were in the kitchen. "She put both her hands around Tulle's neck as if to throttle him," said Pierre. Tulle laughed, thinking it was a joke. But she was looking straight at me, and whispered low 'That is how you must do it!'

It was on a Sunday and he did it. Pierre, Tulle and his wife had been drinking and Tulle had laid down on his bed to "sleep it off" as usual. When he was slumbering soundly Mme. Tulle fixed

HER PIERCING LITTLE EYES

on Pierre and made a gesture with her hands as though tugging at the ends of an imaginary neckcloth. Then, Pierre said, he was seized with an impulse which he could not resist. Hardly knowing what he was doing, he told the jury, he went to the bed, took the sleeping man's neckcloth in his hands and tightened it. He used little pressure at first, he said, but the man

SUNLIGHT SOAP

Wash oilcloths and linoleums with warm water and Sunlight Soap, rinse clean and wipe dry. The colors will be preserved and the surface unharmed.

Common soaps fade the colors and injure the surface. Sunlight Soap cleans, freshens and preserves oilcloths and linoleums.

Sunlight Soap washes clothes white without injury to the most delicate fabrics, or to the hands, for it contains nothing that can injure either clothes or hands.

Sunlight Soap is better than other soaps, but is best when used in the Sunlight way (follow directions).

Equally good with hard or soft water.

LEVER BROTHERS LIMITED, Toronto

PERSONAL POINTERS.

Interesting Gossip About Some Prominent People.

Mr. John Morley began his career as a London journalist by writing literary reviews.

The Prince of Wales killed his first tiger near Jaipur, curiously enough the very place where King Edward shot his first thirty years ago.

Sir Edward Grey, British Secretary of State for Foreign Affairs, is a great fly-fisher, besides being one of the best tennis-players. He is one of the authorities on the lordly salmon.

The Emperor of China has a household consisting of 500 persons, including 30 bearers of State umbrellas, an equal number of fan-bearers, thirty physicians and surgeons, seventy-five astrologers, seventy-six cooks, and sixty priests.

Mme. Sarah Bernhardt has a gown worth \$7,500. Of ivory satin, it is decorated with diamonds and turquoises. Two hundred animals were needed to procure the ermine to line the train. On the skirt is a band of 1,800 turquoises.

The Marquess of Bute, who is the fortunate holder of eleven titles, lord of over 180 square miles of land, and a five-fold millionaire, is a rare combination of bookworm and keen sportsman. In his attire he favors the kilts and in music the bagpipes, on which instrument he is an expert performer.

If the late King of Denmark was the grandfather, his son-in-law, King Edward, is the uncle, of Europe. His Majesty stands in that relation to the German Emperor, the Czar of Russia, the Grand Duke of Hesse, and to King Haakon of Norway, who is his son-in-law also. Then, the nieces of His Majesty are the Empress of Russia, the future Queen of Greece, the future Queen of Roumania, and the future Queen-Consort of Spain.

Mr. Samuel Coles, of Luxborough, Somerset, is receiving congratulations from Bible Christians all over the country on the celebration of his golden wedding. He spends his time in the week as a wheelwright, and on Sundays walks many miles to preach in village chapels, stopping to pray at each milestone he passes. When he goes to Tiverton to preach it means a tramp of fifty-two miles, which he begins on Saturday afternoon and finishes on Monday morning. He has fifty descendants.

The Queen of Sweden is a deeply religious woman who holds strong even-

Scotland.

A forestry department for Scotland may shortly be a reality.

Party bands must in future have a permit from the magistrates of Glasgow before they can parade through the streets of the city.

The City Arms Hotel, Dunfermline, one of the oldest licensed properties in Dunfermline, has been sold at the upset price of £7,000 to Mr. Andrew Burt, solicitor, on behalf of a client.

Lord Lister has just entered on his eightieth year. Forty years have passed since, as surgeon in the Glasgow Royal Infirmary, he announced to the world his antiseptic system of surgery.

Lord Rosebery stated recently that there was no foundation for a report in American newspapers that he had sold his Burns manuscripts, "Auld Lang Syne" included, to Mr. Pierpont Morgan for £10,000.

The death occurred of Colin Storrar, the second oldest Crimean veteran, in Aberdeen. Deceased, who was a native of Morayshire, was 84 years of age. He enlisted in the 93rd Highlanders at Er-gin.

The 160th anniversary of the battle of Culloden occurred recently, and many made their way to the battle-field, which is situated about six miles from Inverness. A few wreaths were placed upon the cairn.

Mr. John Reid, of Govan, Glasgow, whose death in his seventy-fourth year is announced, was the last white survivor but one of Dr. Livingstone's African exploring parties. Sir John Kirk is the only remaining survivor.

At present there are more than 1,600 members on the roll of the Royal Scots Edinburgh Association, and there are five widows and two Crimean veterans on the pension list. Last year £106 13s was paid in relief.

By five votes to two the Edinburgh magistrates resolved to adhere to the ten o'clock closing of public houses in the city. Lord Provost Sir Robert Cranston and Bailie Dobie, in the minority, voted for 11 o'clock closing.

This complaint is now becoming so insistent and its reasonableness is so obvious that the Government will probably soon be compelled to assent at least to a general consultation as to how best to deal with the problem by international measures.

It would be necessary for America to play a prominent part in such a conference. The expulsion of anarchists from London would drive the bulk of them across the Atlantic. Their numbers are large. There are no less than ten avowed anarchist clubs in London and the members of one amounts to 1,000. They are not penniless, and the present American immigration laws would be an ineffectual barrier against them. No practical suggestion of dealing with the problem has been forthcoming amid the universal anger of the last few days, but some official move will soon be made, and it is not impossible that it will be on British initiative.

One branch of the anarchists in London who pretend to know all about the campaign against King Alfonso declare that he was the victim of an implacable anarchist vendetta, due to the treatment of suspects at Barcelona several years ago. This was known at the time as

"THE HORRORS OF MONJUICH."

and referred to the barbarous treatment in the fortress of that name inflicted indiscriminately on all who were arrested in connection with some early anarchist rising in Barcelona. The prisoners were subjected to the rack and other forms of torture in order to extort confessions from them. Several emerged from the fortress maimed for life.

One English journal printed detailed narratives of the released men, several of whom were innocent and some of whom were not anarchists at all. French pamphlets on the subject were circulated throughout Europe and perpetrated the deeds which were charged against the Spanish Government. Alfonso was then a child and had not the faintest responsibility for these acts, but the Catalan can be revengeful as well as the Corsican, and ever since the young king assumed power he has been pursued by the vendetta.

One may trace each of the four attempts on King Alfonso's life since 1902 to this cause. He has been four times sentenced to death by anarchist tribunals, the process being repeated after each failure. The anarchists in London cynically affirm that he will now be tried and condemned for the fifth time.

The Echo de Paris demands international action for the suppression of anarchists. After alluding to the abortive conference in Rome in 1898, the Echo expresses the hope that England's opinion on the subject of harboring anarchists has now changed. The Echo thinks that England's apathy in regard to anarchism greatly encourages it.

on Pierre and made a gesture with her hands as though tugging at the ends of an imaginary neckcloth. Then, Pierre said, he was seized with an impulse which he could not resist. Hardly knowing what he was doing, he told the jury, he went to the bed, took the sleeping man's neckcloth in his hands and tightened it. He used little pressure at first, he said, but the woman's eyes were riveted upon him and they seemed to drive him on. He tugged harder and finally exerted all his strength. How long he did it he did not know, but suddenly the spell seemed to leave him and he stopped. The woman had left the room.

"She came back in a minute," said Pierre, "knelt on the bed and looked at Tulle. 'He is dead right enough,' she said, 'he is quite blue in the face. Now you had better go.' After a pause she added, 'I shall have to cry to-morrow. I don't know whether I shall be able to.'"

Acting was not her forte. She denied Pierre's story in court, but her assumption of indignation was ill done. At last, under cross-examination, she blurted out: 'I don't say that I didn't consent to the murder, but I—I didn't order him to do it.'"

That settled her guilt in the minds of the jury which brought in a verdict against both prisoners, leaving it to the judge, of course, to determine what sentence should be passed. As some of them afterward admitted, his course in imposing the heavier penalty on the woman met with their entire approval. As the murder was entirely unprovoked and without extenuating circumstances, one can only wonder why the death sentence was not passed. But French law is peculiar.

GIVE UP TROUSERS.

Famous Paris Tailor States That Knee Breeches Will be Worn.

"Men should not wear trousers," says Mr. Redfern, the famous Parisian ladies' tailor, in giving his views on the subject of men's attire.

According to Mr. Redfern, trousers are either too long, and have to be turned up, or are too light and have to be jerked up when the wearer sits down, which is anything but a graceful gesture. He declares that knee breeches with leggings for out of doors, would be the most becoming things in which men could encase their lower extremities.

According to Mr. Redfern, stiff collars and cuffs are not only uncomfortable, but ugly. Frills at the wrist and a soft turn-over collar would be much more graceful. His ideas is that coats with spreading tails, something like the modern frock coat, but much more ample, would be an ideal garment for men, and this should be, if not entirely made of silk, at least lined throughout with it. Fancy waistcoats should be worn at all times. They live up a man's appearance.

Lastly, says Mr. Redfern, high and stiff hats should be replaced by soft felt with wide brims, the broader the better.

Pretty Parisiennes are setting superstition at defiance. The favorite feather of the moment is the peacock plume, which has always been considered very unlucky.

Hitherto no Frenchman would ever permit a woman for whom he cared to wear yellow flowers, because it is considered in France that a woman who wears yellow flowers will be unfaithful to her love. But this spring buttercups, yellow tulips, dandelions, cowslips, etc., appear in nodding bunches on most of the smart little morning hats.

Opals are also coming into favor. Some of the faintest white gowns with little square décolletés seen at the fashionable restaurants, are worn with strings of opals about the throat, or adorned with opal buttons.

POOR FELLOW.

Towne—Tenpeck tells me his wife actually pulls his hair when she gets mad. Browne—The idea! Why doesn't he keep his hair cut short?

Towne—I asked him that and he said his wife wouldn't let him.

walks many miles to preach in village chapels, stopping to pray at each milestone he passes. When he goes to Tiverton to preach it means a tramp of fifty-two miles, which he begins on Saturday afternoon and finishes on Monday morning. He has fifty descendants.

The Queen of Sweden is a deeply religious woman who holds strong evangelical opinions: it is through her influence that the Salvation Army has had greater success in Sweden than in any other country. Queen Sophie does not enjoy good health, but she is beloved for her goodness and kindness of heart. She is greatly assisted in her religious duties by her second son, Prince Oscar of Sweden, who often makes a preaching tour through the country and co-operates with the Salvation Army.

The Bishop of Carlisle, England, is a man after the heart of his predecessor. The late Bishop boasted of being able to make porridge and sew on his own buttons, and the present Bishop has the same accomplishments. As a boy he was taught to work with his hands and knit stockings. He is not ashamed to tell how he knitted stockings. Every kind of needlework, with all its attendant mysteries, is familiar to him. He was at one time a Government inspector of schools, and when he came to examine the sewing of the pupils they were astonished to see him pick out the weak places. He went up in the estimation of all when he said that he knew how to make a shirt.

GOSPEL IN DUST HEAP.

Oxford Men Find Papyrus on Christ's Life by Demosthenes.

Professors Grenfell and Hunt, of Oxford, announce the discovery of the fragment of lost gospel on the site of Oxyrhynchus, Egypt, which promises to arouse a theological sensation.

The professors found an enormous number of Greek literary papyri, including compositions by Pindar and Euripides, and new speeches by Demosthenes.

The fragment of the gospel is on vellum and is legible after sixteen centuries. The writing is in microscopic Greek characters and quite distinct.

In speaking of the discovery, Professor Grenfell said:

"This certainly is no part of any extant gospel, and theologians will have to decide on its theological value. It is unusually well written from a literary standpoint. There are some three hundred words on the page. The fragment begins in the middle of a speech.

"Jesus and His disciples have entered the temple and have met a Pharisee who rebukes them for omitting to go through some elaborate ceremonial of ablution. Jesus asks what the Pharisee has done, and the Pharisee in his reply describes minutely the process of purification. This is deeply interesting theologically, because no previous authority details such a ceremony.

"There follows a powerful and eloquent denunciation by Jesus of mere outward purification. Jesus says that He and His disciples have been purified with the living water or water of life. Another new point disclosed in the fragment is the first mention of a portion of the temple called the Hagiauterion, or place of purification. This was never mentioned before so far as is known."

Oxyrhynchus was once the site of innumerable monasteries containing 4,000 monks. Grenfell and Hunt's discovery was made in the mounds that once were the city's dust heap. One hundred and thirty-one boxes of papyri found dated from the second century, B. C., to the sixth century, A. D. The papyri were undoubtedly from some scholar's library.

MOTHERLY.

"Yes," said Miss Ann Teek, coyly. "I am free to confess this much. Mr. Kallow has expressed more than ordinary regard for me and I believe he appreciates my affection for him."

"Yes," replied Miss Knox, "his own mother being dead, I suppose he does."

Edinburgh Association, and there are five widows and two Crimean veterans on the pension list. Last year £106 13s was paid in relief.

By five votes to two the Edinburgh magistrates resolved to adhere to the ten o'clock closing of public houses in the city. Lord Provost Sir Robert Cranston and Bailie Dobie, in the minority, voted for 11 o'clock closing.

Sergeant Robert Laphann, an Indian mutiny veteran, and one of the best known men in the Abernethy, died at his residence Nethybridge. Although a native of Bath, Sergeant Laphann had lived in Invernesshire for thirty years.

During January, February and March the total value of all fish landed on the Scottish coasts was £488,745, and during March alone it was £145,124. In the three months there were 934,530 cwt. of fish, of which 353,959 cwt. were herring.

In order to cope with the enormous increase in parcel post work at Glasgow, a handsome new building is being erected on a site about half a mile distant from the General Post-office, where the work has hitherto been done. It will cost about £80,000.

Mr. John Macgregor, ex-postmaster of Perth, died at Heaton Chapel, Manchester, recently. Mr. Macgregor, who was in his 91st year, entered the postoffice service in Perth on Aug. 9th, 1838, and continued in service at the old postoffice situated at the end of the Perth bridge, for 32 years.

Mr. Robert S. Ross, solicitor, of Invergordon, died suddenly of heart disease. Mr. Ross came from Edinburgh to Invergordon early in the seventies, and since 1878 he acted as town clerk. He was for a long time clerk to the Justices of the Peace, and only resigned that position three years ago.

Isabella McGrorty, aged 64, who resided at Henrietta place, in the east end of Glasgow, died suddenly, and almost exactly 24 hours later her son, William McGrorty, aged 42, a pawnbroking salesman, also died with startling suddenness. Two days before the husband and father was buried, so that the three deaths occurred all within four days.

Following the custom of some years' standing, Lord Provost Sir Robert Cranston entertained to dinner in Edinburgh City Chambers a few days ago a number of the leading volunteer shots in Scotland in honor of their successes at Bisleigh. The company were principally the members of the Scottish eight team who won the Elcho Shield and the Scottish team who won the Mackinnon Cup.

Considerable alarm was occasioned in the east end of Dundee, on a recent Saturday by a runaway horse, which, in its flight, crashed into the windows of the Eastern branch of the Bank of Scotland. On account of the jute-laden lorry, to which it was attached, the animal was forced right on to the teller's counter, and a pile of money was scattered into the street. Considerable alarm was caused among the officials and customers of the bank, but fortunately no one was injured.

A TEST OF LOVE.

"You are sure you have than confidence in me that is so essential in choosing a life partner?" she said, inquiringly. "You trust me fully?"

"Oh! implicitly," he replied. "I would trust you with my life. Only show me how I can prove it."

"I will," she said, with a happy sigh. "Promise me—"

"Anything you ask," he interrupted. "The promise is given beforehand. For you I would go through Niagara whirlpool in a barrel, I would cross the ocean in an open boat."

"Promise me," she repeated, slowly and deliberately, "that when we are married you will put your bank account in my name."

However, of course, there are limitations to even the most devoted love, and so he left her weeping over the hollowness and mockery of masculine protestations.

Young Borem (in the parlor)—"Tommy, does your sister know I am here?" Tommy—"I think so. She told mamma this morning she had a presentiment that trouble was coming."

Buy Hair at Auction?

At any rate, you seem to be getting rid of it on auction-sale principles: "going, going, g-o-n-e!" Stop the auction with Ayer's Hair Vigor. It certainly checks falling hair; no mistake about this. It acts as a regular medicine; makes the scalp healthy. Then you must have healthy hair, for it's nature's way.

The best kind of a testimonial—

SEASON OF 1906.
UNTIL FURTHER NOTICE THE

San Francisco has had another big earthquake shock, entailing much damage. This should be the last straw to break the camel's back and a fair notice to abandon the city to the elements and locate in another direction—the Canadian Northwest for instance.

President Roosevelt is about to nationalize the remaining coal and oil lands. If Britain had done this with her coal years ago she would not now be seeking an outlet for surplus population. There is an application of the policy nearer home, and Canada could wisely follow the President's example—Toronto Globe.

REPLENISH THE FISHERIES.

The rapid decrease in the catch of whitefish in our international waters proves the need of energetic measures by the Dominion and Provincial authorities. The present policy includes the establishment of a close season, the restriction of licenses and fishing appliances, restrictions regarding the taking of undersized fish, and the restoration of the supply by artificial propagation in hatcheries. The catch of the past year shows that, so far as whitefish are concerned, results are unsatisfactory. These lakes and rivers, as a field for the production of an important food supply, have not been used to the best advantage. The common American vanity about improving opportunities is poorly sustained in our experience with the inland fisheries. These waters are a magnificent opportunity, and so far from our neighbors being keen to improve it they have been phenomenally neglectful and improvident. It has been only by persistent appeal and agitation that the Ontario Government has been able to secure sufficient co-operation to avert the absolute destruction of these fisheries. The general indifference of the public and the active work of a few who have short-sighted interests to serve are the obstacles which our Provincial authorities find it hard to overcome.

Branch Office, 625 F St., Washington, D. C.

The command of the Conservative party in Ontario to its leader, the Premier, is that he "loosen up." He has been posing as a strong man. Local government, according to his ideas, was to be of an exalted character. The pettiness of patronage was to be beneath his notice. But he has been literally compelled to do some rank things, and the end is not yet.

Ottawa Journal.

Senator Cox was staggered at the idea that he should give his whole time to the Canada Life company for only \$15,000 a year as president. Doesn't seem to have occurred to him that a good many very clever men could be found who would cheerfully give all their time to the policy-holders for that amount or less.

Stratford Beacon, (Liberal).

Premier Whitney, when in Opposition, used to make the air vibrate with his denunciations of the "horde of Ontario Government officials." Yet he has not reduced the number one iota, but instead has increased it materially. Every dismissal of a Liberal has been to make way for a Tory, and new offices have been created without stint. There is a wide difference between profession and practice in Mr. Whitney's case.

Sherbrooke, Que., Gazette.

The brand, "Made in Canada," accompanied by a certificate upon each can and package that it is put up under the supervision of a Government inspector, should be worth a mint of money both to the Canadian cattle and hog raiser and to the pork and meat packers of the Dominion.

Kingston Freeman.

The hideous practices discovered in the methods of the American meat trust has thrown a wet blanket over the Republic and will put many millionaires to shame. So shameful and disgusting are the disclosures, President Roosevelt has demanded immediate action. In future Canada will have use for its own cattle, the American packing house products being given the cold shoulder, as it should be, according to the Commissioners' report just published.

The English Police.

In the conduct of the police department in an English city we find a striking comparison with our American notion of police work. In Manchester, as in London, the policeman is always the servant of the public. As in London, he carries neither club nor revolver. His duties are very nearly the same as those of a New York officer. It is in his method of doing his work that the striking difference lies. He is always quiet, always neat, always respectful, even deferential, in his treatment of the public. Such overbearing manners as we sometimes see in New York policemen would not be tolerated in Manchester—or in London, for that matter.—Success.

A Biography in a Nutshell.

Born, welcomed, caressed, cried, fed, grew, amused, reared, studied, examined, graduated, in love, loved, engaged, married, quarrelled, reconciled, suffered, deserted, taken ill, died, mourned, buried and forgotten.

Sure on One Point.

"Out late last night? What time did the clock say when you got in?"
"I don't remember what the clock said, but I will never forget what my wife said!"

BIRD AND BEAST.

Battle Between a Hawk and a Big Black Dog Mink.

Silent as an owl in the black of night, the hawk glided low on whist wings across the little open space cleared by the fallen maple, paused an almost imperceptible instant above the unlistening squirrel, and then, wings closed, dropped upon him with unerring talons. But for some strange reason the harrier seemed powerless to bear away his kill; while his angry, frightened screams drowned out the dying squeak of the squirrel, he strove with great rattling wing strokes to get purchase on the air, but could not. Over and over again he struck downward with his beak, apparently at the squirrel, though of this, because of the blur of his whipping wings, I could not be sure. In a moment he half toppled forward, and then, like a huge broken winged partridge, he flopped about among the tangled coils of roots, uttering meanwhile shrill screech on screech that seemed fairly to lacerate his throat. In but little more than it takes to tell it a dozen kingbirds had gathered, and were buzzing round the struggling harrier like gaddies round a horse, adding their spiteful cries to his harsh din; now a crow appeared out of nowhere and searched deep in his throat for his hoarsest cry; blue jays flashed across the clearing and back again in a frenzy of clamorous excitement; a swarm of chattering blackbirds rushed into the tree above me till its branches sagged and creaked like those of a laboring tree over-weighted with fruit—all in an instant bedlam was let loose round that old wind wrecked maple.

Under cover of the uproar I crept nearer and saw that a big black dog mink, his bulldog jaws clamped on the upper leg of the harrier, was grimly fighting to pull him down from behind, while the harrier, with the speed of terror and hate, sought desperately to reach his assailant with his beak. It looked as if the mink must win, for the harrier was perceptibly weakening in his vain counter attack; but a sudden lift with the harrier's long wings half tore the mink from his hold and swung him for one brief moment within distance of that rending beak. Rip; a big red gash gaped open on the mink's writhing flank, and he let go and tumbled back among the roots. Up leaped the hawk, his pearly white breast streaked and blotched with blood from his wounded leg. Like magic the cries of all but the kingbirds were hushed, while, still screaming with rage and hurt, the hawk rose heavily skyward and marked his course athwart the wind for the shelter of the woods.—Harold S. Deming in Harper's Magazine.

A traveler, speaking of some of the oddities of Persian customs when viewed with occidental eyes, said:

"Depending as we do upon illusion and scenic effects in our theaters, the presentation of a Persian play by native performers strikes the westerner as little short of ridiculous, the extreme solemnity of all concerned making the appeal to hilarity all the stronger. In one of their favorite miracle plays the prophet is supposed to ascend to heaven, and this dramatic incident is accomplished by the very simple expedient of drawing him up from the stage and out of sight with a block and tackle. The tackle is attached to his belt by an attendant in plain view of the audience. So strong, however, is the imaginative power in the oriental that many of the onlookers will be observed weeping openly."

A PESSIMIST'S QUESTIONS.

Why is it that a cleaning of windows is the signal for a rainstorm?

Why is John always late the night the cook is out and visitors are expected in the evening?

And why, oh, why, do visitors always come the afternoon in the week when one is not dressed to receive them?

Why does a woman think she has so much better taste than her richer neighbor if she but had as much money to gratify it?

Why is it that a leak in the pipe is always discovered Saturday afternoon, when a plumber cannot be found until Monday morning?

Why is it that when one has made a purchase one sees ten minutes later something else which would have been better or cheaper or more becoming?

A Trite Saying.

It is a trite saying that no man is stronger than his stomach. Dr. Pierce's Golden Medical Discovery strengthens the stomach—puts it in shape to make pure, rich blood—helps the liver and kidneys to expel the poisons from the body and thus cures both liver and kidney troubles. If you take this natural blood purifier and tonic, you will assist your system in manufacturing each day a pint of rich, red blood, that is invigorating to the brain and nerves. The weak, nervous, run-down, debilitated condition which so many people suffer from, is usually the effect of poisons in the blood; it is often indicated by pimples or boils appearing on the skin, the face becomes thin and the feelings "blue." Dr. Pierce's "Discovery" cures all blood humors as well as being a tonic that makes one vigorous, strong and forceful. It is the only medicine put up for sale through druggists for like purposes that contains neither alcohol nor harmful habit-forming drugs, and the only one, every ingredient of which has the professional endorsement of the leading medical writers of this country. Some of these endorsements are published in a little book of extracts from standard medical works and will be sent to any address free, on receipt of request therefor by letter or postal card, addressed to Dr. R. V. Pierce, Buffalo, N. Y. It tells just what Dr. Pierce's medicines are made of. The "Words of Praise" for the several ingredients of which Dr. Pierce's medicines are composed, by leaders in all the several schools of medical practice, and recommending them for the cure of the diseases for which the "Golden Medical Discovery" is advised, should have far more weight with the sick and afflicted than any amount of the so-called "testimonials" so conspicuously flaunted before the public by those who are afraid to let the ingredients of which their medicines are composed be known. Bear in mind that the "Golden Medical Discovery" has the BADGE OF HONESTY on every bottle wrapper, in a full list of its ingredients.

Dr. Pierce's Pleasant Pellets cure constipation, invigorate the liver and regulate stomach and bowels.

Dr. Pierce's great thousand-page illustrated Common Sense Medical Advisor will be sent free, paper-bound, for 31 one-cent stamps, or cloth-bound for 50 stamps. Address Dr. Pierce as above.

THE APACHES.

This Tribe Holds the Record as Bad Indians.

Scarcely a tribe of our American Indians but what have engraved their record of crime and infamy high up on history's wall, yet above them all is the Apaches'.

From 1540 to 1853 New Spain and Mexico carried on a so called warfare with these people. The Apaches were vastly outnumbered by the Mexican soldiery, but what they lacked in numbers was more than made up in courage and craftiness. The Apache ever had a thorough contempt for the Mexican soldier, and in later years, when they were fighting with firearms as well as arrows, they would not waste cartridges on the Mexicans, but would kill them with arrows, spears and stones, saving their cartridges for other and more worthy foes.

When this southwest region became a part of the United States the Apaches were a serious problem with which we had to contend. Our government vacillated between a simpering peace policy and the other extreme, their extermination.

Their zone of wandering being intersected by the international boundary line further complicated matters. They would raid down into Mexico and then rush back with the plunder to our side of the line, out of reach of the pursuing soldiers. Next it would be a raid on the Arizona side and a flight into the wild mountains of Sonora. The Mexican government attempted to assist their miserable army by giving a scalp bounty, and for years they paid out their gold coin for Apache scalps. Scalp hunting became a recognized industry. The horror of this was that to the Mexican official all scalps looked alike, whether from the head of a hostile or a friendly Indian. The price was \$100 for a man, \$50 for a woman and \$25 for a child. It is small wonder that the tribe sank deeper into savagery than ever when we stop to think that the men knew there was a price set on the scalps of their wives and children, and there was a horde of human fiends, white in color, but more savage than the savage himself, who were hunting them as they would a cougar of the mountains.—E. S. Curtis in Scribner's.

QUICKER THAN LIGHTNING.

Action of the Human Body Outstrips Everything in Motion.

"As quick as lightning" is a phrase colloquially used to express the maximum of rapidity, but, according to a well known scientist, electricity itself is outstripped by that old fashioned machine, the human body, by which it appears powers can, so to speak, be generated in the brain, transmitted through the nerves and developed in the muscles in an infinitesimal fraction of a second.

It is stated that a pianist in playing a presto of Mendelssohn played 5,555 notes in four minutes and three seconds. The striking of each of these, it has been estimated, involved two movements of the finger and possibly more.

Again, the movements of the wrist, elbows and arms can scarcely be less than one movement for each note. As twenty-four notes were played each second and each involves three movements we would have seventy-two voluntary movements per second.

Again, the place, the force, the time and the duration of each of these movements were controlled. All these motor reactions were conditioned upon a knowledge of the position of each finger of each hand before it was moved,

RURAL WATER SUPPLY.

Its Sanitary Condition Not What It Ought to Be.

When such great sums of money are being expended by city governments that the inhabitants of towns may have a sanitary water supply it seems strange that the supply in rural towns should receive little or no attention. This latter population may seem relatively insignificant, but it comprises about 40,000,000 souls. This means that those 40,000,000 people are drinking the water most available without a thought of its sanitary condition.

These various sources of supply, whether wells, springs or small streams, are similarly unreliable for furnishing drinking water. The statistics of mortality in the country are very indefinite, but even these show that the rural population is not as free from illness as it should be. And though everywhere the rural death rate is lower than the urban death rate, yet the lowering in the country has not been as great as in the city. An examination of typhoid statistics shows that the death rate of other diseases is generally lower in the country than in the city, but the prevalence of typhoid is almost equal to if not greater in the rural districts than in the cities.

Several instances have been reported which show the rural typhoid rate to be ten times greater than the urban rate for the same district. To particularize, a certain district in central Pennsylvania proves this fact. It is made up of a rural population with 100 inhabitants to the square mile. It is a region of fine farms, wild mountains and woods, country residences and picnic groves. And in this valley there has been as much typhoid fever as in the city of Philadelphia.

Sad as this condition is, there seems to be no remedy for it. The sources of a city water supply are few and the city government easily controls the conditions affecting it. But what can be done when the sources of supply are numbered by the thousands? A mint of money and an army of chemists would not be sufficient to give the same care to the country supply that is given to that of the city.

SNOWSLIDES OF ROCKIES.

Peril of Mountains Takes Its Toll of Life and Property.

Every year the life of a miner in the high mountain regions is menaced by the avalanche or snowslide, and every year brings its list of casualties and of halfbreath escapes. The story of snowslides would fill a book and would be a thrilling, tragic and in some cases a gruesome one.

Men have ridden hundreds of feet on the back of a snowslide and have escaped unhurt. Others have been caught and buried so deep and in such uncertain spots that their bodies have not been discovered until the melting of the snow in the following spring.

Some have been caught as they were walking, but a few steps from the boarding house to the mine, or while emptying a car on the mine dump. Not infrequently men have found themselves temporarily imprisoned by the entrance of the mine being closed by a slide while they were at work and have had to dig their way out.

A Chinese cook at one of the Idaho mines stepped outside his kitchen door for a moment and was caught and hurled with the slide 1,000 feet down the hillsides and his body was not recovered till the following spring.

Such incidents denote the extreme suddenness, power and velocity of the slide. Little or no warning is given, a roar, a cloud of snow obscuring the

How Red Rose Tea is Grown

TEA is a native plant of Northern India. Transplanted to Ceylon it lost much of its strength and richness, but gained in fragrance and delicacy.

That is why Ceylon tea is not a strong tea.

That is why I blend Indian and Ceylon teas together—that is how the strength and richness, fragrance and delicacy of Red Rose Tea are secured—that is why Red Rose Tea has that "rich fruity flavor."

Red Rose Tea

is good Tea

Dr. Agnew's Cure for the Heart

A cure that has stepped to the bedside of a sufferer in the clutch of death. A cure that has unlocked the grip and stopped the pain in 30 minutes and gently led the heart-wracked soul out from the darkness and despair to the brightness and happiness that comes to one whose heart beats true, whose blood tingles with life and vigor. Dr. Agnew's Cure for the Heart is not heralded as a miracle worker, but it has many miraculous cures to its credit.

Weak heart—weak blood—weak nerves travel hand-in-hand, and you find the symptoms in such sensations as palpitation, fluttering, shortness of breath, weak and irregular pulse, smothering spells, chilly sensations, fainting spells, swelling of feet and ankles, weariness, tired feeling; all these presage heart disorder and you cannot afford to neglect them. Dr. Agnew's Cure for the Heart is a tried remedy—the sure remedy—the quick acting remedy—a real heart man.

ALL DRUGGISTS AND DEALERS SELL IT.
DR. AGNEW'S OINTMENT relieves Itches and Burning Piles with one application.

and the duration of each of these movements were controlled. All these motor reactions were conditioned upon a knowledge of the position of each finger of each hand before it was moved, while moving it, as well as of the auditory effect to force and pitch, all of which involves equally rapid sensory transmissions.

If we add to this the work of the memory in placing the notes in their proper position as well as the fact that the performer at the same time participates in the emotion the selection describes and feels the strength and weaknesses of the performance, we arrive at a truly bewildering network of impulses coursing along at inconceivably rapid rates.

Such estimates show, too, that we are capable of doing many things at once. The mind is not a unit, but is composed of higher and lower centers, the available fund of attention being distributed among them.

Legend and Reality.

Legend tells how Napoleon, while Moscow was in flames, found time to draw up a decree organizing the Theatre Francaise. Alas, the story is not true. Napoleon was in Poland when he received the decree ready to be signed. He there signed it and sent it back to Paris, but in the margin wrote the following: "To be forwarded when the army will be at Moscow. It is his majesty's intention that the decree should be dated from that town."

Obedience.

Every duty, even the least duty, involves the whole principle of obedience. And little duties make the will dutiful—that is, supple and prompt to obey. Little obediences lead into great. The daily round of duty is full of probation and of discipline. It trains the will, heart and conscience.

TRIP TO A FIXED STAR.

Would Be a Long Journey Even With Transportation Facilities.

There is a perpetual fascination about the stars and the immense distances at which they lie from one another and from us. To demonstrate the vast distance of Centauri from this planet a popular scientist gives the following illustration in London Answers: "We shall suppose that some wealthy directors, for want of outlet for their energy and capital, construct a railway to Centauri. We shall neglect for the present the engineering difficulties, a mere detail, and suppose them overcome and the railway open for traffic. We shall go further and suppose that the directors have found the construction of such a railway to have been peculiarly easy and that the proprietors of interstellar space had not been exorbitant in their terms for right of way.

"Therefore, with a view to encourage traffic, the directors have made the fare exceedingly moderate—viz, first class at 1 penny per hundred miles. Desiring to take advantage of these facilities, a gentleman, by way of providing himself with small change for the journey, buys up the national debt of Britain and a few other countries and, presenting himself at the office, demands a first class single fare to Centauri.

"For this he tenders in payment the price of the ticket, £1,100,000,000.

"Having taken his seat, it occurs to him to ask:

"At what rate do you travel?"

"Sixty miles an hour, sir, including stoppages," is the answer.

"Then when shall we reach Centauri?"

"In 48,663,000 years, sir!"

CASTORIA.

The Kind You Have Always Bought

Bears the Signature of *Chas. H. Pritchett*

covered in the following spring.

Such incidents denote the extreme suddenness, power and velocity of the slide. Little or no warning is given, a roar, a cloud of snow obscuring the sight of the real slide, and in a moment thousands of tons of snow, mingled with trees and debris, are shot down the gulch or the slope of a mountain as from the mouth of a cannon. In a few seconds all is over and the scenery of the little valley is completely changed.—Mines and Minerals.

What a Letter Will Do.

A proofreader, absent the importance of titles, read from his notebook these absurd sentences, each made by the omission of a single letter:

"The conflict was dreadful and the enemy was repulsed with great laughter.

"When the president's wife entered the humble sitting room of the miner she was politely offered a hair.

"A man was yesterday arrested on the charge of having eaten a cabman for demanding more than his fare.

"An employee in the service of the government was accused of having stolen a small ox from the mall. The stolen property was found in his vest pocket."

Observation.

An observant man in all his intercourse with society and the world constantly and unperceived marks on every person and thing the figure expressive of its value and, therefore, on meeting that person or thing, knows instantly what kind and degree of attention to give it. This is to make something of experience.—John Foster.

Tamed Poetry.

"I wish to submit a lyric, sir," said the timid young man. "My friends say it's a beauty—really sings itself."

"Humph!" said the cold hearted editor. "We couldn't use a poem like that. We want one that, once printed, will remain perfectly quiet and not keep our readers awake by singing itself at all times."

The true strength of every human soul is to be dependent on as many nobler as it can discern and to be dependent upon by as many inferior as it can reach.

The world which took but six days to make is like to take 6,000 to make out.—Brogne.

DR. AGNEW'S CATARRHAL POWDER cures Catarrh, Hay Fever, Cold in the Head.

Sold by F. L. Hooper.

Removed the Growth.

DOUGLAS & CO., NAPANEE, ONT.

DEAR SIRS,—During year 1890-91 I was troubled with a large lump growing on the right side of my neck near the ear. Had consulted several physicians and used everything I could hear of, all to no use. Was told to use

Douglas' Egyptian Liniment.

I did, and before I had used half a twenty-five cent bottle was permanently cured. Since then I have used it for everything where outward application is required; am yet to learn of anything in reason that I cannot cure with it. No man has any idea of its value until he has used it; would not be without it under any circumstance

Respectfully yours,

NATHANIEL W. REID.

Enterprise P. O.

S. BOND & CO., ODESSA.

TO THE PUBLIC—

Our Spring Goods have now arrived and we are able to show exceptional values and patterns in Crum's Prints, Sateen Prints, Dress Ducks, Organdies, Priestley's Lustres and Silks.

We have a full supply of Groceries, Flour, and Feed, Patent Medicines, Boots and Shoes, and Hardware, in fact everything kept by a general store.

We are able to compete with any general store in the provinces

We pay Highest Price for all Farm Produce.

S. BOND & CO., ODESSA.

The Osprey.

Allusion is often made, especially in fashion journals, to "osprey" feathers. Few words have been more loosely bandied about than this bird name. The Roman author Pliny's "ossifraga" (bone breaker) has been identified with the lammergeyer, a vulture that is reputed to break up bones too big for it to devour whole by dropping them from a height upon rocks. But both "ossifraga" and "osprey," a newer form, came to be applied to quite another bird, the fish hawk, which is now the true "osprey." Yet the "osprey" feathers—more properly egret feathers, or egrettes—do not come from this bird, but from the egret, or lesser white heron.

Happy Thoughts.

Doctor—Your throat affection is one of the rarest in the world and is of the deepest interest to the medical profession. Patient—Then remember, doctor, when you make out your bill that I haven't charged anything for letting you look down my throat.

The Strong Point.

He—Really, I never loved anybody before. She—That isn't the point. Are you sure you'll never love anybody by and by?

In so far as you approach temptation to a man, you do him an injury, and if he is overcome you share his guilt.—Johnson.

Especially

For Women

FRUIT-A-TIVES are the finest medicine in the world for women.

As a mild and gentle laxative—as a positive and speedy cure for Constipation and Biliousness—as the only cure for weak and irritated kidneys and especially for "that pain in the back"—as a positive cure for headaches—and as a general tonic to build up and invigorate the whole system—**FRUIT-A-TIVES** stand supreme.

In cases of irritated Ovaries, Ovarian Pains, Vaginal Catarrh, Excessive and Scanty Menstruation, Ulcerations, Bearing Down Pains—and all those troubles peculiar to women—

Fruit-a-tives

OR "FRUIT LIVER TABLETS"

have the most remarkable effect.

Ninety-nine cases out of a hundred of Female Troubles are due to neglect. Bowels become constipated—kidneys irregular—skin neglected—and the poisons of the body, which should be carried off by these important organs, are taken up by the blood, carried to the female organs and poison them, thus starting up a train of female troubles.

FRUIT-A-TIVES are made from fruits and by their remarkable action on bowels, kidneys and skin, rid the system of poisons, purify the blood, and restore the delicate organs of generation to new vigor and health.

No woman, who suffers, should ever be without them. Get a box—6 for \$2.50, at your druggist's or sent postpaid by—

FRUIT-A-TIVES LIMITED - OTTAWA.

HABITS OF THE RICH.

Samples of Millionaire Extravagance in the Metropolis.

Zola in his youth, before fame came to him, wrote some stories about millionaires, wherein it seemed to him he exaggerated shamefully in his descriptions of the costly homes and habits of the rich, but later on, when Zola became a friend of millionaires, he found that his accounts of their extravagance had fallen far short of the truth.

In the same way stories about the extravagance of American millionaires that sound like exaggerations may also fall short of the truth. Here, for instance, are some facts that an interior decorator of New York supplied the other day. They sound extreme, but let Zola be reassured.

A man bought for his hall twelve antique marble columns at Pompeii. Finding he could use only eight of the columns he had the remaining four destroyed, although he was offered for them twice what he had paid. He had paid \$5,000 apiece.

Ambrosian carpets, with a pile three inches thick, are often made to order at a cost of \$40 a yard. Such a cost, though, is nothing beside what is ordinarily paid for antique rugs. They, measured by the yard, often cost \$500 or \$600 a yard.

Chairs of ivory inlaid with wood are occasionally sold at \$500 apiece.

One millionaire's piano cost \$150,000. A five inch band of ivory, four years in the carving, runs around the case, which was decorated by Everett Shinn.

The gold and silver plate of one household requires an expert to look after it. The man is a goldsmith, and

his salary is \$2,000 a year.

Billiard rooms sometimes cost \$50,000 to furnish. The tables and cues are inlaid with ivory and gold.

Certain wines—Schloss Johannesburg, for instance, stamped with the crest of Prince Matternich—are sold at private sales to millionaires for \$40 and \$50 a bottle.

Automobiles of ninety or more horsepower, made to order, will cost from \$30,000 to \$40,000. Some millionaires keep a dozen or more automobiles, with a head chauffeur at \$4,000 or \$5,000 a year salary and two or three assistants at \$25 a week each.

Then there is the ocean going yacht, which cannot be maintained in the most modest way at a smaller annual expenditure than \$25,000.

QUAINT PRESENTS.

Odd Wedding Gifts That Have Been Received by Celebrities.

Celebrities are often the recipients of quaint presents. For instance, on the marriage of Queen Victoria the farmers of East and West Pennard, Somersetshire, wishing to show their loyalty, manufactured from the milk of 750 cows an immense cheese nine feet in circumference. The gift was graciously accepted and was stored at Buckingham palace, where it would undoubtedly have found its way to the royal table had not its donors wished to exhibit it as an advertisement. Their request was granted, but after it had been exhibited and the makers would have returned it her majesty signified that owing to the altered conditions she could not accept it as a gift.

An equally homely gift was made to the late King Charles of Wurttemberg on the morning of his marriage to Princess Olga of Russia. A peasant woman sent him a pair of trousers of her own design, with a note expressing the hope that they might be found a better cut and fit than those which she had last had the honor of seeing his majesty wear.

The Italian singer, Signor Mario, inspired a hopeless passion in the hearts of so many women that at the time of his wedding some of this affection found expression in various strange gifts. One was in the shape of a cushion stuffed with tresses from the heads of many of his hopeless admirers. Another was from a lady in Munich who had had one of her teeth set in a scarfpin surrounded with pearls and emeralds. In an accompanying note she expressed the hope that by sometimes wearing the gift he might be reminded of his unknown worshiper.

The Other Way.

The teacher had been talking about a hen sitting on eggs, says English Country Life, and, with the incubator in mind, asked if eggs could be hatched in any other way.

"Yes, sir," said an experienced person of nine. "Put 'em under a duck."

The Remedy.

"You're not in love, Robbie. You only think you are."

"Well, how the dickens am I to find out my mistake if I am mistaken?"

"Oh, marry the woman by all means."

A Distinction.

Mistress—Have you had any experience with children? Bridegroom—Nope, but they have had some wild me.

ROMAN MILLIONAIRES.

The Phenomenon of Mammoth Fortunes Not a New Thing.

While it is not a very tangible consolation to those of us who belong to the less favored class commercially, there is at least a sort of historic comfort in knowing that the phenomenon of mammoth fortunes is not a new thing.

A magazine writer goes back to ancient Rome, when there were no railroads or trusts or corporations, and gives some figures on the individual fortunes of that day which might look attractive even to some of our modern plutocrats.

Seneca, the philosopher and author, was worth \$17,500,000; Lentulus, the augur, \$16,600,000; Crassus, the politician who formed with Caesar and Pompey the first triumvirate, had a landed estate of more than \$8,000,000; the emperor Tiberius left a fortune of \$118,000,000, which the depraved Caligula got rid of in less than a year. A dozen others had possessions that ran into the millions.

It is true that these Romans did not "make" these fortunes in what we would call regular commercial operations. But they got the money, and they held on to it, which is about all that can safely be said of possessions that run into seven figures in any age or country.

And, speaking of campaign contributions and so forth, Julius Caesar once presented the consul Paulus with \$200,000 merely as a token of esteem and coupled with the hope that Paulus would do the right thing in a certain political matter that was pending. The argument was effective with Paulus, and neither he nor Caesar suffered any in popularity.

There are many things under the sun that are not new.

NAILED TO THE CROSS.

The Two Thieves That Were Crucified With the Saviour.

In nine out of ten pictures of the crucifixion where Christ's two companions in death are represented they are pictured as having been fastened to the cross with thongs or cords. The question naturally arises, Were the thieves in reality bound to their different instruments of torture while the blessed Saviour was nailed to his? And, if so, which mode of death was considered the more ignominious—binding or nailing? The remoteness of the event and the fact that in this case historical truth may have been sacrificed to pictorial effect make the above questions hard ones to answer. The early writers almost invariably refer to the thieves as having been nailed to the cross, while the early picture makers adhered to the general rule of representing them as having been tied or bound to their separate crosses.

If we are to give any credence to the story of the holy Empress Helen and her reputed discovery of the three crosses in the year 328 A. D., the two thieves were nailed to their crosses in a manner similar to that observed in the crucifixion of the Saviour. This conclusion has been settled upon for this reason: When the three crosses were disinterred from the mound in which tradition said they had been buried, that upon which Christ had suffered was only distinguished from the other two by the miracles it performed. This would certainly suffice to prove that all three of the instruments of torture bore similar nail marks and that the tradition of Christ being the only one nailed was not

When the bread or cake or pastry comes from the oven light, crisp and appetising, you are wont to say you have had good luck with your baking.

The "good luck" idea is a relic of the time when housekeepers pitted their competency against poor flour.

To-day good baking isn't a matter of good luck in any home where

Royal Household Flour is intelligently used.

In the hands of competent housewives it never fails because it is the whitest, lightest, purest and best baking flour to be had.

If the goodness of your baking is due to chance, your grocer is giving you the wrong kind of flour. Ask for Ogilvie's Royal Household.

COUNTY COUNCIL.

WEDNESDAY AFTERNOON.

Council resumed at 2 p.m.

Mr. Paul gave notice of the introduction of a by-law to authorize the issue and sale of debentures to provide money for the improvement of our county roads.

Accounts, J. F. Smith & Son, \$4,05, and N. B. Miller, 35c, were ordered to be paid.

A communication from Rev. F. T. Dobb, re erection by the County of a fence adjoining the County property, was referred to Chairman of County Property committee, with power to act.

Mr. G. L. Jennings, representing the Muskoka Free Hospital for Consumptives, was heard, asking for a grant to endow a county bed.

On motion of Messrs. Baker and Paul, the Treasurer was instructed to hold no tax sales this year.

An application from Registrar G. Goson for abstract indexes for the Villages of Enterprise and Centreville, \$225.00, was referred to Finance committee.

Moved by Mr. Martin, seconded by Mr. Creighton, that the Warden be instructed to obtain a legal opinion in reference to the liability of this County to construct or maintain roads already constructed along County roads for the drainage of farm lands adjoining County roads, or in other words, "Is the County liable to construct or maintain ditches except as required for the benefit of the public highway?" Carried.

A motion of Col. Clyde and Mr. Miller, to defer action re Registry office files, etc., was ordered laid on the table until to-morrow.

Moved by Mr. Creighton, seconded by Mr. Paul, that Messrs. Carswell and Paul, M.P.P.'s, be invited to attend this session on Friday, at 10 a.m., in reference to County roads. Col. Martin presented a petition from Clenden railwaymen, asking for the reconstruction of a foot-path over Clenden East bridge, laid on the table until Friday.

Moved by Col. Clyde, seconded by Mr. Woods, that the Council attend in a body to-morrow to witness the working of the road roller on the Hamburg road, and that the chairman of the Roads and Bridges committee provide a conveyance at the County's expense. Carried.

Council adjourned until 130 p.m. to-morrow.

THURSDAY, THIRD DAY.

Council met at 10 a.m.
Col. Clyde, with consent of his seconders, withdrew his resolution, re Registry office files.

Moved by Mr. Martin, seconded by

Malvern Satisfied with your short, stubby, scraggly hair? Or would you like it

 Motion of Mr. Martin, and Col. Clegg,
 that a question of a grant to the hos-
 pital was referred to the Finance
 committee with power to act in con-
 sultation with the Finance committee
 of the Town of Naperville.
 Dr. Simpson and Mr. G. E. Hutton
 were asked, asking for grant to Hay
 Farm.
 The legal opinion of Mr. W. G.
 Wilson, directed along County roads
 was read and filed.
 Motion by Mr. Baker, seconded by
 Col. Clegg, that Chairman of Finance
 committee be instructed to have docu-
 ments prepared and filed in the Registry
 of the court, and that the Board of the said
 committee to plan furnished by the
 Office Specialty Co. and that the Ward-
 en and Clerk issue an order for

Extreme views are never just. Something always turns up which disturbs the calculations founded on their data.—Tancred.

Useless Labor

Teacher: Johnny, I don't believe you have studied your geography. Johnny:—No, ruin. I heard pa say the map o' the world was changin' every day, an' I thought I'd wait a few years til things get settled.

Natural Privileges

"It is a physical impossibility to keep a watering place exclusive."

"Why so?"

"Because there anybody who please can be in the swim."—Baltimore American.

FITSCURED

If you, your friends or relatives suffer with Gits, Epilepsy, St. Vitus' Dance, or Falling Sickness, write for a trial bottle and valuable treatise on such diseases to THE LEIBIG CO. 179 King Street, W., Toronto, Canada. All druggists sell or can obtain for you

WORKING

ments by a Young
and One in Be

All women work; some in their homes, some in church, and some in the whirl of society. And in stores, mills and shops tens of thousands are on the never-ceasing treadmill, earning their daily bread.

All are subject to the same physical laws; all suffer alike from the same physical disturbances, and the nature of their duties, many of our daily distractions, into the horrors of all kinds of female complaints, tumors, obstructions, falling and displacements or perhaps irregularity or suppression, causing headache, nervousness, irritability and lassitude.

They especially require an invigorating, sustaining medicine which will strengthen the female organism and enable them to bear easily the fatigues of the day, to sleep well at night, and to rise refreshed and cheerful.

How distressing to see a woman struggling to earn a livelihood or perform her household duties when her back and head are aching, she is so tired she can hardly drag about or stand up, and every movement causes pain, the origin of which is due to some derangement of the female system.

Mlle. Alma Robitaille, of 78 rue St. François, Quebec, Que., tells women how to avoid such suffering; she writes: Dear Mrs. Pinkham:—

"Overwork and long hours at the office together with a neglected cold, brought on a very serious female trouble until finally I was unable to do any work. I then thought I'd better write and take Lydia E. Pinkham's Vegetable Compound, when my health was in the same condition that mine was, and straightaway sent out for a bottle. I finished that and took two more before I really began to improve, but after that my

Satisfied with your short, stubby, scraggly hair? Or would you like it longer, richer, thicker? Then feed it with Hall's Vegetable Sicilian Hair Renewer. There's solid comfort in handsome hair. Get it! Be happy!

For the whiskers and moustache we make HUCKINGHAM'S DYE. It colors rich brown or a soft black. E. P. HALL & CO., Nashua, N. H.

payment of same, payable 15th Jan'y, 1907, at \$400. Lost.

On motion of Messrs. Craghton and Woods, the question of a grant to Hay Bay ferry, was referred to Roads and Bridges committee.

Mr. Baker presented the report of the Finance committee, and Mr. Paul presented the minority report of same committee, which was read.

Communications from Crown and Dominion banks were read, and referred to Finance committee.

Council went into Committee of the Whole on reports of the Finance committee. Warden in the chair.

Council rose, reported progress, and asked leave to sit again. Report adopted.

Council adjourned till 1.30 p.m.

Council resumed.

Mr. Paul introduced by-law for issue of debentures, which was read first time.

Mr. Miller gave notice of the introduction of a by-law to assist in building wire fences along the County roads.

Council went into Committee of the Whole on Finance committee's reports. Warden in the chair.

Clause 1 was read. Moved by Mr. Baker, seconded by Mr. Hall, that it be adopted.

Moved by Col. Clyde, seconded by Mr. Paul, that the clause be amended by striking out "Dominion Bank" and inserting "Crown Bank."

On motion clause 1 was referred back to committee.

Clauses 2 and 3 were adopted.

A communication from George Dawson was read and referred to the Commissioners of Elizabethtown division.

Accounts of T. H. Walker, \$5.55; J. Stovel, \$20; Irvine Parks, contingent, \$6.20; F. Burrows, P.S.I., \$2.00, were ordered to be paid.

An account of Toomey & Oswald was ordered to be laid out on the table, and one of \$75.00, from Sawyer-Masssey Co., was referred to Roads and Bridges committee.

Moved by Mr. Woods, seconded by Mr. Hall, that the equalized assessment be the same as last year. Carried.

Moved in amendment by Mr. Martin, seconded by Mr. Baker, that the assessment rolls be produced and assessment equalized therefrom. Lost.

Moved by Mr. Miller, seconded by Col. Clyde, that Messrs. Carseillon and Paul, M.P.P.s, of Lennox and Addington, be requested to use their influence to have the County Road By-law approved by the Lieutenant-Governor in Council. Carried.

On motion Messrs. T. G. Carseillon and W. J. Paul, M.P.P.s, were thanked for their attendance on the Council.

Mr. Burrows was heard in reference to the amendments of the Public School act.

Council adjourned till 10 a.m. tomorrow.

FRIDAY, FOURTH DAY.

Council met at 10 a.m. Warden in the chair; all the members present.

Mr. Baker presented first report of the Finance committee, which was read, and on motion Council went into Committee of the Whole to consider it. The Warden in the chair.

Moved by Mr. Baker, seconded by Mr. Woods, that clause 1 be adopted. Carried.

Moved by Mr. Paul, seconded by Col. Clyde, that clause 1 be amended by inserting the words "Crown Bank," in lieu of "Dominion Bank." Lost.

Committee rose, reported, and asked to sit again. On motion the report was adopted.

Accounts of Sawyer-Masssey Co., \$4.00; W. A. Martin, \$19.50; S. Paul, \$3.50, were ordered paid.

An account, Sawyer-Masssey Co., \$1,919, was referred to Roads and Bridges committee.

Moved by Col. Clyde, seconded by Mr. Craghton, that the Chairman of Roads and Bridges purchase sixty feet of bit for road rollers. Carried.

Mr. Miller presented by-law to assist in erection of wire fences along County roads, which was read first time.

Mr. Martin presented first report of Roads and Bridges committee, which was read and adopted.

Moved by Mr. Martin, seconded by Mr. Paul, that Council issue debentures for the sum of \$16,000 for expenditure on improvement of County roads. Lost.

Moved by Mr. Craghton, seconded by Mr. Miller, that a levy of 1-1-2 mills on the dollar of equalized assessment be made for County road purposes. Carried.

Council adjourned till 1.30 p.m.

Council resumed.

An account of N. B. Miller, Commissioner U. E. L. Division, North Fredericksburg, \$4.00, was presented, and on motion, Council refused payment.

On motion first report of Roads and Bridges committee was presented. Adopting it was rescinded and referred back to the committee.

Mr. Martin asked for the vote and

TWO BEAUTIFUL WOMEN WHO ESCAPED SPRING CATARRH BY TAKING PE-RU-NA.

Spring Fever is Spring Catarrh--Nothing Robs One of Strength Like Spring Catarrh.

MISS ESTELLE CAMPBELL.

Miss Estelle Campbell, 140 N. High street, Nashville, Tenn., writes:

"Peruna helped me when almost everything else failed. I was rundown from overwork, as I had not been able to take a vacation for three years and naturally my nerves were all unstrung and I was greatly in need of rest and a tonic."

"I went away for two months, but did not seem to get my strength back, although I was taking a prescription which the doctor gave me before I went away."

"At the request of my relatives, with whom I was visiting, I began to use Peruna, and you cannot realize how glad I was when within a week I found I was feeling so much better. Inside of a month I was feeling splendidly, ready and able to take up my work again."—Estelle Campbell.

A Spring Tonic.

Almost everybody needs a tonic in the spring. Something to brace the nerves, invigorate the brain, and cleanse the blood. That Peruna will do this is beyond all question.

We have on file thousands of letters which testify to the curative and preventive value of Peruna in cases of nervous depression and run down conditions of the system. We quote a typical case:

Mr. Frank Williams, 335 34th street, New York City, member First Presbyterian Church and Captain Capitol Golf Club, writes:

"Last spring I suffered with malaria

and a run down condition which seemed very difficult to overcome.

"I tried several different tonics but did not seem to get much better until I began using Peruna. My recovery was slow, but I was improving and I was glad to continue using it."

"At the end of two months my health was restored and I looked and felt much better than I had for years. Your remedy is well worthy of a recommendation and I am pleased to give it mine."—Frank Williams.

Peruna never fails to prevent spring catarrh or nervous prostration, if taken in time.

Pe-ru-na is the Finest Tonic For a Weary Woman.

Miss B. Inez Silveira, 189 W. 136th street, New York City, Grand Recorder Daughters of American Independence, writes:

"Nine years of work, without a vacation, wore out my nervous system. I lost my appetite and felt weak and exhausted nearly all the time."

"Peruna restored me to perfect health in five weeks. It is the finest tonic for a weary woman that I know of. I gladly endorse it."—B. Inez Silveira.

Peruna is the most prompt and permanent cure for all cases of nervous prostration caused by systemic catarrh known to the medical profession.

MISS B. INEZ SILVEIRA.

Pe-ru-na Contains No Narcotics.

One reason why Peruna has found permanent use in so many homes is that it contains no narcotic of any kind. Peruna is perfectly harmless. It can be used any length of time without acquiring a drug habit. Peruna does not produce temporary results. It is permanent in its effect.

It has no bad effect upon the system, and gradually eliminates catarrh by removing the cause of catarrh. There are a multitude of homes where Peruna has been used off and on for twenty years. Such a thing could not be possible if Peruna contained any drugs of a narcotic nature. All correspondence held strictly confidential.

RICHMOND MINUTES

Selby, June 4th, 1906.

The Council met at Selby. The members present were: Messrs Z. A. Grooms, F. Sexsmith, Chas. Anderson, E. R. Sille, Alf. McCutcheon, The Reeve presiding.

The minutes of the last meeting were read and confirmed.

A communication was read from Herrington, Warner, and Grange, re Otter Creek. Laid on the table.

Moved by Chas. Anderson, seconded by A. McCutcheon, that \$10.00 be laid out in Road Section, No 64 under the supervision of E. R. Sille. Carried.

Moved by Chas. Anderson, seconded by

LAPUM.

Statute labor begins to-day, with L. Rose as overseer.

Miss Jessie Huff, spent a few days last week, with her aunt, Mrs. Michael Love, Camden East.

Levi Brown, is the possessor of a hen that lays an egg weighing four ounces.

Mr. and Mrs. Wesley Brown, recently visited their daughter, Mrs. A. H. Snider, Odessa.

Mrs. Levi Brown, accompanied by Mrs. B. Rose and Miss Jessie Huff, spent Monday at Catarqui and Kingston.

DENBIGH.

that this Committee have power to
prepare specifications and receive
tenders for the same. Carried.

On motion Council adjourned till
Thursday, 14th June.

WOMEN

de Easier-Interesting State-
ing Lady in Quebec
Beauport, Que

recovery was very rapid, and I was soon
well and able to go back to work again. I
certainly think your medicine for sick wom-
en worthy of praise, and am indeed glad
to endorse it."

Miss Clara Beaubien of Beauport,
Quebec, writes:

Dear Mrs. Pinkham—

"For several years I have suffered with
a chronic trouble which has been a serious
drain on my vitality, sapping my strength
and causing severe headaches, bearing down
pains and a general worn-out feeling, until
I really had no desire to live. I tried many
medicines but did not get permanent relief
until I took Lydia E. Pinkham's Vegetable
Compound. In two months I was very
much better and stronger, and in four
months I was well, no more disagreeable
discharge, no more pain. So I have every
reason to praise the Vegetable Compound,
and I consider it without equal for the ills
of women."

Lydia E. Pinkham's Vegetable Com-
pound is the unailing cure for all these
troubles. It strengthens the proper
muscles, and displacement with all its
horrors will no more crush you.

Backache, Rheumatism, aching, bearing
down pains, disordered stomach, morbid
ness, dislike of friends and society—all
symptoms of the one cause—will be
quickly dispelled, and it will make you
strong and well.

You can tell the story of your suffer-
ings to a woman, and receive helpful
advice free of cost. Address Mrs. Pink-
ham, Lynn, Mass. The present Mrs.
Pinkham is the daughter-in-law of Lydia
E. Pinkham, and for twenty-five years
she has, under her direction and since
her decease, been advising sick women
free of charge.

Compound Succeeds Where Others Fail.

ington, Warner, and Grange, re Otter
Creek. Laid on the table.

Moved by Chas. Anderson, seconded by
A. McCutcheon, that \$10.00 be laid out in
Road Section, No 64 under the supervision
of E. R. Sills. Carried.

Moved by Chas. Anderson, seconded by
E. R. Sills, that the communication from
Herrington, Warner, and Grange, re Otter
Creek drain, be referred to the committee
having the work in charge to take im-
mediate action to have the drain repaired.
Carried.

Moved by Fred Sexsmith, seconded by C.
Anderson, that Sidney Pringle be paid \$6.00
for rebuilding two culverts in road section
No 23 by order of the Pathmaster. Carried.

A petition of Robert Bowen and others
was read and laid on the table.

Moved by Chas. Anderson, seconded by
Fred Sexsmith, that on the petition of
Robert Bowen and others the matter be re-
ferred to the Reeve to investigate the need
of the said repairs, with power to act.
Carried.

Moved by Chas. Anderson, seconded by
F. Sexsmith, that James McKittrick's
name be added to the list of fence-viewers,
the same having been accidentally omitted
from the said list, and that the by-law be
amended accordingly. Carried.

A petition of Ira D. Grooms and others
re closing a road in the 2nd concession, was
read and laid on the table for discussion.

Moved by Chas. Anderson, seconded by
E. R. Sills, that on the petition of Ira D.
Grooms and others, the Clerk be authorized
to post the necessary notices and advertise
the same to close the road running east and
west across lot Number 5, in the 2nd con-
cession, between the Grand Trunk Railway
and the Napanee and Belleville road.
Carried.

Moved by Chas. Anderson, seconded by
Alf McCutcheon, that whereas a notice
having been received from Hugh Killorin,
one of the ratepayers of the Hemphy drain-
age works, to have the said drain cleaned
out and all obstructions removed, be it
therefore resolved that the Clerk notify all
parties interested in the said works to clean
out all obstructions across their said lands
from the drain forthwith, in accordance
with the provisions of the Drainage Acts.
Carried.

Moved by Chas. Anderson, seconded by
F. Sexsmith, that the following accounts
be paid: Henry Kellar, 65 loads of sand,
\$6.50; Frank Amey, repairing hay scales
in Seiby, \$2.70; Edward Dodge, for 28
loads of gravel, \$1.40. Carried.

Moved by A. McCutcheon, seconded by
E. R. Sills, that Henry Sexsmith, assessor
be paid \$50.00 for services as assessor for
the year 1906.

Moved and seconded that the Clerk
notify Mr. Edward Dodge to remove
forthwith, the fence that he placed across
the street running between Mr. I. Huyck's
and the late J. W. Green's lots, and if he
refuses or neglects to remove said fence
that this council will take action to compel
him to remove the same. Carried.

Moved by Fred Sexsmith, seconded by
Chas. Anderson, that the Collector's time
be extended until the next meeting of the
Council. Carried.

The Council adjourned to meet on the
last Monday in June, at the hour of ten
o'clock a. m.

A. WINTERS,
Clerk.

Quite the Contrary.

"After all, my friend," began the sol-
em stranger, "life is but a dream,
a—"

"Not much, it ain't," snorted the hard
headed man. "In nearly every dream I
ever had I was gettin' more money
than I knowed what to do with."

Frenchmen and Spanish.

French people find it difficult to
speak Spanish properly. Victor Hugo
boasted that he was the only French-
man who could really speak Spanish
something of Spain being mingled in
his ancestry.

But for some trouble and sorrow we
should never know half the good there
is about us.—Dickens.

Cleaner. MADOLE & WILSON.

Confirmation services were held at
the Lutheran church, on Sunday last,
and six young members confirmed and
received to full membership of the
church. In the afternoon, Rev. G.
Daehlied had to conduct the funeral of
an aged member of his congregation in
Raglan, Renfrew county, and, Monday
held, again, divine service at Denbigh
in the forenoon. After the closing of
the service he started for Kaladar
Station, on his trip to Berlin, Ont., to
attend the forty-sixth annual session
of the Lutheran synod of Canada,
which, this year, meets in Berlin. The
synod will be daily in session from the
7th to the 12th inst.

August Koellner's mother arrived
here from Germany, and intends to
make her home with him a nephew of
Mr. Koellner also accompanied her, but
was detained in quarantine at Montreal
on account of having sore eyes. He is
however, also expected to arrive in a
few days.

The trustees of our school section
intend to undertake some extensive and
very much needed repairs of our school
house and school grounds during the summer
vacation. The ratepayers have been
consulted as to their desire of repairing
the present building or erecting a new
and somewhat larger one, and the
majority decided in favor of the repairs
while the minority are of the opinion
that the required repairs will cost so
much, and may be unsatisfactory when
done, that the additional cost of build-
ing a new and more suitable one would
be more than compensated for by meet-
ing all future requirements for years.

The provincial legislature has made
a grant of \$500, to effect some badly
needed repairs on the Denbigh-Griffith
Colonization road. Oscar Chatsen
has been appointed overseer of the
work. Three hundred dollars have
also been granted for repairing the
road between Vennachar and Plevna,
and William Sallans was appointed to
oversee the expenditure of that grant.

"Let the GOLD DUST TWINS do your work"

"Your Servants, Madam!"

The Gold Dust Twins are always ready to work; they
are certainly artists in the cleaning line. There's nothing
cleanable which

will not clean—and do it better, more quickly and more
economically than anything else can. You are not serving
your best interests if you're trying to keep house without
GOLD DUST.

OTHER GENERAL GOLD DUST

KAI WANG;

A TALE OF SOUTHERN CHINA.

CHAPTER XII.

It was with considerable interest that Larry glanced around him.

They were in the heart of the most densely populated portion of the city, and in one of its most picturesque, as well as remarkable, sections. Daylight would have disclosed to wondering eyes a thousand strange features that went to make up a blended picture such as must long have haunted the memory of any one who cherished a love for the quaint, the bizarre, the Oriental.

It must be admitted, however, that at least one of the senses has no love for these animated scenes in eastern cities—eyes may delight in the rich grouping of bright colors rivaling the prismatic hues of the rainbow, and ears even be forced to admire the wonderful barbaric music to be heard on every hand, but no cultivated European or American nose has ever been known to sniff the abominable odors to be detected in such marts with any other feeling than that of disgust.

Still, familiarity often breeds contempt, and people grow accustomed to almost everything in time.

Larry knew instantly that, as Lord Rackett had intimated, their chase had brought them to the regions of boats.

He had them before him—boats by scores—aye, boats by hundreds—usually of the sampan order, and lashed side by side, just as coal barges may be seen in American rivers.

Where, in all this vast concourse, were they to seek for Avis, even providing she had been brought to this spot, which fact must still remain an open question?

It was a feature of the matter that now began to assume appalling proportions to Larry, and somehow he began to depend upon his companion for means to bridge over the abyss.

Fortunately, Lord Rackett did not fail him.

The big, bluff Englishman seemed to have gained complete mastery over the Chinaman to whose engineering skill they owed their presence here—in fact, he appeared to have partly hypnotized him, and was in a position to secure whatever information the fellow possessed.

Fortunate it was that such a thing should be so—indeed, it promised to prove the most valuable element in the game.

At least Plympton seemed to have a fair amount of enthusiasm when he left the native and whirled upon Larry, and the very sight of his confidence aroused new hope in the breast of the other.

"Then, all is not lost yet?" he demanded, as though seeking a sign.

"Well, I should say not by a great sight," returned the hearty Briton, only with considerable more emphasis than he had ventured to give; "it may look desperate enough. God knows, but we'll change all that in double-quick order, and the time has come to make a move, so follow me and fear nothing."

That was the sort of talk to revive drooping spirits and put new confidence in a man. Larry's feelings underwent a decided change, and rose from zero to summer heat.

A burning desire swept over him, a mad longing to get at those who were responsible for this outrage; it was the same savage feeling that the hungry wolf experiences as it leaps at the throat

of a man, but neither of those who could count themselves the cause of the clamor appeared to lose heart because of it.

Indeed, strange though it may appear, they were paying little or no heed to matters around them, all attention being concentrated upon the boat toward which they so vigorously pushed their way.

By this time, more or less lights having been diffused around the immediate vicinity, owing to so many curtains being drawn aside, they were enabled to make out that the vessel was a small junk, the matting sails of which were slung up in the peculiar style to those boats used for general Chinese navigation and coast commerce.

All this tallied with what they had learned from the man Lord Rackett had hypnotized.

It was evident that the increasing confusion among the houseboats and collected sampans had ere now attracted attention on board the junk.

Signs of life were to be seen in figures that flitted past the shining light, and Larry also felt positive he heard loud orders given in a foreign tongue, presumably Russian.

The sound stirred his heart, for it announced the fact of their having laid a direct course through all the beastly troubles with which they had been beset.

It was also like the clear notes of a bugle urging the charging soldiers on in the face of stinging bullets and roaring bombs; only a little spurt and they would clear the remaining distance.

There was need of the utmost haste, for already the hempen ropes that held the junk to the flotilla were thrown off, and the vessel had commenced to open a gap between, urged on by the current.

Lord Rackett saw this and put out a little more energy, while behind him Larry was doing marvellous things in skipping from boat to boat with the agility of a mountain chamois.

Thus they reached the last sampan—the open water yawned between: but brave hearts could not be daunted, and with a roar Lord Rackett leaped the gulf, followed by Larry, and landed on the deck of the floating junk.

CHAPTER XIII.

It was a close shave.

Had they been delayed just ten seconds in their progress, it would have been utterly impossible for them to have cleared the rapidly widening breach and gained the deck of the moving junk as they did.

Which might be considered an especial piece of good luck in their favor.

Although thus enabled to carry their point, it could not be said that they had won a victory—indeed, the preliminary skirmish had only been fought, and the real battle was yet to come.

No one realized this better than Lord Rackett, whose past life had been somewhat of the tempestuous character, a checkered career in which there were many red crosses that marked scenes of turmoil, where a quick wit was as necessary as the good English brawn to back it up.

Possibly in this boarding the enemy's boat they may have been placing themselves in a trap from which there was no escape.

At any rate, it had been done, and re-

they could hear among the clatter of Chinese tongues that rough Russian voice; it might not belong to the Count himself, but, nevertheless, the presence of such a man aboard was prima facie evidence that they had not gone amiss in their search.

"Back up this way," said Plympton, as he edged toward the door of the cabin.

Larry grasped his meaning; even in this exciting moment his senses were peculiarly clear and on the alert.

Long companionship with Dr. Jack had taught him the only way to take hold of a situation like this and the absolute necessity of maintaining a perfectly cool demeanor.

This movement on their part seemed to be the signal for an attack.

They saw a sudden forward movement on the part of the hovering mass.

It was like the plunge of the lightning express into the mountain defile—with a hiss and a roar the deluge was upon them.

At any rate those at bay seemed disposed to do their part from the start.

When a man finds himself attacked by a mob of ferocious "Chinks," he is not apt to halt upon his convictions as to whether or not he is averse to the shedding of human gore; at such times necessity drives him into defending his life, and all law has long since decided that a human being is justified to any extent in thus standing up to save his existence.

On these grounds alone they felt the right was on their side, even if Avis and her safety had not entered into the question.

So they opened upon the shadowy line that had pushed forward—opened with a vengeance and earnestness that promised speedy results.

The junk was not in absolute darkness, although no lights were to be seen save the one far aft, and which had doubtless been intended to illuminate the passage of some expected person across the crowded sampans and houseboats near by.

Thus it was feasible for our friends, now that their eyes were no longer blinded by this brilliant light, to partially distinguish the ugly yellow faces of the advancing Chinese sailors, and even see the shining weapons they gripped so fiercely in threatening hands.

Under these conditions it was possible to show their mettle and skill, and no bullet flew without finding its billet.

Still the Russian stormed and raved as he urged his deluded slaves on.

Neither Larry nor his comrade were linguists, and jointly possessed but a smattering of the Russian language, but both of them were ready to wager that the Cossack was laying down the law to the accompaniment of the most lusty swear words known to his tongue.

The Chinese character may hardly be looked upon as fierce and warlike; some fragments of the nation, such as the Tartars of the north and the giant mountaineers of the south, known as the Black Flags, have indeed all the inherent qualities of a warrior people, but the main body seem to be devoted to the arts of peace and to solving the ever-present problem of daily existence.

This being the case, they were not apt to stand up very long upon finding themselves targets for such sharp practice.

Lord Rackett tried in vain to discover the owner of that bass voice.

He would not only have felt justified, but immensely pleased could he have sent his compliments in the shape of a bullet through the stout lungs of the man who urged the mad rabble on, since such a lucky stroke, by cutting off his supply of breath, would wind up his noisy harangue, and the advancing sailors, finding themselves left to their own devices, would of necessity have dropped out.

The man who shouted was evidently something of an old fox, and he knew enough to keep his precious body securely hidden by a mast or some similar protection.

Lord Rackett was not the man to let an opportunity go by because he could not realize his highest ambitions.

With him the policy of half a loaf be-

SLIGHTED LOVE AVENGED

HOW A JELTED PARISIAN PUNISHED A GIRL.

A Successful Rival Was Denounced as the Leader of a Gang of Burglars.

Slighted love has just been avenging itself in two cases in a very different manner from the now stale recourse to the knife and the revolver, writes a Paris correspondent of the London Telegraph. In each instance the methods have certainly not been devoid of originality, but while the author of the one has been requested to hold himself at the disposal of the police, the other has won himself any amount of gratitude from the family which had scornfully rejected his matrimonial advances. Hero No. 1, if such a term can be applied to a gay law student somewhat addicted to flirtation, had been making up to a pretty brunette in the Latin Quarter, but the girl, although not currently supposed to be particularly hard-hearted, had for some reason or another sent him about his business. The youth's vanity had been considerably wounded, he had vowed to pay her out, and when a night or two ago she sought to repose of her downy couch in her trim little chamber, high up in the house where she dwelt, and was just composing herself to slumber, she was startled by a weird noise. She opened her eyes, and, to her dismay, beheld a tall object attired in a voluminous white robe standing at the foot of her bed.

Terror kept the fascinating brunette mute, but when, in low deep tones, the words, "I have come to fetch you and to bear you away from this world," were uttered by the mysterious visitor, the poor girl screamed out,

"A GHOST! A GHOST!"

and, bounding from her couch into the middle of the tiny room, fell prone on the floor. Attracted by the noise, neighbors rushed in to find the chamber empty, save for the presence of its tenant, who was lying in a state of insensibility. The police and a doctor were promptly sent for, and when after an hour's interval, the heroine of this grim adventure had been restored to consciousness, she related that she had received the unwelcome visit of a spirit. The officials, however, being decidedly sceptical on this point, started on an investigation, with the result that the mischief was traced to the law student, who confessed that he had got up the scene to punish the lovely brunette for her rejection of his overtures, and that he had obtained entrance to her room by means of a false key. He has not been arrested, but, as said above, has to hold himself at the disposal of the commissary.

Suitor No. 2 had made his advances to a lovely girl, the daughter of retired tradespeople, for what is called 'le bon motif,' that is to say, his intentions were honorable, and he meant marriage. Unfortunately, the young man, although bearing an excellent reputation, was poor, so the family, which indulged in ambitious projects for the settlement of the pretty damsel, gave him politely to understand that he was no match for her. Not long after the occurrence of this little episode there appeared on the scene

A VERY SMART YOUTH,

who gave himself out as having already a splendid situation, which brought him in \$2,500 a year, and was only a stepping-stone to a far more brilliant position. The girl and her parents were completely dazzled, and without starting on the slightest inquiry received him with open arms. The wedding day was fixed, the trousseau purchased, and relatives and friends were assembled at a dinner party which was to be a prelude to the great event. Due justice had been done to the viands, and dessert with sundry bottles of sparkling cham-

summer heat.
A burning desire swept over him, a mad longing to get at those who were responsible for this outrage; it was the same savage feeling that the hungry wolf experiences as it leaps at the throat of a buck at bay.
Larry had been down in the depths, but he would not again know despondency while this strange adventure lasted, thanks to the cheery way in which his companion buoyed him up.
It is worth much to have such a friend in time of need.
Lord Rackett was as good as his word.

He began to advance.
His course seemed to be laid out just as directly as ever a skipper could mark it upon a chart after the use of quadrant and sextant.
It led him across a tangle of boats but were huddled together like a bevy of frightened partridges. The man from Britain stepped from one to another without as much as by your leave, and behind him skipped Larry as lightly as his new-born hopes would allow.

Though this was the ordinary method of crossing to the outer boats, there seemed to be something out of the common run in the mode of Lord Rackett's advance, perhaps, not being accustomed to such work, he may have rolled his boats more than was entirely necessary, by stepping with his weighty figure upon the gunwales.

At any rate in many instances the curtains that concealed the covered part of numerous sampans were angrily hrust aside, and the light from within disclosed yellow faces that expressed the utmost astonishment at sight of two foreign devils thus crossing the string of fastened boats.

All this while, Lord Rackett kept one eye upon a light that was beyond, as though his hopes were centred in this quarter.

Larry, too, seemed to know that this was the object of their mad advance across houseboats and sampans, and his enthusiasm had soared to such a lofty pitch that he would have followed Plympton anywhere in a Quixotic phase.

The suspense was cruel, but there was at least a satisfaction in knowing it could not last long. Whether for better or worse, they would presently be able to decide the matter, since this rapid progress was speedily diminishing the distances between themselves and the steady white light beyond.

Already Larry had determined that his must be stationed upon a junk or some other vessel secured at the outskirts of the great mass of floating craft.

It was no time to discuss the question pro and con, to ascertain how much chance there could be of success falling to their share; duty lay before them, and at such a crisis the brave man pushes on, eager to reach the goal.

The occupants of the various boats who had been so rudely aroused had set up a lively chorus of sharp, querulous cries, very natural to John Chinaman when angered, and this was being constantly augmented by new voices as others took up the shrill refrain.

On the whole, their dance across the interlocked boats was accompanied by as weird and uncanny a refrain as mortal ears ever harkened to.

There was much anger in the chorus that rose and fell with such fierce, mon-

stuck it up.
Possibly in thus boarding the enemy's boat they may have been placing themselves in a trap from which there was no escape.

At any rate, it had been done, and retreat was now out of the question.
In times of old, when the legions of Rome went against a hostile country, it was the policy of their generals to burn the bridges or the boats behind them.

This was done to convince the soldiers how desperate was their venture, and that they must conquer or perish. It invariably caused them to fight with greater fierceness; even a cornered rat will give battle, and men who know they must win or die are desperate antagonists.

When Plympton gained the deck of the Chinese junk, such was the impetus of his leap that he fell forward on his hands and knees.

A dusky figure sprang forward and fastened like a human leech upon his back.

As a great mastiff emerging from the sea shakes the water from his hide with a tremendous convulsion of his frame, so Lord Rackett dislodged this unwelcome burden, and the wretch, stumbling over the near-by, low bulwarks of the vessel, plunged into the dark waters of the river.

It was a remarkable beginning, and must surely give encouragement to any man, since a fair start means much in a race.

As yet they had taken a leap in the dark in more ways than one.

It was not possible to declare positively that they were even on the right track, though certain indications proved that conjecture.

At all events, their work was cut out, and it was of no mean order—to take possession of a vessel where the crew might number almost any number of evil-minded natives, ready with the knife to defend their craft, was an undertaking that might well appall any man.

But Plympton came of a race noted for its daring—he could trace his ancestry back to that bold mariner, Sir Francis Drake; and while the same class of perils might no longer exist, occasions were bound to present themselves calling for just as vigorous action.

Plympton, having shaken off his burden, turned to discover whether Larry had made the leap in safety, for as yet he was quite in ignorance with regard to this matter.

A shrill voice close at his elbow gave him immediate assurance; the little man was literally "on deck" and ready to say "amen" to all that he might propose or do.

The junk had drifted so far from the other craft that nothing was to be feared in this quarter.

Their troubles would all come from a point closer at home.

Even when sweeping his eyes around in this search for his companion, Lord Rackett had discovered shadowy figures clustered near, and knew the respite they were enjoying was only temporary—that by the time they had taken a few quick breaths the storm would burst and they must be ready to face it.

The Englishman had received baptism of fire in the war with Japan, and was by nature gifted with the spirit of a leader.

He could grasp all details with one comprehensive glance, and throw his forces into a position to meet the emergency, and this is usually reckoned the finest trait of a master mind in military circles.

If Avis were, as they had fair reason to believe, upon this boat, then she must of necessity occupy the cabin.

This being the case, their interests lay wholly in that quarter; the enemy might have control of all else; but it was their bounden duty to cover this section.

Lord Rackett did not lose one instant of time in drawing a weapon—desperate cases required like remedies, and he expected a hot time must follow their boarding the junk.

Even if the vessel were not what they had good reason to suspect, the crew would look upon them as pirates, and feel justified in opening hostilities.

Not an atom of doubt assailed them;

purely hidden by a mast or some similar protection.

Lord Rackett was not the man to let an opportunity go by because he could not realize his highest ambitions.

With him the policy of half a loaf being far better than no bread at all applied vigorously.

And so he manfully kept at his task of alleviating the miseries of the wretched Chinese sailors as fast as he could put finger to trigger.

It was a merry time while it lasted—at least to those who held the upper hand in the affray.

Doubtless the miserable sailors could not see anything worth laughing about in the contest—but, then, they were prejudiced, and hardly in a position to give an accurate opinion.

As Larry had managed to keep pace with his companion, the music had been quite up to date, and must have proved a sore test to the nerves of those who had started to advance so studiously.

Their movements became slower; perhaps it was because those who fell formed something of a barrier at their feet, but fear must have had a deal to do with the matter.

Larry saw them going down so rapidly that it was utterly out of reason to believe they could have been stricken.

Then he realized that the crafty natives were taking this method of saving their precious hides.

In another thirty seconds not a figure stood erect upon the slippery deck of the junk, and all that remained of the late desperate assault was the lusty voice of the unseen Russian that still continued to hurl oburgations upon the heads of the cowards for failing to accomplish wonders.

But they could not shoot a voice, and, for all they cared, the fellow was welcome to bellow until doomsday.

For the moment, then, they owned the junk, and were given an opportunity to shape their immediate future.

(To be continued).

CHILDHOOD AILMENTS.

Most of the troubles that afflict little ones may be traced to the stomach or bowels and if these are put right the child will get well and thrive well. Baby's Own Tablets will cure all stomach and bowel ailments, and all the other minor troubles of babyhood and childhood. And the mother has the guarantee of a government analyst that this medicine contains no poisonous opiate or harmful drug. Mrs. Wilbert McKenzie, Chelmsford, Ont., says: "My little girl was troubled with obstinate constipation to such an extent that we did not think she would live. She cried almost constantly and was wasting away. I got a box of Baby's Own Tablets, and in three days found a great improvement. I continued giving her the Tablets for nearly a month, and every trace of the trouble has disappeared, and she has since been a bright, healthy child and has grown nicely." You can get the Tablets from any medicine dealer or by mail at 25 cents a box by writing The Dr. Williams' Medicine Co., Brockville, Ont.

A FATHERLY LONGING.

A good-sized boy was hurrying along the street, dragging his two-year old brother after him, in spite of the loud protests of the child, when a benevolent-looking old gentleman stopped him. "My son," said the old gentleman, regarding him with kindly eyes, "how old are you?"

"Twelve," answered the boy. "You're a stout lad for that age. I should have taken you to be fourteen. Never been sick much, have you?"

"No sir." "I thought not. You enjoy your victuals, sleep like a top, and can play ball all day without getting tired, can't you?"

"Yes, sir." "I was sure of it. I wish I had a boy like you."

"What for?" "So I could turn him over my knee and spank him. Pick up that baby and carry him, you young savage, or I shall be tempted to consider you my boy, for all practical purposes, right now."

was fixed, the trousseau purchased, and relatives and friends were assembled at a dinner party which was to be a prelude to the great event. Due justice had been done to the viands, and dessert with sundry bottles of sparkling champagne had been laid on the table, when the rejected suitor, who had been included in the invitations just by way of showing that there was no ill-feeling, rose to his feet and asked leave to make a little speech. How very noble of him, the family and the other guests exclaimed to themselves, but their horror may well be imagined when he denounced his successful rival as a burglar who was making a good thing by his nefarious trade, and

"AS A WEDDING PRESENT"

threw on the table a bundle of missives addressed by accomplices to the individual in question, whom he described as the ring leader of the gang.

All eyes were turned toward the bridegroom-elect, but he uttered not a word, with blanched cheeks and tottering steps he tried to make his way to the door, but he was collared by the father with indignation at the cruel trick that he had played, and a moment later was committed to the

CUSTODY OF THE POLICE.

who promptly conveyed him to the depot at the Prefecture. It seems that the rejected suitor, partly out of jealousy and partly out of curiosity, as he was by no means inclined to take his rival at his word, had entered into friendly relations with him, and during one of his visits to his dwelling had discovered a parcel of letters, which he had contrived to abstract, and which admitted of no doubt as to the nature of the very lucrative profession which the young man had embraced. The girl and her parents are, however, so grateful to the rejected suitor for having saved her from a shocking fate that it looks as if he may not have to play the sorry part of a rejected suitor much longer. The trousseau is all ready, it would be a pity to waste it, and, after all, as the retired tradesman is very comfortably off and the only objection to the youth is his lack of fortune, the matter may be arranged. He, at any rate, need not dread any unpleasant disclosures on the eve of his own marriage.

IN THE STONE LINE.

An old laborer who wished to rent a pretty cottage in the country was warned not to tell the landlord what he did for a living, or he would certainly not be accepted as a tenant.

Bearing this advice in mind, he coolly informed the owner of the cottage that he was a geologist, and the short-sighted landlord, after a little hesitation, granted him the tenancy.

"What have you let Bill Dash go into that cottage for, landlord?" a bluff old farmer asked him. "He's a rascal, and ye'll never get a single week's rent-money out of him."

"But he told me he was a geologist," said the dismayed landlord. "Is it possible that he has deceived me?"

"Well, it all depends on the way you look at it," responded the farmer, cautiously. "He cracks stones for fifteen cents an hour at the roadside, if that's what you call being a geologist!"

PALE, WEAK WOMEN.

Gain New Health and Strength Through Dr. Williams' Pink Pills.

Anaemia is just the doctor's name for bloodlessness. Dr. Williams' Pink Pills for Pale People actually make new blood. Can any cure be more direct or certain? Blood is bound to cure bloodlessness. Dr. Williams' Pink Pills cure anaemia just as food cures hunger. They cured Mrs. Clara Cook, a young English woman who recently came to this country from Portsmouth, England, and is at present residing at Prince's Lodge, Halifax Co., N. S. She says: "I am an enthusiastic believer in the value of Dr. Williams' Pink Pills as a cure for anaemia. I had suffered from the trouble almost from childhood, but a few years ago it developed into a severe type of the trouble. My skin was pale and waxy; my lips seemed bloodless, and my entire system was run down. I suffered from headaches, dizziness and weak spells, and my friends feared that I was going into a decline. I tried tonics and emulsions, but without benefit. Then a friend who had used Dr. Williams' Pink Pills for the same trouble advised me to try them. In a short time they began to help me and in a couple of months I was quite well, the color having returned to my face, my appetite improved and I had gained in weight. I can strongly recommend Dr. Williams' Pink Pills to all anaemic girls and women."

The pale anaemic person needs only one thing—new blood. Dr. Williams' Pink Pills do only one thing—they make new blood. They won't cure any disease that isn't originally caused by bad blood. But when Dr. Williams' Pink Pills replace bad blood with good blood they strike straight at the root and cause of all common diseases like anaemia, headaches and backaches, rheumatism, indigestion, neuralgia, St. Vitus dance, kidney trouble and the secret troubles that every woman knows but none of them like to talk about, even to their doctors. Dr. Williams' Pink Pills are sold by all medicine dealers or by mail at 50 cents a box or six boxes for \$2.50 from the Dr. Williams' Medicine Co., Brockville, Ont.

THE UNIVERSAL MOTHERHOOD.

An Incident of Two Little Orphan Piggies and a Carrion-Dog.

Two years ago, when the Russians and the Japanese were giving the world reason to doubt the possibility of universal brotherhood, a British war correspondent witnessed a little incident in brute life which bore its lesson home to the onlookers. The narrator was marching with the Japanese army.

While the hot air was palpating with the vibrations of a heavy cannonade a regiment of Japanese troops was crossing a narrow ford of the river just south of Liau-yang. A long stream of the sturdy, plodding little men was dammed up on the bank, where a straggling village had come under the range of Russian fire. In one of its streets a few yards back we had passed a piteous incident of war. A sow was lying dead, killed, apparently, by the fragments of a shell, and round her some of her lean offspring were raising pitiful cries, so humn and baby-like. Occasionally one or other of them would suck again ineffectually at the maternal source of food-supply that yielded not, and then would gaze with unconprehending, wondering eyes at its prostrate mother. Hunger and dismay were never more expressively voiced than in the cries of these little piggies.

While we were waiting at the water's edge for our turn to cross, a Japanese "Tommy," nudging my arm, pointed to two, evidently of the same brood, who were following a dog with shrill, importunate cries. She was a lank and hungry-looking beast, with tattered, mangy-looking coat—one of those mongrel outcasts of canine society, the carrion-dogs or scavenger-dogs, to be found all over China. She was obviously a possessor of a litter of her own, and

CREEDS OF THE PRISONER.

Interesting Statistics About Convicts in British Prisons.

An interesting return was issued from the British Home Office, "the declared religious creeds" of the prisoners in each of his Majesty's prisons in Great Britain on the 28th March last. The prisoners on that day in England and Wales numbered 21,580 and the return classifies them according to the following denominations:

Church of England 16,089, Roman Catholics 4,397, Jews 257, Wesleyan 352, Methodist New Connection 8, Primitive Methodist 65, Bible Christians 5, United Methodists 8, Methodist Free Church 2, Calvinistic Methodist 29, Congregationalist 53, Presbyterian 79, Baptist 132, Salvation Army 11, Unitarian 13, Quaker 1, Plymouth Brethren 1, Christian Brethren 1, Greek Church 4, Lutheran 19, Waldensian 1, Mahomedan and Buddhist 3, Spiritualist 1, Atheist 22, no religion 26, not ascertained 1; total 21,580.

In Scotland there were on the same day in prisons and police cells 2,857 persons, classified thus: Presbyterians 1,724, Roman Catholics 981, Episcopalians 146, Lutheran 1, and Jews 5.

JAPS WANT LONGER LEGS.

Japanese scientists attribute the superior stature of the English-speaking races to their meat eating habits, and the Emperor is reported to be considering a scheme to put the nation on a meat diet to make his subjects grow taller. A native physician of Tokio, who was educated in England, is advocating the general use of the bicycle to achieve the same purpose. In his opinion the bicycle is the most successful body builder and muscle developer the English people possess. He envies the English length of limb. He recommends that young Japs, of both sexes, be taught early in youth to ride the bicycle.

Landlady: "That new boarder is either married or a widower." Daughter: "Why, mamma, he says he is a bachelor!" Landlady: "Don't you believe it. When he opens his pocket-book to pay his bill he always turns his back to me."

A Carefully Prepared Pill.—Much time and attention were expended in the experimenting with the ingredients that enter into the composition of Parmelee's Vegetable Pills before they were brought to the state in which they were first offered to the public. Whatever other pills may be, Parmelee's Vegetable Pills are the result of much expert study, and all persons suffering from dyspepsia or disordered liver and kidneys may confidently accept them as being what they are represented to be.

Miss Dauber: "I can generally tell what a person's profession is by looking at his face." Miss Gushe (sitting for a portrait): "Now isn't that a coincidence? Do you know, the very first time I saw your face I said to myself, 'I'll bet that woman paints!'"

A Quick Recovery from Fever and all sickness is always the case when "Ferroin" the best tonic is used. It builds, it strengthens, it gives new life. Try it.

Mattie: "What has become of your anti-slang society that you took so much interest in a few months ago?" Helen: "Oh, it's in the consomme. The president got nutty and imagined she was the only dent in the pan, so we gave her the willies and the dinky-dink association shot the chutes."

A Successful Medicine. — Everyone wishes to be successful in any undertaking in which he may engage. It is therefore, extremely gratifying to the proprietors of Parmelee's Vegetable Pills to know that their efforts to compound a medicine which would prove a blessing to mankind have been successful beyond their expectations. The endorsement of these Pills by the public is a guarantee that a pill has been produced which will fulfil everything

COBALT-The World's Richest Silver Mining Camp THE COLUMBUS COBALT SILVER CO., Limited.

Authorized Capital Stock, \$450,000. Shares \$1 each.

BOARD OF DIRECTORS:

HON. RICHARD HARCOURT, President, Director of the Ontario Bank, and formerly Treasurer of the Province of Ontario
JOHN FLETT, Esq., Vice-President, Head of the firm of Flett, Lowndes & Co., Director of Ontario Bank
JAMES TUDHOPE, Esq., M.P.P., Head of the firm of Tudhope Carriage Co., Limited, Ontario.
DANIEL SIMPSON, Esq., M.E., Managing Director, Cobalt, Ont.
JOSEPH COLUMBUS, Esq., Explorer, Hallsbury, Ont.
SOLICITORS—Clark, McPherson, Campbell & Jarvis, Toronto.

The company owns a mining claim, free from any encumbrances, the favorably and well-known Columbus Mine of 40 acres, which has a 5-foot vein, one foot being high-grade cobalt, with good silver value, at only four feet depth, located in Coleman Township, near Giroux Lake, in a most favorable location nearby many of the big paying mines, such as the Drummond, Jacobs and others, and only a few feet from the famous Gillies timber limit, which is so rich in silver that the Government decided to develop it for the benefit of the public. The undersigned personally offers for sale at par only a limited number of shares, as it is expected that in a short time it will greatly advance. There is now a full force of miners developing the property. Send for full particulars. Mail your order, with marked cheque or express order, to the order of

A PROFITABLE INVESTMENT

Scientists agree that for the amount of power expended the bicycle above all other machines, or means of conveyance, makes the greatest returns.

are following a dog with them, and the unfortunate cries. She was a lank and hungry-looking beast, with tattered, mangy-looking coat—one of those mongrel outcasts of canine society, the carrion-dogs or scavenger-dogs, to be found all over China. She was obviously a possessor of a litter of her own, and her gaunt, protruding ribs seemed to protest against the tax of maternity. The lean, hungry piggies chased her, wailing all the time beseechingly.

Although she dodged one way and another, she was unable to shake them off—they still followed screeching at her heels. She walked into the shallow water. They dashed in after her, but after a few feet the water gurgled in their opened mouths, and they beat a retreat, and from a knee-deep distance the pair continued their supplications. She was at last free of them—they could no longer follow her. Standing in the water, she turned her head round slowly and looked at them. She blinked her solemn eyes as if considering, and there was not one builder of the Tower of Babel or inhabitant thereof who could not have understood the language of that cry that the two little orphans kept up.

Then she stepped back towards them and waited. In a second the pair were sucking ravenously, still standing in the water. The merry little gunmen laughed, and some of them cheered, and she looked around at her strange guests with patient eyes. It made the greatest picture of charity I had ever seen. She waited until they had had their fill, and then they spluttered back to the bank, grunting satisfaction if not gratitude.

One of the onlookers, who probably enjoyed the reputation in his regiment of being an English scholar, addressed me: "All children—all mothers—all world—all same." I think I understood what he meant.

SNAKES THAT FLY.

At the last meeting of the London Zoological Society some notes were read by R. Sheldford, late of the Sarawak Museum, on "flying snakes." These snakes are climbers, and a wonderful provision of nature has been made for them to break their fall in case of accident when at a height from the ground. They have a sort of hinge line in the skin, on either side of the body, and by muscular contraction the ventral surface of the reptile is drawn in so as to become quite concave and the body more flattened. When falling, instead of wriggling as other snakes do, they hold their bodies perfectly rigid and glide down slowly to the ground, which they reach at quite an angle from where their fall began.

DID SHE OFFER THEM?

A handsome English girl, recently returned from Spain, was recounting her experiences to a circle of friends, among whom was a Spaniard.

"The thing that delighted me most," she said, "was that charming practice they have in Spain of offering you instantly what you may chance to admire."

"Do you approve of the custom?" asked the Spanish friend.

"Oh, yes," was the reply.

"Senorita, you have very beautiful lips," exclaimed the impulsive Spaniard.

to know that their efforts to compound a medicine which would prove a blessing to mankind have been successful beyond their expectations. The endorsement of these Pills by the public is a guarantee that a pill has been produced which will fulfil everything claimed for it.

"She didn't speak to her husband for six months." "My! It must have been very uncomfortable." "Yes—for her."

Sunlight Soap is better than other soaps, but is best when used in the Sunlight way. Buy Sunlight Soap and follow directions.

Hicks: "There isn't a man in town who can keep the conversational ball rolling like our friend Gayrake." Wicks: "Nonsense! He never says anything worth listening to." Hicks: "No; but he does a lot of things worth talking about."

Cucumbers and melons are "forbidden fruit" to many persons so constituted that the least indulgence is followed by attacks of cholera, dysentery, griping, etc. These persons are not aware that they can indulge to their heart's content if they have on hand a bottle of Dr. J. D. Kellogg's Dysentery Cordial, a medicine that will give immediate relief, and is a sure cure for all summer complaints.

"You see, my son, every time that you are naughty, papa gets a grey hair." "Oh! but you must have been naughty. Look at grandpa!"

If a dog bites you don't be scared. Bathe the wound with cold water and cover it with a cloth on which Weaver's Ointment has been freely spread. The Ointment relieves the pain caused by the sting of insects.

"I came near eloping once," said the sweet young thing. "Indeed?" "Yes; we had quite made up our minds." "Who?" "Papa and I—but I couldn't find a man who would elope with me!"

The healthy glow disappearing from the cheek and moaning and restlessness at night are sure symptoms of worms in children. Do not fail to get a bottle of Mother Graves' Worm Extirminator; it is an effectual medicine.

"It's a strange thing," said Willie Wishington, "every time I try to sling my dog howls." "Yes," replied Miss Cayenne: "I have always thought that dogs ranked almost with human beings in intelligence."

Are your corns harder to remove than those that others have had? Have they not had the same kind? Have they not been cured by using Holloway's Corn Cure? Try a bottle.

A RAFT OF BEER BARRELS.

Terrible Voyage of 2,000 Miles by Escaped Convicts.

A sensational story of the sea is related by the officers of the German steamer Willehad, which has arrived at Sydney, Australia, from the islands of the Bismarck Archipelago.

A few weeks ago six French convicts from New Caledonia were discovered on a remote portion of the Island on New Britain in a deplorable condition, and on being questioned it was ascertained that they, with ten others, had escaped from Noumea nearly twelve months ago.

They constructed several rafts from staves of beer barrels, and rigged their frail craft with sails of the most primitive description.

One of the rafts, occupied by six men, after many months, safely reached an uninhabited portion of New Britain, after a terrible voyage of nearly 2,000 miles. For four months the men were tramping in search of civilization, and eventually they were found and brought to Herbertshöhe.

Sometimes a man longs for to-morrow because he is ashamed of what he didn't do to-day.

LANDS In Western Canada

Two cornering sections, selected lands in Saskatchewan, only 3 miles from two railways, C.P.R. & G.T.P. Strong soil, 30 per cent. plough land, spring creek, no sloughs. About 40 miles N.E. of Indian Head. Price \$10.50 per acre. Write for map and full particulars.

R. PARSONS, 91 Wellesley Street, Toronto, Canada.

Magistrate (to Pat): "You are charged with stealing a loaf from a baker's cart. What have you to say for yourself?" Pat: "Nothing, sir; except that the doctor told me I must eat stale bread for me dyspepsy, so I had to steal it."

A Medicine Chest in your house—any one well-to-do can afford to possess a medicine chest, but Dr. Thomas' Eclectic Oil, which is a medicine chest in itself being a remedy for rheumatism, lumbago, sore throat, colds, coughs, catarrh, asthma and a potent healer for wounds, cuts, bruises, sprains, etc., is within the reach of the poorest, owing to its cheapness. It should be in every house.

"You advertise that there is a fine stream of water on the place, but I don't see it," remarked a stranger who wanted to rent a small farm. "Just work that pump handle a little," said the landlord, "and you will see a fine stream of water. You don't expect to have the Niagara Falls on the place for \$27.50 a month, do you?"

ANOTHER WONDERFUL CASE.

Here is Something that will be Welcome News to Many a Discouraged One.

WILLIAM H. REED.

"For several years I have been troubled with gas around my heart, shortness of breath, in fact, if I walked my usual gait my breath would get so short I would be compelled to make several stops during my walk. "Of late my food did not digest properly. It turned sour in my stomach, causing me great distress; often, too, I had disagreeable attacks of belching gas and heartburn. "I was bothered with severe pains across the small of my back and the least bending or turning would cause me to almost cry out. "I was induced to try Dr. Leonard's Anti-Pill and from the very first found relief."

"For the last three months I have had no recurrence of my former complaints, so I am bound to say Anti-Pill has indeed cured me."

This is the voluntary statement of Wm. H. Reed, of 165 Queen St., Kingston, Ont. All Druggists sell Anti-Pill. The Wilson-Fyle Co., Limited, Niagara Falls, Ont.

The remedy that cured such an extreme case is surely worth trying.

GERMANY'S WAR CHEST.

A Berlin contemporary has discovered that Germany's holding of foreign obligations totals \$4,000, or four times the amount of the French war indemnity—a striking instance of the enormous rate at which the wealth of the empire has accumulated in recent years. This figure has been cited as a reply to the contention that financial stress would restrain Germany from a great war owing to the difficulty or realizing all this money. It is forgotten that the empire has a war chest fund of \$30,000,000, which was set apart from the French milliards against the coming of another evil day. This enormous sum in gold has been lying in the Julius Tower at Spandau.

200 Men Wanted at Once

In various parts of the Dominion, as whole or spare time agents, to sell a high grade stock of hardy and well-grown trees and plants. Go-ahead and energetic men can make a very profitable business of selling this stock, which is well known. Liberal terms and a complete outfit. Commission paid weekly. Apply at once to

THE TWO LAWS OF LIFE

The Great Teacher Was Right When He Called For Self-Denial and Self-Victory.

"If thy hand or thy foot offend thee, cut them off, and cast them from thee."—Matt. xviii., 8.

This age finds it hard to accept that saying. It asks, if we are to throw life away why should it have been given to us? Why this selfhood with its passions, its surging desires, its great longing to be untrammelled and free, if all is to be restrained and the passions are to be perpetually denied? If religion means, as some plainly have said, doing the things you don't want to do, and leaving undone those you desire, then it is a mockery, a contradiction of our lives and natures.

Therefore there exists another philosophy which says, boldly: Live out all that is in you; do all the things you want to do; your passions in themselves are sufficient justification for their gratification. They say man is free; therefore, let him realize himself by giving free and full expression to every thought, inclination, appetite, and possibility within him.

When the average man puts the two philosophies in contrast he is likely to conclude that the path of self-denial, of stern repression, is the mistaken one, for he will say, does it not contradict nature?—does it not involve the repression of natural instincts and make all life a perpetual fight against ourselves, a waste of forces, instead of, as it should be, a plan by which a man might find success through the realization of the best in himself?

But let another test be put to this philosophy—

THE TEST OF LIFE.

How does it work out? What are the best lives, the lives that are richest and that have most enriched the world? Are they those that have given free rein to every fancy, that have nurtured and brought to fruition every growth of the heart's garden, whether it be thistle, briar, or poison root, or fair, nutritious product? Are they those that have given the tiger and the beast of prey free and full range of the life?

There is striking unanimity in the answer. The rich and the enriching lives have been those that have come by the path of the cross; they have learned repression, practiced denial, and suffered death. In every sphere the lights

that have illumined the way of man's advance have not been the dancing flames of selfish, sensual passion but the consuming of the bodies of the martyrs and heroes, either burning in their passion for others or denying and losing all rather than denying truth and light.

The law runs through it all; if you would have a perfect flower you must deny existence to many weeds, you must repress the rank growth, you must pluck off many a leaf and nip many a bud that the one may come to the fullness of its beauty. Through the grain of the character goes the wise husbandman, and death is in his hand—the death of the less worthy, the harmful, and the enemy that life may abound yet more and more in that which is worthy.

In those fields where all things grow in their own way the weeds become the standard for all; license brings all down to

THE LEVEL OF THE LOWEST.

But life is not license—it is choice, selection, sacrifice, death. Pain is the only price at which perfection may be purchased. Self-realization comes not by permitting all things to have their way but by subjecting all parts to the securing of that high end.

It is but cowardice that cries for the so-called natural outworking of everything within man; it seeks to save the labor of weeding, the pain of cutting here and pruning there. It asks only to be left alone. But that way lies the deepest pain of all, the pain of a life where there is nothing but tangles of weeds—no flowers, no capacities for joy, no power to will, no eye to see the good and true and beautiful.

He only is great, he alone has found life who has learned to bring all his parts and faculties into service, who brings all his body and self into subjection that all may be keen and well-kept tools in the work he is doing as a servant of his brothers and his age. This service gives the supreme and sufficient motive for the suppression and elimination of all things that might hinder; the development of the best service by means of the cutting off of anything that might hinder or thwart the high and holy service purposes of a life.

HENRY F. COPE.

THE S. S. LESSON IN MERRY OLD ENGLAND

INTERNATIONAL LESSON,
JUNE 17.

Lesson XII. The Transfiguration.
Golden Text: Luke 9. 35.

THE LESSON WORD STUDIES.

Note.—The text of the Revised Version is used as a basis for these Word Studies.

In Retirement with his Disciples.—The events of to-day's lesson like those of the last belong to the third period of the Galilean ministry, during the second northern journey. In the sparsely settled regions near the foot of Mount Hermon and not far from Caesarea Philippi Jesus at last found the long-sought place where he might for a short time at least be alone with his disciples. Here it was, then, that he revealed himself more fully unto the twelve. And here doubtless he instructed them concerning many things not recorded in our Gospel nar-

Occurrences in the Land That Relinquish Supreme in the Commercial World.

Mr. Robert Whitehead, inventor of the Whitehead torpedo, left an estate in the United Kingdom valued at £454,000. The people of the United Kingdom spent £22,200,000 less for drink in the last five years than in the five years before that.

Representing some thirty schools, nearly 4,000 public school volunteers were engaged the other day at Aldershot in field operations.

Only 200 out of 670 members of the present British Parliament are in favor of woman's suffrage, according to a statement by Mr. Keir Hardie.

St. Michael's Church in the Strand, London, has been sold for £20,000, equal to £5 1s. per square foot, to be

Fashion Notes.

LINEN OF ONE TONE.

Linen has played a prominent role in the comedy of the fashions during the last few seasons, and, while sheer lingerie stuffs have interfered somewhat with the vogue of the heavier forms of linen for ceremonious wear, the linen fad is still flourishing mightily in the province of the tailored shirt waist, the simple tub frock and the little dress accessories.

It is in this last field that a long list of linen novelties is to be found, and the summer girl may go attired in linen, from parasol to pumps, if she desires.

The linen parasols are of all grades of elaboration, but the smartest of the models in the heavier grades of linen are severe in outline, although heavy hand embroidery may run their prices up to goodly sums. The embroidery may be of the openwork kind or of any one of the various stitches in high relief, and very often both forms of embroidery are used in the design, while the edges of the parasol are scalloped and worked in button-hole stitch.

Perfectly plain parasols of heavy linen scalloped and buttonholed around the edges or simply hemmed have for their only ornamentation big embroidered monograms in self color or contrasting color; and nothing more chic than these models has been shown for use with the morning frock of linen or other wash material.

With dressier frocks of sheer cottons more pretentious parasols in lingerie materials, finely embroidered, inset with lace, and much befrilled, are charming accompaniments; but the severe linen parasol has a place all its own in the modes of the season. In one of the soft blues, greens or rose shades, with monogram, scalloped edge and stick all in white, such a parasol is eminently attractive, especially if worn with a frock of linen of the same color relieved by dainty touches of white lingerie trimming.

More daring in color scheme, and, perhaps less generally practical, but suggesting delightful costume effects for all that, was a parasol in linen of the natural hue, perfectly plain save for a huge bunch of natural-looking cherries embroidered in high relief upon one of the divisions of the cover. The stick was one of the cherry wood sticks with a bunch of cherries on the handle, which have been familiar for many seasons.

The linen bag is practically new this summer, though a few models were sold last year, and the makers are turning out some exceedingly pretty things of this sort for use with costumes of linen. Of course such a bag has not the wearing qualities of good leather and is easily soiled; but it is readily cleaned and it answers the purpose for which it is designed, not being intended for general use.

Here again embroidery is the essential feature of the design, and upon some of these bags very beautiful hand work is lavished. There may be a single bold design embroidered upon the side of the bag or little sprays or garlands may wander all over the linen surface.

The latter idea is the more popular of the two, and open work eyelets are frequently scattered throughout the design. Many of the shapes liked in leather are reproduced in linen, and the setting of the bag may be as elaborate as one places, although a plain setting of silver gilt is the usual thing and a very pretentious frame seems out of keeping with the linen material.

The envelope bags and purses, introduced last season in leather, and still modish, are now made in embroidered linen, and a parasol, bag and card case or purse en suite matching a frock of linen constitutes the last word of modishness.

The shoes, too, may match the linen frock, though many women even when they can afford to indulge in whims, prefer an all white shoe of canvas or kid to any other for wear with the tub frock. Colored footwear has, however, obtained more favor this season than

TOLD IN STRAW WISPS

WARNINGS AND MESSAGES DENOTED BY STRAW.

There is Quite an Extensive Language in These Signs in the Old Country.

When a farm servant in Perthshire and other parts of Scotland is seeking a new situation he doesn't advertise in the local newspaper, or even apply to farmers in the neighborhood. He just waits for "feeling" day, as the market at Lady Day and Michaelmas is called. Then with a wisp of straw either between his teeth or in his hat, he strolls up and down the market place. Without a word being uttered it is a sufficient intimation that its bearer is a ploughman, stableman, or other farm worker, and is seeking employment with a new master. A similar custom still prevails in the North of England and in some parts of Ireland, says Pearson's Weekly.

Straw, as a sign that certain things are "for sale" is frequently used. Plaited into a horse's tail with the end curled up, it has such a meaning, but when the plait is partly unwound and allowed to hang downwards, it denotes that the horse has recently changed ownership.

A wisp of straw fastened to the mainmast of a fishing-boat or a pleasure-yacht, in many districts, is a sign that its owner is desirous of selling it. On the Thames, watermen place straw in the sterns of their craft for sale.

DEALERS IN FOWLS AND EGGS

In the North of Ireland know, without any waste of time, whether farmers have any of the produce they seek to buy. Farmers having these for sale erect a pole, with straw tied to its top, on their grounds as near as possible to a public road. Cheeses, when sold at Chester's and other cheese fairs, can instantly be detected by the handful of straw on top of them.

An even more popular use for straw is as a warning of danger. When bridges are being repaired it is customary to hang a bundle of straw from an arch so that those passing beneath it shall be warned against falling bricks and such like debris.

A few wisps tied to a horse's tail denotes that it is a "kicker," while straw for the same purpose, is tied to its stall-post in the stable. To warn pedestrians who would cross a pathway running through their fields that a vicious bull is grazing there, Kent farmers fasten a bundle of straw to the gate leading to it. Some farmers also give further warning by tying straw to the horns of the bad-tempered animal.

Tramps in the South of Ireland fight shy of entering farmyards whose gates are adorned with wisps of straw. It is sufficient notice that fierce watch-dogs are kept for tramps and trespassers. As

A WARNING TO SKATERS

In the Fen districts straw is strewn about broken and dangerous ice, and should there be any holes in its otherwise sound surface these are marked by straw being stuck lengthways into them.

Londoners frequently meet with straw as a sign of warning. When wood-paving is being repaired, or the pathway is being dug up for any purpose, iron rods, to which a rope is attached, mark off the dangerous area. Very often a wisp of straw is fastened to each rod as a further precaution to pedestrians. Without the straw, if the background were dark and the day was dull, short-sighted and absent-minded people might not be aware of their danger till the ropes were reached. Straw, too, is frequently hung outside a warehouse to denote that the crane is being used, and to so warn passers-by.

Huntsmen in the Home Counties know directly they see straw tied to the top of a tall red pole to "ware barbed wire." To warn hunting parties off fields new-

where he might for a short time at least be alone with his disciples. Here it was, then, that he revealed himself more fully unto the twelve. And here doubtless he instructed them concerning many things not recorded in our Gospel narratives. Tradition fixes the site of the transfiguration on Mount Tabor, a comparatively low mountain, regular in outline, about six miles from Nazareth on the north-eastern boundary of the Plain of Esdraelon. But Mount Tabor at this time was fortified on its summit, and being only thirteen hundred feet higher than the surrounding plain, with no projecting points, it hardly offered the seclusion necessary for such a revelation. Moreover, Jesus when last mentioned, was in the vicinity of Caesarea Philippi, near Mount Hermon, where, in all probability, he had remained with his disciples during the intervening period. Mount Hermon was more than nine thousand feet high, with many protruding spurs and lower foothills. On one of these spurs of Mount Hermon, therefore, we are in all probability to think of the transfiguration as having occurred.

Verse 28. About eight days after—Matthew and Mark each have the words "after six days." Both phrases are approximate expressions, meaning about a week. The time from which the evangelists are reckoning is the time of the retirement of Jesus into the vicinity of Caesarea Philippi, mentioned in the last lesson.

Peter, and John, and James—Representative men and leaders of the apostolic group. Together they form a sort of inner circle or sub-committee of the apostles.

29. Was altered—Matthew and Mark use the term "transfigured." Luke's word gives us more nearly the literal meaning.

30. Who were Moses and Elijah—Apparently the three disciples recognized two heavenly visitors. It is not, however, necessary to assume that they did from the wording of the narrative, since it is quite possible that the identity of the men was revealed to the disciples by Jesus.

31. Appeared in glory—Similar to that which Jesus assumed.

Decease—i.e., departure; i.e., his death and departure from this world. Which he was about to accomplish at Jerusalem—The conversation between Jesus and Moses and Elijah was thus about his impending suffering and death, and doubtless concerning the significance of that suffering and death to himself and to the world.

32. Were heavy with sleep—Jesus had been praying, possibly by himself, a little apart from the disciples, as later he did in Gethsemane. During this time the waiting disciples had become drowsy, even as on that other yet more solemn occasion in the garden.

When they were fully awake—Apparently they were aroused from their sleepiness by the vision of the transfigured Christ before them.

Saw his glory—It is to this event, in part, no doubt, that John refers in the first chapter of his gospel in the words "And we beheld his glory, glory as of the only begotten from the Father (John 1:14)."

33. As they were parting from him—their intention to depart became evident to the disciples, whereupon Peter interposed with his suggestion to build three tabernacles or booths.

34. They feared as they entered into the cloud—An explanatory remark given by Luke only.

35. My son, my chosen—Or, as many ancient authorities read, My beloved Son (Comp. Matt. 17:5; Mark 9:7).

36. Came—Or, was past. Alone—Compare the narratives of Matthew and Mark.

The contents of verse 36 are amplified in the narrative of Matthew and Mark. Thus Matthew records, "And when the disciples heard it, they fell on their face, and were sore afraid. And Jesus came and touched them and said, Arise, and be not afraid. And lifting up their eyes, they saw no man, save Jesus only."

present British Parliament are in favor of woman's suffrage, according to a statement by Mr. Keir Hardie.

St. Michael's Church in the Strand, London, has been sold for £20,000, equal to £5 is. per square foot, to be used as a site for business or newspaper purposes.

Linotype machines are being installed at the Bank of England, and in future the addresses on the dividend notices sent out will be printed instead of written by hand.

The site difficulty at Birkenhead has at last been surmounted, and so Mr. Carnegie's gift to the town—£15,000 for a central library and £5,000 for branch libraries—has been secured.

It is 45 years since King Edward—then, of course, Prince of Wales—bought the Sandringham estate for £220,000. He has considerably increased the beauty of the estate by planting innumerable trees.

The Welsh National Eisteddfod is the biggest open-air concert in the world. At least 20,000 people attend it every year.

During military manoeuvres at Sheffield on the 18th ult. a couple of bulls took part in the proceedings and routed a party of soldiers.

Major Oswald H. Ames, who served nearly 22 years in the Second Life Guards, and is the tallest officer in the British army, is retiring from the service.

It is officially announced that the King's birthday will be celebrated in London and at all home stations on June 29th. At all other stations it will be celebrated on Nov. 9th.

The British employer has to pay, on the average, 46 per cent. more for labor than the German employer pays, while the difference as against the American employer is 191 per cent.

"Please do not smoke, eat, strew paper, sit upon the tombstones, pluck flowers in the churchyard, or wheel mail carts," runs a notice posted at the entrance to Whalley church-yard.

A comprehensive work entitled "The Laws of England" is being compiled under the general editorship of Lord Halsbury. It is intended to be a complete statement of English law, and will occupy eighteen or twenty volumes.

Much success has attended the interchange of letters and postcards between pupils in the London County Council schools and those in schools in the colonies. London boys and girls are put in communication with children in the elementary schools in any part of His Majesty's dominions from which applications are received.

There is in the possession of the Rothschilds a grandfather's clock which is practically priceless. It cost originally over £30,000. The mechanism records the day of the week, the month of the year, the phases of the moon, and strikes each hour. The quarters are chimed with a different bell, and—a rare thing with these clocks—has a second hand.

Baroness Burdett-Couts, who is 92 years of age, in early life frequently visited the poorer parts of London, and assisted personally in her almsgiving, and while on these expeditions she was often accompanied by the novelist, Charles Dickens.

SHORTEST WILL ON RECORD.

Estate Worth Over \$40,000 Disposed of in Three Words.

Probate of the shortest will on record was granted in London, England, last Saturday. It is that of Fred Charles William Thorn, of Streatham, whose will disposing of property of the value of £8,285 was written in pencil on a creased envelope, and read "All for mother. C. T."

This grant supersedes a grant of administration to the widow in June last, as the president of the Probate Court in the action Thorn v. Dickens, on Feb. 22 last, pronounced for the force and validity of this will, and probate thereof has accordingly been granted to the widow. Mrs. Mary Ann Thorn, of 57 Park Road, Stratford, Essex, as residuary legatee, the testator having named no executor.

The shoes, too, may match the men's frock, though many women even when they can afford to indulge in whims, prefer an all white shoe of canvas or tub to any other for wear with the tub frock. Colored footwear has, however, obtained more favor this season than ever before, and not only are low shoes, slippers and pumps shown in leather of all the popular colors, but linen and canvas and duck in the modish colorings are also pressed into service by the shoemakers.

Sometimes the material is combined with kid or with patent leather, but, more often, it is used alone. It may be plainly finished with the conventional stitching, heels of leather or of leather covered with linen, eyelets of white and lacings of white or of the color of the shoe. Or, perhaps the model is embroidered daintily by hand on the toe and possibly along the top of the shoe or the top of the vamp.

Concerning linen belts, little remains to be said, though they are more popular than ever before, and new models are constantly appearing. One may buy an embroidered belt at any price from twenty-five cents to ten dollars, but it is needless to say that the cheap embroidered belt is a coarse, machine-made affair and is by no means so desirable as a plain stitched belt of finer linen.

Either the narrow stitched model or the wider crush belt is correct, and, though buckles of silver gilt are used, the pearl buckle of good shape is perhaps the best buckle for the linen belt. Some models in plain linen have edges cut in tiny scallops and embroidered, but more often, if the edges are embroidered, there is an embroidery design upon the body of the belt, and much variety is achieved through such embroidery.

Open eyelets are, as in the case of the linen bags, sprinkled through the design of the belt embroidery, and some of the models show complicated and exquisite hand work. Our artist has sketched several linen belts of unusual cut but without embroidery, which are more novel than the plain belts and not too complicated to be copied by any clever seamstress.

When one comes to the theme of linen neckwear, there is bewildering variety. The renaissance of the linen tailored waist has brought out innumerable new models in tailored linen stocks, and there are turnover linen collar and cuff sets galore.

A turnover collar of fairly heavy linen, embroidered by hand, and worn with a little tie of sheer embroidered linen or lawn or a tiny bow of lace, is a popular Parisian idea; and from Paris, too, come the turnover collars and cuffs of fine linen with the smallest of frills bordering in the edges and a plaited rabat of linen. Heavy linen and sheer handkerchief are associated in many of the French models, but the American woman is partial to the severely tailored stock for use with the tailored shirt waist, and American manufacturers have supplied a surprising number of them.

Very tiny buttons of pearl and worked loops set on the back of a stock will be found a much more satisfactory scheme than the usual pins or hooks and eyes.

One of the clever things in a perfectly plain stock is a close fitting model whose ends pass one through the other in the back after the well known fashion and are brought back to the front. Here the rounded ends come nearer meeting than is the case when a model of this type is to be held by ribbon or scarf ties, yet they do not meet and they tie as in other models.

The almost meet and in each end is worked a button hole. Link buttons like those used for cuffs are slipped through the buttonholes and hold the ends in place. The trim neck finish with collar link of cabochon stone set in a gold rim and matching cuff buttons is particularly effective upon the tailor-made waist.

Mother (firmly, to little daughter who is about to have tooth drawn): "Now, May, if you cry I'll never take you to a dentist's again!"

a warehouse to denote that the crane is being used, and to so warn passers-by.

Huntsmen in the Home Counties know directly they see straw tied to the top of a tall red pole to "ware barbed wire." To warn hunting parties off fields newly sown with wheat or clover roots, it is customary also with farmers in central and northern England to bind bundles of straw to their fences and hedges.

During the shooting season on the big Yorkshire moors tall sticks are placed at intervals along the pathways that traverse the gorse and ling, and decorated with wisps of straw. It is a warning to the peasantry that

THE "SPORTING GENTRY"

are out shooting and that there is danger in crossing these particular parts. Miners frequently warn their comrades of dangerous parts of the workings by throwing straw about the ground.

In Germany, workmen repairing the roofs of houses hang a bundle of straw from the top window as a danger signal to passers-by, while bricklayers in Norway and Denmark tie a similar bundle to the top of a scaffold-pole to signify that the chimney-pots are set and their work is finished. In England it is customary, in fixing fireplaces in new houses, to place straw within the grate. This denotes that the masonry is not sufficiently dry to withstand the heat of a fire.

A bundle of straw left in a field in Sussex is a sign that the gleaners are not yet allowed to gather the corn left by the reapers. When wheat is being sown, a stick, crowned with straw, is put up at each end of the field in order to guide the sower and prevent him going twice over the same ground. Tied to hedges and fences, straw is yet again used by surveyors as a guide in measuring allotments.

To denote when roads, which are the property of the Crown, are closed to vehicular traffic, large bundles of straw are suspended at each end of the thoroughfare. Fastened to a pole stuck in a newly-sown field, a bundle of straw serves as a "scarecrow"; secured to the roof of a farmhouse in many parts of Ireland, it is an invitation to passers-by to enter and drink the health of

THE BRIDE AND BRIDEGROOM

who are within; and when strewn thickly across the street, so that the noise of traffic is deadened, it denotes, as is well known, that a person is lying dangerously ill in its vicinity. In the West of England neighbors show their disgust of wife-beaters by tying straw to the door-handles of the house in which such cruel husbands live.

The driver of the first caravan of a travelling circus invariably throws straw cut at intervals so that those following behind shall know which path he has taken. Similarly, when an army is marching to action the advance scouts, provided with bundles of straw, fasten a bunch at each turning, or a little way down the road, so that the officers in charge may know for a certainty the route their scouts have taken.

Despite the invention of knitting machines, many elderly women in the north of Ireland still carry wisps of straw stuck in their belts. These form sheaths for their knitting-needles, and is a further sign to all and sundry that their wearer is willing to make knitted goods to order.

Even policemen on night duty use straw, especially where there are many warehouses and offices upon their beats. Providing themselves with straws about a foot long, many constables place one immediately beneath a door, between a gate and a post, and in other places. If the straws have been disturbed or crushed, they know at once that there is need for investigation into the causes. This simple trick has been the downfall of not a few clever housebreakers.

Indignant Youth: "I want you to recollect, sir, that I'm a gentleman." Other Fellow: "All right, sir; as a friend of the family I will do my best, but you are putting my capacity for memory to a fearful test."

YOUNG FOLKS

WHOM ARE YOU LIKE?

When Kitty puts her things away,
They're all so neatly folded,
That nothing ever goes astray,
Nor is she ever scolded.

Miss Mollie flings hers in a heap,
Just anywhere she pleases;
To one place she will never keep,
And thus her old nurse teases.

But Master Tom, so all declare,
Is the worst one of the three;
He drops his glove upon the stair,
Flings his cap up in a tree.

And never will his clothes collect,
Though he's scolded every day;
It does not have the least effect,
Whatsoever nurse may say.

Now, tell me true, who is like you—
Mollie, or Tom, or Kitty?
What! tiresome too! like Tom, you do—
It surely is a pity.

UNCLE JACK'S STORY.

"Uncle Jack, please tell us a real wonder story!" cried Hal, throwing himself down on the steps beside his uncle.

"Just a little story about a bad boy," lisped Lucy, snuggling up beside her brother.

Uncle Jack stretched himself a little lazily. "Well, I don't believe I ever knew any bad boys, but I might tell you a bad story about a good boy."

"Do."

"Yes, do," echoed Lucy.

Now Uncle Jack had told so many stories since breakfast that he had not many more ideas in his head, and so he felt a little like teasing the children.

He began this way:

"Well, once there was a boy named Tommy Teggs. He lived—"

"Do you mean Tommy Beggs?" asked Hal, a little timidly.

"Why, yes, to be sure, I did get that wrong! Well, this boy Tommy started out one day to go to the village. He carried a ten-quart pail of milk in one hand and a hand-saw in the other. He went gaily along, whistling and throwing rocks at the fence-posts—"

"Why, Uncle Jack, did he set his milk down every time?"

"Why, yes, yes, I think he must have done that. Well, he went along, looking off at the sea, that lay all behind him—"

"Wasn't it in front of him?" asked Lucy, eagerly.

"No, I think not; I said behind him. He kept one eye on the sea behind him and one at the long lane down which he was walking."

"But—" began Hal; and then, not wishing to interrupt, he contented himself with trying to look back at the door and at the same time keep an eye on his uncle.

"As he went down along the street he saw something in a tree that caught his attention. It was a bird's nest. He shaded his eyes with the saw, and saw the nest. 'I must go up and look in that nest,' he said. So he climbed up nimbly—"

"He sat his milk down, didn't he?" asked Hal.

"Yes; but he kept his saw because he wanted to see." Uncle Jack waited for the pair to laugh at this mild joke.

"He found that there were three eggs in the nest, and as he was rather a bad boy, he thought he would take them out, so he reached in the nest and took out the eggs, and began to come down the tree hand over hand."

"But what did he do with the saw?" asked Lucy.

"And how could he hold the eggs and come down hand over hand?" asked Hal.

"That I don't know," said Uncle Jack, seriously. "It is strange that I cannot explain that to you. It must have been that he could see by means of the saw that he must hand over the eggs to his

FAMOUS MINERAL FINDS

RICH DISCOVERIES IN ALL PARTS OF THE WORLD.

Big Nuggets Found in Australia — The Oliver Martin Chunk—Fiddler's Mexican Mine.

No vocation is so full of risks and possibilities as that of prospecting for minerals and following up a clue when found. This applies with special force to the pursuit of the most precious metals and stones. How many stories have been written around the imaginary discovery of a large nugget, which, just as things are going very badly with the finder, rescues him from despair and sets his feet on a foundation of gold!

Yet the fictions of the romancer can hardly outstrip solid facts, says the Strand Magazine. The history of mining is full of instances in which, either by accident or stroke of luck following on hard, deliberate work, a man has opened his hand and found wealth lying in the palm.

It will be interesting to glance at some of the most remarkable cases. We may fitly start with the royal metal. Chief among gold nuggets are the Welcome and the Welcome Stranger. The first weighing 2,217 ounces, was found at Ballarat, Victoria, in 1858; the second, 2,268 ounces in weight, at Dunolly, Victoria, in 1869. In both cases the fortunate discoverer netted more than \$40,000 by a blow of the pick.

Another typical instance of gold mining luck comes from Mount Alexander, in the same colony. A gang of five miners had sunk several holes unsuccessfully to depths ranging from about thirty to sixty feet, and were so disheartened that they decided to give up the search for "color" after one more attempt. Before the seventh hole was nine feet deep a rich "pocket" appeared and in a few hours

120 POUNDS OF PURE GOLD

had been secured. In New South Wales, almost simultaneously, an Australian black shepherd who amused himself with gold seeking happened to notice a glittering speck on the surface of a quartz boulder. He chipped off a piece with his tomahawk, and lo! a mass of gold, scaling 120 pounds 9 ounces, lay revealed! The arrival of the nugget in Bathurst produced a gold fever which seemed to deprive hitherto sane men of their senses, and was largely responsible for the subsequent "rush" to Australia from all parts of the world.

The early history of the West Australian gold fields is marked by similar smiles of fortune. The Pilbarra field, to take an example, owes its discovery to a stone which a boy picked up to cast at a crow. Its weight being unusual for its size, the boy examined the missile and found that it contained a quantity of gold. Coolgardie, a name now so well known, is also associated with a curious incident. In 1892 Messrs. Bayley and Ford, starting from Southern Cross, plunged into the deserts, where they believed gold to exist. Bayley prospected a long time without success, and was returning to Perth very much down in luck when his fortunes were changed in a most casual manner. One night his horse, picketed outside of the tent, became so restless that he went out to quiet it, and on the way tripped over what he thought at first to be a stone, but which proved on closer inspection to be a huge nugget. A claim was at once pegged out, and in four weeks \$50,000 had been realized. This claim lies at about the centre of Coolgardie, the town created by the conquest "rush."

We should expect the California gold mania of the early '50s to yield its quota of

ROMANTIC STORIES.

The discovery of gold in the Sacramento Valley was made accidentally during the construction of a tail-race for a water mill wheel. The owner of the mill observed some shining fragments in the banks of the new channel, and

Any one acquainted with American mining annals will at once think of the marvellous Comstock vein of Nevada, and its Big Bonanza, the largest body of silver ever struck by a miner. The great silver vein was first cut into in 1859 by two prospectors, McLaughlin and O'Riley, who both died poor and broken hearted. Other miners, who stuck to their claims, raised fortunes from the great treasure house of silver, became "nabobs" and spent their money royally without fear of its giving out.

Mexico is a veritable land of silver, just as England is a land of iron and coal. Its wealth attracted the Spaniards under Cortes nearly 400 years ago. But at that time the silver deposits had scarcely been touched, and it was not until the Spanish conquerors brought European mineralogical knowledge to bear on the great silver lodes of Sonora, Zacatecas, Guanajuato and Hidalgo that the real resources of the country were understood. At Arazuma, in Sonora, a mine owner discovered in the middle of the eighteenth century a solid silver mass weighing 2,700 pounds, which was only one of a number of similar finds. The Flores Mine of San Luis Potosi was struck by a poor priest, who for a mere trifle bought up a claim which had been abandoned as barren. His venture endowed him with \$3,000,000 worth of silver.

In the same region a negro fiddler found among the ashes of his campfire—a curious parallel to the Carmack episode—a button of silver, which led to his becoming a millionaire. More recently, in 1826, two Indian peasants, so poor that they could not raise money to buy a meal, stumbled on the outcrop of a vein which yielded \$26,000. Returning for a moment to the eighteenth century, we encounter the stirring history of mulatto, one Piere Tereros, who struck the Real del Monte deposits in Hidalgo, and at the end of twelve years had

AMASSED \$15,000,000

besides being ennobled by the King of Spain for pecuniary services rendered.

In Chile the name of Godoy is associated with great riches. A hunter of this name was chasing guanacos, and being tired, sat down under the shelter of a large rock, one part of which had a bright color. He cut off pieces with his knife—the substance of the rock at this point was quite soft—and had it assayed. The substance was recognized as silver lead. Godoy had discovered a vein containing an extraordinary amount of silver. His good fortune was afterwards eclipsed by that of the brothers Bolados, fuel carriers by trade, who found in a crevice opened by an earthquake an enormous block of silver ore worth nearly \$1,250,000.

In 1760 a boy was fishing in a Virginian stream, when he ran short of bait, and while hunting for more he saw in the bank of the stream a streak of black stone, which proved to be rich bituminous coal. Thus was started the soft coal industry of the Eastern States, which to-day has reached such vast proportions. The even more valuable anthracite or hard coal deposits of Pennsylvania were also discovered by sportsmen. Philip Glnther in 1791 struck the first signs of anthracite in the southern coal field. This was how it happened: Being short of food, he went out into the woods with his gun to look for deer. A day's hard walking brought him no luck, and he was returning home at nightfall, very dispirited, when he kicked something hard which rolled away before him. He stopped and picked it up and wondered if this was the coal that he had heard people speak of as likely to exist in that region. Such it proved to be.

From the prizes drawn in the lottery of mining we may turn to the blanks which fall to the majority of prospectors. Sometimes good fortune never appears at all; at others it just evades the grasp of him who, consciously or unconsciously, is

ON THE POINT OF SEIZING IT.

Petroleum now ranks second to coal as a producer of heat, light and power. More than 5,000,000,000 gallons of this liquid are raised annually in different parts of the world. It was not until the year 1859, however, that petroleum began to play its present important part

HEALTH

TYPHOID FEVER.

Although there is always more or less typhoid fever in most of the larger cities of this country, the late summer and autumn are the seasons when it is most to be feared.

The disease is not so formidable, as regards the mortality, as some others, but its great length and the evil consequences which sometimes follow it in the form of weak heart, weak spine, or nervous disorders make it quite as serious as some which are more fatal but far less protracted.

Unless one knows how the disease is usually spread, one cannot hope to avoid it, and so it may be useful to consider in what way the germs of the malady find their way into the system.

Water is the usual vehicle for typhoid germs, as is well known, and probably all great outbreaks of the disease in cities are due to an infected water-supply. This has been strikingly shown in Philadelphia, where some parts of the city are supplied with filtered water and others with unfiltered or mixed water. Comparing two parts of the city in which the conditions, except as to water-supply, are almost the same, it was found that in the one supplied with filtered water the occurrence rate of typhoid fever was one in five thousand, while in the others, in which the unfiltered water was drunk, it was one in sixteen hundred.

But a city with an ideal water-supply may be scourged with typhoid fever, although less severely, through the medium of impure ice, and it is almost as important to know where the ice is cut, or with what water it is made, if artificial, as where the city water comes from. Not long since a number of officers on one of the United States ships in the Mediterranean squadron were taken down with typhoid fever. When the source of the infection was traced, it was found to be some ice bought at Athens, the ice-machine on board having broken down.

Another source of infection is found in oysters that have been fattened in streams contaminated with sewage. Not only has typhoid followed the eating of these fish, but the typhoid-bacilli have been found in the stomachs of the oysters.

Raw vegetables used for salads may have been grown in soil contaminated with slops used as fertilizers, or may have been washed in infected water.

Unless a water-supply is above suspicion, all that used for drinking, tooth-cleaning and in the kitchen should be boiled, and the drinking water cooled by putting vessels containing it on the ice, not by putting ice in the water itself.

Finally, great care should be taken to screen all food from flies, for if there is a case of typhoid fever in the neighborhood flies may become most active distributors of the poison.—Youth's Companion.

DISEASE DISSEMINATORS.

The instinctive dislike of rats and mice which is so common, especially among women, is rationally justifiable. It has been proved that these animals transmit trichinae and the plague, and that from their unclean hiding places they bring forth and disseminate the germs of typhoid and typhus. Worse still, as has been demonstrated by certain French and Russian pathologists, there is danger of rabies from the bite of these noxious vermin. Dr. P. Remlinger, of the Pasteur Institute at Constantinople, after having treated three Beyrut Arabs who had been bitten by rats and who feared hydrophobia, discovered that rats and mice were extremely susceptible to the poison. He inoculated a number of these animals, and kept them under observation in the laboratory. Two out of three thus treated contracted the disease. The most pronounced symptom

"But what did he do with the saw?" asked Lucy.

"And how could he hold the eggs and come down hand over hand?" asked Hal.

"That I don't know," said Uncle Jack, seriously. "It is strange that I cannot explain that to you. It must have been that he could see by means of the saw that he must hand over the eggs to his pocket. On thinking it over, I guess that was it."

"Well, go on," said the children. "Well, he thought he would like to give the eggs to his mother, so he set down the milk, and the saw under the tree, and sat down beside them to watch that no one stole them while he was gone, and he ran back as quickly as he could down the lane—"

"But he was under the tree!" exclaimed Lucy, who was trying to help matters all she could. "He could not run home while he was sitting there."

Uncle Jack rose up on his elbows and looked at the children in astonishment. "That is quite true," he said, thoughtfully. "He could not have done it—and—in that case it could not have happened, and thus—there is no story to tell, is there?" and Uncle Jack opened the magazine he was reading, as if that were quite the only way out of the difficulty. The children waited patiently.

"But what about the bird's nest?" questioned Hal.

"Well, if the boy could not have done what I said, he could not have climbed the tree, and in that case there was no one to bring down the eggs, and so there could not have been any one to see the eggs in the tree, and thus we see that there was no one to see the eggs there, and so—well, it all seems to me very unlikely. In fact, I don't believe any of it, do you, now, on your honor?" Uncle Jack looked at them with smiling eyes.

"Let's play horse, Lucy," said Hal. "I'll be the horse," said Lucy. "Stories are silly."

After this, Uncle Jack, who was rather tired of stories, read his magazine comfortably.

SPANISH FAD IN LONDON.

Smart Set Adopting Fashions of Alfonso's Kingdom.

London is rapidly and enthusiastically becoming Spanish. Spanish costumes, Spanish decorations, and Spanish furniture will everywhere be the vogue this season.

In ballrooms decorated with the Spanish colors women dressed in modifications of the national dress of King Alfonso's subjects will dance to music composed by Spaniards, and the mantilla, the high, jeweled comb, and the glittering sequins, beloved of the Basque peasant girl, have already made their appearance in West-end shops.

Spanish lace in enormous quantities is stocked in all the smart shops. Black is the favorite color, but natural, cream, and soft pastel tints of pale pink and pale mauve are in great demand. One Oxford Street shop has made a specialty of hand-made mohair shawls for theatre wraps, and within the last few weeks 2,000 of them have been sold.

A well-known customer said that he is bringing out in a week or two some beautiful tea gowns and negliges modeled on the national dress of the Spanish women.

"Velvet and gold boleros will confine the full lines of flowing silk robes, and sequins will be used for trimming," he said.

"Orange and crimson, the Spanish colors, would prove too violent to suit the English complexion in dress, but the colors will be popular in soft materials for decorative schemes of color."

Of all the Spanish modes the most picturesque is the high-dressed evening coiffure. This is being adopted in London enthusiastically, and every hair-dresser and jeweller is selling the beautiful Spanish comb.

Not only is Spanish dress the fashion, but Spanish pottery, leather, old silver, and pictures are being eagerly sought after, and in commercial circles shorthand writers and typists are studying

mania of the early '50s to yield its quota of

ROMANTIC STORIES.

The discovery of gold in the Sacramento Valley was made accidentally during the construction of a tail-race for a water mill wheel. The owner of the mill observed some shining fragments in the banks of the new channel, and thinking that they were only mica or some other worthless substance, dealt with himself for a time whether it would be worth while to pick them up. He decided to do so, and to his astonishment, found that they were scales of gold. This happened in 1848. Before a year had passed California, hitherto a scarcely explored country, became the focus of an unprecedented immigration of people of all conditions who poured across the plains and deserts or came round by sea to San Francisco determined to stake health and even life itself on the chances of the pan and sluice. A few made enormous fortunes, a large number secured competencies, but the majority learned by bitter experience that Fortune is a very fickle goddess indeed.

Among the lucky miners was one Oliver Martin. He and a companion named Flower had been prospecting for weeks without touching gold, and so great were the hardships endured that the two men almost died of exhaustion. While in extremities they were overtaken by a terrible storm, which killed Flower. His comrade, though terribly weakened by hunger and toil, felt it his duty to give the corpse a decent burial and dug a grave at the foot of a tree. As he threw out the earth he struck a nugget, which under the name of "The Oliver Martin Chunk" has become famous as the largest ever found in the New World. It weighed 151 pounds, six ounces, and realized \$36,270. The episode is truly extraordinary. Flower died in the search for gold, and his death reveals the gold he has so long sought. Martin, reduced to the depths of despondency by ill uses and the loss of his mate, suddenly finds himself

A RICH MAN;

all the richer because his companion can no longer claim a share.

Another case of the irony of luck is furnished by a Frenchman of Eldorado county, who was so much overcome by the sudden discovery of a gold lump worth \$5,000 that he went insane. As a contrast may be mentioned the good fortune of a couple of tramps, turned off a westward bound train because they could not pay their fares. While they stumbled along on foot they happened to find a nugget worth \$2,750.

Even more welcome than the nugget, which may lie far away from other gold, is the discovery of a gold bed or vein. The arid regions of Alaska and northwest Canada furnish some startling records of rich strikes. None is more romantic than that connected with the name of George Carmack, a half breed trapper. One morning, after a night spent on the banks of the Bonanza Creek (as it was afterward called), he noticed among the ashes of his camp fire the "color" of gold, and soon realized that fortune had favored him. The winter of 1896-97 was just closing in, so that the 250 inhabitants of "Forty Mile," the nearest mining camp, who at once hastened to the creek, were secure from invaders until after the next year's thaw.

All winter long the lucky crowd shovelled out dirt so rich that, when the spring cleanup or washing came, as much as \$900 worth of gold was taken out of a single pan! Some men made money steadily at the rate of \$17 a minute. One of the most curious episodes of this "strike" was the result of an act of sheer laziness. An ex-bartender of Forty Mile, being too sluggish to go up to the top of Bonanza Creek to peg out his claim as last comer, turned aside into a subsidiary creek, the Eldorado, and struck a deposit which subsequently yielded \$3,000,000. Next spring those of the Bonanza workers who returned to San Francisco took with them more than a

TON OF GOLD DUST AND NUGGETS. Done up in an extraordinary variety of receptacles, ranging from a deerskin bag to a jam pot, and the gold rushes of '49 and '51 were repeated to Klondike.

the grasp of him who, consciously or unconsciously, is

ON THE POINT OF SEIZING IT.

Petroleum now ranks second to coal as a producer of heat, light and power. More than 5,000,000,000 gallons of this liquid are raised annually in different parts of the world. It was not until the year 1859, however, that petroleum began to play its present important part among the commodities which conduce most to the comfort of mankind. In that year Col. E. L. Drake, formerly a conductor on the New York and New Haven Railroad, was engaged by David Fletcher and Peter Wilson, two residents at Titusville, Pa., to sink an oil well in the Oil Creek Valley. He was much hampered by quicksands, which filled the bore as fast as it was drilled, and so he conceived the idea of driving down iron pipe to keep out intruding substances until rock should be reached. People regarded him as a madman for trying to draw oil from the earth through a tube "like a boy sucks cider from a barrel through a straw."

He persevered, nevertheless, and at a depth of thirty-three feet struck hard rock. Operations were continued until \$10,000 had been spent, and then, as no oil had yet appeared, he was told to pay off debts and give up the attempt. On the day before the receipt of this order, on August 26, 1859, the drill, at a depth of sixty-nine feet, suddenly fell six inches into a crevice of the rock and the bore hole filled with oil almost to the surface. A pump was rigged and 1,500 gallons a day were raised and sold for a dollar a gallon. Thousands of people flocked to the spot eager as gold seekers to profit by the discovery. Farms all around were leased at enormous prices. The countryside soon echoed with the sound of many drilling outfits and oil flowed up in torrents, a large part of the yield running to waste for lack of barrels in which to transport the oil. Thus began an industry which has added \$2,000,000,000 to the wealth of the United States.

Yet Col. Drake himself missed wealth. In the first place he omitted to patent his well sinking process and so

THREW AWAY A FORTUNE.

In the second place an accident set the well alight and destroyed the pump, with the result that before another could be rigged, rival bores had already tapped the oil bearing strata and seriously reduced prices. This bad luck seems all the worse because it so happened that Drake's oil well was the shallowest ever sunk in Pennsylvania! If a thousand wells had been sunk at other spots in Oil Creek to a depth of only sixty-nine feet, every one of them would probably have been "dry as a powder horn." Still it is impossible to calculate what civilization has gained by that happy freak of chance. A single foot more and Drake would have raised his drill for the last time and the priceless rock oil deposits of the United States—perhaps of the world—might have been untapped for decades.

Another striking instance of bad luck is that of M. Porte, a Frenchman who, in 1830, exploited a mine at Monte Catini in Tuscany. For seven years he burrowed for copper and at last found himself in circumstances so straightened that he sold the mine for the proverbial old song. The purchasers at once cut into a mass of ore which returned a profit of \$20,000, and the mine yielded \$200,000 annually for many years, making the fortunate proprietors millionaires. The fact that he had so narrowly missed a prize so preyed on M. Porte's mind that he died on a broken heart.

SPEECH AT THE WEDDING FEAST.

Very few persons acquit themselves nobly in their maiden speech. At a wedding feast recently the bridegroom was called upon, as usual, to respond to the given toast, in spite of the fact that he had previously pleaded to be excused.

Blushing to the roots of his hair, he rose to his feet. He intended to imply that he was unprepared for speech-making, but, unfortunately, placed his hand upon the bride's shoulder, and looked down at her as he stammered out his opening (and concluding) words: "This—er—thing has really been thrust upon me."

Pasteur Institute at Constantinople, after having treated three Beirut Arabs, who had been bitten by rats and who feared hydrophobia, discovered that rats and mice were extremely susceptible to the poison. He inoculated a number of these animals, and kept them under observation in the laboratory. Two out of three thus treated contracted the disease. The most pronounced symptom was paralysis, but there were frequent manifestations of excitement and ferocity. It would appear that rats or mice are responsible for many cases of rabies in dogs which have not been brought into contact with others of their species. Indeed, says Dr. Remlinger, canine rabies would have worn itself out, and would have become far less severe, were its virulence not constantly reinforced by the bites of rats and mice. No one has ever given the rat a good name, but we must revise the old phrase, "harmless as a mouse."

CHILDREN AND DISEASE.

It used to be considered as impossible for children to escape certain ailments—called children's diseases—as to avoid the teething period. The intelligent mother of to-day recognizes the absurdity of this. She knows that a sound body is essential to perfect mental growth. So, instead of taking each attack as a matter of course, she uses every effort to avoid the slightest ailment. The best safeguards to the health of children are a suitable regimen, cleanliness, fresh air, pure water and a due allowance of sleep. To the child thus armed disease is not a frequent visitor. The old idea that diseases must come has given place to the doctrine that sufficient knowledge and care will prevent almost any evil, and this is no less true of disease than other things.

FIVE WAYS TO CURE A COLD.

(1) Bathe the feet in hot water and drink a pint of hot lemonade, then sponge with salt water and remain in a warm room. (2) Bathe the face in very hot water every five minutes for an hour. (3) Sniff up the nostrils hot salt water every three hours. (4) Inhale ammonia or menthol. (5) Take four hours' active exercise in the open air. A ten-grain dose of quinine will usually break up a cold in the beginning. Anything that will set the blood actively in circulation will do it.

CURE FOR HEARTBURN.

Nothing is better for heartburn than a quarter of a teaspoonful of baking soda mixed in a little sour milk, and taking it will give instant relief. The same quantity taken in a little water will cure a sick stomach. A pinch put into baby's bottle will prevent the milk souring on its stomach.

CRUSHED FINGERS.

A crushed finger should be plunged into water as hot as can possibly be borne. This application of hot water causes the nail to expand and soften, and the blood pouring out beneath it has more room to flow; thus the pain is lessened. The finger should then be wrapped in a bread-and-water poultice. A jammed finger should never be neglected, as it may lead to mortification of the bone if it has been badly crushed.

ONE FAULT.

"Dere ain't nobody dat can't brag a little bit about something," said Meandering Mike.

"Dat's right," answered plodding Pete. "Take you an' me, for instance. We never get mixed up in no labor riots, do we?"

THE POET'S HARD LOT.

Miss Coyleigh: "No, Mr. Penwiper, mamma doesn't allow me to accept presents from young men."

Poet: "And I had so wished to present you with a copy of my poems!" "Oh, I thought it was something of value."

THE BEST FLOUR. DAFOE'S NONESUCH DAFOE'S MANITOBA PATENT

By numerous tests by the best Bakers the above mentioned grades have been proven to be the best Flours in the market. When buying Flour ask for Dafe's, and patronize your home mill, thereby producing Bran and Shorts that you can purchase cheaper than the product of the Western mills, which has to be transported thousands of miles at great expense, and usually, when it reaches you, of inferior quality.

The grocer complains if the farmer or the mechanic sends to Toronto or to outside points for an article he can get at the home store as good, but he does not hesitate to buy Flour from mills hundreds of miles away, and sell you an inferior Flour for more money than you can purchase the home product for, every bag of which is guaranteed.

CHOICE CORN MEAL and BUCK-WHEAT FLOUR always on hand.

FEED GRINDING a specialty, with the best feed mills known to the trade.

A full stock of the best ANTHRACITE COAL. Also in the market for the purchase of all kinds of Grain.

Ask for prices at the big Mill before purchasing your Flour, Feed or Coal.

Your eyes tested free and satisfaction guaranteed. —FRED. L. HOOPER.

Boyce-Vanalatine

A pleasant event was solemnized at the home of Mr. and Mrs. Nicholas Vanalstine, Mill street, on Wednesday evening at 8.30 o'clock when their daughter Miss Louisa, was united in wedlock to Mr. William Arthur Boyce of Newburgh, by the Rev. J. R. Real. The ceremony was performed in the presence of only the immediate relatives of the contracting parties, after which the happy gathering partook of a light wedding tea. The bride was handsomely attired in a cream silk voile dress, and was attended by her cousin, Miss Lena Fields. Mr. Stanley Boyce, of Colebrook, performed a like service for the groom. Little Miss Jennie Cole, daughter of Mr. and Mrs. Jas. Cole, Deseronto, acted as flower girl. The happy couple were the recipients of many wedding gifts from their large circle of friends, who will join with The Express in wishing them a happy and prosperous journey through life. They will make their future home in Newburgh.

District Meeting.

The Bay of Quinte District Meeting of the I. O. O. F. was held in the Lodge Rooms of Napanee Lodge on Wednesday afternoon. The following delegates from outside points were present: Messrs. Patterson and Allison, Bay of Quinte Lodge, Picton; Messrs. Pasco and Eccles, Belleville Lodge; Messrs. Hicks, Ketcheson and Davis, Mizpah Lodge, Belleville; Messrs. Bowen, Kimmerly and Young, Deseronto Lodge, Deseronto, and Messrs. Kemp and Bissell, of Trenton Lodge. The usual routine business was transacted. Mr. W. R. Kemp being elected District Deputy Grand Master, and Mr. Allison District Secretary. In connection with the meeting, Napanee Lodge No. 88 invited the delegates to the district meeting and the members of the sister lodges in the district to meet in the Lodge rooms in the evening when the Initiatory, and first and second degrees were conferred by the degree teams of Napanee Lodge, and a lunch was afterwards served. After the luncheon a number of short addresses were delivered by visiting brethren rounding off a very enjoyable evening. A large number of visitors were present from Odessa, Deseronto, Argyll and other Lodges.

SYMINGTON'S

South Side Dundas Street, Napanee, Ont.
At The Downtown Office of the,
NAPANEE CANNING CO., Limited,

There was quite an exciting time in the Royal Hotel yard, one day last week, a well known townsman was chasing a hen for dinner.

We have Lawn Mowers that you want and you cannot get them too good. But the best are only to be had in Napanee at BOYLE & SON.

The Clerk's Friday half holiday excursions which proved so popular last summer, will be again run this summer. Full particulars will be given later.

Richard's & Pringle's Coon Minstrels, appeared in the Brisco Opera House on Tuesday evening and gave an excellent performance to a crowded house.

The Toronto Salvation army band was in town on Tuesday, and discoursed sweet music on the street afterwards holding a special service in the S. A. Barracks. They were in Deseronto in the evening.

Work is progressing rapidly on the new Eastern Church. The walls are very nearly completed to the eaves, the towers and gables alone remaining to be finished. The roof of the Sunday School room is being built this week.

The new bell for S. Mary Magdalene's church arrived on Saturday last and was placed in the new tower yesterday. The bell is a beautiful one and weighs complete 2000 lbs. being the largest church bell in the town.

A. S. KIMMERLY has just got in a car of Potatoes, Roses, Hebsons, Seed Peas and Mandscheuri Barley in stock and all kinds of garden and field seeds. I buy clean Timothy Seed, Vetches for sale.

The members of Court Selby, No. 1800, I. O. F., will attend Divine Service in the Methodist church, Selby, on Sunday, June 17th, at 7.30 p. m. Members of Sister Courts are cordially invited to join with them. Meet at Court room at 7 o'clock sharp.

The New Perfume.

The new perfumes, to which we are almost daily introduced, are like the new books, soon pass away. We believe that our new odor Marichal Neil Rose has come to stay, it will live on its merits. A delicate lasting perfume Have you tried it? Sold only at The Medical Hall—FRED L. HOOPER.

Half Holidays.

The prospects are very good that the Friday half holidays, given by the merchants in former years will be continued this year a large number of the merchants have signified their willingness to close their places of business on Friday afternoons during July and just three Fridays in August and give their staffs a holiday.

Annual Outing.

The Eastern Methodist Church will hold its annual outing on Tuesday, July 10th, to Kingston and 1000 Islands going by G. T. Ry. to Kingston and Str. Aletha to the Islands. The Excursion will leave Napanee at 7.43 a.m. returning at 8.11 p. m. This should prove one of the most enjoyable excursions of the season. Remember the date and go with the crowd. The steamer will not carry any other excursion the same day, as the boat has been secured exclusively for this excursion on that date.

IT'S DELICIOUS!

What's Delicious? Fry & Sons goods. We have a large consignment direct from the manufacturers, consisting of Plain Chocolate Drops, Cream Drops, Vanilla drops, M. C. drops, M. C. Merchant Tailor, - Napanee.

THE FIRST SPECTACLES.

They Were Made In Italy In the Thirteenth Century.

Spectacles were invented late in the thirteenth century. The use of glass to aid the sight of defective eyes is, however, much older. Nero looked through a concave glass in watching the gladiatorial games, and many other historical men of his day were dependent on similar devices for lengthening their sight.

Till the latter part of the thirteenth century only the single glass was in use. In 1290 the double glass was invented, and in the fourteenth century spectacles were used quite frequently by the very wealthy and high born, although they were still so scarce that they were bequeathed in will with all the elaborate care that marked the disposition of a feudal estate. The first spectacles were made in Italy.

Somewhat later the manufacture of cheaper glasses sprang up in Holland, and it spread late in the fourteenth century to Germany, Nuremberg and Rathenow acquired fame for their glasses between 1490 and 1500.

For many years glasses were used only as a means of aiding bad eyes, until the fashion of wearing merely for the sake of wearing them sprang up in Spain. It spread rapidly to the rest of the continent and brought about the transformation of the old thirteenth century spectacles into eyeglasses and eventually into the monocle.

Quicksilver.

Quicksilver is found in veins of rocks, like gold, silver and other metals. Sometimes the tiny globules of the mercury appear in the interstices of the rock, but usually it is found in the form of cinnabar, a chemical compound containing 13.8 per cent of sulphur and 86.2 per cent mercury. When pure and reduced to a powder it is a bright red color.

The principal uses of quicksilver are for removing free gold and silver in placer and quartz mining, for manufacturing vermilion paints and dyes, for backing mirrors, for making thermometers and many other scientific instruments.

What Water Did.

A certain liquor dealer, a hard headed old Scot, grew rich in the trade. After he had grown rich the old man built himself a fine house, a limestone

PERSONALS

Mrs. Richard Carr, and Miss Lillian Carr, Dorland, were in town on Tuesday.

Mrs. Simpson, and Miss Willa Dusty, Kingston, spent a few days this week the guest of Miss Ada Stevens.

Miss Bessie Emmons, Adolphustown, is spending a week in Picton.

Mr. Ed. Skeates, and little daughter, of Syracuse, are guests of his mother, Mrs. Samuel Hayes.

The Gibbard Furniture Co.

Have fitted up some of their best Dressers and Stands, Buffets and China Cabinets, which are samples from their wholesale line. They will be glad to have the public call and see these, as they will only be on exhibition for a few days; especially those interested in good designs and the latest finishes will be well repaid for the time spent in looking over the line, whether they intend purchasing or not.

The Gibbard Furniture Co. of Napanee, - Limited.

"The Strenuous Life"

of the present day calls for every appliance that will economize time.

The successful farmer must lead a strenuous life during his season for it is crowded into half the year.

A Bicycle saves time; saves his horses; saves work and is comfortable and rapid transit.

The successful city man must account for every moment lived in the twelve months. He has street cars, yet he prefers the bicycle because it is more economical, convenient and is a time saver.

And the CLEVELAND is the bicycle that satisfies and delights the rider.

monometers and many other scientific instruments.

What Water Did.

A certain liquor dealer, a hard headed old Scot, grew rich in the trade. After he had grown rich the old man built himself a fine house, a limestone mansion on the hill, with a park around it, with conservatories, stables and outbuildings—in a word, a palace. One day the old Scot rode in the omnibus past his fine house. A temperance man pointed up at the grand edifice and said, with a sneer, "It was the whisky built that, wasn't it?" "Na, na, man; the water," the Scot answered.—London Mail.

Origin of "Chauffeur."

There were chauffeurs long before automobiles. History tells us that about the year 1795 men strangely accoutered, their faces covered with soot and their eyes carefully disguised, entered by night farms and lonely habitations and committed all sorts of depredations. They garroted their victims, dragged them before a great fire, where they burned the soles of their feet and demanded information as to the whereabouts of their money and jewels; hence they were called "chauffeurs," a name which frightened so much our good grandmothers.

DEATHS.

WILSON—At Morven, on Sunday, June 10th 1906, Flora M. Wilson, aged 29 years 8 months.

One gallon of Prism Brand Paint will cover 360 sq. ft., two coats. Every can guaranteed. The Medical Hall.—Fred L. Hooper, sole agent for Napanee.

Gentian Root.

Gentian root, often used as a tonic, is considered in many malarial countries a remedy against intermittent fever. Especially is this the case in Corsica, in that section of the island near the town of Aleria, which is infested with malaria. The inhabitants recently protested violently against the introduction of quinine on the part of the medical authorities, declaring that they would not abandon the remedy which had been used among them for centuries, the gentian root, either powdered or simply masticated.

The Sea Otter.

The sea otter combines the habits of a seal with the intelligence and amusing character of the otter. When met in herds far out at sea, which is but seldom now, they are commonly seen swimming on their backs. They even eat their food lying in this position on the water and nurse their young ones on their chests between their paws, exactly as a south sea island mother swims with her baby in the water. When swimming in this attitude they even shade their eyes with their paws when the sun dazzles them.

One of His Inferiors.

"He says he always tries to be polite to his inferiors and— Hey, where are you going?"

"Going to find him and give him a licking."

"What for?"

"I met him this morning, and he was as polite as a dancing master."

The new Golf Suitings are here in many designs and weaves, Panama Cloths, Broadcloths, Serges, Etc.

Camping Parties, Attention!

Lava In the Ocean.

This earth received what was probably its greatest shaking in modern times when the tremendous volcanic eruption of Krakatoa, in Sunda strait, occurred in 1883. A curious incident of that time is recalled by a correspondent who was a passenger on a steamship on the voyage between Colombo and Albany, King George's sound, some 1,500 or 2,000 miles south of the center of the disturbance. It was a beautiful night, and shortly after dinner, when the deck was crowded with passengers, the lookout shouted, "Breakers ahead!" This was in midocean, with no shoal water nearer than the Australian coast, five or six days' sail distant. The steamer was slowed down, and presently drifted into a mass of floating lava and green slime. Bucketfuls were hauled on deck and strained through cloths. Nearly all night the steamer forged ahead at half speed, with the floating scum grating against her sides, and in the morning, when clear water was reached, the sides of the ship below the water line were bare of paint and burnished like steel.

The Red Howling Monkey.

The red howler (*Myetes seniculus*) is a rare monkey of the forests of tropical America. It is an extremely delicate animal and is chiefly remarkable for the extraordinary noises it makes. The cries it utters comprise almost any sound from a subdued moan to an angry roar, and it is hardly conceivable that they should proceed from a single animal. This is the animal called red monkey by Waterton in his "Wanderings In South America," where an admirable description of its weird cries may be read. These sounds are produced in a bony cavity formed by an enlargement of the hyoid, or tongue bone. In appearance the red howler is an elegant little creature, well clothed with hair of a reddish brown color. Like the spider monkeys, it is provided with a long, prehensile tail, the under surface of which is naked toward the tip, but it differs from those monkeys in having well developed thumbs.—Westminster Gazette.

One Way to Get a Dog.

"There are ways and ways of getting things," said the old secret service man, "but I wouldn't recommend some of them to a Sunday school class. Now, I knew professionally a reformed confidence man. I won't say how deep the reform went, but officially he was reformed and occupied a pretty respectable position in the community. One day I met this chap on the street, and I had something to say to him. 'See here,' I demanded, 'is this your advertisement in the paper offering a reward of \$5 for the return of a lost dog?' 'Sure!' said he. 'But you don't own a dog,' said I. He grinned. 'You mean I didn't own a dog,' he corrected. 'But I do own one now—the handsomest English bulldog you ever laid your eyes on, and he cost just \$3.'"

Imagination and Judgment.

Dr. Eaton, president of Madison university years ago, was beloved by the

Camping Parties, Attention!

Here is something for your benefit, a real Tapestry Pillow Top, size 26 x 26, with Lido Centre in colors of red, blue, and green ground. Regular 30c values, just the thing you need while camping or travelling. In order, for your benefit we will have a special sale on

Saturday at 9 a. m., and the price is 16c each

SEE WINDOW

READY-TO-WEARS FOR THE HOLIDAYS.

No doubt many will not have time now to leave orders for a new waist, a skirt, jacket or raincoat. The Ready-to-Wear Department is now extensively stocked with the necessary requirements—this week's arrivals are, new rain coats, new tweed effect showerproof, travelling coats, new silk and muslin waists, skirts, etc. New Lingerie, new Lisle, Cotton and Silk Vests, etc., children's and ladies sizes.

Nick Nacks---Holiday Wants!

It may be a linen embroidered wash belt, an embroidered wash stock collar, a linen collar tab, a pair of silk, tulle, or lisle gloves, a pair of cotton or lisle hose, openwork or plain, white, black or tan, a new Dresden neck or hair ribbon. You need lots of these small articles—we say if you want something real swell, nobby and up to the mark you will always get it at Madill's Smallwear Department.

Carpets, Floor Coverings.

You may be renovating your summer cottage—the probabilities are you will want a new floor covering, a new drape, window shades, curtain poles, etc. There is always something you require. We want you to see our complete stocks of Jap Matting, Oil Cloths, Linoleums, Crex Matting, Lace and Tapestry Curtains, Draperies, etc., the designs and patterns are, as you know, exclusive, so come and have a talk with the carpet man. We are interested and will interest you.

MADILL BROS.

Gettin' Wisdom

is a comparatively easy task if you start it while you are young. Don't allow your children's eyes to be ruined for all time because "they look too 'dod' with glasses on."

We'll tell you the truth as to whether they need glasses or not, and charge you nothing for the telling.

Headaches in children are suspicious. We are also the best people to guarantee the quality of our frames, it being part of our jewelry business to acquire that ability and knowledge.

Painting White.

If you intend painting white either inside or outside, use Sherwin-Williams Gloss White. It will cover more surface, wear longer, remain whiter, and cost you less than any other white paint. It will not chalk off like Pure White Lead. Ask us for prices before painting. The Medical Hall.—Fred L. Hooper, Sole agent for Napanee.

NOTICE—is hereby given that the Municipal Council of the Township of Richmond, intend at the regular meeting to be held on the First Monday in August to introduce a By-Law for the closing of the road running east and west across lot No. 5 in the 2nd concession of Richmond, between the Grand Trunk Railway and the Belleville road and that all parties interested are requested to take due notice and govern themselves accordingly.

ABRAM WINTERS,

Tp. Clerk Richmond.

Selby, June 6th, 1906.

CLERK'S NOTICE OF FIRST POSTING OF VOTERS' LIST.

Voters' List, 1901, Municipality of the Village of Bath, County of Lennox and Addington.

Notice is hereby given that I have transmitted or delivered to the persons mentioned in sections eight and nine of the Voters' List Act, the copies required by said sections to be so transmitted or delivered of the list, made pursuant to said Act, of all persons appearing by the last revised Assessment Roll of the said municipality to be entitled to vote in the said municipality at elections for members of the Legislative Assembly and at municipal elections; and that said list was first posted up at my office, at Bath, on the eighth day of June, 1906, and remains there for inspection.

Elections are called upon to examine the said list, and, if any omissions or any other errors are found therein, to take immediate proceedings to have the said errors corrected according to law.

MAX ROBINSON,

Clerk of said Municipality.

Dated this 8th day of June, 1906.

27b

The Temiskaming & Northern Ontario Railway Commission has given to the Town Site Mining Company a 999 years' lease of the southwest 37 acres of the Cobalt town site, which is known to contain mineral.

your eyes on, and he cost just \$3."

Imagination and Judgment.

Dr. Eaton, president of Madison university years ago, was beloved by the students and his good opinion courted above all things. One commencement day the student who had delivered the valedictory approached the doctor and timidly asked him what he thought of the effort. The doctor looked at him a moment and then said slowly, "Edward, if you would pluck a few of the feathers from the wings of your imagination and stick them in the tail of your judgment, you would make better speeches."

Talleyrand's Thirteen Oaths.

Talleyrand took thirteen oaths of fidelity—to Clement XIII. when he entered holy orders, to Clement XIV. when he became bishop of Autun, to Louis XVI. in 1789, to the king and the constitution, to the directory in 1795, to the directory in 1796 as minister of foreign affairs, to the three consuls, to Bonaparte sole consul, to Napoleon emperor, to Louis XVIII. in 1814, to Louis XVIII. at the second restoration in 1815, to Charles X. in 1824, to Louis Philippe in 1830.

A Generous Cardinal.

Cardinal Bonaparte was a grandson of Lucien Bonaparte. He was a very charitable man. During one of his illnesses a servant came to him and said that a poor person at the door begged for alms. "Give him what money you will find in my purse," said the cardinal. "There is no money, eminence. The silver spoons are all given away. We have nothing left but pewter spoons." "Well, bring him in and give him a good meal."

Disappointed in the Boy.

"I don't know what kind of figure that boy'll cut in life," said the old man, with a sigh. He's gone an' shattered all my hopes!"

"Why, what's he been a-doin' of?"

"He's been a-doin' of nothin'," was the reply, "cept writin' poetry on barn doors when I had set my stakes to make a carpenter or a congressman out o' him!"

His Character.

A cook has been going round a station in the south of India with the following "character" and is somewhat surprised he is not engaged: "Abdul has been my cook for three months. It seems much longer. He leaves on account of ill health—my ill health."

A Coincidence.

"I suppose you enjoy hearing your boy talk since he went to college."

"Yes," answered Farmer Cornstossel, "but ain't it kind of a coincidence that so many of them classical quotations begin with 'Rah, 'rah, 'rah?'"

Always Speaking.

Mrs. Jones—I always think twice before I speak once, John. Mr. Jones (sighing)—Exactly, Maria. But you're such a quick thinker.

Use Prism Brand Floor Enamel. It dries quickly, has a varnish gloss, and is true to Color. The Medical Hall.—Fred L. Hooper, sole agent for Napanee.

TOWN COUNCIL.

Council Chamber,
Napanee, June 18th 1906.

Council met in regular session Monday evening. Mayor Lowry in the chair.
Councillors present—Simpson, Williams, Graham, Meng and Normile.
The minutes of the last regular session were read and confirmed.

COMMUNICATIONS.

From P. Gleeson and J. P. Hanley, on behalf of the R. C. Church, asking for the sum of \$25 for damage done to the R. C. manse, by water backing up into the cellar, from the canning factory sewer. Laid on the table until later in the evening.

From T. Symington, re gangway on Dundas street (known as Jameson's gangway) stating that he is willing to comply with any reasonable suggestion from the council to prevent water running over the sidewalk. Laid on the table until later in the evening.

From R. S. Kelsch, recommending that Robert Wells, Brockville be secured for the position of Chief Engineer of the Electric Light Works, at a salary of \$75 a month. Laid on the table.

From R. S. Kelsch asking for instructions in reference to line wire to be purchased, the tenders, for wire being the same Laid on table.

From a number of ratepayers asking the council to grade and gravel road on Alma Ave, and also to continue the sidewalk the length of the street. Laid on table.

The Street Committee reported as follows: re walk on Dundas street, west of Campbell House, asked further time to report; Wm. Davy, petition for sidewalk, no action; approach to fire hall, further time to report; account of Robt. Light, recommend payment; O. S. Davis, account for broken springs, no action; sidewalk built on Bridge street from Adelphi to Dundas; sidewalk in front of N. Deans; and road repaired on Bridge street, near the Herring terrace. Report adopted.

The Town Property Committee reported the building of a boulevard around the Harvey Warner Park, but thought a cement base should also be built. The cellar of the Public Library was also in a very bad shape, and in their opinion a cement floor should be built.

On motion of Couns. Graham and Williams a cement floor was ordered to be placed in the Public Library.

On motion of Couns. Graham and Williams the Town Property Committee were instructed to furnish the council with an estimate of the cost of a cement base on the boulevard around the Harvey Warner Park at the next session of council.

Mr. T. F. Rutlan, collector of taxes for 1905, was in attendance at the council board, and on motion he was given a hearing.

Addressing the council Mr. Rutlan stated that he was in possession of a certain sum of money, procured while occupying the position of tax collector, but which did not belong to him, and he would turn the same over to the council for a certain remuneration.

Just here probably it would be as well to explain that during the day it had got whispered around that the late Collector had in his possession considerable money, after having returned his roll, made a settlement with the proper official, and received his salary, and in consequence the council chamber was packed with citizens eager to hear the explanation. Mr. Rutlan stated that the Council pay him ten per cent on all taxes collected from parties who should have been assessed but whose names did not appear on the roll.

Moved by Coun. Graham, seconded by Coun. Meng, that if Mr. Rutlan make a statement, and give an account of money in his possession that he receive 10 per

NEWS IN GENERAL.

The eleven-year-old son of Mr. James Bigford was drowned at Smith's Falls while bathing.

A terrific hurricane caused serious damage along the coast of Newfoundland.

The number of killed in the massacre at Bialystock is placed as high as six hundred.

Viscount Howick, eldest son of Lord Grey, was married to Lady Mabel Palmer, daughter of the Earl of Selborne, on Monday.

E. LOYST has a carload of good potatoes, Royal Household flour, all other grades. Bran, Shorts, Cream Equivalent, Flax Seed, Oil Cake, Rock Salt, barrel and sacks fine and coarse, Groceries. Highest price paid for eggs and hides. One price to all.

Kingston, June 17.—John Kane, well known in marine circles as a wheelman, was choked to death while eating his supper in Walker's restaurant on Princess street last evening. A large piece of meat got stuck in his throat, and all efforts to remove it were unavailing. He was about sixty years of age and sailed from this port during the summer and lived with relatives in Montreal during the winter.

In Parliament on Monday the session was practically monopolized by private bills, but the Government managed to get through some supply for the Immigration Department. Mr. Monk gave notice of his intention to make a motion calling for the dismissal of Mr. Preston, in view of the evidence before the Agricultural and Public Accounts Committees.

"A" and "B" Batteries, Kingston, will leave on their long march to Pettawa camp, near Renfrew, on Tuesday, July 3rd, and will go out Princess street to Napanee where they will strike camp for the first night, after which the two regiments expect to make about fifteen miles a day, the whole journey of about 200 miles to occupy about thirteen days. The Toronto Dragoons will commence their march to the above camp on the same day and they expect to have a big time enroute.

Fly Pest on Horses and Cattle.

The best remedy found yet is "Zenoleum Fly Oil." It is used with a spray or can be used with a sponge one application will last for 24 hours it is not sticky or greasy. For sale in Napanee at the Red Cross Drug Store. T. B. Wallace. 85c will make 5 gallons

HISTORICAL.

The County of Lennox and Addington has without doubt as interesting history as any in the Province of Ontario. Where are the records of that history at the present time? Some have been collected by the Ontario Historical Society and are in Toronto. Some are in the hands of local collectors, and are as safe as long as the present owners live and care for them; but the greater portion of them are still with the various families whose ancestors have made this history so interesting. All of them should be very carefully collected in some safe repos-

WHEN you should buy your New Spring Hat is something for you to decide.
WHERE you should buy it is also in your own hands.

WE HAVE IT

A Business Training Institution conducted along modern and practical lines by a staff of thoroughly competent instructors, thus insuring our patrons a Commercial Education of the highest standard.

SELECTED WHEAT LANDS IN WESTERN Canada near transcontinental railroad. Exceptional investments, absolutely safe and profitable. Full particulars on application. Denny & Pringle, Melita, Man., or Kenosha, Wis.

WANTED, by Chicago wholesale house, special representative (man or woman) for each province Canada. Salary \$20.00 and expense paid weekly. Expense money advanced. Business successful; position permanent. No investment required. Previous experience not essential to engaging. Address Manager, 132 Lake Street, Chicago, Ill., U.S.A.

FINE FARM FOR SALE—John M. Hawley offers for sale, his farm of 20 acres, situated at Hawley, 2nd concession South Fredericksburgh. This is one of the very best farms in the county, well drained and fenced, and free from foul seed. 100 acre under good cultivation. 10 acres woodland, 4 acres new land ready to stump. Good orchard 4 splendid wells. Fine brick residence, law and shade trees. 2 large barns, tenant house, new poultry house, hog house, etc. Very convenient to church, school, post office and blacksmith shop. 8 miles from Napanee, miles from Bath, and 3 miles from station. For further particulars enquire of 76-3m JOHN M. HAWLEY.

FOR SALE.

That desirable farm known as the Blanche Farm, situated about one mile south of Napanee containing 210 acres more or less. Will be sold as a whole or in two parts. (1) The north part with the buildings containing 140 acres more or less, and (2) the south part containing 70 acres more or less; on which there is a good

cent on all taxes collected from parties who should have been assessed but whose names did not appear on the roll.

Moved by Coun. Graham, seconded by Coun. Meng, that if Mr. Rutana make a statement, and give an account of money in his possession that he receive 10 per cent on all moneys collected from parties whose names did not appear on the roll, provided the statement is satisfactory to the council.

Yea—Graham, Lowry, Meng, Normile, Nays—Simpson, Williams.

Mr. Rutana thereupon informed the council that he had in his possession \$1148 16, \$572 60 of this amount was for taxes which did not appear on the roll at all, and the balance was made up of errors in the roll. The amounts received from those not on the roll ranged from \$2 up to \$112, and comprised some twenty-nine parties. As Mr. Rutana proceeded to explain how this state of affairs came about he remarked that "the whole system was out of joint" and evidently his opinion was shared by the spectators present, judging from their actions. He said he was only too willing to do all in his power to assist the council in the adoption of a system "not out of joint."

Moved by Coun. Meng, seconded by Coun. Graham that the matter be referred to the Finance Committee and that they have power to employ a competent man to investigate this matter, and also to go back over the books for two or three years, and report to this council. Carried.

On motion of Couns. Graham and Meng it was decided to accept Mr. Rutana's explanation as satisfactory.

Moved by Coun. Simpson, seconded by Coun. Meng that this council vote the sum of \$75 for the Free Hospital for consumptives at Gravenhurst. Carried.

Mr. Albert Websdale addressed the council concerning water in his cellar, caused by the canning factory sewer. When the water receded from the cellar about two inches of slush and filth was left on the floor which made things very unsatisfactory as well as unhealthy, besides it made a good deal of work keeping the cellar clean. Mr. Websdale was granted \$2.50 for trouble of cleaning his cellar.

The clerk was instructed to write the several owners of stone crushers in this vicinity and get prices from them for crushing 100 tons of stone.

Moved by Coun. Normile, seconded by Coun. Meng, that this council recommend (in reply to Mr. Symington's communication) that the passageway referred to be properly drained and a cement pavement laid.

Moved in amendment by Coun. Williams seconded by Coun. Graham, that this council recommend the laying of a tile drain in the driveway referred to. Cd.

Moved by Coun. Meng, seconded by Coun. Normile, that the prayer of the petition in reference to Alma Ave. be granted. Carried.

Moved by Coun. Graham, seconded by Coun. Williams, that the walk in front of Mr. Nelson Dean's property be extended ten feet west of his house. Carried.

The Street Committee were empowered to continue the sewer on West Street, known as the Canning factory sewer, plugged, as the R. C. Church corner to Bridge street, there to connect with the stone drain, and that 10 inch tile be used.

Moved by Coun. Normile, seconded by Coun. Graham, that the bill for damages put in by the R. C. Church committee be paid. Carried.

Moved by Coun. Graham, seconded by Coun. Williams that the Street Committee have the grates on the commons which lead into the canning factory sewer, plugged, as the surface water from the commons running into this sewer is supposed to be the cause of all the trouble along the lines. Carried.

Beware of Ointments for Catarrh that Contain Mercury,

as mercury will surely destroy the sense of smell and completely derange the whole system when entering it through the mucous surfaces. Such articles should be avoided. Be sure you get the correct prescription from reputable physicians, as the damage they will do is ten fold to the good you can possibly derive from them. Hall's Catarrh Cure manufactured by F. J. Cheney & Co., Toledo, O., contains no mercury, and is taken internally, acts directly upon the blood and mucous surfaces of the system. In laying Hall's Catarrh Cure be sure you get the genuine. It is taken internally and made in Toledo, Ohio, by F. J. Cheney & Co. Testimonials free. Sold by Druggists. Price 75c per bottle. Take Hall's Family Pills for constipation.

Portland Cement, Rathbun's Star Brand MADOIE & WILSON.

Some are in the hands of local collectors, and are as safe as long as the present owners live and care for them; but the greater portion of them are still with the various families whose ancestors have made this history so interesting. All of them should be very carefully collected in some safe repository and put in the hands of a reliable organization, in order that future generations may have access to them, and may feel with pride that the records of the history of their country are as complete as any in the Dominion.

With this object in view, it is thought advisable to form a Lennox & Addington Historical Society, with Archives in Napanee.

A meeting will be called to perfect this organization at an early date, and in the meantime, I would be pleased to hear from residents of the County, both those living here at present, and those who still have a love for the old home, although far away, with suggestions for the formation of such a society, and ideas for the development of it.

Now, don't say you are not interested. Every one is in some way interested, and every family has an old story of how the mother, father or the grand-parents fought in the rebellion of '37 or the war of 1812, or came over from "the States" as U. E. Loyalists, or helped build the first church or school, or road, or served in the first council, or nominated the first member or laid this or that corner stone, or was the first Justice or Postmaster, or launched the John Stevenson, you are all interested. Just look in that old trunk in the attic, and find those old papers. Every one of them should be kept for our Society, and the Family Record should be added to the collection. When your interesting proofs of history are all collected bring them in, and each giver's name will be carefully preserved and the papers marked suitably with such names.

I have assurances from many others that they will give their collections to the Society, and the items I have gathered will aid materially to the record.

The announcement of meeting to organize will soon be published.

Try and be present in person to help in the work.

Very Respectfully,
Clarence M. Warner.

Will Increase the Death Rate.

The death rate in the potato bug family will be greatly increased if you use Lewis Berger's (English) Pure Paris Green, sold in 1 lb. tins at The Medical Hall—FRED L. HOOPER.

Is one of the best friends that any family has, but there are often sudden and acute attacks of some painful disease that require immediate treatment, such, for instance, as rheumatism, neuralgia, lame back, etc. Tuck's

The Family Rheumatic Bone Oil makes the calling of the doctor unnecessary. It will give relief before he could answer the call.

Doctor and if faithfully used will cure the most stubborn attacks of rheumatism, neuralgia, lumbago, pain in the chest or back, soreness, sprains or strains. It is a powerful penetrating oil that goes straight to the seat of the trouble and roots out the cause. It relaxes the stiffened joints, soothes the affected part and allays the inflammation which produces the torturing pain. It is therefore a valuable remedy not only for rheumatism and kindred diseases, but is equally good for croup, bronchitis and quinsy. One father writes that it cured his child of a violent attack of croup in five minutes. A mother writes that boy was subject to quinsy and two or three times each year was confined to his bed and could not speak. When threatened with another attack this fall she rubbed his throat and chest with the Bone Oil and by three applications warded off the attack. The wonderful curative powers of this remarkable remedy are being talked about by everyone. A bottle should be in every home. For sale by all medicine dealers at 50c a bottle or will be sent prepaid on receipt of 50c, by the Tuck Bone Oil Co., Limited, Smith's Falls. Money refunded if not satisfied.

KAI WANG;

A TALE OF SOUTHERN CHINA.

CHAPTER XIV.

The first round had been quickly fought, with but trifling danger to the brave couple who had boarded the floating junk in search of Dr. Jack's widow.

True, they had not allowed the ragged line of Celestials to come within striking distance, and the latter had been unable to put their knives against the action of modern firearms, else the result might have been somewhat different.

It was necessary, however, that they proceed to take advantage of the respite offered them, since the golden opportunity might prove to be the desideratum upon which their whole future depended.

So Larry edged his way further along in the quarter where he knew the door of the junk's cabin lay.

And close to his side the more bulky frame of Plympton kept pace with his movements.

The latter had grave doubts regarding the tactics of the Chinese crew of the boat, and believed it his duty to keep their rear well guarded.

He had considerable respect for the well-known trickery which has always marked the character of the race, and feared less this sudden change of base might be only a means to an end.

In other words, Lord Rackett, blunt and straightforward himself in his bluff English fashion, deeded the enemy fully as much when they threw themselves upon the bloody deck and ceased their clamorous outcries as when they surged forward in bold attack.

Some characters are more dangerous when still than while whooping it up like wild Bedouins of the desert.

They reached the cabin door. Larry's groping hand came in contact with the knob by means of which it was opened.

Of course it moved outwardly, so that a heavy sea might not force its way inside during some tropical typhoon.

A Chinese junk is an ungainly craft in the eyes of sailors accustomed to the trim outlines of boats built upon the Clyde or in American waters. She rears her squatly shape out of the water much after the fashion of a Dutch galliot of olden days, and it takes some time and experience to realize what weatherly qualities may be in such a quaintly-formed vessel.

And yet a deal of comfort lies in some of these same junks, fashioned to cater to the tastes of native nabobs and powerful mandarins. The cabin is usually richly furnished, after the prevailing Chinese style, to be sure, but those who affect to sneer at all such clumsy pleasure craft would doubtless change their tune could they have a glimpse of their luxurious surroundings.

Larry, having clutched the brazen knob, which was fastened in fantastic guise, perhaps after the manner of a dragon's head, started to pull open the door.

It resisted all his efforts. Whether the sheer weight was against him, or the door was held by some contrivance on the other side, Larry had no means of discovering—all he knew was that his most earnest efforts to drag it open were in vain.

Again he deemed himself signally

"Larry! God be thanked!" came in accents of keenest delight, and in an instant the situation underwent a kaleidoscopic change.

The little man was threatened with death from a toy weapon at one moment, and the next he found himself in danger of the same violent end through being smothered.

For in the excess of her emotions, due to the revulsion of feeling upon discovering who this intruder on her privacy really was, Avis had gathered the little man in her arms and given him a genuine, hearty, cousinly hug.

Larry made no protest, not he; such things are like angels' visits, too few and far between, and he was ready to stand the consequences with the valor of a stoic, however short of breath the vigorous attack might leave him.

Besides, Larry infinitely preferred this sort of an assault to being compelled to face even a toy revolver that blinked into his left optic with threatening zeal.

Lord Rackett now came up, and Avis quickly held out her hand for him to clasp.

The dim past was forgotten.

Once she had dreaded contact with this man, at the time his soul was consumed with a mad love for her—once she had despised, aye, feared him as an enemy of her husband.

That was all gone.

The big Briton had conquered himself, and his life since had been in positive evidence of the sincerest reformation.

To-day, at this hour and minute, he was proving the wonderful change that had come over his nature, and, instead of taking risks in the endeavor to bring harm upon any whom she loved, was placing his own life in deadly peril, so that he might stand between Dr. Jack's widow and calamity.

And this with no other prospect of reward—at least that she knew anything about—than the pleasure that overwhelms one when the call of duty has been obeyed.

She therefore gladly gave him her hand, and thanked him with an eloquent look from her glorious blue eyes, now bright with tears that had been started by this sudden change from darkness to the dawn of new-born hope—tears that no danger could have forced her into showing.

And Plympton, thrilled by the touch of her hand, felt that his grievous errors of the wretched past had been freely and fully forgiven; and that henceforth she would look upon him as an honored and trusted friend.

It were well worth enduring many times what he had gone through in order to gain the good-will and confidence of so charming a woman.

He experienced a solid satisfaction, such as had probably never come to him before in that other day when, urged on by jealousy and malice and envy, he had conspired to rob Dr. Jack of his wife as well as his fortune.

Lord Rackett was well aware, however, that the present was no time to indulge in these reflections; his work, although thus far successful to remarkable degree, could not by any means be regarded as completed—indeed, he felt it had only been fairly started.

Enemies were close at hand; the stout doors alone stood between them, and no

Plympton could rack his brain and not find anything in his stormy past that held a candle to it.

This threw him entirely upon such resources as the cabin of the junk offered, backed up by the inventive abilities of himself and comrade, which it may be understood were of no mean order.

They could tell from the motion of the boat that the junk still floated, and, so far as they were able to detect, no movement was in progress looking toward reaching land.

It evidently quite suited the purposes of those on board to keep afloat while wrestling with the unique problem they had on their hands.

Plympton looked out of the stern window in which the piratical chap had been lodged at the time Larry gave him his compliments.

It was some little distance over the sombre-looking water of the river, but a valorous man would have thought little about making the plunge when his life was at stake.

This method of procedure was not in his mind just at present; some other means of escape would have to be considered, since they had a lady to look after.

He glanced back over the course they had come.

Lights could be seen about the city, but after all it made a miserable showing, considering the immensity of space covered. Chinese methods are still of the antiquated kind that were good enough for their ancestors. Should they insult the reverend memory of those worshipful generations by deserving better?

Perhaps Plympton had cherished a hope that a boat of some kind might be trailing astern of the junk.

Alas! there was no sign of one, and whatever fancies clustered about this chance vanished in thin smoke.

Then he looked up.

To clamber out of the window and gain the poop deck of the junk was certainly feasible, since one of the sailors had effected a reverse movement.

What good would it accomplish? He could not thus gain the mastery of the boat and send her ashore.

Evidently the game was to be fought out from another vantage point, and he must look within for means of continuing the contest.

So Larry was posted to cover this weak place, where the open windows invited an assault, while Plympton examined the cabin in order to obtain his bearings.

Avis had recovered her usual self-possession and watched these manoeuvres with considerable interest.

She quickly comprehended that Lord Rackett hoped to find some means of leaving the cabin besides the door or the window, and presently joined him in the search.

It seemed useless, however.

While they were speculating as to what might lie beneath the cabin floor, Plympton felt a trembling movement under his feet.

His first thought was that the junk had struck some floating object—then it flashed into his head that mayhap the rascals had started to scuttle the vessel, hoping that those in the cabin might drown like rats.

The most amazing fancies are apt to surge into one's mind when an earthquake thrill makes the footing insecure.

Again he felt that strong quiver beneath his feet.

Then it suddenly dawned upon him that some unknown person was endeavoring to raise a board in the cabin floor.

There was, after all, a cavity or hold, beneath, and a means of reaching it from the cabin; but the sagacious enemy had taken possession of it first, and thus shattered any dreams he may have indulged in.

Lord Rackett was a very accommodating man; at least his friends all thought so.

He sympathized with the aspirations of those whom circumstances kept down and who were ambitiously trying to rise above the environments.

Now, he could only give a rough guess as to the identity of the man who from below was endeavoring to raise

GIFTS IN ABYSSINIA.

Experience of a Stranger Who Wishes to Do the Right Thing.

An agent of the British government who visited Abyssinia some years ago wished to return the favor of a native official by some suitable present. The bestowal of this was, however, a matter quite beyond the knowledge of one brought up in the court circles of Western civilization. His experience was instructive.

"The arrangement was badly handled," he says, "and when I arrived several persons besides the high officials were present. After a few light topics had been discussed, I mentioned my object in making the visit, and as no offer was made to dismiss the bystanders, I exhibited my donation.

"In an instant I was aware that I had made a false step. A frown of mingled surprise and indignation clouded the hitherto serene brow, and tones of fathomless integrity declined the proffered gift, while strong inward feelings vented in a rocking motion of his body.

"You have utterly misunderstood me," said he. "The friendliness which I have shown you has been extended solely with pure motives of kindness to the stranger in the land. Devotion to my sovereign and country is amply repaid by the internal consciousness of rectitude. Your intentions are doubtless good, but greater happiness will await me from the knowledge that you will now recognize how disinterested my conduct has been."

"My offering was firmly waved away, and for some period his frame continued shaken by inward emotion, to the great edification of the bystanders whose eyes remained fixed on the ground.

"It was undoubtedly very discerning, and my apologies for so great a mistake were profuse. I declared that I could not quit his abode until restored calmness had given me the assurance that his feelings had recovered their usual serene tone. As, fortunately, this soon happened, I left, properly enraged at the miserable management which had occasioned the awkwardness.

"Naturally, I consulted a native authority, who had witnessed the transaction, and the mistake which I had committed; but he was so tickled by the circumstances that I extracted from him for some time little but laughter. His eventual view of matters was confined in few words:

"Try again; but take more, and have no witnesses."

"On the next occasion I found the governor alone, and when I opened the subject on which my visit was founded, his eyes twinkled, and he said:

"From the first moment when I saw you I had a presentiment that we were ordained to be great friends. I do not know if Europeans have these superstitions, but with us they are general, and we do not find them deceptive. You may have heard—and I am aware it is generally stated of us by foreigners—that we are deceitful and avaricious. Do not believe this; all countries contain bad men, and your experience has perhaps been unfortunate. But we shall remain always friends—and what are presents, after all, but external emblems of esteem?"

"There were no difficulties on this occasion. He was obviously much pleased, and finally said that the blessing of Providence would be sure to attend the exertions of a man who was thoughtful of the saddened circumstances of others; and he was poor, very poor."

THE CHILDREN'S FRIEND.

Baby's Own Tablets is not for babies only. It is a medicine for children of all ages. It is gently laxative and comforting. It cures indigestion, all forms of stomach troubles, constipation, simple fevers, diarrhoea and makes teething painless. There's a smile in every dose. Mrs. Henry Mater, London, Ont. says:—"Having used Baby's Own Tablets I can say with sincerity that I know nothing as good for simple fevers, stomach and bowel troubles. My baby

ly means of discovering—all he knew was that his most earnest efforts to drag it open were in vain.

Again he deemed himself signally fortunate in having such a robust comrade in the hunt.

Lord Rackett, seeing that his help was needed, stretched out a hand, took a good grip upon the metal knob, and with a sudden muscular contraction of his tremendous powers tore the door open, its mate also flying outward.

The cabin was before them. Neither stopped to take an observation, but plunged boldly in.

It would have been the height of folly to have lingered even a second, a temptation of Providence, as it were, for the aspiring voice still harangued the wretched Chinese, and some of the sailors, either stung into activity by this bitter goad, or the realization that their desperate enemies were on the retreat, had scrambled to their feet and were rushing pell-mell in the direction of the cabin entrance, yearning to get in at least one savage stroke ere this lord foe passed from the immediate range of their vision.

The two men had an indistinct view of a dimly-lighted compartment where shrunken draperies hung, and many rich oriental divans and pillows were scattered about.

Lord Rackett turned instantly to snap the doors shut and fasten them, if possible, against the projected intrusion.

He uttered a shout of delight when his eye discovered that the double doors could be rigidly fastened by means of a bar which, when dropped into certain metal arms fashioned for the purpose, might hold out against any ordinary force from without.

It was a close call.

Even as the weighty bar clanked into place, a hand was eagerly fled upon the dragon's head without and the door was shaken with a violence that spoke of extreme passion.

Little Plympton cared; with him a miss was as good as a mile, and he felt as though they were favored by fortune, being so placed as to hold the fort against the foe.

Meanwhile Larry had been enjoying something of an adventure, though one might perhaps question whether he fancied the sensation very much, for it certainly is not altogether conducive to the greatest pleasure in the world to have a small revolver thrust directly into one's face, with a nervous finger toying with the trigger.

That was Larry's experience.

He had not been looking for any such sudden meeting, and was for the moment rendered quite breathless by his recent labor and this really startling demonstration.

At the same time a voice he should know, a voice that thrilled every fibre of his being, a voice he had been dearly wishing to hear, exclaimed in accents that spoke of bravery wrestling with womanly fear:

"Stand back, you villain! I may be trapped, but not conquered! Stand back, or—"

She left her sentence incomplete, for by this time she had been enabled to catch a glimpse of Larry's face, now wreathed in a huge grin of astonishment and pleasure.

means to be regarded as completed—indeed, he felt it had only been fairly started.

Enemies were close at hand; the stout doors alone stood between them, and no doubt such clever rascals would speedily find a way of getting at the beleaguered ones in the cabin.

This being the state of affairs, it behooved the two comrades to prepare for action and place themselves on a footing to meet any new emergency.

Their first move must be to restore their faithful weapons to a condition in which they would be able to do further damage should the exigencies of the case require it.

So Lord Rackett thrust a hand deep into one of his pockets.

Larry did likewise.

These hands came out holding extra cartridges.

"Load!" said Plympton.

There was a succession of clicking sounds and a tossing aside of empty brass shells—then both cylinders were freshly charged, and the new power had been placed at their disposal.

Now we can consider what may be done to further our escape," said Plympton, gravely.

"By Jove! What d'ye think of that, now?" snapped Larry, as he suddenly threw up an arm and discharged his weapon in the direction of a cabin window where the wriggling figure of a Chinese pirate could be seen pushing through.

CHAPTER XV.

Evidently the people of the junk did not intend to give up the ship or call off the dogs of war so easily, after all.

Because all the first round in the battle had gone against them was no sign of defeat; he laughs loudest who laughs last; and so long as the Russian could control his voice, with Chinamen to obey his commands, there was little or no danger of his crying quits.

Larry had taken a snap-shot at the chap so industriously engaged in the endeavor to enter by the window.

He had no positive means of knowing whether he had struck him or not, but at all events the result was the same for the fellow vacated his lodgings in such quick order that it was utterly impossible to say whether he clambered aloft or dropped into the dark river.

Lord Rackett sprang to the spot, ready to present his particular compliments to any others who might be attracted by the prospect of another "grand opening," but the prompt action taken in the case of the leader served as a check upon their actions, since none put in an appearance.

There was now time to examine their situation with a view to extracting all the comfort possible out of it.

Taken as a whole, the condition of affairs was decidedly unique.

There they were shut up in a cabin of a hostile junk, with vengeful enemies on deck, and drifting down the river.

What would be the end? A score of things might happen to them, any one of which could only be considered with a shudder.

Even the sea lay beyond, and there were many ways in which their enemies might force them into a surrender, or accomplish their destruction if it came to that desperate end. In imagination Lord Rackett could see the junk beset by one of those fierce tempests that sweep the Chinese coast, born of tropical influences amid the islands of the Eastern seas, or else engulfed in flames, with not a boat remaining in which to escape.

The prospect was not alluring. Indeed, it presented a grim aspect to even such an old and tried campaigner as himself.

Not that he had any idea of submitting to the pleasure of those on deck one minute longer than was absolutely necessary.

Such acquiescence would not have been in accordance with the nature of the man.

Escape from the floating prison they must, and with Avis in their company. But how was it to be done?

That was the all-important question. The situation was unparalleled.

and who were ambitiously trying to rise above the environments.

Now, he could only give a rough guess as to the identity of the man who from below was endeavoring to raise the trap in the cabin floor, nor was he in a position to fully decide what his designs might be, but somehow he felt that here was a chance where assistance and appreciation were needed.

Accordingly Plympton stepped suddenly back, and, relieved of his weight, the trap, owing to the tremendous pressure below, flew up into the air.

With it came the head and half the body of a very dirty and extremely astonished Chinaman, who, never suspecting the true cause of the resistance, had been doing his level best to accomplish the work in hand.

Of course, he had no idea of coming into the cabin, but such a warm-hearted and generous-minded fellow as Lord Rackett could not bear to refuse a favor, since he hated to see any one left out in the cold.

Acting upon this impulse he had stooped down and laid hold of the fellow by the neck ere he could recover sufficiently from his stupefaction to dodge.

Not understanding this philanthropic action on the part of the big Englishman, the yellow fellow began to wriggle and squirm after the manner of a serpent, doubtless under the mistaken notion that he could in this way slip out of the clutches of his master.

A less muscular man would have lost him most assuredly, but Lord Rackett had landed many a lordly salmon, and he slapped this contortionist upon the cabin floor with a vigor that warned him to desist.

The trap had fallen in its place again. Evidently if there were other fellows below, they had been frightened off by the fate that so suddenly befell their leader, for, according to the ethics of warfare in vogue among themselves, he must be a dead herring ere this.

Plympton begged Avis to secure some cord, and when this had been brought he wrapped his captive in it, arms at his sides, until he was little better than a mummy.

"Let them only come one at a time, and we will soon have the whole gang in limbo; but I fear they have taken the alarm, and mean to try other methods," was what he said.

There was a reason for his belief.

Already sounds came from the direction of the doors, sounds that indicated a gathering of the clans in that quarter.

Lord Rackett had faith in the bar, but still it was not irresistible, and the crew of the junk might yet find some means of clearing away this stout barrier to their progress.

Indeed, they appeared to be working upon that theory at the present moment.

Bang!

Lord Rackett uttered an exclamation. He had seen the effect of this concussion on the doors, and realized that it would not take a very great number of such blows to weaken, aye, utterly demolish their barrier.

There was no mystery about it at all. The Russian diplomat had gone back to antiquated methods of warfare, but which under certain conditions were just as efficacious to-day as in the times of the stone-throwing catapult.

A fragment of mast or spar had been obtained, which, put in action by the Chinese, was being made to do duty as a battering ram.

Such an object in the hands of men entirely great, and used for such a purpose, is mightier than the sword.

It looked as though the temporary security which had been achieved through the strategy of the two friends was about to be shattered and give way once more to the stir of battle.

Lord Rackett's first thought was in the direction of strengthening the doors, but he almost immediately realized how utterly impossible such a thing must prove.

Then it became evident that a meeting must take place, and that he and Larry would be only wise in taking time by the forelock and making such preparations to receive their foes as lay in their power.

(To be continued).

dose. Mrs. Henry Mater, London, Ont., says: "Having used Baby's Own Tablets I can say with sincerity that I know nothing as good for simple fevers, stomach and bowel troubles. My baby has thrived splendidly since I began giving her the Tablets." You can get Baby's Own Tablets from any medicine dealer or by mail at 25 cents a box by writing the Dr. Williams' Medicine Co., Brockville, Ont.

BRAVERY IS REWARDED.

Carter Receives the English Royal Humane Society's Reward.

The Royal Humane Society at its annual meeting in London, England, the other day, awarded the Stanhope gold medal for the most daring rescue of the year to John Stockton, a baker's cartier, of Warrington.

The heroic action for which this honor has been conferred took place on March 6, when a workman while engaged in cleaning a sewer was overcome by foul gas and became unconscious. Two fellow-workmen who went to his help were also struck down.

Stockton volunteered to try to save them, but on going down the manhole was at first driven back by the deadly gas. A second attempt was more successful, and he brought up one man alive. A third and fourth time he went down and brought up the other two, but one of them was dead.

ARTFUL MRS. WITHERBY.

Witherby—"I've invited a fellow here to dinner to-morrow night."

Mrs. Witherby—"Oh, my dear, what did you do that for? Why, the new cook is coming to-morrow, and you know it will be just awful."

Witherby—"I don't see anything awful about it. Give him what we've got. I guess it's good enough."

Mrs. Witherby—"That's just like a man. You don't seem to care for appearances at all. Can't you put him off?"

Witherby—"No, I can't. The ideal I invite a friend to dinner, and my wife protests. But, madam, he comes just the same. As long as I am running this house I propose to do as I please."

Mrs. Witherby—"Who is it?"

Witherby—"Wigson. You know him, don't you?"

Mrs. Witherby (seized with an inspiration)—"Know him! I should say I did. Why, he's an old sweetheart of mine."

Witherby—"I guess not."

Mrs. Witherby—"But he is. Have him to dinner by all means. Oh, I should just love to see him! How he used to make love to me!"

Witherby—"He did, eh?"

Mrs. Witherby—"Yes, indeed. It was only by the merest chance that I didn't become his wife. This is indeed a pleasure. Dear boy! Let's see; I haven't seen Charlie Wigson for four years."

Witherby (dryly)—"You haven't, eh? Well, I wouldn't be surprised if you didn't see him for four more."

Mrs. Witherby (feigning great disappointment)—"Oh, you haven't changed your mind, have you? Aren't you going to bring him to dinner?"

Witherby—"No, madam, I'm not."

And Mrs. Witherby, having gained her point, glided blandly from the room.

WEAK KIDNEYS.

Restored to Strength by Dr. Williams' Pink Pills.

Bad blood is the cause of weak kidneys. The impurities of the blood clog the kidneys so that they are unable to perform their work of separating the waste matter from the blood—the bad from good. The symptoms of diseased kidneys are numerous. The dull sunken eye, the coated tongue, the backache, weak shaky knees, swollen face all show what is wrong. This disease must not be neglected. Every day delayed in finding a cure is a day nearer "Bright's disease"—that trouble is incurable. Do not waste time and money on a medicine which acts only on the kidneys. It may relieve, but it cannot cure you. The trouble to be permanently cured must be treated through the blood. Good blood makes healthy kidneys. Dr. Williams' Pink Pills actually make new, rich blood—that's why they cure when other medicines fail. Thousands owe good health some life itself to this medicine. Among them is Roy Davidson, who resides with his uncle, Mr. C. B. Maclean, near Brockville, Ont. Mr. Maclean says: "My nephew, Roy, had weak kidneys. About a year ago he took the measles and this left him in a bad state. His kidneys were so weak that they were incapable of performing their functions. He suffered from backache, weakness and restlessness. For a time he had to leave school. Our family doctor was unable to help him. In fact he told me that Roy might never get better; that the disease would probably grow worse. I then procured a supply of Dr. Williams' Pink Pills. I had already used the Pills myself with great benefit and felt confident they would cure Roy. He began taking them, and continued their use until he had taken a half dozen boxes, which fully cured him. He is now stronger and better than he ever was and neither study nor work about the farm seem to fatigue him. I believe Dr. Williams' Pink Pills saved him from a life of misery."

Dr. Williams' Pink Pills do just one thing—but they do that thoroughly. They actually make new, rich, red blood, which feeds and strengthens every nerve and organ in the body. That is why this medicine cures such common ailments as anaemia, general weakness, headaches and backaches, indigestion, palpitation of the heart, rheumatism, neuralgia, and the ailments which make the lives of so many women and young girls miserable. Don't take something else which the dealer may say is "just as good." If you can't get the genuine Pills from your dealer send to The Dr. Williams' Medicine Co., Brockville, Ont., and get them by mail at 50 cents a box or six boxes for \$2.50.

LION TAMER SAVED BY SISTER.

She Enters Cage and Beats the Animals Off.

A girl's courage and presence of mind saved a lion tamer from a terrible death the other day at Paris, France.

During a performance at a menagerie at Versailles a tamer named Robert entered a cage containing a lion and lioness. The lioness sprang upon him, and while he was seeking to beat her off, the lion also attacked him, seizing him by the arm. Seeing the tamer's danger, his sister, aged twenty-two, arming herself with a heavy stick, rushed into the cage and belabored the lion over the head. Then she caught hold of the animal by the mane and dragged him off her brother, enabling the latter, who was badly wounded, to be taken out of the cage.

The attendants, with pitchforks, kept the animals at bay until the plucky girl effected her escape.

THE PILLING CATTLE INSTRUMENT CASE.

These cases, which are made of polished oak, contain a number of instruments that no farmer, dairymen or

BRITAIN'S ALIEN ACT.

Anarchists Find Shelter Under the Name of Political Refugees.

London is now being practically invaded by Anarchists. Every Anarchist expelled from the country in which he has made himself obnoxious invariably makes Britain his future home. It is the only country in Europe where they can remain unmolested.

Last week some seventy-five of the Anarchists who were arrested in Paris last month arrived at Newhaven, England, as steerage passengers. They were put on board at Dieppe with apparently the full cognizance of both the English and French police.

The Aliens' Act forms no obstacle to these men, and how they evade it was explained by one of these "exiles."

"It is in London that we have our acknowledged headquarters now," he said. "The whole of the correspondence with our confreres is conducted from here. But you need not alarm yourself. We are grateful for the hospitality, and we will not do any harm here. Besides, it would be obviously against our own interests, would it not?"

"It is difficult to answer you when you ask me where we would go if we were not allowed to land in England. I think it is the only place. We are persecuted by everybody. Were England closed to me I should go immediately to one of the republics of South or Central America."

"But if it happened that we were persecuted in every country we should become savage. We should make ourselves felt, and that in a very decisive manner. We are honest people, and fighting for freedom."

"We manage to avoid the Aliens' Act by describing ourselves as 'political refugees.' That usually suffices; but most of us have realized the advisability of travelling first-class, and it is not so very difficult to be provided with the necessary five pounds."

PILLS AND PILLS

A prolific cause of Piles is the use of cathartics and pills of a drastic, violent nature, which is always followed by a reaction on account of the resinous, drying properties they contain.

There are other causes, but no matter what the cause or what the kind of Piles, Dr. Leachard's Hem-Roid can be relied upon to cure—to stay cured.

It's an internal remedy that removes the causes of Itching, Burning, Bleeding or Suppurating Piles.

A guarantee goes with each package containing a month's treatment.

It can be obtained for \$1.00 at druggists', or The Wilson-Fyle Co., Limited, Niagara Falls, Ont.

Parent—"How did you get along with your geography lesson to-day, Johnnie?" Pupil—"Beautifully. The teacher was so pleased that she made me stay after school, and repeat it all over again, only just to her."

Success in Life is dependent upon good health. You are out of sorts, ill or feeble, take "Ferrovin." It's the best tonic. \$1 bottles. All medicine dealers.

Visitor—"How beautifully still the children sit while you talk to them!" Schoolmaster—"Yes; I've got them pretty well trained. I told them at the start that every time I caught a boy moving in his seat while I was talking to them I would talk ten minutes longer."

Dr. J. D. Kellogg's Dysentery Cordial is prepared from drugs known to the profession as thoroughly reliable for the cure of cholera, dysentery, diarrhoea, griping pains and summer complaints. It has been used successfully by medical practitioners for a number of years with gratifying results. If suffering from any summer complaint it is just the medicine that will cure you. Try a bottle. It sells for 25 cents.

THE PILLING CATTLE INSTRUMENT CASE.

These cases, which are made of polished oak, contain a number of instruments that no farmer, dairyman or stock owner can afford to be without. Every one of these instruments when needed are needed at the moment. Just in case of Milk Fever saved will many times pay the cost of the entire outfit. It seems strange that this very important outfit has not before now been made up. To us it seems one of the most important improvements to the dairy farm ever devised.

Not only does it contain the Milk Fever outfit for Air Treatment recommended by the United States Department of Agriculture, but it also has a complete assortment of cattle syringes, recars for blood, lead probes, milking tubes, test dilators, test bistouries, test opener, thermometer and bandages. It is made by George P. Pilling & Son, Philadelphia, who will gladly send any of their readers a description of the case.

"I have three children, who are the very image of myself," said Jones, enthusiastically. "I pity the youngest," returned Brown, quietly. "Why?" asked Jones. "Because he is the one who will have to resemble you the longest," said Brown.

It will Prolong Life.—De Sota, the Spaniard, lost his life in the wilds of Florida, whither he went for the purpose of discovering the legendary "Fountain of perpetual youth," said to exist in that then unknown country. While Dr. Thomas' Electric Oil will not perpetuate youth, it will remove the bodily pains which make the young old before their time and harass the aged in to untimely graves.

A SUDDEN CHANGE.

Two commercial travellers, one from London and one from New York, were discussing the weather in their respective countries.

The Englishman said that English weather had one great fault—its sudden changes.

"A person may take a walk one day," he said, "attired in a light summer suit, and still feel quite warm. Next day he needs an overcoat."

"That's nothing," said the American. "My two friends, Johnson and Jones, were once having an argument. There were eight or nine inches of snow on the ground. The argument got heated, and Johnson picked up a snowball and threw it at Jones from a distance of not more than five yards. During the transit of that snowball, believe me or not, as you like, the weather suddenly changed and became hot and summer-like, and Jones, instead of being hit with a snowball, was—er—scalded with hot water!"

SHE MARRIED HIM.

He (angrily): "So there was a man after you when you married me, was there?"

She: "Yes there was."

"Poor fool! I wish to heavens you had married him."

"Did it?"

of years with gratifying results. If suffering from any summer complaint it is just the medicine that will cure you. Try a bottle. It sells for 25 cents.

"Would you marry a woman who had sued another man for breach of promise?" "Well, it would depend largely on how much the jury had compelled him to pay her."

Sunlight Soap is better than other soaps, but is best when used in the Sunlight way. Buy Sunlight Soap and follow directions.

Agent—"Here, madam, is a book that will tell you how to manage a husband." Woman—"But, my dear lady, what I want is a book that will tell me how to get one, and I'll manage him all right."

A Cure for Costiveness.—Costiveness comes from the refusal of the excretory organs to perform their duties regularly from contributing causes usually disordered digestion. Parmelee's Vegetable Pills, prepared on scientific principles, are so compounded that certain ingredients in them pass through the stomach and act upon the bowels so as to remove their torpor and arouse them to proper action. Many thousands are prepared to bear testimony to their powers in this respect.

Mother—"How's this, Tommy? You've been fighting Billy Jones again, when I forbade it." Tommy—"Didn't yer tell me to return good for evil, ma? Well he gave me a bad lickin' yesterday, and I gave him a good one to-day."

There are a number of varieties of corns. Holloway's Corn Cure will remove any of them. Call on your druggist and get a bottle at once.

Young Wife (worn out by attending crying baby): "Dear, dear! I do wish people had their second childhood first. Then they'd be old enough to know better than to cry so."

There is no more obstinate skin trouble than Salt Rheum. It sometimes lingers for years, but Weaver's Corate makes short work of it. Also, take Weaver's Syrup to insure permanent cure.

QUITE GENEROUS.

One Sunday recently a lady went into a church in a town to which she was a stranger and asked to be shown to a seat. The sidesman conducted her to a back seat in the gallery, the only other occupant at the time being an old gentleman, who rose to let her pass.

It was somewhat dark, and the lady, as she shook her skirts and settled down, had a horrible suspicion that she was sitting on something besides the cushion. She put out her hand and drew forth the sad remains of a silk hat.

"Oh," she said to the old gentleman, "I beg your pardon. I'm so sorry."

The old gentleman looked at the melancholy ruin, and replied that it could not be helped.

"Oh, it's truly generous of you to say so," said the lady, "but I'm afraid you're angry."

"Not in the least," said the old gentleman, straightening out the hat and placing it under the seat; "you see, it's not my hat. It belongs to Mr. —, who showed you in!"

Judy: "Will you give me your promise, Dennis, that you'll love me forever?"

Dennis: "Sure, an' O'd loike to do that same, Judy, but O'm hardly of the opinion that O'll last as long as that."

"They call me the human songbird." "As a precaution, I suppose. There's a law against shooting songbirds."

Mother (who is a strict disciplinarian): "Children, I have something to tell you. On Thursday afternoon I shall marry Dr. Lane, whom you all know and respect." There was a solemn pause, ended by the oldest boy. "Mother," he asked, "does Dr. Lane know yet?"

Do not delay in getting relief for the little folks. Mother Graves' Worm Exterminator is a pleasant and sure cure. If you love your child why do you let it suffer when a remedy is so near at hand?

"So sorry not to have heard your lecture last night," said the loquacious lady. "I know I missed a treat; everybody says it was good." "How did they find out?" asked Mr. Frockcoat. "The lecture, you know, was postponed."

In Nature's Storehouse There are Cures.—Medical experiments have shown conclusively that there are medicinal virtues in even ordinary plants growing up around us which give them a value that cannot be estimated. It is held by some that Nature provides a cure for every disease which neglect and ignorance have visited upon man. However, this may be, it is well known that Parmelee's Vegetable Pills, distilled from roots and herbs, are a sovereign remedy in curing all disorders of the digestion.

A butcher was invited the other night to attend a concert, but positively declined, even when a free ticket was offered him. When pressed for a reason, he replied: "If I should go I should see so many people who owe me for meat that it would spoil all my fun."

CZAR'S UNHAPPY EMPIRE

Terrible Scenes Enacted in a Russian Town.

MASSACRE OF JEWS.

A despatch from Bielostok, Russia, says: A massacre of Jews occurred here on Thursday, in which hundreds were killed and wounded and Jewish shops demolished. The outbreak was the result of the throwing of a bomb at a Corpus Christi procession that was passing Alexandrovski Street. Someone threw a bomb from a balcony among the processionists, killing a priest and many others. It is alleged that a Jewish Anarchist threw the bomb, and it is asserted that other Jews immediately followed the throwing of the bomb by discharging revolvers from windows into the crowd. Soldiers hastily surrounded the house and poured volleys through the windows. Meanwhile Christians attacked the whole Jewish quarter, smashing shops and houses, trampling upon goods that had been thrown into the streets, and hunting the Jews, whom they beat and hacked. A number of Jews, who were pursued by a mob, fled to the railway station, where several of them were caught and killed. Three were taken from the upper storey of the station to the street. The Jews are fleeing from Bielostok to the neighboring forests, and mobs are pursuing them. Detachments of dragoons have been sent out to protect the Jews. Jews arriving here on trains have been dragged from the cars, and many of them have been murdered. Troops have cleared the railway station.

APPEAL TO GOVERNMENT.

A despatch from St. Petersburg says: The latest despatches from Bielostok report a situation of the utmost gravity. The anti-Jewish outbreak there was still raging; fighting was in progress in the streets; firing was continuous; the best stores in the city had been sacked, and many were dead or wounded. Figures, however, were not given out, and probably the casualties are not known in Bielostok owing to the continuance of the disorders.

The signal for the outbreak, which was apparently deliberately planned, perhaps as a counter-stroke for the murder of Chief of Police Derkatchoff on June 10, which was attributed to Jewish bundists, is given as the explanation of the explosion of a bomb during a religious procession. This was followed by revolver fusillades in several quarters of the city. The police are said not to have attempted to interfere in the early stages of the riot. The Jews, who number three-fourths of the population of the city, offered the best resistance possible, many of them being armed, but were unable to prevent the pillaging of their homes and places of business.

Finally the military interfered, but, according to advices received here, without being able to restore order. Reinforcements have been rushed to Bielostok from Grodno.

Several members of Parliament on Friday night received messages from Jewish correspondents at Bielostok declaring that the police apparently had given over the Hebrew population to slaughter and pillage. These correspondents urged that the only hope was in an appeal to the Ministry of the Interior to interfere in their behalf. A delegation of deputies immediately called at the headquarters of the Police Department, where they were informed that all measures possible had been taken to stop excesses and restore order.

SITUATION IN PROVINCES.

The London Times' correspondent at

St. Petersburg cables as follows:—The Bourse on Thursday was terribly depressed on large selling orders from Paris. Fours fell to the unprecedented figure of seventy-two. It is rumored that some provincial banks are on the eve of suspending the payment of interest on their bonds. Such a step would infallibly cause a financial cataclysm. The situation in the provinces is going from bad to worse and agrarian disturbances are reported to be extending north, involving even Tver and Novgorod. Outrages in the Baltic provinces are daily increasing and another revolutionary outburst there appears imminent.

PEASANTS HARRY JEWS.

A despatch from Bielostok says: After a lull in the mutiny, the mob on Friday evening again began to harry the Jews and pillage their shops. The mob was swelled by thousands of peasants, who are now plundering and burning the deserted residences of Jews. Almost all the Jewish shops are ruined. The Jews who have not fled are being mercilessly harried. The women are spared, but the men are bludgeoned, stabbed, and shot. Firing is heard in many directions. Six thousand Jews are now camped in the forests, surrounded by soldiers. Another mob was thrown on Friday, killing a policeman and wounding others.

It is known that thirty Jews were killed and more than 100 were wounded in the rioting which occurred here on Thursday, when a mob attacked the Jewish quarter because a bomb was thrown into a Corpus Christi procession. The hospitals are overcrowded, and many injured persons are hidden in private houses.

All the Jewish shops on the four principal streets of the town were sacked by the mob. The anger of the crowd was fed by a rumor in the afternoon that Jews had killed Christian girls in neighboring villages.

The Christians' exasperation is increasing and the mob vows vengeance on the two young Jews who are under arrest on suspicion of having thrown the bomb.

The city is in possession of soldiers of the Vladimir Regiment. The streets and railroad stations are occupied by the military and entrance into the town is prohibited.

TRAIN ATTACKED.

A despatch from St. Petersburg says: The Sebastopol express arrived in St. Petersburg on Thursday six hours late, owing to its having been attacked by 2,000 armed peasants. The passengers were not hurt, but the windows of the train were smashed.

ORDER RESTORED.

More troops, including a battery of artillery, arrived on Sunday. Quiet was restored the same evening. Numbers of Jews, who are fleeing from the city, were escorted by soldiers to the railway station. The refugees have lost all their property and money, and all of them are hungry. There was further rioting Saturday night and Sunday morning. The mob was swelled by thousands of peasants, and plundered and burned the deserted dwellings of Jews. The suburb of Boudary has been totally burned. Eight streets have been totally devastated.

THE WORLD'S MARKETS

REPORTS FROM THE LEADING TRADE CENTRES.

Prices of Cattle, Grain, Cheese and Other Dairy Produce at Home and Abroad.

Toronto, June 19.—Flour—Ontario wheat patents are quoted at \$3.15 in buyers' sacks, outside, for export. Manitoba first patents, \$4.40 to \$4.60; second patents, \$4.10, and strong bakers', \$4, Toronto. Bran is steady, being quoted at \$16 to \$16.50 outside, in bulk; shorts, \$19 outside.

Wheat—No. 1 Northern Manitoba offered at 86½c spot, Point Edward, with 86½c bid, and at 87½c Owen Sound, with 86½c bid.

Oats—No. 2 white offered at 41c on track, Toronto, with 40½c bid. They offered outside at 40c, at Owen Sound at 41c on track, and at 44c Montreal, without bids. No. 3 white offered at one cent less. No. 2 mixed offered at 40½c, Owen Sound, without bids.

Corn—No. 3 American yellow offered at 61c to arrive Toronto, and at 60½c, prompt shipment, Toronto, without bids.

COUNTRY PRODUCE.

Apples—Choice stock, \$4 to \$4.25 per barrel; and inferior qualities at \$3 to \$3.25.

Beans—Hand-picked selling at \$1.75 to \$1.80, and primes at \$1.50 to \$1.60.

Honey—Strained honey quoted at 8½ to 9c per lb, and combs, \$1.50 to \$2 per dozen.

Lops—14 to 17c per lb.

Hay—Car lots of No. 1 timothy are quoted at \$10 to \$10.50 on track, Toronto, and No. 2 at \$7.50 to \$8.*

Straw—\$6 per ton.

Potatoes—Ontario stock, 80 to 85c per bag, and Eastern, 90 to 95c per bag, on track.

Poultry—Turkeys, fresh killed, 14 to 16c; chickens, last year's, 10 to 11c; live chickens, 8 to 9c.

THE DAIRY MARKET.

Butter—Pound rolls are quoted at 17 to 18c; large rolls, 15 to 16c, and inferior at 14 to 15c. Creamery prints sell at 20½ to 21c, and solids at 19 to 20c.

Eggs—Sales at 17c per dozen in case lots. Splits, 14c.

Cheese—New are quoted at 11½ to 12c, the latter for twins.

HOG PRODUCTS.

Dressed hogs in car lots are nominal. Bacon, long clear, 12 to 12½c per lb in case lots; mess pork, \$21 to \$21.50; short cut, \$23.

Hams—Light to medium, 14½ to 15c; do., heavy, 14c; rolls, 12 to 12½c; shoulders, 11½c; backs, 17 to 18c; breakfast bacon, 15 to 16c.

Lard—We quote:—Tierces, 11½c; tubs, 11½c; pails, 12c.

BUSINESS AT MONTREAL.

Montreal, June 19.—Grain—There was a slight improvement in the demand for Manitoba wheat from foreign sources, and bids came a fraction higher, though still out of line. Sales of No. 2 oats were reported at from 43½ to 43¾c, store, while No. 3 were quoted at 43c, and No. 4 at 42 to 42½c. Flour—The demand continues fairly good from local and country buyers, and a good steady business is passing: Manitoba spring wheat, \$4.60 to 4.70; strong bakers', \$4.10 to \$4.20; winter wheat patents, \$4.30 to \$4.40; straight rollers, \$3.90 to \$4.10; do. in bags, \$1.85 to \$1.95; extras, \$1.40 to \$1.50. Feed—Manitoba bran, in bags, \$18 to \$19; shorts, \$20 to \$21 per ton; Ontario bran, in bags, \$19.50 to \$20; shorts, \$20.50 to \$21; milled mouillie, \$21 to \$25 per ton, and straight grain, \$28 to \$29. Provisions—Barrels heavy Canada short cut pork, \$23; light short cut, \$21.50; barrels clear fat back, \$22.50; compound lard, 7½ to 8c; Canadian pure lard, 11½ to

POISONS IN EVERY DINNER.

No Use Trying to Obtain Pure Food, Says an Expert.

A despatch from Chicago says: Do you know that you eat forty-two poisons at every dinner on the average? Harry R. Waimsey, food expert of Kansas City, and the man behind the Pure Food bill in the last session of the Illinois Legislature, declares such to be the case. Every restaurant bill of fare bears on its face the proof of food adulterations, he says.

Here are the various foods and the way they are poisoned, according to this expert:—

Butter—Covered with coal tar dyes. Meat—You know all about the meat. Lard—Used in frying meat—Made from diseased hogs.

Catsup—Full of salicylic acid, colored with coal tar dyes.

Bread—Full of slum.

Coffee—Full of copper salts.

Tea—Full of copper salts.

Pepper—Always impure; full of cocconut shells, sawdust and clay.

Vegetables—All impregnated with various coal tar dyes.

Rosy apples—Made rosy with coal tar dyes.

New potatoes—Freshened up from old potatoes with alum water, after being scraped.

"Half of the deaths in the United States are the result of impure foods," Mr. Waimsey declared warmly. "It is practically impossible to get pure food in this country."

NINE SAILORS KILLED.

A Terrific Explosion on Board a British Steamer.

A Liverpool despatch says: Nine men were instantly killed and about forty were wounded as the result of a terrific explosion on Thursday morning on board the British steamer Haverford, of the International Navigation Company. The vessel, which is commanded by Captain Nielsen, arrived here on Wednesday from Philadelphia, landed her passengers and proceeded to Harkinson Dock early on Thursday in order to unload. The stevedores were in the act of loosening the hatches when the explosion occurred. It blew off the hatches, rent the decks and hurled dead and wounded men in all directions. Several bodies were dismembered, and the deck resembled the floor of a charnel house. The explosion, which, according to rumor, was caused by an infernal machine was followed by the outbreak of fire. The cargo, consisting of linseed oil cake, in hold No. 2 and hold No. 3 was soon blazing fiercely. Firemen and police hurried to the dock, and the injured were quickly taken to a neighboring hospital, while the work of searching for further possible casualties proceeded with vigor, in spite of the fierceness of the fire. After two hours' hard fighting the firemen obtained the mastery of the flames. Later it was said that the disaster on board the Haverford was apparently caused by the explosion of a barrel of naphtha.

GROWTH OF CANADA'S TRADE.

Will Aggregate Half a Billion Dollars This Year.

An Ottawa despatch says: With an aggregate foreign trade amounting to \$483,234,889 and exports to the amount of \$208,233,972, every branch of which exhibits an increase, Canada's commerce continues to expand at a phenomenal rate, and the farmer is enjoying a large share of this great prosperity. The total foreign trade shows a gain of \$74,037,160 for the eleven months ending May 31 when compared with the same period of the previous year. The domestic exports were \$208,233,972, a gain of \$42,135,848. Although imports for consumption were considerably more being \$257,421,427, they do not show as large an increase. The betterment was only \$24,146,800, or a little less than one-half that of the exports. Agriculture contributed most of the exports, as will be seen from the following statement:—
Agricultural products, total \$50,148,583

SITUATION IN PROVINCES.

The London Times' correspondent at

deserted dwellings. of Jews. The suburb of Boudary has been totally burned. Eight streets have been totally devastated.

ON THE FARM

CURING TIMOTHY HAY.

At the risk of being called a poor farmer, I say boldly, that I raise and sell timothy hay, in fact raise it to sell, writes Mr. Edward Van Alstyne. I like something better for my own feeding. I do not consider it the most profitable branch of my farming, but on heavy clay in bottom lands, naturally adapted to this plant, when the labor question is taken into account, I find it a paying crop. We average ten tons per acre, and one year with another, get from \$9 to \$10 a ton net for it.

By net, I mean after deducting 75 cents for harvesting it, \$1 for pressing and 75 cents for putting on boat or cars. We have our own press. I do not see why selling hay is any poorer farming than selling grain or potatoes, when we restore the fertility, by manure or fertility. As I have some 70 odd head of cattle, as well as sheep and swine, I don't stay awake nights fearing my land will be depleted in fertility.

The meadows are held from four to six years, and sowed mostly without a grain crop. To hold the crop so long means rich ground, heavy seeding, and little or no pasturing. As a matter of fact, I sow about one-third red top, which increases both the bulk and the weight, and does not materially affect the price. I like to cut it as early in July as possible, as soon as the head is formed. Then we get the color, which makes the price. We mow in the morning what we can handle the next day, from ten to twenty loads.

This is raised the second day, as soon as the dew is off, in small windrows. By 11 o'clock the water is out of it. That is all I want. Then we run over the windrows with a loader. Two men stay in the field. Another set of two men and a boy with a horse or pair to hoist, stay at the barn. I drive the teams, and keep things straight and harmonious at both ends. Thus, with two teams, an old horse, three wagons, five men and a boy, including myself, we frequently put in four loads an hour. Sometimes the tedder is run ahead of the rake for an hour. Suppose it rains? Well, I never can stop it. If it looks threatening we don't mow. So we only have one day's hay down ahead. It will color very little when green in the swath. If a shower comes on it, a tedder will dry it quickly and cheaply, it is an expensive job to cock hay and throw it out by hand. I was brought up to cock all my hay, but for fifteen years have followed the other plan. I make my hay for one-third of the former cost, and just as good, or better.

PREPARING HOGS FOR MARKET.

At one time I tried to fatten a lot of pigs by feeding them shelled corn after it had been cooked, writes Mr. Robert Hildebrande. This I found very wasteful as the grain did not seem to be digested. I had the same experience in feeding whole wheat soaked or boiled. This was largely undigested and practically wasted.

At the same time I fed another bunch ground wheat and corn made into slop. This they ate so rapidly that it made many of the pigs sick. I then tried a bunch of pigs on wheat and oats ground one part oats and one part wheat. This I fed with a great deal of satisfaction. In the morning I gave them all the warm water they wanted to drink and in about 20 minutes gave them wheat and oats ground. After that they would eat anything I would put in. On this all the pigs gained 15 pounds each in two weeks. I have fed corn and oats, one part corn and one part oats ground with the same result I fed the whole

grain, except that the growth was not quite so rapid.

My hog house is 20x30 feet with a partition running lengthwise. On each side are stalls 7½x10 feet. Each one of these will hold five hogs. The floor is made of boards and is 2½ feet from the ground. It is thus always dry and the ventilation is excellent. Half the house is used as a slaughtering room and is provided with stoves, kettles, arrangements for hanging hogs along one side and all the modern conveniences. I have no trouble in butchering or selling my stuff when I want get rid of it.

LIVE STOCK NOTES.

No sheep should be allowed to die at an old age, but all should be fattened and sent to market before their vitality has become impaired.

The more salt a cow takes at once the thinner will be the milk she gives the next day. A little salt every day will not affect the quality of the milk. So it pays to have salt where the cows can often get it.

Do you feed your horse well after working it hard all day? Give it plenty of good feed. It earns it; it deserves much better than it gets. A businessman recently said: "My horses must have something to eat if I have to do without." In hot weather we enjoy a cool, fresh drink. See that your horse has plenty of good fresh water.

Did you know that the cow that freshens in the fall will give fully 25 per cent. more milk during the year than she would if she freshened in the spring? The fall fresh cow will then give butter fat when it is high in price, thus making her fully 50 per cent. to 100 per cent. more valuable than she would be if she had calved in the spring. The fall calf raised on sweet milk and corn, will be as large at one year old as the spring calf that runs with its mother will be at 1½ years.

Water Horses Before Feeding—This question of watering before or after feeding has never been settled. A leading English authority states that horses should never be watered until after feeding, but always before, especially if the feed is grain. If a horse is very thirsty give him water and then wait a short time before feeding. If possible, horses should always have access to water. They will drink less, and there is much less danger of indigestion or cholera. If a horse is exhausted from over-exercise, the supply of cold water should be limited. If water is tepid, a much larger amount may be allowed.

BIG FIRE AT BALTIMORE.

The Steamer Essex, Docks and Scows Were Burned.

A Baltimore, Md., despatch says: A million dollar fire on Wednesday wiped out the big Savannah docks of the Merchants' and Miners' Transportation Company, destroyed the steamer Essex, of that line, all the valuable freight with which the dock was crowded, and a number of scows loaded with cotton and rosin, with their freights. Besides causing great anxiety as to the fate of the crew of the Essex, said to have consisted of about forty men. All of the Essex crew, save two, are known to have escaped. The two others were almost certainly burned to death, as they were apparently unconscious when last seen by their fleeing mates. They were Edward Atkinson, a cabin assistant, and John Costello, a fireman. The burning steamer and scows drifted to the south side of the harbor, and for a time there were grave fears that extensive damage would be done there, as the wind carried the flames from the vessels directly toward the shore and shipping on that side, but the firemen were successful in preventing serious damage there.

John Gaunt, a farmer of Kincardine, committed suicide by hanging, on Friday.

moultie, \$21 to \$25 per ton, and straight grain, \$28 to \$29. Provisions—Barrels heavy Canada short cut pork, \$23; light short cut, \$21.50; barrels clear fat back, \$22.50; compound lard, 7½ to 8c; Canadian pure lard, 11½ to 12c; kettle rendered, 12½ to 13c; hams, 13½ to 15c; breakfast bacon, 17 to 18c; Windsor bacon, 16 to 16½c; fresh killed abattoir dressed hogs, \$10.50; alive, \$7.75 to \$8 per hundred pounds. Eggs—New laid, 16 to 16½c per dozen. Butter—Choicest creamery, 20½ to 21c. Cheese—Ontarios, 11½ to 11¾c; Quebec, 11 to 11¾c.

UNITED STATES MARKETS.

Milwaukee, June 19.—Wheat—No. 1 Northern, 86½ to 88c; No. 2 do., 84 to 86½c; July, 82½c bid. Rye—No. 1, 65½ to 66c. Barley—No. 2, 56½ to 57c; sample, 45 to 56c. Corn—No. 3, cash, 53½ to 53¾c; July, 52¾c asked.

St. Louis, June 19.—Wheat—Cash, 86c; July, 79¾c; Sept., 80¾c.

Minneapolis, June 19.—Wheat—July, 82½c; September, 81¾c; December, 82c; No. 1 hard, 84¾c; No. 1 Northern, 83¾c; No. 2 do., 82½c. Flour—First patents, \$4.35 to \$4.45; second do., \$4.20 to \$4.30; first clears, \$3.50 to \$3.60; second clears, \$2.45 to \$2.55. Bran—In bulk, \$12.25 to \$15.50.

CATTLE MARKET.

Toronto, June 19.—Trade at the City Cattle Market to-day was necessarily active, in view of the heavy run of stock offering.

Export Cattle—One lot of extra choice sold at \$5.30, and the general run of choice cattle are quotable from \$5.25 down. Choice ran from \$4.90 to \$5.25; medium to good, \$4.75 to \$4.85; bulls, \$3.50 to \$4.15; cows, \$3.50 to \$4.40.

Butchers' Cattle—Picked cattle are quoted at \$4.50 to \$4.95, good to choice \$4.25 to \$4.50, fair to good \$3 to \$3.85, bulls \$3.50 to \$4.15.

Stockers and Feeders—Short-keeper feeders, \$4.70 to \$4.90; heavy feeders, \$4.60 to \$4.80; stockers, \$3.25 to \$3.75. Milch Cows—Springers run at \$25 to \$40 each.

Calves—Were easier, with trade slightly slow. Prices are quoted lower at 3½c to 5½c per lb.

Sheep and Lambs—Export ewes are quoted at \$4.25 to \$4.40, bucks at \$3.50 to \$3.75, while spring lambs were firm at \$3 to \$6 each.

Hogs—Prices are quoted 15c per cwt. down at \$7.25 for selects and \$7 for lights and fats, fed and watered. Dealers say prospects are for still lower prices.

SUICIDE FROM REMORSE.

Killed Two Men While in Militia in San Francisco.

A despatch from Los Angeles, Cal., says: Stricken by remorse because he had killed two men in San Francisco during the earthquake excitement, Wm. O'Connor, a wealthy blacksmith, committed suicide at the Hotel Brownstone on Tuesday afternoon. O'Connor is said to have been downcast because he had been jilted by his sweetheart for having lost his fortune in the fire. "I am not usually timid," he told the hotel clerk, "but since I had to shoot two men while I was serving as militiaman in San Francisco I have been filled with remorse and have also had a feeling that their relatives would kill me sooner or later."

BLEW TOP OF HIS HEAD OFF.

Bright Township Man Commits Suicide at Brother's Home.

A despatch from Woodstock, Ont., says: Samuel Cowan, aged 56 years, a resident of Bright, who came back from Montana some little time ago, committed suicide at the home of his brother on Thursday by blowing the top of his head off with a shotgun. Cowan retired to his room during the afternoon, remarking that he was going to take a bath. He attached the gun to the window sill, and seating himself at the end of the muzzle, pulled the trigger with a broomstick with a nail at the end of it. Deceased had been acting strangely of late. He leaves a widow and family in Montana.

feeling \$257,427, they do not show as large an increase. The betterment was only \$24,146,800, or a little less than one-half that of the exports. Agriculture contributed most of the exports, as will be seen from the following statement:—Agricultural products, total \$50,148,583, increase \$22,409,500; animals and their products, total \$60,002,343, increase \$3,614,359; products of the mine, total \$30,388,753, increase 3,789,701; fisheries, total \$13,872,234, increase \$4,325,915; products of the forest, total \$31,888,253, increase \$4,570,665; manufactures, total, \$21,852,457, increase, \$3,381,933.

SICKNESS IN CAMP.

A Bad State of Affairs in the G. T. P. Construction Camp.

A despatch from Brandon, Manitoba, says: Reports have been brought to this city by travellers of a terrible state of affairs existing in the Grand Trunk Pacific construction camp in Minniota district. A party arriving here on Friday stated that smallpox and black diphtheria have appeared among the men, and that one man suffering from smallpox had been sent into Winnipeg for treatment. Dr. Lawson of Hamiota has three cases of chickenpox under his care, but fear is expressed that it may develop into smallpox. It is reported that a man from the same camp was sent away on the train because he had black diphtheria, but a few miles from camp he succumbed, after suffering great agony. Health authorities are looking into the conditions prevailing.

ONE OF LIGHT BRIGADE.

Richard Yates is Dead at Detroit, Michigan.

A despatch from Detroit, Mich., says: Richard Yates, 77 years of age, is dead here. Mr. Yates was said to be the only living survivor in the United States of the famous charge of the Light Brigade at Balaklava. He served all through the Crimean war in the Fifth Dragoons and was honorably discharged in 1863, and had several medals commemorative of bravery and good conduct. He landed in New York in 1863, and at once enlisted in the northern cause in the civil war, and served until its close. He then moved to Woodstock, Ont., later going to Windsor and six years ago moved to Detroit.

ROAD'S GROWING RECEIPTS.

Temiskaming Railway Made Profit of \$23,617 in April.

A despatch from Toronto says: Gratifying reports of the operations of the Temiskaming and Northern Ontario Railway were received yesterday by Hon. Col. Matheson, the Provincial Treasurer, from the commissioners. The total receipts of the Government line during the month of April amounted to \$48,405.62. Against this there were expenses of operation, aggregating \$24,786.17, leaving a net profit for the month of \$23,617.43, as compared with \$7,360 for the same month last year.

BRIDE NINE FEET TALL.

Travelled With Barnum & Bailey and Accumulated Money.

A Lockport, N. Y., despatch says: The tallest woman in the world, formerly with Barnum & Bailey's circus, became on Friday night the bride of Morris Stapleton, a wealthy merchant of this city. She was Miss Mary Ellen Powers, but was known in the profession as Leah May. The bride is over nine feet. She travelled with the Barnum & Bailey organization seven years, and made a sensation in Europe. She possesses considerable wealth.

RAILROAD CATASTROPHE.

Awful Disaster on the Chinese Eastern Railway.

A Vladivostok despatch says: A passenger train was derailed at Progranitschna station, on the Chinese Eastern Railway on Sunday, and 100 persons were killed or injured.

DOMINION PARLIAMENT

EMIGRANTS FOR ONTARIO.

Mr. Armstrong was informed by Mr. Oliver that the total number of emigrants destined for Ontario from the countries covered by the North Atlantic Trading Company during the years 1903 and 1904 and nine months of the year covering 1905 and 1906 was 9,191.

MILITIA PENSION ACT.

The House went into committee on Sir Frederick Borden's resolution to amend the Militia Pension Act so as to provide that time served in His Majesty's regular forces might be counted in the time of service for pension in the case of an officer transferred to the permanent force in connection with the taking over by Canada of the garrisons at Halifax and Esquimaux, and also to provide that time served in the regular forces might be counted towards pension for non-commissioned officers and men similarly transferred. The resolution was carried in committee, and a bill based upon it was introduced and read a first time, and a similar resolution, auxiliary to this one was also introduced and carried, and a bill based upon it given a first reading.

NO NEW WORKS NEXT YEAR.

It is understood that in the supplementary estimates for next year the Government is undertaking no new works, but merely providing for the completion of what has already been undertaken.

MR. CINQMARIS CENSURED.

The House of Commons asserted its supremacy, and passed a motion of censure on Mr. Cinquars, the correspondent of La Presse, for a portion of his article criticizing Mr. Foster, of which the latter had some time ago made special complaint.

FRATERNAL SOCIETIES.

In reply to Mr. Hughes (King's), Hon. Mr. Fielding reiterated the statement that the Insurance Commission would inquire into operations of companies doing business under the assessment plan.

RELEASE OF BROUTHIER.

Mr. Macpherson brought to the attention of the House the action of the Minister of Justice in having advised his Excellency to release from British Columbia Penitentiary one Brouthier, a convict. The city of Vancouver, he said, was stirred to its depths by the release of this man, who had offended against all decency. He had been accused by friend and foe of having secured the man's release, but he desired to state publicly that he knew nothing about the matter until the man was at liberty, and that the release had been made by the late Minister of Justice at the instance of another ex-Minister of Justice, Sir Charles Hibbert Tupper, who had taken up the man's case. He gave notice that he would ask that the papers be published.

Mr. Aylesworth pointed out that the convict referred to had been convicted and sentenced to two years' imprisonment for what might be considered a more serious offence. That term had been served, and nearly one-half of another term. He was satisfied Mr. Fitzpatrick had received good reasons for releasing the prisoner, who had left the country and would probably never return. He could not for one moment accept the theory that the personality of the representative of the prisoner (Sir Hibbert Tupper) had unduly influenced the granting of the pardon.

CHILD'S PLUCK SAVED LIFE.

Ten-year-old Girl Plunges Into a Raging Mill Race.

A despatch from London, Ont., says: Another drowning accident was narrowly averted on Wednesday night by a magnificent act of bravery on the part of 10-year-old Violet Wilson, who lives near the Meadow Lily Mills on the north

FARM LABOR IS SCARCE.

Immigrants Are Going Into Industrial Concerns at Good Wages.

A Toronto despatch says: A new situation has arisen in connection with the settlement of immigrants in the province. From the recent experiences of the provincial officials it seems apparent that industrial concerns are entering into competition with the farmers for the services of the newly-arrived settlers. There are 1,000 or 1,200 applications for farm help on the books of the office, and while there are large numbers of persons arriving, they are quickly seized by the agents around the Union Station to do construction work on railways, build fences, or to fill positions in such industries as box factories. These employers are willing to pay good wages to ordinary laborers. Firms at Kingston, Oshawa, Penetanguishene, Galt, and other places were seeking men in this way yesterday.

"We are finding it extremely difficult to induce any immigrants to go in for farm work, and I know farmers are in bad shape for want of help," remarked Mr. Thos. Southworth, Director of Colonization on Wednesday, in speaking of the condition of affairs.

RICHEST CLAIM YET.

A Very Big Find Reported From the Township of Coleman.

A Cobalt despatch says: A very rich find has been reported from lot 1, concession 3, township of Coleman. The discovery was made by Andy Devine a few days ago, but the matter was kept quiet until the inspector saw and passed the claim. It is very rich in silver and cobalt, and reports credit the inspector with stating it to be the richest and best claim he has seen. He states that it will develop into one of the richest mines in the district. Another rich find is reported from Gillies Depot, 5 miles south of here, where a party of prospectors discovered nine good veins of cobalt and silver. The samples shown are as rich as any we have seen, and give promise of good results.

Rumors are coming daily of finds in the back country, but the distances are too far to permit of them being verified for some time. The next month or two will see a big increase in the mining interest, as many good mines will be opened up if half the rumors prove true.

A PRAIRIE TRAGEDY.

Mrs. Harry Long Lost in the Yorkton District.

A Broadview, Sask., despatch says: Word has just reached here of the tragic death of Mrs. Harry Long, who, with her husband and two children, left Broadview a little over a year ago to take up a homestead at Hirzel, in Yorkton district. After seeding this spring, Mr. Long was obliged to accept a situation with a G. T. R. survey party. This necessitated his being from home for long intervals, and Mrs. Long had to look after the cows in his absence. On the evening of May 29th she went out as usual to fetch them and lost her way and never returned. She was not found until five days afterwards, when her body was discovered accidentally quite near the home of a German neighbor and within a mile of her own home. These neighbors had heard her cries, but had thought it was some boys driving cows and paid no attention. How the children, aged six and four, lived through these long, dreary days, almost without food of any kind, is a miracle.

BIG ORDER FOR RAILS.

The Grand Trunk Pacific Railways in Canada.

A Montreal despatch says: The Dominion Iron & Steel Company have just received an order for 150,000 tons of steel rails from the Grand Trunk Pacific Railway Company. Recently they contracted with the Montreal Street Railway Company to deliver 20,000 tons, and they have an order also to deliver about 30,000 tons for the eastern section of the National Transcontinental

GREAT BRITAIN.

Viscount Howick, eldest son of Lord Grey, was married to Lady Mabel Palmer, daughter of the Earl of Selborne, on Saturday.

Lord Strathcona, as Chancellor of Aberdeen University, will entertain 2,500 at a dinner in September in celebration of the 400th anniversary of the institution.

UNITED STATES.

Oklahoma and Indian Territory have been admitted to the union as one State. Abraham Clemens, a cousin of Mark Twain, aged 74, married Elizabeth McFarland, aged 72.

Mrs. Wm. E. Corey has petitioned for a divorce from her husband, who is President of the United States Steel Corporation.

Harry Burson, a student at Purdue University, Peru, Indiana, shot himself dead before a mirror the other day because he thought he was threatened with death from carbuncles.

The convicts in Sing Sing and the other prisoners throughout New York State will have honor marks attached to their clothing as a reward for good conduct. For each year of good behavior a prisoner will get an honor bar.

Jesse James, son of the famous bandit, has passed the severe examination of the Missouri State board of bar examiners with a high rating. His home is in Kansas City and he recently took honors in the Kansas City Schools.

That tuberculosis is sufficient ground for divorce in California was decided in the Superior Court, Los Angeles, Cal., the other day, when Judge Bordwell granted Mrs. Charlotte T. Scamille, a decree because her husband is suffering from that disease.

On account of the heavy demand for tinsplating the plants at Newcastle, Penn.,

NEWS BY MAIL ABOUT JOHN BULL AND HIS PEOPLE.

Occurrences in the Land That Reigns Supreme in the Commercial World.

Over 600 people go mad every year in London.

The number of telephone messages recorded last year in the United Kingdom was 1,052,000,000.

Of the thirty new magistrates for Liverpool twenty-one are Liberals, two Nationalists, and two Labor.

The death is announced of Alderman Henry T. Brown, twice mayor of Chester.

Lord Charles Beresford, whose term of command of the Mediterranean fleet will expire next year intends to return to political life.

Cromwell House, Huntingdon, which is built on the site of the birthplace of Oliver Cromwell, is to be sold by auction.

Five of seven sons who were summoned at Kingston were ordered to pay 1s. a week each towards the support of their father.

The Prince of Wales has appointed Sir R. H. Charles, K.C.V.O., M.D., to be a physician-in-ordinary to his Royal Highness.

The National Rifle Association proposes to hold a boys' camp at Bisley from July 30 to August 14, to encourage rifle shooting in schools.

In celebration of the Spanish Royal wedding some parents in North London are about to christen their child "Alfena."

The chauffeur who drove King Alfonso during the recent visit to England has been decorated with the Spanish Order of Isabella the Catholic.

Sixteen thousand children die from suffocation every year in England, said Mr. Wynne E. Baxter at an inquest in East London on Saturday.

"The real extravagance of the South African war, which cost £250,000,000, was unpreparedness," said Lord Roberts, speaking to an assembly at the Mansion House, London.

A college cap or "mortar board" made of straw and colored white or black has just been placed on the market.

By Princess Ena's special request, it is stated, King Alfonso will throw Spain open to the influence of the Salvation Army.

The male births in London last year, the Registrar-General reports, were in proportion to the female births, 1,028 to 1,000.

Mr. George Whight, of Highgate, has left £8,000 and his household effects to Florence Fitchett, who was in his service thirty years.

The document signed by King Edward VI. providing for a mint and assay office for Canterbury in 1547 has been sold at Sotheby's for £450.

Interesting relics have been recovered by a diver from the wreck of H. M. S. Ramillies, which went to pieces on the rocks near Bolt Tail, on the Devon coast, on February 15, 1760.

The King has sent 20,000 willow saplings to the Midland Reafforesting Association. They will be planted on the pit mounds in which the Black Country, many of which have already been transformed.

Ladies are to be admitted as professional accountants by the new Institute of Accountants and Bookkeepers, of which Sir Albert Rolit is president.

The following appeared in Tuesday's "London Gazette": General Sir G. B. Wolseley, K. C. B., retires on retired pay; Lieutenant-General Donald J. S. McLeod, C. B., to be a general in the army.

Sir William Holland, M. P., has given notice to move, in the House of Commons, that "in view of the altered circumstances, it is desirable that the question of the Channel Tunnel between this country and France should be considered."

MILL RACE.

A despatch from London, Ont., says: Another drowning accident was narrowly averted on Wednesday night by a magnificent act of bravery on the part of 10-year-old Violet Wilson, who lives near the Meadow Lily Mills on the north branch of the Thames. For sheer pluck the deed that snatched little Louisa Harris, 7-year-old daughter of F. G. Harris, from a watery grave has never been equaled here. With other children, Louisa was playing teeter-totter on the river bank, when she fell off the board into the mill race and was swept away by the swift current. To dash into a raging torrent, such as the Meadow Lily Mill race is after being swollen by the recent heavy rains, is an act which might make many a strong man hesitate, but Violet Wilson, who happened to be passing, without an instant's indecision uttered a cry of "Lou shant drown if I can help it," plunged into the current, and, half-drowned herself, succeeded in bringing the other child to shore. Both were carried far down the stream before this was accomplished, however, and it was fully an hour before little Louisa regained consciousness.

CHEQUES WERE FORGED.

Ottawa Department Messenger Has Vanished — Three Cashed.

A despatch from Ottawa says: Another case of manipulating Government cheques has come to light, and this time it is the Department of Marine and Fisheries which suffers. Thos. Corcoran, a messenger in the department, on May 23 got possession of a cheque book, several cheques in which had been already signed by J. H. Halkett, a clerk in the accountants' branch. The signature of Mr. A. W. Owen, the accountant, was forged. It is already known that three cheques for \$50 each have been cashed in this way. Corcoran has disappeared, and has not been seen since Victoria Day. One of the cheques was presented to the Bank of Montreal by the Crown Bank. It has not transpired which institution will suffer.

PROBATION OFFICERS.

The Ottawa Society Takes a Forward Step in Child Saving.

A forward step has been taken by the Children's Aid Society of Ottawa in deciding to appoint two probation officers, in addition to the general Secretary of the Society, to devote all their time to the work of supervising and befriending the neglected and delinquent children of the city and especially to co-operate with the Judge of the Juvenile Court. Formerly, children accused of petty offences were either dismissed with a warning or convicted and sent to the reformatory. In future these children will be placed under the supervision of a Probation Officer, who will have all the powers of a guardian. In this way it is believed, hundreds of children will be helped and encouraged to lead a good life, who otherwise would drift into a criminal career. This change was warmly advocated by Mr. W. L. Scott, President of the Society and the resolution to appoint Probation Officers was moved by Sir Louis Davies of the Supreme Court, seconded by Lt.-Col. Irwin.

SCORES OF CHINESE DROWN.

Siang Valley is Under Water and Houses Submerged.

A despatch from Victoria, B. C., says: Mail advices from Hankow, China, show that the great floods of this spring in Hunan caused an appalling loss of life amounting to tens of thousands. The rivers were higher than in any previous year, and swept over the dykes, submerged houses, and covered an immense area. In fact, the whole Valley of the Siang was flooded. Stanton, a prosperous city, was flooded with water to the second storeys of the riverside buildings. The river was thick with wreckage and villagers on floating roofs. The foreign missionaries in Stanton were heavy losers, though all escaped in boats.

minion Iron & Steel Company have just received an order for 150,000 tons of steel rails from the Grand Trunk Pacific Railway Company. Recently they contracted with the Montreal Street Railway Company to deliver 20,000 tons, and they have an order also to deliver about 30,000 tons for the eastern section of the National Transcontinental Railway. Their new orders, therefore, total to date about 200,000 tons. Even though this company should not receive another order for steel rails within the next two years, the rod mills will be kept busy, calculating on the basis of a fair average daily output. It is said that the price to be paid by the Grand Trunk Pacific Company is \$33 a ton.

LADY HAMILTON WEDS.

Said to be the Richest Woman in Great Britain.

A London despatch says: Lady Mary Hamilton, only daughter of the late twelfth Duke of Hamilton and Brandon and the richest woman in Great Britain, was married on Thursday at St. George's Church, Hanover Square, to the Marquis of Graham, eldest son of the Duke of Montrose. King Edward was among those present at the ceremony. The church was filled with members of the Peerage. The scene outside the church was quite exciting. The enormous crowd desiring a closer inspection of the bride, broke through the police cordon and swelled round her carriage when it arrived in front of the church portico, almost completely blocking its passage. Heavy reinforcements of police were necessary to clear the way for the King's carriage and to open a passage for the bride to enter the church.

WILL MAKE CITY BEAUTIFUL.

Plans for Western Terminus of the Grand Trunk Pacific.

A despatch from Montreal says: Prince Rupert, the Western terminus of the Grand Trunk Pacific, according to the plans of the company, is to be one of the most perfectly laid out and beautiful cities of the Dominion. Expert surveyors are now at work planning the streets and parks, and other features of the city, and expert landscape gardeners have been engaged who will be sent out to see that it will be a city beautiful in its general outline, as well as one with broad streets and all the requirements of a modern metropolis. During the present year, after the surveys are completed, the details of the company's plans for starting the new city on its way will be perfected, and by next spring the lots and building sites will probably be ready for sale.

MURDER AND SUICIDE.

A Jealous Lover Shoots the Girl Who Rejected His Addresses.

A Troy, N.Y., despatch says: Because she refused to receive the attentions of John Carter, who was jealously in love with her, Carter on Tuesday night shot and killed Mamie Stanton, 26 years old, firing three shots into her head. The murderer ran a short distance, stopped and turned the smoking weapon upon himself, fatally shooting himself through the head. Death in each instance is said to have been instantaneous. Miss Stanton was walking down Ferry street with a lady friend when accosted by Carter. He tapped her on the shoulder, said something to her, and then drew the revolver and fired. After emptying the chamber of one revolver he drew a second, but fired only two shots from this one, reserving the other bullets for himself in case all were needed to carry out his plan of self-destruction.

ZUZU CHIEF IS DEAD.

Identification of His Body Has Removed all Doubts.

A Durban, Natal, despatch says: It is now definitely known that the rebel chief, Bambata, the cause of all the recent trouble, was killed in the fighting which occurred June 10. His death had previously been reported and denied, but his body has been fully identified. The revolt is now expected to speedily die out.

for divorce in California was decided in the Superior Court, Los Angeles, Cal., the other day, when Judge Bordwell granted Mrs. Charlotte T. Scammell, a decree because her husband is suffering from that disease.

On account of the heavy demand for tinplate the plants at Newcastle, Penn., the largest in the world, will not close this summer. This will be the first time the American Sheet and Tinplate Company has operated its plant continuously during the summer.

In the "make believe" warfare at the South Framingham (Massachusetts) militia encampment Private Lewis Smith, of Athol, Second Regiment, in drawing a bayonet from the scabbard, stabbed himself in the cheek. Private Tucker, of Springfield, also of the Second Regiment, fainted at the sight of the blood, and five privates who laughed at him were put in the guard-house.

GENERAL.

Lieut. C. Bolton, Governor of the Province of Davao, Philippine Islands, has been murdered.

King Haakon of Norway left for Trondhjem for the coronation ceremonies on June 22.

A terrific hurricane caused serious damage along the coast of Newfoundland, on Saturday.

PACKERS MUST BE SANITARY.

Filthy Tables Must be Discarded — Chicago's Fiat.

A despatch from Chicago says: The city health department on Friday sent its first official written notice to the packing companies at the Union Stock Yards to improve the sanitary conditions of their plants. The packers are instructed that they must within three days discard the filthy tables and benches, provide cleaner rooms and tools, and correct some of the present unsanitary conditions. Structural changes in the buildings, including new toilet rooms, and more ventilation and light, must be made within thirty days.

THREW HERSELF INTO RIVER.

Peterborough Girl, Mentally Unbalanced, Commits Suicide.

A despatch from Peterborough says: Alice Corbman, daughter of Stephen H. Corbman, Aylmer Street, left her home on Sunday morning about 7 o'clock, and going to the Otonabee River, a short distance away, deliberately threw herself in. The body was recovered a few hours later. Last winter the young woman was nearly drowned by having a fainting fit while taking a bath in her home. The shock received seemed to have affected her mentally, and since then she has been in a melancholy mood. She was 22 years of age.

RIISING IN SOUTH NIGERIA.

The British Assistant Commissioner Murdered.

A London despatch says: The Morning Post's correspondent at Lagos reports a political rising in Southern Nigeria. The British Assistant Commissioner, Oswald Crewe Read, has been murdered in the Asaba Hinterland. The Southern Nigeria Regiment has been hastened thither. Heavy fighting is expected.

BOMB KILLED THIRTY-THREE.

Result of Attempt at Assassination of King Alfonso.

A despatch from Madrid says: An official report states that 33 deaths resulted from the throwing of a bomb by the Anarchist Moral on the occasion of King Alfonso's wedding. Nine of the persons injured are not likely to recover. The Government has appointed a special commission to ascertain the source of a fund of \$100,000, which, it is alleged, was placed at Moral's disposal for the purpose of assassinating the king. Six Anarchists have been arrested at Barcelona for publishing a letter congratulating Editor Nakens, of El Motin, for hiding Moral after his attempt on the life of the king.

army.

Sir William Holland, M. P., has given notice to move, in the House of Commons, that "in view of the altered circumstances, it is desirable that the question of the Channel Tunnel between this country and France should be considered."

CHOKED BY PIECE OF MEAT.

Sailor Dies While Eating Supper in Kingston Restaurant.

A despatch from Kingston says: Through a piece of meat sticking in his throat, John Kane, a sailor, choked while eating supper in Walker's restaurant, Princess Street, on Saturday evening. Efforts were made to dislodge the meat, but these failed. A doctor was summoned, but before he arrived the sailor was dead. Deceased lived in Montreal during the winter, and was engaged as a wheelman around these parts in the summer. He was about 60 years of age and well known in marine circles.

LONG TERM FOR STUART.

Youth Who Tried to Kill Farmer Sent Down for 21 Years.

An Owen Sound despatch says: Judge W. J. Hatton on Saturday sentenced Albert Stuart to 21 years' imprisonment. The prisoner showed no emotion till he was taken back to the cells, where he broke down, and to his counsel, Mr. H. G. Tucker, admitted his guilt. Stuart was found guilty Thursday of a murderous assault on James Morrison last February. Morrison was returning home after dark, when Stuart attacked him with a revolver, his object being robbery.

FLOGGED; WALLED UP ALIVE.

Terrible Punishment Meted out to Moorish Murderer.

A despatch from Tangier, says: The shoemaker Mesliwi, who was convicted of murdering 30 women at Marakeesh, was flogged every day after his conviction. Finally he was placed in a hole in a wall, which was then built up in the presence of a jeering crowd. His screams could be heard for two days, after which he became silent, death ending his torture. Mesliwi was originally condemned to be crucified, but owing to protests his punishment was changed.

REBEL CHIEF CAPTURED.

Natal Government Had Counted Upon the Loyalty of This Zulu.

A despatch from Durban, Natal, says: Chief Siganda and his eldest son have been captured and brought into camp. Siganda is one of the chiefs upon whose loyalty the Natal Government counted, and who was expected to assist in the campaign against Bambata, but he and his tribe cast in their lot with the rebels.

STABBED HIMSELF IN HEAD.

Half-crazed Italian Attempts Suicide in Blenheim Township.

A Woodstock despatch says: In a half demented condition, an Italian, whose name is unknown, attempted to commit suicide on the fifth concession of Blenheim about 3 o'clock on Friday afternoon. He stabbed himself in the head with a knife, but beyond severe cuts, his wounds, which were dressed, are not serious, and he was sent to Toronto to the Italian Consul in that city.

AIIDING COTTON IN AFRICA.

British Government to Build Railways to Foster Cultivation.

A despatch from London says: Mr. Winston Spencer Churchill, Under-Secretary for the Colonies, announced in the House of Commons on Tuesday that the Government was preparing a definite scheme for railway building in Nigeria, West Central Africa, with the view of aiding the extensive cultivation of cotton.

The Song of the Hair

There are four verses. Verse 1. Ayer's Hair Vigor stops falling hair. Verse 2. Ayer's Hair Vigor makes the hair grow. Verse 3. Ayer's Hair Vigor cures dandruff. Verse 4. Ayer's Hair Vigor makes the scalp healthy, and keeps it so. It is a regular hair-food; this is the real secret of its wonderful success.

SEASON OF 1906.

PLEASE REFER NOTICE TO THE

The Chicago meat packers say they are not in business for their health. They are certainly not in it for the health of their customers according to the Commissioners' report.

Among the recent additions to the population of Canada is a Russian who has attracted attention to himself by piling obstructions on a railway track in an effort to derail a train. When arrested and questioned as to the reason for his mad act, he explained that he could not bear to see people riding comfortably in trains while he had to walk. He will probably be stowed away for some time in a place where he will not be annoyed by seeing trains go by. This is a reasonably free country for people to come to when they grow weary of the oppressions of Europe, but we cannot make it free enough to suit all comers. Here is a man that has leaped out of the boiling cauldron of Russia: he has arrived in a land where he does not need to fear conscription, where his body is in no terror of the knout, where even tramps grow fat, where the police must respect every law they enforce; he has penetrated a thousand miles into this country, laboriously learning our language, and about the first use he makes of English is to stutter out an explanation of why he tried to wreck a train. In succoring the distressed millions of Europe, this country will get hold of some queer people.

In view of the somewhat general impression, especially among the manufacturers and exporters of Canada, that the Commercial Agency should be greatly extended, and further in view of the fact that Canada has not a single commercial agent in the United States the Superintendent of Commercial Agencies recently addressed a circular letter to all British Consuls General and Consuls in that republic seeking if possible to bring about some measure of harmony between these officials and the Canadian business community, and thereby if possible unofficially enroll their services more directly in the interests of Canadian trade.

As is well known, the impression has existed for many years among Canadians that British Consuls do not interest themselves in Canadian trade, and therefore, could be of little or no use to them. On the other hand the statement was made to the Superintendent of Commercial Agencies that Canadians as a rule seldom availed themselves of the advantages offered by British Consuls in the United States by calling upon them, and that Canadians had no ground to hold such an opinion when they seldom or ever sought their assistance.

The circular letter, therefore, referred to was sent to all of the more important British Consulates in the United States. The existing condition of affairs was frankly stated, and under the assumption that the services of British Consuls were always available whenever the Empire's trade might demand, a full and frank opinion was requested. Incorporated therein were the following questions:—

(a) What suggestions can you offer seeking to bring about more intimate commercial relations with Canadian business men?

(b) Have you much correspondence with Canadian firms? If so, has it resulted satisfactorily or otherwise?

(c) Do you think you can assist Canadians to extend their market in your district?

The system in vogue in Canada in the conduct of the Commercial Agency Service was also briefly referred to, and permission was requested to pub-

The result has been a splendid testimony to the efficiency of the British Consular Service in the United States many of whom replied at considerable length, offering excellent suggestions, and in general terms stating that the facilities of their respective offices were at the service of Canadian business men.

American and Canadian Coal Oil and Gasoline. MADOLE & WILSON.

WHAT OTHER PAPERS SAY

Calgary Herald.

The actual fact about the crop situation in Alberta is that grain of all kinds is in splendid condition, growing rapidly, and with excellent prospects for a great harvest.

Kingston Freeman.

A good way to prevent typhoid fever is: Boil all the hot water, sterilize all the milk, thoroughly cook all the vegetables, kill all the flies, muzzle all the mosquitoes, and eat un buttered bread once a day.

Peterboro Examiner.

The appointment by the Whitney government of a nephew of Hon. Dr. Willoughby as registrar of East Northumberland, is a clear case of political, literal, and etymological nepotism.

Toronto Star.

Watermelons are on the market, but somehow those shipped in from the South never taste so good as those you used to borrow from your neighbor's patch while he wasn't looking when you were a boy.

Tara Leader.

The unfortunate denizen of town or city who is denied the incomparable delight of an occasional drive through the country at this season of the year is entitled to all the pity his fellows can bestow on him. Field, forest and meadowland are looking their prettiest.

Roseland Miner.

A food expert is endeavoring to induce people to live on nuts. He claims his food expense is about \$133 per month. The expenditure and the peculiar diet are calculated to make people who live up to them a little nutty.

Seaforth Examiner.

Mr. Emerson, the Minister of Railways, made the welcome statement in the House on Tuesday that the Intercolonial Railway had been now brought to a jaying basis, and after this year there will be a surplus of earnings over expenditure. We hope this prediction may prove true, but the public will be better pleased still when the actual figures bear out this prediction.

Winnipeg Telegram.

The publication of the spring crop report of the Provincial Department of Agriculture forecasts unparalleled prosperity for Manitoba this year. The high-water mark in acreage and crop prospects last year at this season was regarded as a difficult record to approach, much less surpass, but the situation to-day shows many improvements over the 1905 report.

Hammocks a fine assortment. MADOLE & WILSON.

THE FIRST AIR BRAKE.

What It Did When Westinghouse Finally Won a Trial.

Persons who should have known better thought Westinghouse visionary when they were told that he proposed to stop a train by air. Nobody seemed inclined to let him try his plan on a real train, but they did not object to his working a model of it in a shop where he couldn't do any harm or involve anybody else in expense. He knew his scheme would work, but he could not make any one else believe it. So he continued to sell his invention for replacing derailed cars on the tracks and to talk about his brake to any railroad man who was willing to listen.

"Well, have you ever stopped a train with this air thing of yours?" they would ask.

No, he couldn't say that he had done so. Nobody would let him try it even on a train of dump cars.

One day he arrived in Pittsburgh, selling his other invention and talking about his brake notion to a man connected with a railroad out there. "That's a great idea of yours," said the man. "We will try it on our line."

So the officials of this railroad permitted Westinghouse to put his new "kickshaw" on one of their trains. But he had to agree to indemnify the road for any damage that might be caused to the train as the result of the trials. The train was equipped. On the designated day the confident inventor and a group of skeptical railway men boarded the train on which the first air brakes were fixed. Off went the train on its trial trip. The engineer put on full speed, and just as he had rounded a curve he saw ahead, at a grade crossing and in the middle of the track, a loaded wagon, a man and a boy and a bally horse. The engineer moved his little lever, and the first train that was ever stopped by air pulled up at a standstill several feet short of the obstruction.

Thus, on its first trial, the Westinghouse air brake saved life and prevented damage to property. Thenceforward talking was unnecessary; all that had to be done was to make brakes. The inventor thought of that clause securing compensation to the railroad for any damage he might do to the train, and he laughed. His fortune dated from that day. He was then only twenty-two.—Arthur Warren in Success.

THE HUMAN BRAIN.

It Undergoes Wonderful Changes During Its Growth.

The wonderful changes which the human brain undergoes from the moment when it first appears in the embryo until it becomes the perfected laboratory of thought characteristic to the matured human being has been commented upon by several of the leading writers on biology, physiology, etc. During these successive changes, or, rather, transformations from the lower to the higher sphere, the human brain not only takes upon itself the general shape

and form of the brains of various representative of the lower classes of animals, but appears to have the same structural constituents, at least to a certain degree. Thus it has been found that the original germ of the brain as it appears in the human embryo has the exact outlines of a serpent's though factory. After that the changes which take place while the brain is assuming the various shapes which it must undergo before it becomes perfect give it a decided resemblance to the brains of fishes, birds and mammiferous animals.

"Hein's 'Thoughts on the Structure of the Human Brain' and Wilson's 'Anatomy of the Human Body' both mention these queer transformations as does also Hugh Miller in his famous work, 'Testimony of the Rocks.' Miller puts it in this way: 'It has long been known that the human brain is built up by a wonderful process, during which it assumes in succession the form of the brain of a serpent, a fish, a bird, and lastly, before it assumes the characteristic human form, it takes up on itself the outline of a mammiferous quadruped's brain.' Hence the remark made by scientific writers that 'man is the sum total of all animals.'"

An Oddity In Toes and Digits.

There is one curious fact respecting the animal creation with which you will never become acquainted if you depend on your text books for information. It is this: No living representative of the animal kingdom has more than five toes, digits or claws to each foot, hand or limb. The horse is the type of one toed creation; the camel of the two toed; the rhinoceros of the three toed and the hippopotamus of four toed animal life. The elephant and hundreds of other animals belonging to different orders belong to the great five toed tribe.

OPEN PUBLICITY THE BEST GUARANTY OF MERIT.

When the maker of a medicine, sold through druggists for family use, takes his patients fully into his confidence by frankly and fearlessly publishing broadcast as well as on its bottle wrapper, a full list of all its ingredients in plain English, this action on his part is the best possible evidence that he is not afraid to have the search light of investigation turned full upon his formula and that it will bear the fullest scrutiny and the most thorough investigation. Dr. Pierce's Favorite Prescription for the cure of the weaknesses, periodical pains and functional derangements of the organs distinctly feminine, is the only medicine put up for sale through druggists for woman's special use, the maker of which is not afraid to take his patients into his full confidence by such open and honest publicity.

A glance at the published ingredients on each bottle wrapper, will show that it is made wholly from native, American, medicinal roots, that it contains no poisonous or habit-forming drugs, no narcotics and no alcohol—pure, triple-refined glycerine, of proper strength being used instead of the commonly employed alcohol, both for extracting and preserving the active medicinal properties found in the roots of the American forest plants employed. It is the only medicine for women's peculiar diseases, sold by druggists, that does not contain a large percentage of alcohol, which is in the long run so harmful to woman's delicate, nervous system. Now, glycerine is perfectly harmless, and serves a valuable purpose by possessing intrinsic value all its own, and besides it enhances the curative effect of the other ingredients entering into the "Favorite Prescription."

Some of the ablest medical writers and teachers endorse these views and praise all the several ingredients of which "Favorite Prescription" is composed—recommending them for the cure of the very same diseases for which this world-famed medicine is advised. No other medicine for women has any such professional endorsement—worth more than any number of ordinary testimonials. If interested, send name and address to Dr. R. V. Pierce, Buffalo, N. Y., for his little book of extracts from the works of eminent medical writers and teachers endorsing the several ingredients and telling just what Dr. Pierce's medicines are made of. It's free for the asking.

Hump Back

SCOTT'S EMULSION won't make a hump back straight, neither will it make a short leg long, but it feeds soft bone and heals diseased bone and is among the few genuine means of recovery in rickets and bone consumption.

Send for free sample.

Toronto, Ont.
50c. and \$1.00; all druggists.

THE TIDY TADPOLE.

How This Cheerful Little Cannibal Eats and Develops.

A wonderful spirit of tidiness seems to pervade the tadpole world. They always eat whatever has become useless—their own eggs, their superfluous companions. Even those who are only weakly are cleared out of the way and the victims take it all as a matter of course. I have disturbed a strong member of the community just as he had begun to dine off the tail of a weaker brother, but the sufferer has not troubled to escape—he simply waited till the fratricide returned to complete his deadly work.

For some time there is no grave change in the tadpoles. They simply grow and become so far transparent that their internal mechanism, which consists of one coil of intestines, is plainly visible. When, however, they are about three months old a careful observer can distinguish a tiny foot on either side of the base of the tail. These grow slowly, but seem unable to move independently until shortly before the border land is passed which leads to perfect froghood. The hind legs have reached their full size before the front ones appear, and, while the feet grow slowly, the hands are ready made and can be used at once. For a day or two they can be seen under the skin before they venture forth, and their possessor is very restless and excited. He rushes madly about, jostling his comrades, and no doubt being voted a bore; then a more vigorous effort breaks the skin and the tiny hand and arm appear.

There seems some rule about the order of precedence here, as there is when the whiskers go, for last year my tadpoles, almost without exception, had their right hands some hours before the left, while on previous occasions I have had an entirely left handed crew.—Chambers' Journal.

MUSIC AT SEA.

Conditions Under Which Ships' Sails Sometimes Sing.

Some curious facts have been noted with regard to the sound conducting qualities of ships' sails. When rendered concave by a gentle breeze, the widespread sails of a ship are said to be excellent conductors of sound.

A ship was once sailing along the coast of Brazil, far out of sight of land. Suddenly several of the crew, while walking along the deck, noticed that when passing and repassing a particular spot they always heard with great distinctness the sound of bells chiming sweet music, as though being rung but a short distance away.

Dumfounded by this phenomenon, they quickly communicated the discovery to their shipmates, but none of them was able to solve the enigma as to the origin of these seemingly mysterious sounds which came to them across the water.

Months afterward, upon returning to Brazil, the crew determined to satisfy their curiosity. Accordingly they mentioned the circumstance to their friends and were informed that at the time when the sounds were heard the bells in the cathedral of San Salvador, on the coast, had been ringing to celebrate a feast held in honor of one of the saints.

Their sound, wonderful to relate, favored by a gentle, steady breeze, had traveled a distance of upward of two miles over the smooth water and had been brought to a focus by the sails at the particular locality in which the sweet sounds were first heard.

This is but one of several instances of a similar kind, trustworthy authorities claiming that this same music is often heard under somewhat the same

Queer Things About Flames.

There is a relation between the color of flame and the energy of the combustion causing it. The more vigorous and complete the combustion the higher the refrangibility of the light. A flame burning in a tardy and restricted way emits rays that are red. When burning in a more complete and effective manner the emitted rays change to violet. The flame of a candle or a lamp consists of a series of eccentric luminous shells surrounding a central dark core. These shells of flame emit light of different colors, the innermost one—that in direct contact with the dark core—being red and having a temperature of exactly 977 degrees F. Upon this and in their proper order of refrangibility are shells of light which are orange, yellow, green, blue, indigo and violet. The reason that such a flame does not appear to us as a nest of cones of different colored light is this: When we look upon such a flame all of the rays issuing from the different layers or strata of concentric luminous shells are received by the retina of the eye at one and the same time. This can only impress with the sensation of neutral or white light.

Rubies.

The finest rubies are still kept in Asia. The Great Mogul had 108 large rubies in his throne, and among them was one weighing two and one-half ounces. Of European rubies Charles the Bold, that luckless son of a fortunate father, had three rubies called the Three Brothers, of perfect color and worthy size. They passed into the possession of James I., who sent them to "Baby Charles." There is a large heart shaped balas ruby in the English crown. It has been neither cut nor polished, is only semitransparent and is of a dark red, like a morello cherry. Austria had, or has, an oriental ruby the size of a hen's egg, and Queen Elizabeth showed Sir James Melville one as big as a racket ball. Runjeet Singh had a large ruby with the names of many kings engraved on it. Among them was that of Aurangzeb. A King of Persia had one which he prized at the value of a city or even a kingdom. It was a table cut balas ruby of a beautiful color of at least a finger's breadth.

The Ship's Log.

The record of a ship's voyage is called its log because the observations of its speed, usually taken hourly, by the log line are a very important factor in the record. The log line is so called because the float attached to the line was originally a small log or stick of wood. This "log" is now a square or triangular piece of board weighted so that it sits upright in the water. The log line is divided by knots or marks into lengths of fifty-one feet, which is about one one-hundred-and-twentieth of a marine mile, so that the ship is told as many marine miles or knots in an hour as the number of knots or lengths that run off the reel in half a minute when the "log" is thrown overboard.

Animals In Mohammedan Heaven.

According to the Mohammedans, ten animals have been admitted to paradise—the dog Kuthba, the follower of the seven sleepers, Balaam's ass, Solomon's ant, the honeybee, Jonah's whale, the ram which was offered in sacrifice in place of Isaac, the camel of Balaam, the cuckoo of Balaam, the ox of Moses and 21 Balaam, the man-trocity which conveyed Mohammed from earth to heaven and back again in a very short time. These creatures were all sainted for some special services which they had rendered to man.

English Railway Signals.

The Red Rose Flavor and Strength

NO Ceylon tea nor Indian tea alone can have the "rich fruity flavor" of Red Rose Tea, because neither variety in itself, possesses all the qualities of strength, richness, delicacy, and fragrance. Each has its own peculiar qualities, but each has its weaknesses.

By combining the two in the Red Rose proportions, I produce a tea with the "rich fruity flavor" and strength of Red Rose Tea, a flavor and strength found in no brand of Ceylon alone.

Red Rose Tea

is good Tea

DRS. KENNEDY & KERGAN

Specialists in the Treatment of Nervous, Blood, Private and Sexual Diseases of Men and Women. 25 Years in Detroit.

NO Names used without Written Consent. Cures Guaranteed.

Thousands of young and middle-aged men are annually swept to a premature grave through early abuse or later excesses. Chas. Anderson was one of the victims, but was rescued in time. He says: "I learned an evil habit. I became nervous, despondent, gloomy, had no ambition, easily tired, evil forebodings, poor circulation, pimples on face, back weak, dreams and drains at night, tired and weak mornings, burning sensation. To make matters worse, I became reckless and contracted a blood disease. I tried many doctors and medical firms—all failed till Drs. Kennedy & Kergan took my case. In one week I felt better, and in a few weeks was entirely cured. They are the only reliable and honest Specialists in the country."

READER—We guarantee to cure you or no pay. You run no risk. We have a reputation and business at stake. Beware of frauds and impostors. We will pay \$1,000 for any case we take that our NEW METHOD TREATMENT will not cure.

We treat and cure Nervous Debility, Varicocele, Stricture, Weak Parts, Kidney and Bladder Diseases. Consultation free. Books free. Call or write for Question List for Home Treatment.

THROUGH THE HEART!

WHEN THE NERVES BECOME A WRECK AND VITALITY RUNS LOW BECAUSE THE HEART FAILS TO DO ITS WORK—THROUGH THE SELFSAME HEART—IF CURE COMES—MUST IT COME

Dr. Agnew's Cure for the Heart

Cures the nerves through the heart. Experience of the highest medical authorities has conclusively proven that the quickest way to cure diseases of the nerves is to fortify the heart with "food" that is natural to it, and that can be the blood, and it has been proven also, beyond the shadow of a doubt, by the one high medical authority, that Dr. Agnew's Cure for the Heart is the most potent nerve nourisher and heart strengthener that has been "discovered" from nature's lap to date. It stops pain and heal the heart's ailment and when you know that such a heart is the main spring, the balance wheel of life, out of order, the future lies out on a path of darkness and suffering, why postpone applying the remedy? Why delay until the heart is so weak that it will lift you back to bed? Dr. Agnew's Cure for the Heart will relieve any and every form of heart disease in 30 minutes.

Margaret Smith, of Brussels, Ontario, says: "Many a time my suffering was so great that I would have hailed a doctor with a welcome, but four bottles of Dr. Agnew's Cure for the heart wrought a wonderful cure in me."

SOLD BY ALL DRUGGISTS AND MEDICINE DEALERS.

the particular locality in which the sweet sounds were first heard.

This is but one of several instances of a similar kind, trustworthy authorities claiming that this same music is often heard under somewhat the same circumstances and especially in a moisture laden atmosphere.—London Tit-Bits.

English Regard For Teaching.

If there is one occupation which Englishmen are unanimous in condemning as degraded and degrading it is that most fascinating, most difficult, delicate and important work, the training of the mind. In what are humorously called "the higher walks" of teaching there are respectable salaries to be earned and agreeable rooms or houses for occupation. Here, purged of the dross of utility, a man may once more take rank as a gentleman, and if he becomes head of a house the supreme uselessness of his position commands universal and silent respect.—Nineteenth Century.

LIZARDS OF BARBADOS.

They Can Change Color and Drop Their Tails at Will.

The green lizards which swarm on every tree certainly have the hardest life of any creatures in Barbados, since their flesh is so delicate that everything eats them which can catch them. Cats, fowls, birds, monkeys and snakes all devour the poor lizards, which have only two methods of defending themselves, both very inadequate for the purpose. One is their power of changing their color, whereby they can appear bright green at one moment on the leaf of an aloe and then dark chocolate brown on a piece of damp earth. If this does not conceal them from their enemy they drop their tails. The caudal appendage jumps from the ground and makes a frantic dance all by itself, and if the pursuer is deluded into seizing it the lizard avails itself of the chance to escape and grow another tail.

For the rest the poor lizards are harmless things, with pathetic eyes, in which lurks an expression of weariness and disillusion, as though they were as old as the world itself and had found it all vanity and vexation of spirit. They are fond of plaintive music and will enter at the open windows when a piano is playing and sit listening and nodding their queer flat heads and looking out of those wistful eyes at the player till he or she, if of an imaginative temperament, might fancy she were playing to an audience of transmigrated souls.—Chambers' Journal.

Cigar Smoke and Love.

In Siam the lighting of a cigar indicates a betrothal. In that country a person wishing to become betrothed to the girl of his choice offers her a flower or takes a light from a cigar or a cigarette if she happens to have one in her mouth, and thereupon, provided there is no impediment in the birth months and years of the respective parties, steps are at once taken to arrange for the payment of the dowry. The families of the bride and bridegroom have each to provide at least \$1,000. In Calabria, as in certain parts of India, a lighted taper or a lighted pipe betokens the acceptance of the suitor for the hand of a lady in marriage. In Siberia it is the custom that when a suitor has been accepted by a girl she presents him with a box of cigars and a pair of slippers as a sign that he is to be master in the house.

heaven and back again in a very short time. These creatures were all sainted for some special services which they had rendered to man.

English Railway Signals.

An observant traveler on English railways could tell you at once the railway upon which he is traveling by merely looking at the first signal he passes. It may surprise many to know that there are hardly two styles quite alike in this country in station architecture and fittings, color of rolling stock, design and color of the locomotives, uniforms of the servants, style of the signal cabins and signal appliances and many other details.—London Mail.

Adder Stones.

The singular superstition of the value of adder stones for curing a variety of ills has continued in many countries from the time of the Romans. These celebrated charms are nothing more than antique green or blue glass striped in various designs and perforated. The virtues of these stones are sung in the poems of the ancient Druids and are mentioned by Pliny and other classical writers.

A Warning.

"See here!" said the theatrical manager. "You want to quit your overbearing behavior toward the other members of this company?"

"Indeed?" haughtily replied the Thespian. "I am the star, am I not?"

"Well, yes, but you want to remember that you're not a fixed star."

No Use For Them.

Customer (being measured in a fashionable tailor's shop)—By the way, what's your price for a suit? Tailor—Sixty dollars, sir. How many pockets would you like? Customer—No pockets at all. I shan't need any when I've paid your bill.

Poverty.

Poverty is very terrible and sometimes kills the very soul within us, but it is the north wind that lashes men into vikings; it is the soft, luscious south wind which lulls them to lotus dreams.—Ouida.

There is something on earth grander than arbitrary power. The thunder, the lightning and the earthquake are terrific, but the judgment of the people is more.—Daniel Webster.

Removed the Growth.

DOUGLAS & CO., NAPANEE, ONT.

DEAR SIRS,—During year 1890-91 I was troubled with a large lump growing on the right side of my neck near the ear. I had consulted several physicians and used everything I could hear of, all to no use. Was told to use

Douglas' Egyptian Liniment.

I did, and before I had used half a twenty-five cent bottle was permanently cured. Since then I have used it for everything where outward application is required; am yet to learn of anything in reason that I cannot cure with it. No man has any idea of its value until he has used it; would not be without it under an circumstance!

Respectfully yours,

NATHANIEL W. REID.

Enterprise P. O.

S. BOND & CO., ODESSA.

TO THE PUBLIC—

Our Spring Goods have now arrived and we are able to show exceptional values and patterns in Crum's Prints, Sateen Prints, Dress Ducks, Organdies, Priestley's Linen and Silks.

We have a full supply of Groceries, Flour, and Feed, Patent Medicines, Boots and Shoes, and Hardware, in fact everything kept by a general store.

We are able to compete with any general store in the provinces.

We pay Highest Price for all Farm Produce.

S. BOND & CO., ODESSA.

Given and Taken Away.

A tiny bridesmaid at a wedding the other day surveyed the departing bride, and groom with a gloomy brow. "Oh, dear!" she pouted. "Sister was going to get married today and have lots of fun! And now that man's taken her away!"

Fame.

Stranger (in Vienna).—Then this is the hotel which Beethoven used to frequent! I say, waiter, can you not show me the table at which Beethoven used to sit? Waiter—Beethoven? Stranger—Why, he very often came here! Waiter (betrinking himself)—Ah, yes! The gentleman is out of town.

Child Love.

Welcome to the parents the puny struggler, strong in his weakness, his little arms more irresistible than the soldier's, his lips touched with persuasion which Chatham and Pericles in manhood had not. His unaffected lamentations when he lifts up his voice on high, or, more beautiful, the sobbing child, the face all liquid grief, as he tries to swallow his vexation, soften all hearts to pity and to mirthful and clamorous compassion.—Emerson.

The first regular serial newspaper was printed at Antwerp in the year 1605 and bore the name of Nieuwlijd dagbode.

CASTORIA.

The Kind You Have Always Bought

Bears the Signature

Especially For Women

FRUIT-A-TIVES are the finest medicine in the world for women.

As a mild and gentle laxative—as a positive and speedy cure for Constipation and Biliousness—as the only cure for weak and irritated kidneys and especially for "that pain in the back"—as a positive cure for headaches—and as a general tonic to build up and invigorate the whole system—**FRUIT-A-TIVES** stand supreme.

In cases of irritated Ovaries, Ovarian Pains, Vaginal Catarrh, Excessive and Scanty Menstruation, Ulcerations, Bearing Down Pains—and all those troubles peculiar to women—

Fruit-a-tives

OR "FRUIT LIVER TABLETS"

have the most remarkable effect.

Ninety-nine cases out of a hundred of Female Troubles are due to neglect. Bowels become constipated—kidneys irregular—skin neglected—and the poisons of the body, which should be carried off by these important organs, are taken up by the blood, carried to the female organs and poison them, thus starting up a train of female troubles.

FRUIT-A-TIVES are made from fruits and by their remarkable action on bowels, kidneys and skin, rid the system of poisons, purify the blood, and restore the delicate organs of generation to new vigor and health.

No woman, who suffers, should ever be without them. 50c. a box—6 for \$2.50, at your druggist's or sent postpaid by **FRUIT-A-TIVES LIMITED - OTTAWA.**

Intellectual Drinks.

"Tea and coffee are drugs—drugs solely," said a chemist. "They stimulate the brain, and the reaction from the stimulation is not perceptible; hence tea and coffee are excellent brain spurs. For a little while they do actually make us more intelligent than we naturally are. That is why they are so popular. It is why we chemists call them intellectual drinks. Alcohol, whether it be taken in the form of champagne or beer or whisky, is not an intellectual drink, but the opposite. From the beginning alcohol stupefies instead of enlivening the brain. But it makes us talk! If it were not enlivening how should it make us talk? Alas, alcohol makes us talk, but we say under its influence the things we should not. Alcohol deadens the inhibitory, the prohibitive centers of the brain. It stupefies the brain muscle, which knows what things should not be told, and hence, while drinking we talk; but, oh, the things we say, and, oh, how we blush in the cold gray light of the morning after to remember what we said!"

"Tarry" Gould's Long Cruise.

"Tarry" Gould was a well known character in and around Danvers years ago, but very few knew what gave him the nickname of "Tarry." He was very fond of telling about the long sea trip he enjoyed when a young man. It seems he thought he was tired living ashore, so he went to Danversport and shipped on a coasting schooner bound for Philadelphia. He used to say, in telling his story: "I did expect to enjoy that trip so much. Well, we cast off from the wharf and started down

river. When we got to Beverly bridge (a mile or so from the wharf) I made up my mind that I had got enough of it, and as we passed through the draw I climbed to the bridge and started for home, and, if you will believe me, I could not get a wink of sleep that night until they threw water on the outside of my bedroom windows to make it seem I was aboard ship."

Scraps From the Sea.

"There is often found at sea a life belt or some sort of a life preserver floating on the water that bears the name of the vessel to which it belonged," said a veteran sea captain. "As soon as it is reported there is at once a great amount of speculation on the part of those interested in the ship as to whether the vessel is safe or not. This increases to alarm if the ship is any way overdue. In most instances the preserver has been washed from the deck by a wave or has fallen overboard, and the alarm is entirely without foundation. I remember an instance in which my boat broke a crank shaft. We were eleven days overdue, and we were given up for lost because a raft that should have been fastened on the deck was washed overboard and picked up by a faster liner. I have sometimes thought it would be a good thing if these minor articles were not marked."

South Sea Island Customs.

When a south sea island mother wishes to chastise her child she seldom resorts to slapping, and slippers, of course, she has none. Instead of using the forms of punishment customary among civilized mothers she pulls the child's hair or bites some part of the body, generally the fleshy part of the arm. In wandering about the village one sees many children having on their bodies scars produced by wounds inflicted by their mothers' teeth. When a mother wishes to caress her child she deftly draws her thumb across its eyebrow or cheek or gently seizes its cheek between her teeth. The rubbing of noses is also a mark of affection among the Kingsmill Islanders, as it is among the Maoris of New Zealand.

Hot Soda Baths.

Hot soda baths are recommended by some persons for rheumatism, and the way they are taken is this: Fill the tub half full of water as hot as can be borne, add half a pound of common baking soda and immerse the body for at least twenty minutes, keeping up the temperature by the addition of hot water from time to time. Vaseline or cold cream should be rubbed into the skin after the latter has been dried in order to replace the natural oil.

A Bit of English Humor.

Recently the London Morning Post contained the following advertisement: "Wanted.—A nurse for night duty only; one thoroughly accustomed to bottle babies."

This called forth the remark from the British Journal of Nursing:

"To bottle babies? How is it done and for what purpose are these innovations used when 'bottled'?"

A Bright Boy.

"Your son, I believe, made some experiments while at college?"

"Yes; he discovered what he calls his 'scientific paradox.'"

"What is the nature of it?"

"He succeeded in demonstrating that debts are expanded by contracting them."

BREAD is never better than the flour it is made of.

Often it is not nearly so good, but that is the fault of the bread-maker.

Without good flour, good bread is impossible, no matter how skilfully it is handled.

Now, good bread must be good to eat, as well as good to see or to taste. Good-to-eat bread is bread that nourishes.

In the matter of nutriment,

Royal Household Flour

is supreme. It represents the best that is in the wheat, ground to a snowy whiteness and purified by electricity.

It produces bread that is light, easy to digest and best of all—nutritious. Ogilvie's Royal Household is to be had at all grocers.

102

Ogilvie Flour Mills Co., Ltd.

Montreal.

"Ogilvie's Book for a Cook," contains 130 pages of excellent recipes, some never published before. Your grocer can tell you how to get it FREE.

Don't Be Touchy.

There are some people always looking out for slights. They cannot pay a visit, they cannot receive a friend, they cannot carry on the intercourse of the family, without suspecting some offense is designed. They are terribly touchy. If they meet an acquaintance in the street who happens to be preoccupied with business, they attribute his abstraction to some motive personal to themselves and take umbrage accordingly. They lay on others the fault of their irritability. A fit of indigestion makes them see impertinences in everybody they come in contact with. Innocent persons who never dreamed of giving offense are astonished to find some unfortunate word or some momentary factuality mistaken for insult. Of course, such a mental condition is due to too much thinking about self and to an exaggerated self esteem, even though unconscious. The best remedy is to persistently put thoughts of self out of mind. Find something more absorbing and more elevating to think about if you are one of the touchy ones, and you'll soon lose the habit.

A Storm Above the Clouds.

Professor John Wise, the eminent aeronaut, who lost his life in making a balloon ascension on Sept. 28, 1879, gave the following description of a thunderstorm which he once viewed from the "top side." "The view of a stormcloud from above is one of the most interesting sights ever beheld by mortal man. A storm viewed from above the clouds has the appearance of ebullition. The upper surface of the cloud is bulged upward and outward and has the resemblance of a vast sea of boiling, upheaving snow. Immediately above the stormcloud the air is not so cold as it is in the clearer at-

CONTROL OF ENERGY.

Is It Possible For the Human Race to Avert Extinction?

The only conceivable way in which the human intelligence can ever succeed in averting the "procession of the great year" is not by postponing the issue, but by reversing the process. The question is this: While energy is being dissipated in accordance with the natural law, can we so manipulate things as to accumulate energy, making the unavailable available—notwithstanding the fact that cosmic processes seem to be essentially irreversible? Now there is assuredly no inherent reason why we should not accomplish this. It is true that hitherto all the atomic evolution that has been observed is atomic disintegration. We may speak now, indeed, of the analysis of the elements. But so it was, we may remember, that the older chemistry began, and yet analytic chemistry was the precursor of synthetic chemistry. We began by breaking up compounds, but now we can make them—can, indeed, make compounds hitherto unknown in nature. Similarly, it is more than probable that we shall ere long learn to achieve the synthesis of the elements as well as their analysis. No energy is ever lost. Even when the radium atom, itself the child of the uranium atom, breaks down and dissipates its energy, ending, it is supposed, as the dull atom of lead, the original energies are not destroyed. Why should they not be gathered up again and thus again become available? Are matter and energy to go on their way, ultimately destroying the human race? For myself, I incline to the view that victory will rest at last with "man's unconquerable mind."—C. W. Saleeby, F. R. S., in Harper's Magazine.

COUNTY COUNCIL.

FIFTH DAY.

Thursday, 14th June, '06.

Council met at 2 p.m., as per adjournment. Warden in the chair; all the members present. Minutes of 9th inst., were read and confirmed.

A communication from the Eastern Good Roads Association, asking for grant of \$25, and for appointment by Council of delegates to be held 28th and 29th inst., at Kingston, was read.

Moved by Col. Clyde, seconded by Mr. Woods, that the Chairman and Secretary of the Roads and Bridges Committee be appointed delegates to the Convention. Lost.

Mr. Pau presented second report of Finance Committee, which was read and adopted.

Council adjourned till 10 a.m., tomorrow.

FRIDAY—SIXTH DAY.

Council met at 10 a.m. Warden in the chair; all the members present. Minutes of yesterday were read and approved.

Moved by Mr. Creighton, seconded by Col. Clyde, that the resolution of Messrs. Creighton and Miller, re striking rate of one and one-half mills on the dollar for county road purposes, be reconsidered. Carried.

Mr. Miller asked for the yeas and nays.

Yeas—Messrs. Baker, Bogart, Creighton, Clyde, Hall, Martin, Paul, Woods—8.

Nays—Mr. Miller.

On motion of Messrs. Martin and Creighton, the resolution was rescinded.

Moved by Mr. Martin, seconded by Col. Clyde, that this Council approve the issue and sale of debentures of this County for the sum of \$20,000, to provide funds for County road improvements, and debentures be issued, sold and made payable as shall hereinafter be decided by this Council.

Moved by Mr. Martin, seconded by Mr. Paul, that the Council go into Committee of the Whole; Col. Clyde in the chair, to consider the foregoing resolution.

Mr. Miller asked for the yeas and nays.

Yeas—Messrs. Baker, Bogart, Creighton, Clyde, Hall, Martin, Paul, Woods—8.

Nays—Mr. Miller.

Moved by Mr. Martin, seconded by Mr. Paul, that the resolution be amended so that debentures be issued to the extent of \$20,000.00; \$10,000 repayable in 1911, and \$10,000 in 1912; debentures to bear interest at 4 per cent. in accordance with report of the Special Committee adopted 2d Feby., 1906. Lost.

Committee rose, reported, and asked leave to sit again. On motion the report of the Committee was adopted, and Council adjourned till 1:30 p.m.

Council resumed.

Mr. Paul presented the second report of the Finance Committee, which was read and adopted.

Mr. Baker presented third report of Finance Committee, which was read and adopted.

Mr. Martin presented first report of Roads and Bridges Committee, which was read and adopted.

Moved by Mr. Miller, seconded by Mr. Woods, that the \$25 paid to ex-Warden Martin, re effort to have experimental farm established in this County, be repaid to the County Treasurer. Carried.

Council went into Committee of the Whole, re resolution of Messrs. Martin and Clyde, re issue of debentures. Warden in the chair.

Moved by Mr. Martin, seconded by Col. Clyde, that the resolution be amended so as to provide for the issue of \$15,000 debentures; one debenture for \$9,000, to be repayable in 1911, and another debenture for \$9,000, repayable in 1912, at 4 per cent. O.K.

Committee rose, reported the amendment made to the resolution, and on motion the report was adopted.

Mr. Miller asked for the vote.

Yeas—Baker, Bogart, Creighton, Clyde, Hall, Martin, Paul—7.

Nays—Miller, Woods—2.

On motion it was referred to the Finance Committee to take all necessary steps to negotiate the sale of the debentures.

On motion of Messrs. Martin and Creighton, the Clerk was authorized to prepare a By-law for the issue of the debentures.

Mr. Martin presented the second report of Roads and Bridges Committee, which was read and adopted.

Moved by Mr. Baker, seconded by Mr. Paul, that a special grant of \$200 be laid out in the Village of Newburg, to prepare a road connecting our County road system, the same to be laid out under the Commissioners of that district. Lost.

MANY PEOPLE HAVE

CATARRH OF KIDNEYS

AND DON'T KNOW IT.

Backache, a Warning Symptom of Kidney Trouble.

Pe-ru-na Is Invaluable in Such Cases.

Prominent Persons Who Have Been Cured.

Mr. J. Blyler, 1505 Ohio street, Des Moines, Ia., writes:

"I wish to state my appreciation of your excellent remedy.

"I have always enjoyed excellent health, except frequent and painful attacks of bladder trouble, which doctors failed to relieve or cure.

"Upon recommendation I used Peruna to my utter satisfaction, not having had an attack now for four or five years."—J. Blyler.

MR. L. BRANDL

Dangerous Kidney Diseases Cured.

WHEN the kidneys become affected by catarrh, either from colds, overwork, or an extension of catarrh from some other organ, they fail to perform their normal functions.

It is the work of the kidneys to excrete from the blood many of the poisons which accumulate in the body.

If the kidneys fail in their work, the poisons accumulate to such an extent as to cause convulsions, which often prove fatal.

Peruna, by relieving the kidneys of their congested and catarrhal conditions, leaves them free to act in a normal manner.

It also strengthens the action of the heart, equalizing the circulation of the blood in all parts of the system.

A remedy that relieves catarrhal derangements of the kidneys should certainly be considered a household remedy. Peruna is such a remedy.

High Commendation For Pe-ru-na.

Mr. C. B. Fizer, Mt. Sterling, Ky., writes:

"I have suffered with kidney and bladder trouble for ten years past.

"Last March I commenced using your Peruna and continued for three months.

"I have not used it since, nor have I felt a pain.

"I believe that I am well and I therefore give my highest commendation to the curative qualities of Peruna."

Neglected catarrh of the kidneys is apt to develop into Bright's Disease or diabetes, when a cure is almost an impossibility.

COLEBROOKE.

The Ladies' Aid of this place held a lawn social on the church grounds, last Wednesday evening, the weather was not very favorable. Nevertheless they had a fair turn out. The proceeds amounted to \$40. The Yarker band was in attendance.

The Rathbun company's drive of logs is passing through here now, with very good success, although the water is lower than usual.

As George Hamilton was driving through here, Tuesday evening, at a furious rate, the horse dropped dead on the corner above the school house.

F. S. Wartman has gone for a trip

WERE THEY MURDERED?

Chief of Police is Looking Up a Story.

Rumors have been afloat of late, and most persistently at that, regarding a double murder in the vicinity of Sharbot Lake. The whole case continued enshrouded in mystery and the facts were hard to ascertain. However, at last, the curtain has been raised. To go back to the earliest history of the case, readers of the Whig, of some four years ago, will recall an account of the sudden ending of two boys, or rather young men, named Babcock, and Martin, the sons of well-known and respected residents of Sydenham. Where the

ing the money was paid to Babcock and Martin. The next day they did not show up for work, but on the following morning were on hand as usual. This is borne out by the official records of the railway company at Montreal.

The story of the fortune teller at Mountain Grove became public, and was whispered from ear to ear, but so far, there is nothing beyond suspicion to point towards foul play. But fortune throws the dice in many fashions and it is said before had to taste the revenge following a woman's forsaken love. For some time he had been living with a woman named Neddo, but soon tiring of her, he took up with

MR. J. BLYLER

Catarrh of Kidneys Caused Much Suffering.

Mr. Leopold Brandl, 246 Bleecker street, Brooklyn, N. Y., writes:

"I was sick three months with catarrh of the kidneys and lungs. I was treated by my home physician and relieved to some extent, but after I had worked again for two weeks, my old suffering—backache and pains in the right lung—returned. The dreadful cough which bothered me day and night lasted six months and no one could help me.

"I tried three different patent medicines, without avail. I could scarcely eat anything and slept only a few hours each night.

"A friend told me to take Peruna. I did so and the second day my appetite had improved. I took a teaspoonful of Peruna every hour, day and night, for three weeks. Now I have taken five bottles. I can eat enough for two people and am able to sleep well.

"Whenever I meet a sick person, I advise him to take Peruna. I thank you a thousand times for your medicine, as it was the only remedy that saved me. We continue to keep it in our family."—Leopold Brandl.

We have on file many testimonials like the ones given here.

We can give our readers only a slight glimpse of the vast array of unsolicited endorsements we are receiving every month.

No other physician in the world has received such a volume of enthusiastic letters of thanks as Dr. Hartman for Peruna.

Address Dr. S. B. Hartman, President of the Hartman Sanitarium, Columbus, Ohio, for free medical advice.

All correspondence held strictly confidential.

which was read and adopted.
 Moved by Mr. Baker, seconded by Mr. Paul, that a special grant of \$200 be laid out in the Village of Newburgh, on the roads connecting our County road system, the same to be laid out under the Commissioners of that division. Lost.
 Mr. Baker asked for the vote.
 Yeas—Messrs. Baker, Clyde, Martin, Paul—4.
 Nays—Messrs. Bogart, Creighton, Hall, Miller, Woods—5.
 Moved by Mr. Paul, seconded by Col. Clyde, that a special grant of \$150 be made to the Village of Bath, in aid of roads and bridges, to be laid out by the local Council. Lost.
 Council adjourned till 10 a.m. tomorrow.

SATURDAY—SEVENTH DAY.
 Council met at 10 a.m.
 Mr. Baker presented the By-law to assess, which was read first time. Rule 88 was suspended and the By-law was read second and third times in Committee of the Whole, reported on, and adopted, signed, and sealed.
 Mr. Martin introduced By-law to provide for issue of debentures to raise \$18,000 for County road purposes, which was read a first time.
 Moved by Mr. Hall, seconded by Mr. Baker, that a grant of \$25 be made to Innis and Addison Teachers' Association. Carried.
 Council adjourned till 1:30 p.m.
 Council resumed.
 An account of C. A. Anderson, back line for County purposes, was ordered to be paid.
 Commissioner Martin's By-law to issue debentures was given its second and third readings in Committee of the Whole, and signed, sealed, and numbered.
 Moved by Mr. Baker, seconded by Mr. Creighton, that the Ward and Clerk be authorized to issue orders on the Treasurer upon the recommendation of the Finance committee, for all expenses in connection with the issue, sale and delivery of the debentures placed in the hands of the committee for sale. Carried.
 Mr. Miller asked for the yeas and nays on the motion adopting the report of the Committee of the Whole, on second reading of the Debentures By-law.
 Yeas—Baker, Bogart, Creighton, Clyde, Hall, Martin, Paul—7.
 Nays—Miller, Woods—2.
 Moved by Mr. Martin, seconded by Mr. Creighton, that the Finance committee be authorized and instructed to advertise and sell the County debentures provided for by By-law No. 211, said sale to be made at as early date as practicable. Carried.
 On motion the resolution of Messrs. Paul and Clyde, yesterday, re grant to Bath, was reconsidered.
 Moved by Mr. Paul, seconded by Col. Clyde, that the Council make a special grant of \$100 to the Village of Bath, in aid of roads and bridges, to be laid out by the local Council. Carried.
 On the motion of Messrs. Baker and Paul, the resolution of yesterday, re grant to Newburgh, was reconsidered.
 Moved by Mr. Martin, seconded by Mr. Baker, that a special grant of \$150 be laid out in Newburgh, on the roads connecting our County road system, to be laid out under the Commissioners of that division. Carried.
 Mr. Hall asked for the vote.
 Yeas—Baker, Creighton, Clyde, Martin, Paul—7.
 Nays—Bogart, Hall, Miller, Woods—4.
 Moved by Mr. Miller, seconded by Mr. Hall, that the Townships of North Fredericksburgh, Richmond and Shipfield be given a special grant of \$200 each for County roads. Lost.
 Yeas—Bogart, Hall, Miller, Woods—4.
 Nays—Baker, Creighton, Clyde, Martin, Paul—5.
 On motion Council adjourned till 20th Nov. next, at 2 p.m.

The account of N. B. Miller, which appears in the County Council minutes should have appeared as an account from the Township of North Fredericksburgh, for drawing the steam roller out of a ditch where it was run by the agent who delivered the roller to the county Commissioners.

Hitting Him With the Truth.
 Mr. Boastful—I wonder how it would seem if I could have all the money I have given to charity piled on a plate before me. Mrs. Boastful—I think you could still distinguish the plate.

A Bright Idea.
 Theater Manager—I can't use your play, sir. It's too long for the stage. Amateur Playwright—But, I say—aw—look here—aw! Can't you lengthen the stage, you know?

Her Quick Wit.
 He—Your new hat is charming, but I fancy it doesn't go well with that dress. She (enchanted)—Oh, you dear old hubby, so you really mean to buy me a dress as well?

There should be as little merit in loving a woman for her beauty as a man for his prosperity, both being equally subject to change.

 Mrs. E. Sharp and Miss Lizzie Thomas were at Bath, on Wednesday.

POOR HANDWRITING.
 One of the Causes That Downed Napoleon at Waterloo.

The nose of Cleopatra had a marked influence on the destinies of the ancient world. The handwriting of Napoleon I, we are assured by recent historians, had a similar effect upon the evolution of the modern world. He did not write; he scrawled. By reason of this, among other causes, he lost Waterloo. Grouchy could not read with exactness his decisive message. Was it "bataille engagee" (battle is on), or "bataille gagnée" (battle is won)?

Grouchy chose the latter significance and, not believing it necessary to press forward, arrived too late. So much for the curl of a letter, a pen stroke or an illegible swell to an "a."
 This question was brought forward by the writing master of the elder Dumas.

"Remember, Alexandre," the master said to him, "the great defeat of the emperor was due only to his scrawling hand. If you wish to succeed in the world be careful of your heavy and your light strokes." So if Napoleon had known how to write legibly or if he had taken the trouble to do so his descendants would reign today in France and we should not have had the republic. It appears historically established today that Dumas' writing master was right. And on such slight things rests the fate of empires.

Wit In the Workbasket.
 "What's the old lady doing now?" asked the stocking.
 "Getting a needle and wool," replied the thimble.
 "Well, I'll be darned!" ejaculated the stocking fiercely.

He—Your new hat is charming, but I fancy it doesn't go well with that dress. She (enchanted)—Oh, you dear old hubby, so you really mean to buy me a dress as well?

There should be as little merit in loving a woman for her beauty as a man for his prosperity, both being equally subject to change.

 The Kind You Have Always Bought

case, readers of the Whig, of some four years ago, will recall an account of the sudden ending of two boys, or rather young men, named Babcock, and Martin, the sons of well-known and respected residents of Sydenham. Where the K & P. railway goes into the village it crosses the C. P. R. railway, the tracks forming a large letter "X." Just beyond is a large bay, branching from the lake, well at the time in question the two lads started in a skiff for a point on the other side to bring back some cedar posts for Mr. Cannon. They never returned. The lake was swept by one of the worst storms known and the surmise followed that the boys were drowned. This supposition was strengthened by the finding of the boat and also of a cap and one mitten.

And now let us come on down to a year ago. At that time an old fortune teller, at Mountain Grove, so rumor tells, stated that the boys were not drowned, but had been murdered, and even went so far as to indicate where the remains could be found. Fate of the lads became the talk of the countryside and the idea once sown bore fruit. Several facts were brought to light. It appears that the evening before the supposed drowning the boys received a large sum of money (some \$70 or \$80) from Cannon. Two other men were present at the time, "Sandy" Bedore, now serving a fourteen-year sentence in the Kingston penitentiary, and recently under the limelight as a witness in the Schacher trial, and Frank Beaver, an Indian.

As the story goes, the lads were supposed to have had this money on their persons when they started for the trip across the Bay, though it afterwards transpired that it had been paid upon some insurance policies and, in reality all the pair had was some seven or eight dollars. But Bedore and Beaver were not aware of this. They were working on a section of railway at Sharlot Lake on the day of the even-

ing. The old man throws the dice in many fashions and it is said Bedore had to taste the revenge following a woman's forsaken love. For some time he had been living with a woman named Neddo, but soon tiring of her, he took up with another. That was more than the Neddo woman could stand. She went to Bathurst, near Perth, where she now lives. But disappointment gnawed into her soul, and the desire for revenge became uppermost in her mind. She made a statement to the effect that Bedore had confessed to her that Babcock and Martin had never been drowned but that he and Beaver had brought about their real ending, and all for the love of gold. The money paid the lads by Cannon in the presence of Bedore and Beaver, proved too great a temptation. According to the secret, of which Mrs. Neddo became a party, the men had followed the boys encompassed their death. The one had been shot, the other knocked on the head and their bodies buried. The story once out, it travelled fast. The rumors reached Perth. The Neddo woman was sent for. She went there and gave the particulars as already outlined.

Chief of Police White, Perth, visited Sharbot Lake, and with a local constable named Joseph Reynolds, went to the spot indicated by the woman. It was the point on which Babcock and Martin were to have landed to secure the posts. They re-opened a grave and as the story goes, found bones and traces of hair.

The chief and Reynolds left Saturday, for Rice Lake, to look up Beaver, and further developments are now awaited with much interest by the people of Sharbot Lake and vicinity to whom the mystery has been a source of constant uneasiness.—Whig.

GOLD DUST makes hard water soft

TIME TO TAKE A FRESH HOLD

Rev. Dr. Newell Dwight Hillis Discourses on
a Hebrew Patriot's Motto.

Text—"And the shadow went back ten degrees." 1. Kings.

The other day the Dean of Cornell University showed me his shrubs, flowers and trees. While walking through the garden my eyes chanced upon a unique sundial. Studying the bronze plate, I deciphered these words: "Turn the shadow back ten degrees on the sun-dial and take a fresh hold." The Dean explained the motto by saying that he had heard the sentiment expressed in some sermon or oration. Thirty centuries ago a Hebrew patriot and poet was approaching old age. Grown weary, the tool was about to drop from his hand. But his country was suffering, and the poor needed him. In that hour he girded up his loins afresh and began anew. Addressing a group of dispirited followers, the old hero suddenly exclaimed: "Turn the shadow of life's dial back ten degrees and begin anew." From that day on the words became the motto of his life.

HIS DAYS PACKED WITH GOOD DEEDS.

After a while his fame began to spread. When he died, he was known as the man who packed all his days with good deeds and took the motto of his life from a sun-dial. Slowly his story began to move out into other climes and continents. History tells us that a crusader, a young English soldier, carried the fuchsia from Asia Minor to England, just as a Spanish missionary carried a vine from the hills of Valencia to Southern California, and so filled the world with purple clusters. And so the old Hebrew poet, who passed away thirty centuries ago, still lives, and walks up and down our earth.

In one of his last journeys he took ship to America, and made his way to Rhaca. For I found his footprints in Rhaca, the flower garden! And when I look at a library of books and reports written by Prof. Bailey and the group of scholars about him, I discovered the secret of the American scholar, as it was graven on a bronze plate on which the sunbeams lay, pricking out these words for all who seek inspiration to fresh endeavor: Turn the shadow back ten degrees on the sun-dial and take a fresh hold."

DISCOURAGED PEOPLE SHOULD BEGIN AFRESH.

To all patriots and teachers and lovers of their kind who have sown widely and reaped few sheaves, there comes this word of hope from the great Hebrew, who began life afresh, and at last succeeded and made himself immortal. For those who bear the burden and heat of the day, life is often very hard. It is not an easy task to teach or write, or do reform work. Oft the harvest is postponed. Often the victory for reform is delayed for years. Full oft the philanthropist labors and sees no fruit of his labor. "I have done my share; let the young men come forward," exclaims the political reformer. "I have been at the head of this movement ten years; it is time for some one else to take his turn" cries the patriot or teacher. "I have earned money enough," says the merchant; "I am going to retire from business." But no man has ever done enough for his generation. What! Refuse your voice and eloquence to the poor and weak and leave the great cause of the people without an advocate? Death alone has a right to silence your voice. What! Withdraw from the movement for reform or education or philanthropy, and leave the host without a leader? It is ignoble to

desert. It is for you to die pushing the flag forward into the thick of the enemy and be carried off the field on your shield. What! You, manufacturer, or merchant, or financier, have made money enough for yourself? Go on making money for others, that you may be bread and raiment for the hungry and the naked. No matter how old you are, you are just at the beginning. There is time to write a new chapter in your life. You are in sight of the goal; one more forward movement and the victory is yours. "Turn the shadow back on the dial and take a new hold."

A MOTTO FOR YOUNG AND OLD ALIKE

To all who have reached middle age, who recall youth and anticipate life's decline, there is food and medicine in these words: "Turn the shadow back on the dial ten degrees and take a new hold." Strictly speaking, there is no old age. Is the Mississippi River any older now than it was a million years ago? The Mississippi River is water. The dirt banks between which it flows show time, but the Mississippi River is eternally young, eternally fresh, eternally pure, fed by the rains of summer, the snow of winter, and the clouds of the ageless ocean.

The soul is a living stream of thought and love and plan that flows through the lips in speech. The right hand and the left hand are like the right bank and the left bank of the Mississippi River. The body shows the mark and scar of time, but not the soul. For the heart that thinks and loves and prays, there is neither youth, nor maturity, nor old age. It is simply life that came from God. Out of the deep the soul came; into the deep it goes, like the river. And for those who open their heart to the rushing tides of the divine spirit there is no old age.

ACHIEVEMENTS OF THE AGED.

As for the memory, Cato, at seventy-five, learns a new language, the Greek. As for philosophy, Richter makes his greatest intellectual discoveries after seventy. As for reform, Gladstone achieves his greatest eloquence, and makes his noblest pleas after three score years and ten. As for art, Michael Angelo never finds himself until he comes to those years when the psalmist thought he ought to have been in the cemetery. As for poetry, in extreme old age the great German's spirit rises like a lark, floats into the sky, still pouring forth lyric melody. As for world achievements and civilization, Moses wrote his laws, social, political, domestic, after he was eighty years old.

God lives, the eternal sun, with whom a thousand years are as one day. Man is a spark struck out of the genius of God. Thinking God's thoughts, fulfilling God's plans, living God's life, the years have no power upon man. Therefore, begin life afresh. There is no growing old. Instead of dropping the tool, take a new grip. Instead of confessing defeat and withdrawing from the scene, plan a new advance. Have you discharged your clerks, preparatory to closing up the business, tear up the bond and make a new contract. Begin life afresh at seventy. Gird up your loins anew for a last dash toward the goal. Open a new furrow and sow one more harvest. Dig one more spring, build one more booth, bind up one more broken heart, and then—do it all over again! This day, the second Sunday in June, no matter where you are in life's race, "turn the shadow back ten degrees on the dial and take a fresh hold."—Newell Dwight Hillis.

SOME SMUGGLERS' RUSES

QUEER HAPPENINGS ALONG BORDER
OF CANADA AND MAINE.

Boys Who Coasted Tea Into the United States—A Farmer With a Trick Granary.

Any person that lives on the border between Maine and New Brunswick and doesn't know anything about smuggling must be deaf and dumb and blind. There are many ways to evade the officers, says a correspondent of The New York Sun.

In the Madawaska country, between Van Buren and Fort Kent, the settlers are the French Arcadians, and all the customs officers in Maine, with the Sturgis deputies thrown in if they were there, could not prevent them from getting their gin from across the river. I was there once, when the good women of Aroostook, backed up by the law, sent a band of officers to prevent the poor Frenchman from spending his money for gin, writes a Parkhurst man in the Lewiston Journal. The water was high, there was no fording and every boat and ferry for miles was watched. It happened that Xavier G— was out of gin. He kept a public house, and nothing for his guests to drink did not suit him at all.

But he had something up his sleeve to fool the officers. A barrel of gin from the Canadian side was hauled through the woods to the river, lashed to the under side of a log with hay wire and sent adrift with a man on the log. Now, a log can be held at a certain angle in the river and the current will carry it across as it does a ferryboat—rivermen often cross in this manner and it excites no suspicion. There was plenty of gin and molasses at Xavier's that day for dinner.

COASTING THAT PAID.

In one place the line runs several miles along a side hill. I once saw a gang of boys coasting on the crust some forty rods from the road. At the foot of the hill on the American side was a wood lot and a big pile of sawed wood. The boys had an old pung, and a close observer would have noticed that they always went in behind an old barn on the Canadian side to start, then they would go like the wind clear down to the wood pile in behind the fir trees.

And that very morning a man with a double team was there loading wood; the blue jays in the trees probably noticed that he was building a funny load in his big sled box; it was hollow in the middle with woodpiles at the sides and ends, and perhaps they noticed that every time the pung load of shouting boys came down the hill they brought a chest of tea. The load was carefully covered with wood, taken to a village merchant, driven in the back yard and deposited in the cellar.

One of my neighbors once suddenly had a call to preach and finally went over into New Brunswick to spread the Gospel. In three weeks he returned, and when he came back he hitched his old horse in the village street, near the customs house, and had a prayer meeting in the street, but no one mistrusted that he had fifty costly silk dress patterns in the bottom of his old wagon.

A MYSTERIOUS GRANARY.

Mr. A. had a farm that ran to the boundary line. His buildings were forty rods from the line, but his granary was only forty feet. Mr. B.'s farm buildings were close by on the Canadian side, a road ran between the granary and B.'s buildings, the road was on the line. A raised about six hundred bushels of oats each summer and put them in his granary. Each winter he sold about 6,000 bushels. Of course things looked very suspicious. The customs officers hid behind fences and rock piles and shivered many a winter night. Spotters and spies were hired and a Government

HEALTH

PREVENTION OF DEAFNESS.

It is a distressing thought that many of the physical ills in the world might have been prevented had the sufferers only known how. Much of the blindness found in asylums is due to a destructive inflammation of the eyes occurring soon after birth, which can almost always be averted by proper treatment.

Very many cases of deafness are also preventable if treatment is begun early enough and persisted in long enough.

Sometimes loss of hearing is due to disease of the auditory nerves in the inner ear; that is unusually unavoidable and irremediable. But in the great majority of cases the trouble is in the middle ear, and is primarily of a catarrhal nature. It does not originate in the ear ordinarily, but extends to it from the throat, and so it happens that treatment of catarrhal conditions of the nose and throat is the best preventive of deafness.

The most frequent cause of deafness in children is the presence of adenoids, or the throat tonsil. This obstructs the passage of air from the nose, and compels the child to breathe through the mouth. The mucous membrane of the throat was never intended to receive the impact of the unfiltered and unwarmed air, which in health is both warmed and filtered of much of its floating dust during its passage through the nose. The irritation caused by the dust and the cold results in a low grade of inflammation with increased secretions, and that we call catarrh.

This inflammation is apt to spread outward from the centre, passing from one point to another and up through the connecting air-tubes from the throat to the middle ear. This extension of the inflammation is often helped along by the bad habit of blowing the nose violently when it is stopped up, for thus a little of the secretion is forced into the tube, and sometimes even into the drum cavity of the ear.

From what has been said of the cause of catarrhal deafness, the means of prevention can be readily understood. Any child who breathes through its mouth should have the throat examined, and if adenoids are found they should be removed. Any chronic catarrhal condition of the throat and nose should receive proper treatment, and any one with a tendency to take cold on small provocation should consult his physician, who may find some local trouble in the nose which a simple operation may remove, or may find that the sufferer is not living hygienically, or that the throat needs some remedial applications to relieve a state of irritability.—Youth's Companion.

BEWARE OF OVER-EXERCISE.

It is probable that more harm is done by over-exercise than by taking too little. The man who over-develops his muscles in order to pose as a strong man suffers for his rashness in after years. Exercise to exhaustion should never be indulged in. Those footballers, cyclists, and harriers who regularly play or ride so furiously, or run so immoderately that they frequently find themselves in a state of collapse immediately after enjoying their favorite sport, are doing themselves considerably more harm than good.

Tepid or moderately warm bathing is recommended by most doctors, as the cold bath extracts more heat from the body than the nervous person can spare. Sea bathing has a favorable influence.

Clothing should be as light as possible. Tight boots, corsets, belts, and garters must be carefully avoided.

Nine, or even ten, hours of sleep may be advantageously taken.

Use of tobacco is best avoided. Smoking certainly impairs the nervous system, as steeple jacks and telephone "linemen" testify.

Persons of very nervous tempera-

an advocate? Death alone has a right to silence your voice. What! Withdraw from the movement for reform or education or philanthropy, and leave the host without a leader? It is ignoble to

THE S. S. LESSON

INTERNATIONAL LESSON,

JUNE 24.

Lesson XIII. Second Quarterly Review.
Golden Text: John 7. 46.

RESPONSIVE REVIEW SERVICE.

LESSON I.

Leader: A good tree cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit.

Boys: Wherefore by their fruits ye shall know them.

Girls: Not everyone that saith unto me, Lord, Lord, shall enter into the kingdom of heaven; but he that doeth the will of my Father which is in heaven.

LESSON II.

Leader: At that time Jesus went on the Sabbath day through the corn; and his disciples were all hungry, and began to pluck the ears of corn and to eat.

Boys: But when the Pharisees saw it, they said unto him, Behold, thy disciples do that which is not lawful to do upon the Sabbath day.

Girls: He said unto them, the Son of man is Lord even of the Sabbath day.

LESSON III.

Leader: And a certain centurion's servant, who was dear unto him, was sick and ready to die. And when he heard of Jesus, he sent unto him the elders of the Jews, beseeching him that he would come and heal his servant.

Boys: When he was now not far from the house, the centurion sent friends to him, saying, Lord, trouble not thyself, for I am not worthy that thou shouldst enter under my roof; but speak the word only, and my servant shall be healed.

Girls: And they that were sent, returning to the house, found the servant whole that had been sick.

LESSON IV.

Leader: Jesus said to Simon the Pharisee, There was a certain creditor which had two debtors; the one owed five hundred pence, and the other fifty.

Boys: And when they had nothing to pay, he frankly forgave them both. Tell me therefore which of them will love him most?

Girls: Simon answered, I suppose that he to whom he forgave most. And he said unto him, thou hast rightly judged.

LESSON V.

Leader: Behold, there went out a sower to sow; and some fell by the wayside, and the fowls of the air came and devoured it up.

Boys: And some fell on stony ground, but when the sun was up, it was scorched; and because it had no root it withered away.

Girls: And some fell among thorns, and the thorns grew up and choked it. And other fell on good ground, and did yield fruit that sprang up, and brought forth, some thirty, some sixty, and some an hundred.

LESSON VI.

Leader: The kingdom of heaven is likened unto a man which sowed good seed in his field. But while men slept, his enemy came and sowed tares among the wheat.

Boys: But when the blade was sprung up, and brought forth fruit, then appeared the tares also.

Girls: He said to his servants, Let both grow together until the harvest; and I will say to the reapers, Gather ye together first the tares, and bind them in bundles to burn them: but gather the wheat into my barn.

LESSON VII.

Leader: And when the demoniac saw Jesus, he cried with a loud voice, What

have I to do with thee? (For he said, Come out of the man, thou unclean spirit!)

Boys: And all the devils besought him, saying, Send us into the swine.

Girls: And forthwith Jesus gave them leave.

LESSON VIII.

Leader: And when the daughter of Herodias came in, and danced, and pleased Herod and them that sat with him, the king said, Ask of me whatsoever thou wilt, and I will give it thee.

Boys: And she said to her mother, What shall I ask? And she said, The head of John the Baptist.

Girls: And the king was exceeding sorry; yet for his oath's sake, and for their sakes which sat with him, he sent an executioner, and commanded him to bring it.

LESSON IX.

Leader: He saith unto them, How many loaves have ye? And they said, Five, and two fishes. And he commanded them to make all sit down.

Boys: And when he had taken the five loaves and the two fishes, he blessed and brake the loaves, and gave them to his disciples to set before them; and the two fishes divided he among them all.

Girls: And they did all eat and were filled.

LESSON X.

Leader: A certain woman, whose young daughter had an unclean spirit, came and fell at his feet, and besought him that he would cast forth the devil out of her daughter.

Boys: And he said, The devil is gone out of thy daughter.

Girls: And when she was gone to her house, she found the devil gone out.

LESSON XI.

Leader: Jesus saith unto his disciples, Whom say ye that I am?

Boys: And Simon Peter answered and said, Thou art the Christ, the Son of the living God.

Girls: And Jesus answered and said unto him, Blessed art thou, Simon; for flesh and blood hath not revealed it unto thee, but my Father which is in heaven.

LESSON XII.

Leader: He took Peter and John and James, and went up into a mountain to pray. And as he prayed, the fashion of his countenance was altered, and his raiment was white and glistering.

Boys: And, behold, there talked with him two men, which were Moses and Elias.

Girls: And there came a voice out of the cloud, saying, This is my beloved Son: hear him.

A FESTIVE GHOST.

English Village Visited by the Spirit of a Practical Joker.

Great Baddow is a sleepy little village near Chelmsford, England, but it sleeps these last few nights less easily than of yore. A ghost—a real ghost, so, at least, runs the village story—has made its appearance in this Essex Sleepy Hollow!

It is, too, a ghost of a highly original pattern, for it gambols free in the light of day.

It made its appearance a day or two ago in a cottage occupied by an elderly couple, Mr. and Mrs. John Wallace. Mrs. Wallace had just made the bed, when the spook strewed the clothes on the floor.

Then the ghost descended from the bedroom and cleared the kitchen mantelpiece of all its ornaments, which it placed, in a spirit of unghostly carelessness, uninjured on the hearth rug.

At this the village constable, and after him the village blacksmith and a parish councilor, were called in. But even they could do nothing, and a few minutes later the frolicsome spirit set several flower pots dancing on the window-sill before the frightened eyes of Mrs. Wallace.

each summer and put them in his granary. Each winter he sold about 6,000 bushels. Of course things looked very suspicious. The customs officers hid behind fences and rock piles and shivered many a winter night. Spotters and spies were hired, and a Government detective loafed around the line saloons for a month in plain sight of the magic little granary, but discovered nothing. It was dark and deserted nights, but in the morning A. would come and help load his team. The detective would sometimes saunter over and ask foolish questions, peek into the bins and look for tracks in the snow, and then go back more puzzled than ever.

I will tell how the Government was outwitted. Between the granary and B.'s buildings was a culvert under the road, a wooden spout was made of boards about a foot square, and some dark stormy night at the beginning of winter the snow was cleared away, and the spout laid close on the ground in the culvert, under the road, under fences and into A.'s granary. A belt with cups attached ran inside the spout and a crank in B.'s barn was turned to carry the grain. As it was down hill a very little effort would carry a stream of oats into A.'s granary a foot square. A blustery night would obliterate all tracks.

A pile of brush cut from apple trees was piled between the granary and the road fence; this, covered with a drift of snow, hid the place where the spout entered the granary on the outside, and on the inside it was covered by sliding back a wooden window. This was always pushed back over the hole in the wall when they were loading oats, to admit light, there being no other window. When it was closed the bin was in darkness and the hole could not be seen. Of course, the oats were delivered in B.'s barn in New Brunswick. When the snow began to melt in the spring the spout was removed and packed away until the next winter.

LIQUOR BY PIPE LINE.

At one time a certain village planned to have a great Fourth of July celebration, and it was planned to have it dry. The local officers warned the saloon-keepers that any attempt to sell liquor in any form on that day would be punished to the full extent of the law, and the customs officers gave notice to all that an extra force would guard the roads leading from New Brunswick, and all persons caught with liquor on that day would have their teams taken and be sent to Portland to settle with a United States Commissioner.

The day dawned bright and clear and by 9 o'clock the trotting park at the lower end of the town was swarming with people to see the races. Half a mile away across the fields was a saloon on the boundary line. The thirsty looked at it with wistful eyes, but to walk there for a drink through the grass and grain was too much and to go around by the road by team where officers were thick as flies was not to be thought of.

Behind the dark fence, close to a little brook shaded by thick alders, was a dance floor and a little booth where lemonade and soft beer were sold. There was soon a noisy crowd at his place, and by noon the town and lockup were full of drunks. More officers were sworn in, the saloons were searched, and men were sent through the crowds to look for pocket peddlers, but none were found. The guards on the line road reported all quiet in their direction, and the drunks, when questioned where they got their booze, refused to tell.

It was a nine-days' wonder, but at last it leaked out. Some farmers near the line were preparing to lay an aqueduct. They had piled up several large rolls of half-inch lead pipe. The conspirators had taken this, and with the aid of a plumber had laid it in the grain and grass from the line saloon to the dance floor and booth near the racecourse. The pipe came out under the counter in the booth and served both as a conductor and speaking tube. The night before a jigger load of empty bottles had been smuggled into the alders, and inside of twenty-four hours a thousand of them had been distributed among the 5,000 people at the celebration, filled with liquor, besides all that was sold by the glass.

Nine, or even ten, hours of sleep may be advantageously taken.

Use of tobacco is best avoided. Smoking certainly impairs the nervous system, as steeple jacks and telephone "linemen" testify.

Persons of very nervous temperament should cultivate the habit of working slowly, eating slowly, talking slowly, thinking slowly—in short, living slowly. Nervous persons let the fire of their vitality burn too quickly, which is the frequent cause of nervous break-down. Care should be taken that there are regular hours for meals, exercise and sleep.

EGGS FOR CHILDREN.

An Austrian physician has called attention to the value of uncooked eggs as food for growing children. Of all the substances found in the animal organism, albumen seems to be the one most directly concerned with the phenomena of growth and development. Its value as a food is correspondingly great, and is not sufficiently appreciated. In the artificial feeding of children this should be borne in mind. The white of the raw egg is the most available form in which we can find albumen, and it should be used in the preparation of most of the foods for children. After the usual nursing period it is well to add raw eggs to the milk regularly taken by the child. Free albumen is one of the most easily-digested substances, and is rapidly made use of by the muscle cells. It is a valuable food for adults as well as for infants, and should be freely given in all debilitated conditions, whether from disease, exhaustion, or old age.

FOR OBSTINATE COUGHS.

A better remedy than any you can buy, which has proved efficacious in a very obstinate cough following the grippe, is made in this way: Dissolve in alcohol as much pure spruce gum as it will cut, and add half as much glycerine as alcohol. A few drops of this on a cube of sugar will loosen the cough as if by magic, and the treatment followed up several times a day will relieve the soreness of the air passages, eventually healing them, and so curing the cough.

STAMP WORTH \$7,250.

Lay for Years Unappreciated in a Private Collection.

The greatest international philatelic exhibition ever held was opened the other day in the hall of the Royal Horticultural Society, Vincent Square, Westminster, London.

The stamps shown are valued at over \$2,500,000, and have been insured for \$1,000,000.

The Prince of Wales, who was present in the early part of the first day, has lent many interesting stamps to the exhibition, among them the famous blue "Mauritius," the most valuable single stamp in the exhibition. This stamp has a romantic history. For years it lay unnoticed in a collection made by a Hampstead gentleman in his school days.

One day he happened to show his collection to a visitor, who told him the "Mauritius" was valuable, and advised him to sell it.

The first offer was \$25, but the lucky owner held on to his treasure, and eventually entrusted it to Messrs. Puttick and Simpson, from whom it was bought two years ago by the Prince of Wales for \$7,250.

The Prince also exhibits his famous Hong Kong and Trinidad specimens.

Henry J. Crocker's exhibits, including his celebrated Hawaiians, are worth \$15,000. He was persuaded against his will to send them to England, one week before the earthquake occurred at San Francisco. Had he not done so, his celebrated Hawaiians would in all probability have been destroyed.

Young Prince Edward has a miscellaneous collection in the juvenile section.

Buzzards and vultures can scent their food at a distance of forty miles.

WORLD'S BIGGEST CROWD

ASSEMBLED EVERY 12 YEARS AT
ALLAHABAD, INDIA.

The Great Religious Festival is Attended
by Thousands of Hindu
Fanatics.

The greatest crowd that ever collects is that one which comes together once every twelve years at the festival of Kumbh Mela, at Allahabad, India. It is a religious affair, this bathing festival, and it is estimated, says a correspondent, that not less than a million Hindus form the crowd that comes from all over India to bathe at the juncture of three rivers—the Ganges, the Juma and the Sarawati. Do not be disappointed if you are not able to locate the last named stream on your map of India. Only a Hindu fanatic can see this river joining with the other two. It exists only in the figments of superheated religious imagination.

It is proper to take a dip in the Ganges at all times, for the river is sacred day in and day out; but every twelve years one's sins are to be washed away by a plunge into the water where the rivers join; and the crowd that undoubtedly holds the world's record for size.

It doubtless also holds the record for picturesqueness, noises, fanaticism (of a religious character and types).

On every side are to be seen religious fakirs smeared with ashes, others doing penance for their sins on beds of sharpened spikes, while still others torture themselves in the numerous ways characteristic of

THE HINDU FANATIC.

Turbaned caterers to the wants of the inner man are plentifully sprinkled about, bargains are driven at the edge of the sacred waters, and the noises of traffic mingle with the groans of penitents the shouts of bands marching to the bathing, the shuffle of hundreds of thousands of moving bare and sandal covered feet. There are thousands of sightseers, of course, many being travelers attracted to the spot through desire to get a view of a million people, which is possible from the roofs of buildings not very far distant.

Northern India's real crowds collect on the festival days. Then, in the words of an English officer who has grown weary trying to convey some idea of the size of these crowds, "they are monumentally enormous." The thousands of every day become tens of thousands, side streets as well as the principal thoroughfares are jammed, and to an Occidental it would seem that all the swarthy Caucasians of the universe have been brought together in one spot.

One of the greatest crowds of modern times assembled on the Hodynky Plain, Moscow, on May 30, 1896, to participate in the popular fete incident to the present Czar's coronation. It numbered half a million, and when it was dispersed by soldiers a few hours after it had collected it left dead behind variously estimated

FROM 1,100 TO 2,500,

and seriously wounded to the number of 1,200.

All the night prior to the fete day the horde of people, mostly peasants from Moscow and the provinces, streamed to the vast plain on which Napoleon had massed his army before marching into Moscow. By 6 o'clock in the morning they were packed about the 50 booths from which free food, drink and souvenir mugs were to be distributed to one and all. Barriers had been erected in front of each booth to prevent undue crowding.

There are various explanations as to why the fete was turned into a day of mourning. One is that the crowd was greater than anticipated, the crush in the rear pinioned those in the van against the barriers, which finally gave way, and the people, finding themselves free, swept forward in a great wave, trampling under foot all who were not strong enough to keep their feet.

This was the first story. Later it was

Fashion Notes.

FASHIONS FOR LITTLE FOLKS.

Frocks for young folk are at the height of their daintiness just now, and from the frilly net or mull gown for the graduates down to the babies' layettes complete in snowy details colored only by pink or blue ribbons, all the frocks are made of white materials.

Much liking is evidenced for the square necked style in the graduating dress, the materials of which may be of any of the white nets, organdies, nulls and India linens or very sheer white India or China silks. Pretty elbow length sleeves, frilly with lace and trimmed with old-fashioned spider web puffs made from bias folds of the materials, thread drawn into sharp angles, are seen upon the majority of these dresses. Color is rarely introduced even in the ribbon bows.

The slips over which these frocks are worn should in every case be made of soft white lawn, as a silken material is too grown up in appearance. Narrow flouncings are edged with Valenciennes lace, but never ribbon run, the ribbon adornment being confined to the knots used for the frock decoration, or used upon the ribbon girdle, made this season in very elaborate designs and accompanying almost all frocks.

The newer girdles are made of white surah silk, of a fine quality shirred in pretty shapes upon a well featherboarded foundation, but having long sash ends that are fringed and knotted to a depth of about fourteen inches. Plain white satin or silk ribbons are never out of fashion and vie with the new designs of satin striped silk ribbons for popularity.

The shopkeepers' mightiest and prettiest efforts, however, are exerted for the benefit of the babies—and this means all of the children from the newest to the four-year-olds.

The reign of the extremely long dress for the first named is over, for now-a-days these mites are put into short dresses almost before they have strength enough to lift their little heads.

Following the fashionable vogue of their elders' frocks, the children's and babies' dresses are variously plainly hemmed or tucked or made of solid embroideries or flouncings. The hand embroidered article, about four yards in length, sent to us from France, is very beautiful and very expensive, but shops are showing quantities of yards of machine embroidered lawns and batistes that are nearly as effective, twice as practical, and have the advantage of being much less expensive. English eyelet work enters largely into the designs of these embroideries, and when modeled into lace yoked frocks these need no additional adornment, save the usual big bowed ribbon sash or butterfly looped shoulder knots.

These flouncings enter into the composition of almost every article of the juvenile wardrobe. Numerous little coats made of the finer qualities are simply trimmed with Mechlin or Valenciennes lace ruffles edging the embroidered hem, and with their ribbon ties, either white or colored, having narrow lace frills edging them and tasseled with flower dotted balls of lace.

Other coats showing embroidered linen covered buttons for fastenings have the embroideries of the coat picked out in colors done either with wash silks or embroidery floss, that the little garments may not suffer from their laundry experiences.

The hats of embroidery are better shaped than they were last season and are embroidered like the coats, and trimmed with knots of ribbon to match the colored embroideries. Others are fluffy, with many lace edged flouncings, uplifted by clusters of button roses or other small flowers and with the wired frames upon which they are mounted, bent into shapes that will best become the small people for whom they are intended.

Newer kinds of hats are made of delicately tinted straw, scoop shaped and with double brims separated by puffs of chiffon and ribbon contrasting daintily with the straw. A tan straw shows cream, chiffon and picot edged liberty satin ribbon trimming it and

CURE OF WHITE PLAGUE

DIET CHANGES AND ADDITIONS THE
REMEDY.

Successful Results Obtained While the
Patient Continues at
Work.

It was estimated by Dr. L. F. Flick, during the recent convention of the United States Association of Tuberculosis that the financial loss to the public by consumption is \$50,000,000 annually. Dr. Flick is well known as a specialist in the pathology and treatment of tuberculosis, and has written much on the subject. Other physicians in attendance were severe in their denunciation of various patent medicines advertised as cures for consumption. It was said that some of the "cures" were comparatively harmless, being mostly a mixture of inert drugs that had no effect one way or the other, while others were made up of cocaine, opium, hashish and cheap whiskey, the latter of which was declared to be an active poison in any case, but especially so in the case of a consumptive patient.

Advocates of the home-treatment method of cure says that this loss of life and waste of money are to a great extent needless; that by pursuing the latest methods of treatment it is possible to restore a consumptive patient to health while he still lives at home and continues at work.

NEED MORE NUTRITION.

Consumption is regarded as one of the many effects of mal-nutrition; and the means adopted to overcome it is scientific nutrition. In roughest outline, the problem was to build up the body faster than the ravages of the disease could break it down, and the perfection of the diet which will do this has been the object of experiments to which the last seven years and more have been devoted.

The Post-Graduate School, New York, offers treatment as follows:

The dispensary at the Post-Graduate is open early in the morning and late in the evening, and every member of the "class" reports there before and after his work.

FAT TREATMENT.

Consumption is regarded not only as one result of mal-nutrition, but more particularly as the result of a deficient absorption of fat. The "class" take a dose of fat twice a day. It is for this purpose, and incidentally, in order that the physicians and nurses may keep track of their progress, that the patients are made to come to the dispensary in the morning and evening, where they drink a cupful of an emulsion of fat. Doses of fat are by no means all the diet which is relied on to offset the waste of disease and hard manual work. Fats supply only the heat or energy which the body demands. Proteids—to be found in all lean meats; and in cheese, eggs, milk and vegetables—furnish both energy and tissue material, and, as the tendency of the body is first to assimilate heat or energy for the performance of its functions, it will draw the necessary amount from the proteids if it has not a sufficient supply of fats, with the result that tissue-building is neglected for want of material.

EARN THEIR LIVING.

The great majority of the class in pulmonary tuberculosis earn their living without too much strain. Of the last five cures reported by the committee in inspection, one was a tailor, earning \$12 a week, one a clerk earning \$20; one a barber, \$18; one a salesman, \$8.50 and the fifth an elevated railroad guard making about \$14 a week. From two to nineteen months was the time required in each case, and the gain in weight was from 19% to 30% pounds. More striking gains than these are not infrequent. In one case a salesman who began the treatment weighing 107 pounds,

YOUNG FOLKS

A STRANGE DISAPPEARANCE.

"If we are going to take care of Ruth we must take her to some safe place," said Dorothy. "You know she always gets in something she ought not to."

"We might take her down in the field, she can't run away because the fence is too high for her to climb, and there if nothing she can fall into," said practical Sue.

"I want to go in the field," said Ruth with a wide smile. Ruth was generally was happy, even though she failed to keep other people so.

Mother had left the two girls to keep house while she went to the city, and they felt the importance of the situation, and were determined that Ruth should be given back to mother as night as clean—or very nearly so—as when she left. This was a great deal to accomplish where baby sister was concerned, for she had a strange way of finding forbidden things.

It was a glorious day in early spring, and in the field they found it almost as warm as summer.

"We will have a doll-house in the trunk of this tree," said the girls, "and Ruth can play around anywhere."

"I want doll-house. I don't want to play round," protested Ruth.

"Well, let her play," said good-natured Sue. "Here Ruth, you run down to that flat rock and pretend you are getting some water. We will play getting supper."

Ruth toddled away. She knew what "pretend" meant, and soon she came back, holding an imaginary pail in her hands.

"Here's water," she said.

"Now run over to the corner of the fence and bring us some potatoes." Again Ruth toddled across the field, and the girls took advantage of the time to do much planning. Several times they sent the little messenger away, but after a time they became quite engrossed in the affairs of home-making. Suddenly they realized that Ruth had not returned from one of her errands.

"My, where can she be? And right in this little field with this high fence."

"She couldn't have gone up in the sky and there isn't any hole in the fence."

The girls were then puzzled. It was uncanny. It was better though Sue, if they had been in some real danger and could help her out of it. But the thought that she had disappeared without apparent cause made them tremble with fear. Sue even wondered if an eagle had swooped down and flown away with her. They began walking round the field and examining the wall to see if there were any place to crawl through. As they came to the lower side of the field they heard a faint cry. It was surely Ruth's voice, but where was she? Next they heard a little thumping. "It sounds right near," said Sue.

"In that log," began Dorothy, and no sooner was it said than both girls were down on their knees by the log, peering into the hollow end. It was a tree trunk, about four feet long, that had lain in the field ever since they could remember, and as the inside had rotted the boys had dug it out so they could crawl through and come out at the other end. Ruth had probably seen this done, but her chubby sides would not permit her passage through. She was firmly hung midway. She was in no danger of stifling, because they could see her little red face from the other end. She was crying as loudly as she could, but her lungs were so crammed she could not make much noise. The girls each took a foot, and pulled with all their strength. They heard the little apron rip and tear, but by degrees they managed to get first the limbs, then the body, and at last, with a final struggle and with much kicking on Ruth's part, she was drawn outside, and lay on the grass before them, tear-stained and panting.

greater than anticipated, the crush in the rear pinioned those in the van against the barriers, which finally gave way, and the people, finding themselves free, swept forward in a great wave, trampling under foot all who were not strong enough to keep their feet.

This was the first story. Later it was said that there had been much stealing of the funds set aside by the Czar for gifts to the populace, and with the idea of covering their guilt the officials in charge of the food distribution instructed the 1,000 attendants to throw gifts at the crowd. Then, when complaints were received that the packages did not go around, the reply would be that every effort was made to serve the crowd, but it was much larger than any one had planned for.

It is a fact that packages of food and mugs were thrown at the people by men in the booths, but this may have been done in the hope that under such a bombardment the fearless press would cease. However, it served only to

INCREASE THE HORROR

those in the rear leaping forward all the more eagerly to get their share of the food flying about.

There was a hollow in the ground at the point of the greatest crush, and this proved a veritable death trap for scores of moujiks. So furious was the rush of feet that in places the plain looked as if it had been freshly turned with ploughs. Hundreds of the dead were never identified. The Czar defrayed the funeral expenses of the victims, and to each family that lost a member a substantial sum of money was paid by his direction.

In the days before the French made a colony of Madagascar the capital of that island was the point of assemblage for a great crowd whenever the grand Kahary was held.

The last ruler to issue her commands to and receive the homage of the chiefs at this ceremonial was Queen Ranavalona III. Swarming around the dais on which she sat with her chief councillors, and the secondary platform holding the chiefs was the great crowd filling the spacious sacred enclosure, a half mile distant from the royal palace. To swell the crowd on these occasions thousands of natives travelled from all parts of the island, and the capital turned out en masse.

STOVES IN JAPAN.

Very Creditable Stoves and Grates are Made There.

The fuel in Japan is charcoal, wood, coal, coke and kerosene oil. The Japanese cooking apparatus is of two kinds—one of the "shichirin," a small portable construction of metal or earthenware, costing from 25 cents to \$1.25, and heated by means of charcoal; the other the "kamado," a kind of stationary furnace, built of brick and mortar, the price varying from \$1.25 to \$10, and burning wood as fuel. The houses are usually heated by charcoal braziers, costing from 50 cents to \$15.

Foreigners there use cooking stoves of which some are imported from America, England and France, but the greater number are of Japanese make, while their residences and offices are heated by grates and stoves, most of which are of Japanese manufacture, though those houses built by foreigners are usually fitted out with American or English grates. Only a few furnaces and steam heating plants are in use. Very creditable stoves and grates are made there, and though somewhat inferior in quality and finish they are largely taking the place of the cheap prices at which they were sold. The prices of Japanese manufactured stoves and grates show a great variation, the approximate figures being—Office stoves, from \$2.50 to \$48; cooking stoves, from \$7.50 to \$98; oil stoves, from \$3.50 to \$29.50, and grates, from \$3.50 to \$40.

PROOF OF ENTERTAINMENT.

Mistress: "You can't entertain your company in the parlor."

Bridget: "O! can't? Why, mum, didn't yez hear him laughin' fit to shail?"

people for whom they are intended.

Newer kinds of hats are made of delicately tinted satin straw, scoop shaped and with double brims separated by puffs of chiffon and ribbon contrasting daintily with the straw. A tan straw shows cream, chiffon and picot edged liberty satin ribbon trimming it, and further ornamented by yellow centered roses placed within a chiffon chou. Long white ribbon streamers tie under the chin.

Another tan straw is charmingly pretty with trimmings of rose pink chiffon, while a pink straw has golden brown maline and pink flowers to form the desired color contrasting trimming. This last hat was designed for an older child and was made to harmonize with a golden brown coat of tussah silk made in simple box coat style.

For the older children sailor suit styles are vastly favored, the later models showing double-breasted blouses. Duck, linen and piques are very popular for these suits, these fabrics having superior serviceable qualities and being very sheer, but inexpensive crossbarred madras and lawns are also favorites.

Ginghams in plaids of shades of one color are new in design, and are shown in finer weaves and colorings. They are used very effectively for dressy little frocks, and, though seemingly such lowly material, are surprisingly costly in the small children's furnishing shops.

A pink toned plaid made with a square neck to be worn with or without the always pretty little gumps had short puffed sleeves gathered into a pink linen embroidered white pique band. Pippings of the pique edged the neck opening and edges of wide bias band of the gingham placed just above the wide skirt hem. Gray and pink was the color combination of another little gingham frock made with pointed neck opening edged with white and fashioned with a new style white embroidered bertha, fastened to the dress with six little pearl buttons, three upon each side.

A little frock of plain blue chambray was severely practical but quaintly effective made in one piece with a loose blouse gathered to the plaited skirt, both opening in front upon the left side and fastening with a prim little row of pearl buttons. A wide, stiffly starched Eton collar and turnback cuffs of white linen completed the costume. A black grenadine silk tie knotted sailor fashion at the neck completed this little costume.

VETERANS OF THE CRIMEA.

Woman in the Ranks to be Inspected by the King.

Surviving veterans of the Crimea and Indian Mutiny campaigns who live in Nottinghamshire and Derbyshire will be inspected by the King on the occasion of his visit to the Royal Agricultural Society's show at Derby on June 28th. There are 104 survivors in the two counties, 88 of whom live at Nottingham.

One woman is to take part in the inspection, Mrs. Milne, the widow of a troop sergeant-major of the Eighth Hussars. When the war broke out and the first troops were despatched from England Mrs. Milne insisted on accompanying her husband.

She was on the march through Bulgaria, and witnessed the siege and fall of Sebastopol. She was present when Miss Florence Nightingale landed at Scutari.

Pte. William Dodd is the oldest of the veterans who will parade before the King. He is 86. The youngest is 70. Sergt.-Major Morley, 17th Lancers, and Trooper Holand, 11th Hussars, took part in the famous charge of the Light Brigade at Balaklava. Sergt. William Smedley is the last survivor of the 22nd Regiment of Foot, who fought in the defense of Lucknow.

Trooper William Thompson participated in the remarkable retreat of British troops from Chilianwallah during the Sikh War. Pte. Thomas Whiteman possesses the rare bronze star of Gwalior, the memento of the one day's war on Dec. 26, 1843, when 12,000 British troops defeated 31,000 of the enemy so severely that the natives abandoned their cause.

the fifth an elevated railroad guard making about \$14 a week. From two to nineteen months was the time required in each case, and the gain in weight was from 19½ to 30½ pounds. More striking gains than these are not infrequent. In one case a salesman who began the treatment weighing 107 pounds, increased in twenty-one months to 163½ pounds—a gain of more than 50 per cent.

Under any treatment, relapses are expected, but instead of sinking lower and lower after each one, it has been demonstrated that with the system of dieting outlined the patient rises steadily in strength, and each relapse is less severe than the previous one.

WHEN RELAPSES OCCUR.

When a member of the post-graduate class experiences one of these relapses, or, where possible, when he first begins the treatment, he is put to bed in the dispensary annex and kept at rest, usually for eight weeks, but never for a longer period. During this time, bread, butter, milk and the emulsion of fats, are the only food administered, and on this diet the patient is expected to gain about two pounds a week. Frequently, however, the gains are much greater. An elaborate system of records enables the physicians to ascertain with scientific accuracy the exact consequence of the treatment. At the end of the eighth week the important question of the diet for the intervals between the exacerbations must be settled, and, as has already been pointed out, meats and eggs are now excluded whenever possible. All stimulants such as tea, coffee and alcohol, are forbidden, and smoking is discouraged, although it is not always practicable to forbid it absolutely.

It is on this principle of supplying to the body in great quantities proteids and proteid-sparers that the cures of pulmonary tuberculosis are based. For the rest, as much fresh air as circumstances permit is insisted on, and the usual precautions to prevent contagion are rigidly enforced.

KANGAROO HUNT IN ENGLAND.

Truant Animals Escaped From Collector Defy Recapture.

The unusual event of a kangaroo hunt has occurred near Crawley, Sussex, England.

Sir Edmund Giles Loder, Bart., of Leonardse Park, Horsham, has a private zoological collection, said to be the second best in the country. Some of the kangaroos a short time ago escaped from their enclosure, and, notwithstanding the efforts of the estate workmen to recapture them, got right away.

The animals were seen a few days subsequently in St. Leonard's Forest, and later were observed in Tilgate Forest, Crawley, several miles from their place of confinement. The farmers in the neighborhood have been somewhat alarmed at the appearance of the kangaroos, it being known that the animals in their native haunts are very destructive to grass and crops.

During the last few days kangaroo hunts have been frequent in the district, but so far no capture has been made.

Friday a young kangaroo was found dead in the forest, having apparently succumbed to the cold, and the farmers who regard the kangaroos as unwelcome additions to the already numerous farm pests, would rejoice to learn that the remainder had either been captured or met with a similar fate.

THE FLIGHT OF SEEDS.

Most persons probably think that winged seeds from trees travel to great distances on the wind. But the studies of Doctor Ridley of the Botanic Gardens at Singapore indicate that winged seeds have a far narrower range of flight than do "powder seeds and plumed seeds. The greatest distance travelled by the winged fruit of a forest tree, observed by Doctor Ridley, was 100 yards. Under the most favorable circumstances he calculates, it would take this plant 100 years to spread 300 yards, and 1,500,000 years to spread from the Malay Peninsula to the Philippines, if a land connection existed.

gins each took a root, and pined with all their strength. They heard the little apron rip and tear, but by degrees they managed to get first the limbs, then the body, and at last, with a final struggle and with much kicking on Ruth's part, she was drawn outside, and lay on the grass before them, tear-stained and panting.

The girls now saw the funny side of the situation, and began to laugh so hard that they had to sit down. Sue fell to hugging her sister.

"You poor dear!" she said, "I don't mind if you are all soiled and rumpled—you are safe!"

"Let's tie a strong string to her and tie her to us," said Dorothy. This they did, and although she did not wear the harness all day, little Ruth was safely delivered to mother some hours later.

FORTUNES IN BIRDS' NESTS.

Four Specimens of the Great Auk Eggs Worth a Small Fortune.

The enormous value attaching to the eggs of birds which have become extinct has been recalled by the accident that has befallen the specimen of the great auk, which constitutes one of the treasures of the Scarborough (England) Museum. Kept securely guarded in the safe, it was recently placed on public exhibition. By some means or other it has become cracked, and its value has been depreciated by more than £60. These eggs, which were as plentiful as the ordinary chickens' eggs in the early part of the last century, are now worth small fortunes. The highest price realized for a specimen was £315—paid by an enthusiastic collector in North London, who now boasts four of these eggs, representing a total value of £1,415.

There is one now carefully preserved under a glass case in the National Museum at Washington, which the American authorities value at no less than £2,000. When first brought into the market this specimen was sold in 1851 for £22.

The stories associated with the disposal of some of these specimens are highly romantic. In 1879 a Scotchman picked up two eggs at an Edinburgh sale for 16s. each. A little later he parted with his bargains for no less than £480. Another specimen purchased for £40 realized subsequently £160 from an American collector. There are only about eighty of these eggs in existence, of which the British Museum possesses twelve, representing a value not far short of £5,000.

Valuable though the egg of the great auk is, it cannot compare with that of the aepyornis, or moa, which thrived in Madagascar some two hundred years ago. The egg is about twelve inches in length, and the number known to be in existence can be counted upon the fingers. When the first specimen was brought to Europe, in 1851, it aroused the greatest excitement. There is one specimen preserved in the British Museum which was obtained in quite a romantic manner. It was picked up in 1897 floating in a bay off Madagascar. Its value is incalculable, since it constitutes one of the most extraordinary relics of its type. It is impossible to estimate its marketable price, for the simple reason that an egg of this bird has not been put up at auction within recent years.

A NAUTICAL DESCRIPTION.

A sailor who was looking for work, called at a certain farm to see if the farmer could find him a job.

Farmer: "Been working anywhere since you left your ship?"

Sailor: "Yes."

Farmer: "What sort of work?"

Sailor: "Well, I dunno exactly. It was on some sort of a machine. They put all the wheat down her main hatch an' the straw came right out of her bows, an' there was two bags hooked on to her stern to catch the other stuff."

Hostess: "Have you got as much as you would like, Johnny?" Johnny (eying the good things on the table): "Well, I haven't got as much as I would like, but I've got as much as I can hold."

COLONIALS IN THE HOUSE ALTER BLOOD CURRENTS WAS BUILT BY ONE HAND NO PILOT TO MEET THEM

EQUALLY DIVIDED IN POLITICS BETWEEN THE PARTIES.

Colonial Representation in English Commons Stronger Than Ever Before.

For the past two hundred years the colonial factor, in greater or less strength, has been present in every British Parliament, says a London letter. To understand how brilliant it has sometimes been, one has merely to recall the careers of Lord Abinger and Lord Lyndhurst, Ellice and Roebuck, Childers and Lowe.

But never has it been so numerically strong as it has been since 1900, and, but for the tide which has engulfed the Unionist party, it would be stronger still now. For of the colonial candidates in the field at the late general election the majority were tariff reformers.

OUT OF PROPORTION.

The number of members in Parliament from overseas has, however, never been in proportion to the strength of the colonies. That is to say, it has not increased with their growth. In 1857 there were six colonial members of the House of Commons, and there were six in 1887. In 1877 and in 1897 there were eight.

With the great events of the past ten years, and growing international pressure, it has received enormous impetus. That is why colonial representation in the House of Commons was so large in the last Parliament, and why there were so many new candidates in the field.

IN LAST PARLIAMENT.

Consider the former first. In all, there were sixteen colonials at Westminster when Mr. Balfour resigned. Three retired. Sir William Dunn, Gen. Laurie, and Mr. G. M. Brown, a son of one of the fathers of the Canadian Confederation, and of the thirteen who stood again ten were returned.

As might be expected, the three who went under in the general wreck were Unionists. One was Mr. Bonar Law, late Under-Secretary for the Board of Trade, and the ablest debater on fiscal policy after M. Chamberlain.

The others were Mr. Louis Sinclair and Mr. John Stroyan. Of the 22 new candidates for Parliament 13 were tariff reformers, of whom only one was returned. The other four elected were on the other side. In spite, therefore, of the fact that the list of colonial candidates at the recent election was a record one, colonial representation in the House is less, not greater, than it was before the late Government went to the country. Instead of the sixteen colonials in the last Parliament, there are fifteen in the present one.

CANADA MOST IMPORTANT.

It is often assumed that colonials can belong only to one side. As a matter of fact, they are usually fairly divided between the parties. Before the general election Mr. Balfour had six colonial supporters, Sir Henry Campbell-Bannerman seven, and Mr. Redmond two. Among the new candidates there was a majority of Unionists, but, as it melted away in the general rout, there are now only four colonial members who are Unionists—Sir Gilbert Parker, Mr. Henricker Heaton, Dr. Rutherford Harris, and Mr. Arthur Fell; two who are Nationalists—the Hon. E. Blake and Mr. C. R. Devlin; nine Liberals—Mr. C. Wason, Mr. A. Baker, Mr. W. A. C. McArthur, Mr. Hamar Greenwood, Mr. P. Molteno, Mr. H. Foster-Boulton, Mr. A. C. Beck, Mr. H. T. Eve, and Mr. C. D. Rose, the popular member for Newmarket.

NO LITTLE ENGLANDERS.

But whatever their political opinions may be, they are never little Englishers. Hence, wherever they sit in the

CHICAGO SURGEON'S IMPORTANT DISCOVERY.

The Experimenters Hope to Accomplish Some Wonderful Results.

As the result of experiments which have been conducted for nearly a year by Dr. Alexis Carrel and Dr. C. C. Guthrie, in the Hall Physiological Laboratory at the University of Chicago, discoveries have been made that promise to revolutionize surgery.

While all the experiments have been performed on dogs, the object was to ascertain methods of surgery that could be used on human beings to transform veins into arteries, transplant organs and even to substitute the arteries and veins of an animal for the diseased arteries and veins of a man.

At the present time Drs. Carrel and Guthrie are watching half a dozen dogs that are apparently thriving with their veins and arteries transposed in various ways. Among the facts discovered by the surgeons are these:—

METHOD OF OPERATION.

The transplantation of veins on arteries produces, from a functional point of view, the transformation of veins into arteries.

Transplanted veins adapt themselves to the new functions imposed.

The new arteries transmit the blood indefinitely. After ten months the circulation through the arteries is apparently as active as on the day of the operation.

The ascertained facts are insignificant compared with what the experimenters hope to accomplish by applying their method to human beings. In a scientific treatise they have indulged in speculation to only a moderate extent, but their hypotheses are decidedly startling to the lay mind.

They hope by the transplantation of a vein on another vein to produce a deviation of the blood from one part of the venous system to another. The significance of such deviation is that healthy red blood could be introduced into areas where the blood has become stagnant or unhealthy. They hope to be able by this deviation to cure diseases of the liver, kidneys, and even of the brain. Softening of the brain is now incurable, but Drs. Carrel and Guthrie expect to see the time when by sending red blood surging through the brain they will be able to revivify the brain cells and restore the patient to a normal mental condition.

RESULTS EXPECTED.

If the discoveries are carried to their logical conclusions various affections of the heart now considered incurable will be quickly remedied. If your heart is not in the right place it will be transplanted. If your kidney or liver is not hitched to the proper kind of machinery your veins and arteries will be dissected and grafted together in odd ways that will give new, healthy life to the diseased organ.

More wonderful still, Drs. Carrel and Guthrie, it is declared, have actually succeeded in reversing the circulation of the blood. The results which they expect to obtain from the reversal of the blood currents have long been sought by the medical world.

Reversal of the circulation in a man, it is said, will cure gangrene, which has been the chief obstacle confronting surgeons in the healing of internal wounds.

Where ulceration of the lining of the heart has set in reversal of the circulation will soon restore the tissues to a healthy condition by an increase in the flow of blood. The same result, it is thought, can be obtained in the case of any diseased gland.

The experiments of the two surgeons have been confined to the transplantation of veins taken from the operated

REMARKABLE FEAT BY ONE-ARMED POSTMAN.

Planned and Erected a House in His Spare Time — Phenomenal Energy.

Snodland, a quiet village in Kent, England, possesses a wonder in the shape of a six-roomed cottage, planned, constructed, and completed by a one-armed man.

Mr. W. G. Collins, the amateur builder, has seen thirty-nine years' service in the post-office; he travels from Rochester at five in the morning to Snodland, about eight miles away, delivers his mails by half-past nine o'clock, and has the rest of the day free until 5.30 p.m., when he returns to Strood. In his leisure moments he has built the house.

The history of the undertaking is remarkable. When quite a boy Collins had his right hand shot away by a gun, but he entered the post-office, and has been regarded as a valuable servant. The time came when he wanted a house built for himself at Strood. It was done, but not to his liking. He set to work to make a better one.

He got the plans, and then drew his own designs for a house at Snodland. These were passed by the parish council. First of all he laid down a solid foundation of cement, which he got locally, and prepared for the building. In a pony-trap, also of his own construction, he drove over to the cement works each week and purchased enough cement to make bricks for his purpose. He took his time; he has been ten years building "The Cosy," as he calls it.

He, with his one hand, moulded thousands of bricks, which he carried up two at a time, until he completed a strong building, which would take a San Francisco earthquake to overthrow.

FARMS AN ACRE.

It was the wonder of Snodland, this one-armed man building a complete house. The villagers watched the walls go up, and then the roof go on. Finally he got the chimney-pots on and pointed and cemented the front, and the house was ready for occupation.

The while he farmed an acre of land, did his postal duties of twenty odd miles a day, and lived in Rochester!

The house is now let to good tenants. A look through the place was enough to satisfy one as to the care taken in its construction. No builder could have done it more cheaply or better. "Those arches caused me trouble," he said quite simply, as he pointed to a ticklish piece of work. "Oh yes," he continued. "I did most of the carpentering. I put the floors down, and then I did all the painting."

Collins, a robust little man, is just fifty-eight years old, and is proud of his six stripes of service. He built the cart which takes him round with the mails.

THE PALACE OF EL PARDO.

Where Alfonso Took His Bride After the Royal Wedding.

On the left bank of the Manzanares, some twelve miles from Madrid, at the end of a dusty road, made more dusty to-day by rushing motor cars and rumbly furniture vans, lies the Palace of the Pardo, in which the King of Spain's bride is now staying, says the London Tribune. It is little more than a handsome, well situated, chateau, of slight historical or artistic interest. On its site Henry III. of Castile built himself a hunting box, which Charles I. razed in 1543 to make way for a more important building; this, however, was not completed until the reign of Philip II., and indeed bears the later name of the Emperor Charles: "Carolus V. Rom. Imp. Hispano Rex," with his escutcheons, imperial crowns, and eagles. It is a magnificent building, with towers at

STEAMER CITY OF PARA SAILED INTO DESERTED BAY.

More Instances of the Grit of the Citizens of San Francisco — Food That Went to Waste.

The main story of the San Francisco disaster has been pretty thoroughly threshed out by this time, but side features and incidents of the days of terror which throw a new and interesting light on it, viewing in its separate aspects, will crop out now and then probably for years to come. One story—the story of the passengers on the steamship City of Para, as it came into the bay immediately after the earthquake and as they viewed the city from the rails has not been told here in the East. Major A. H. Hutchinson writes about that incident as follows in a letter addressed to a friend:

"A man I talked with the other day had rather a ghastly experience. He was aboard the City of Para, which arrived the morning of the earthquake. All the passengers were counting up the minutes till they could go ashore, and it was sometime before they noticed that the officers of the ship were disturbed over something. No pilot came to meet them, and when they got into the bay there was something peculiar about its appearance. You must know that at that time the wind was driving away from them so that

THEY SAW NO SMOKE,

and the usual landmarks—the Cliff House, Call building, dome of the city hall and Ferry building—were all standing, and from a distance would appear undisturbed.

"As the steamship slowly came up the bay the appearance of the water front was not unusual, but the bay was strangely deserted. Not a ferryboat or a tug was in sight; the quarantine or customs-house boats did not come out, and it was not till they approached the Mission street wharf that they saw the smoke, the wreckage of the wharves and a fireboat at work. Then a launch approached and gave them news of the disaster. It was a situation that a story writer could make good use of, and the gentleman who told me about it paled as he enlarged upon the awful uncertainty they felt over the deserted appearance of the usually lively bay with its myriad boats."

Major Hutchinson notes two striking instances of the grit of the San Franciscans. He went downtown immediately after the quake and noticed the signs over two new stores. One read, "There will be an O so different opening here in a few days." The other read, "There will be something doing here shortly." Concerning his experience in getting out a newspaper under difficulties, the major writes:

"My small press had been shifted about eighteen inches to the west, but was not injured. I went to work and set up a little account of my trip downtown, which appeared in the extra, designing it for my regular use.

THE FOLLOWING MORNING

I planned the extra and, not wanting to use the little stock of paper I had for a regular issue, I printed it on the brown paper which was part of a stock that had been in the office four years.

"Of course, the papers say there is employment for everybody who will work, but it is an absurdity, for how can a man who has been used to office work do much handling bricks? It would need a new pair of hands every hour. Besides that, the relief work has got into a snarl of red tape that makes a man work a week to collect a week's wages. The worst feature of this red tapeism, though, is to see great stores of needed goods lying idle for no apparent reason. Tons of bread have spoiled and gone moldy at a time when it was badly needed. At our nearest station we did not get any bread a

NO LITTLE ENGLANDERS.

But whatever their political opinions may be, they are never Little Englanders. Hence, wherever they sit in the House, they are a source of strength to the Empire.

As might be expected, Canada carries most weight in the present Parliament, as she did in the last. Of the fifteen colonial members in it, seven are her sons. The West Indies have one, and Australasia four. South Africa, the last of the colonies to make herself felt in the mother country, has three, and it is worthy of note that until 1891 she was represented in only one Parliament, from 1866 to 1868, when a member of one of the oldest Dutch families in the Cape Colony, Mr. P. Van der Byl, sat for Bridgewater.

WOMEN WORKERS IN JAPAN.

Employed as Clerks, Bookkeepers and School Teachers.

The remarkable increase during the last few years in the number of women employed in various branches of commercial life in Japan must be regarded as a very significant sign of the times, says the Japan Chronicle. Not content with the occupations which have almost exclusively belonged to females, they have now invaded those fields which have hitherto been considered as belonging to the male sex.

The experiment made in the employment of women as clerks and bookkeepers has been found satisfactory, and we now find girls employed by many of the firms and stores in Tokio and other large cities. The employment of women in these various directions will do much toward emancipating the Japanese women, who have until now been entirely dependent on men for the shaping of their destinies. It is only natural, under such circumstances, that female education should engage serious public attention. The number of girls receiving a school education, it is stated is now more than eight times the number of those at school ten years ago. More remarkable are the figures given by the Tokio Educational Society. Fifteen years ago the percentage of females admitted to the training school for teachers was less than 20, as compared with the men, but to-day the role has been completely reversed, the number of male applicants being now about 15 per cent. of the total. It is said that women, as teachers, are proving themselves superior to men, and that there is consequently more demand for the former than the latter. There is no doubt that the employment of women in the various branches of business activity will steadily increase with the advance of education among them.

SIGNALS FROM THE DEAD.

Proposed Employment of "Death Verifiers" to Prevent Premature Burial.

Mortuaries for the reception of inanimate bodies, where they should be kept under vigilant supervision by competent "death verifiers" for three days or more, are proposed by Miss Lind-Agheby, a Swedish lady, as a preventive of premature burial.

In addition, she proposes the use of the signalling apparatus invented by Karmicki, by which any movement on the part of the buried person is signalled by a small flag above the grave, and by which fresh air is at the same time supplied.

She says that in an experimental cemetery in America every coffin was fitted with an apparatus, which signalled the slightest movement; and six out of 1,200 signalled.

CITY OF BIG FAMILIES.

San Francisco contains the largest families in the world. It boasts of having thirty-nine families each having more than fourteen children, and sixty-five families with more than eight children in each.

thought, can be obtained in the case of any diseased gland.

The experiments of the two surgeons have been confined to the transplantation of veins taken from the operated animal itself. In time however, they hope to transplant veins taken from another animal of the same species and even from an animal of a different species.

ERR IN PERILIZING LIVES.

French Professor Describes Ills Which Cause Unneeded Operations.

A sensational statement was made the other day before the Academy of Medicine by Professor Dieulafoy, who said that many persons merely suffering from muco-membranous or sabulous typhlocolitis are wrongly operated on for appendicitis. Muco-membranous typhlocolitis is characterized by periods of constipation and diarrhoea, the ejections having certain characteristic features. There is pain in the right iliac fossa which resembles that caused by appendicitis.

Dr. Dieulafoy pointed out that it was very rare for a person to suffer from appendicitis and typhlocolitis at the same time, and in any case appendicitis is neither a cure for nor a result of typhlocolitis.

He expressed the opinion that the number of errors of diagnosis and unnecessary operations performed were ever on the increase. It had been demonstrated, he said, that muco-membranous typhlocolitis has nothing to do with the appendix, the ablation of which consequently had no curative effect whatever. It was necessary, therefore, that great care be taken in making the diagnosis, as it was time to put an end to useless surgical operations.

Dr. Dieulafoy said he was as much as ever in favor of the ablation of the appendix in cases of real appendicitis.

Dr. Doyen fully supports the views of Dr. Dieulafoy, and says:—

"I could cite many cases where an operation was decided upon merely because the diagnosis was insufficient. There has been a tendency blindly to decide upon surgical intervention, and operations have even been carried out on patients in the early stages of typhoid fever.

"Quite recently a child was brought to me. I was asked to proceed to an operation for appendicitis. Instead of operating I examined the child and found symptoms described to be simply due to the presence of worms in the intestines. Nevertheless, the parents were so convinced that it was a case of appendicitis that an operation was performed by another surgeon the next day."

ABSINTHE IN CLASSROOM.

Youthful Pupil in Parisian School Victim of Bad Habit.

An amazing discovery has been made in one of the communal schools in Paris. A class master noticed that after ten o'clock every morning one of his pupils, a little boy of seven, seemed to become a prey to fits of delirium. He thumped his neighbors, and when reproved by the master, rolled on the floor, shrieking, and groaning like one possessed.

The child was constantly in the habit of asking leave of absence for a minute or two, and the master had him watched. It was found that he carried a small bottle of absinthe in his pocket and took a nip as often as he could escape from the class room. It has been proved that the child's mother filled the bottle for him every morning.

THE MITTEN FOR HIM.

"Ah!" he sighed soulfully, as he leaned above her, "would I were a glove upon that hand."

"Ridiculous," replied the girl, wearily. "You could never be anything but a muff."

A few men earn more than they get, but the majority get more than they earn.

pietized until the reign of Philip II., and indeed bears the later name of the Emperor Charles; "Carolus V. Rom. Imp. Hispano Rex," with his escutcheons, imperial crowns, and eagles. It is a quadrangular building with towers at the four corners, surrounded by a deep moat over which there is a bridge and a drawbridge.

The walls of many of the rooms are covered with tapestries, of which the most notable are some fine Gobelins after Teniers and some copies of Goya's pictures made in Madrid. But perhaps the most interesting work in the whole building is the best painting that has come down to us of the Admiral Gaspar Becerra, the stories of Medusa, Andromeda, and Perseus on the vault and walls of one of the smaller rooms; but it has been shamefully treated and tinkered. On the right of the staircase is an equestrian portrait of John of Austria, the bastard of Philip II.; it is attributed to Ribera, and bears an imitation of his signature, but it is obviously a forgery or, at the best, a bad copy. Elsewhere there are some fairly good allegorical frescoes by Bayeu and Mariano-Maella, a few paintings by Morales, two nice little Vanloos, a copy of a Velasquez that ought to be burned, and a Rubens in the chromo lithographic manner. In the chapel, which was built in the reign of Philip V., there is a good St. Ferdinand, by Lucas Jordan, over the high altar.

The furniture is fairly good—in the drawing room beautiful classic frames in gold and white, covered with purple damask; the curtains and screens of Talavera silk are unusually fine, and there are some bronzes and candelabra of merit. There is a profusion of china, which, however, amounts to nothing more than a nice little collection of biscuit figures and the inevitable gilded and painted vases of royal parkers.

Besides the palace itself and an attendant building, in which are the stables and staff rooms, a little way to the north is a pretty little building called the Prince's house, built by Charles IV. before he came to the throne.

Owing to the energy of Colonel Ripoll, the chief engineer of the royal household, to the incessant personal attention of Don Alfonso himself, and to the labor of 200 workmen, a great transformation to modernity has been made in the old house.

Princess Ena's apartments are in the west wing. No one may see her bedroom, but the old tapestries have been taken down and replaced in frames over newly painted walls. On the walls of the dressing room is a tapestry of a hunting scene, and the ceiling has paintings illustrative of commerce, industry and agriculture. In the dining room of the suite are three tapestries after Goya's "The Good-for-Nothing," "The Smugglers" and "The Pilgrims," and the dome is decorated with allegorical frescoes of the Spanish provinces.

The little theatre has been refitted, it has flat benches for the 200 people who can squeeze into it, and a royal box at the back facing the stage. Its drop scene is grey and bears the initials of Isabel II., in whose time it was made.

SIMPLE LIFE APOSTLE.

Parades Streets of Paris in White Robe and Crown.

Joseph Salomonson, who calls himself "Meva," is exciting much amusement in Paris, where he parades the streets dressed only in a flowing white robe reaching to the knees, and wearing a circlet on his head.

His hair and beard, of a rich golden color, have never been cut. He carries a long white staff, and wears sandals.

"Meva," who says he is an apostle of the "simple life," has walked all over France in his singular costume. He always sleeps on the ground, whatever the weather may be, and lives entirely on vegetables. He believes that man should eat no animal or mineral product, and will not even use salt with his vegetables.

"Meva," who is fifty-three years of age, declares that he is wonderfully healthy, and attributes it entirely to his mode of life.

of needed goods lying idle for no apparent reason. Tons of bread have spoiled and gone moldy at a time when it was badly needed. At our nearest station we did not get any bread at all for over a week, and then only in the proportion of one loaf to a family of six. Meat is cut up and lies a day or two before it is distributed, and men are going about with their feet tied up in rags while immense stocks of shoes are lying tied up waiting for requisitions to be passed upon. In the way of clothing and tents there is more of a supply on hand than has been distributed and much of the food supply that was absolutely needed was spoiled by rain and exposure. Lots of times canned goods were given out instead of fresh when fresh goods were spoiling in the depots. I do not think any of the main officers are responsible for this, but it is regrettable that some understrapper can so tangle things up in a time of need."

STATESMAN AND MARRIAGE.

Married Men Who have Been Successful in English Politics.

There has been no more interesting news for weeks than the announcement of the engagement of J. Austen Chamberlain, M. P., to the daughter of Col. Dundas, a retired staff officer, says an English paper. The idea that "Mr. Austen" has at last capitulated to Cupid after reaching his thirty-fourth year is fascinating to men and overwhelming to women. He is the most popular and most reticent of all the younger men in public life. In the first place he is exactly like his eminent father. He has the same clear cut, finely chiselled face, the keen eye, the firm, small mouth, the inevitable monocle and the ever present orchid in his coat lapel.

He is the exception to the rule that a great man cannot have a great son, for "Mr. Austen" is exceedingly great in many respects. He has been the best Chancellor of the Exchequer that this country has known for many generations. He was an ideal Postmaster-General, and while he falls short of his father's exceptional ability as a fighting man in debate, he is still so far in front of his contemporaries that he may be called first class. Aside from this, he is modest, sedate, studious, industrious and considerate; and his father simply adores him. It is almost pathetic to watch the elder statesman when the younger is on his feet in the House of Commons.

The old warrior, scarred by many fights with the great men of the Victorian Parliaments, sits up straight, never allowing his eyes to leave the adored object. "I congratulate my right honorable friend the member for Edgbaston," says Mr. Chamberlain, in referring to his son (names are never mentioned in the House except by the Speaker when he wishes a member to know that he is in disgrace), and "Mr. Austen" refers to his parent as "My right honorable friend the member for West Birmingham."

There are people here who believe that a man's usefulness as a politician is impaired by marriage, and that the member for Edgbaston will not be so great a man after the ceremony at the church, but I am inclined to scoff at the idea. There are and have been so many great men in politics whose married life helps it. Mr. Gladstone's wife was responsible for much of his power, for she looked after him, arranged his engagements and generally sponsored him. Lord Beaconsfield, the success of successes, was married; so were Palmerston and Salisbury.

On the other hand the doubters point to the experience of Lord Melbourne, to Charles James Fox, to Mr. Parnell, to Mr. Balfour, as proof of their contention. Parliamentary life, like journalism, certainly takes a man from his home circle more than is usual with men who live a less exciting and exacting life. Men who never reach home until the midnight hour has long since gone, and the gray dawn is turning out the secret lights, cannot expect to lead a carpet slipper life, unless, mayhap, they intend to neglect their duties.

SOMETHING W A MISS

IS THIS WHAT IS CALLED A "SOUND SECULAR EDUCATION?"

A Doctor's Examination of an English Lad in General Everyday Knowledge.

The following incident is true. It took place in my surgery two nights ago, writes a doctor to the Pall Mall Gazette. A patient of mine had sent for her medicine, and a strapping lad of thirteen sat waiting for it. While putting it up I endeavored to interest him with a few questions about himself, which proved a mine of interest to me. This is the dialogue that took place:

"You are a big boy; left school yet?"

"No, doctor."

"Where do you go to school?"

"To — Road Board School, sir."

"What standard are you in?"

"Sixth."

"Good! And what do you learn?"

"Typewriting, shorthand and carpentering."

"Really? I suppose you have done with geography, history, and similar subjects?"

"Oh yes; we've passed all those subjects."

"Finished them, eh? Good; but I hope you haven't forgotten them?"

"Oh, dear no."

"Did you do all your physical geography, too?"

DON'T KNOW, SIR: WHAT'S THAT?"

"Why all about the winds, currents, time and the mathematical geography."

"No, sir. Don't know anything like that."

"Well, what do you remember of your geography? Where's Timbuctoo?"

Here he leered up at me with a grin that plainly said, "You're 'avin' me."

"Don't know? Well—er—where's Cape Horn?"

"Don't know, sir," and another grin.

"Well, now, can you tell me where Cape Colony is?"

"Oh, yes, sir."

"Where?"

"In India, sir."

"Well, er—where's Ceylon?"

"Don't know, sir; never 'eard of it."

"What, not know where the tea comes from?"

Another ignorant leer was the response, so I thought I would come nearer home, and guessing he might be a football enthusiast, inquired

"Well, where's Luton?"

"Don't know, sir."

"Don't you know where Londonderry is?"

"No, sir."

Hopeless, I changed the subject and remarked:

"Well, your geography is certainly beautiful. Now how about your history; is it right there?"

"Oh, yes, sir, passed all that; I'm in the sixth standard."

"So you said before," I replied. "Now tell me who was the father of Queen Victoria?"

I might as well have asked him who was Nebuchadnezzar's father, or to describe the "circle of Willis."

"Never mind; now, when did George III. accede to the throne?"

DON'T KNOW, SIR."

"Great Scott, boy, can you tell me when he died?"

"No, sir."

"Well, who was William the Conqueror?"

"Oh, I know that, sir," he answered, deprecatingly.

"Well, who was he?"

"Why, he was William the Second."

"Oh! Where did he come from?"

"From Spain, sir."

"Nonsense, my boy; he came from France. Was he not William of Normandy?"

"Oh, yes, sir," eagerly.

"Well, where's Normandy, now?"

"In France, sir."

"Good, positively good. By the bye, what is the capital of France?"

With eager response said he:

Sunlight Soap is better than other soaps, but is best when used in the Sunlight way.

To appreciate the simplicity and ease of washing with Sunlight Soap in the Sunlight way you should follow directions.

After rubbing on the soap, roll up each piece, immerse in the water, and go away.

Sunlight Soap

will do its work in thirty to sixty minutes.

Your clothes will be cleaner and whiter than if washed in the old-fashioned way with boiler and hard rubbing.

Equally good with hard or soft water.

Lever Brothers Limited, Toronto

MILLIONS OF PASSENGERS

ENORMOUS TRAVEL ON BRITISH RAILWAYS.

Colossal Figures Which Represent a Year's Travel in the Old Land.

The colossal proportions which railway traffic in the United Kingdom has now assumed are strikingly indicated in a return recently issued by the Board of Trade, giving a preliminary summary of the railway returns for 1905.

There are now, the return shows, no fewer than 22,843 miles of railway line open to traffic. The number of miles travelled by trains reached the following astounding dimensions:—

Passenger trains	24,336,000
Good trains	154,473,000
Mixed trains	1,717,000
Total	40,769,000

A THOUSAND MILLION.

The number of passengers carried amounted to well over a thousand million. The exact figures are as follows:—

Ordinary Passengers.	
1904.	1905.
1st Class	34,930,433 36,077,000
2nd Class	71,294,217 51,981,000
3rd Class	1,092,549,070 1,109,444,000
Total	1,198,773,720 1,197,502,000

Season-ticket Holders.	
1904.	1905.
643,783	663,000

While the number of passengers showed a slight decrease last year, the receipts from passenger traffic were greater by over £300,000 than in 1904, amounting to £48,698,000, compared with £48,387,617 the previous year.

The goods traffic shows a great increase both in the amount carried and the receipts, the actual figures being as follows:—

AMOUNT CARRIED.

	Tons.	Tons.
Minerals	349,551,616	357,989,000
General merchandise	100,285,999	103,173,000
Total	449,837,615	461,162,000

RECEIPTS.

	1904.	1905.
Merchandise	28,314,906	£28,748,000
Live stock	1,413,206	1,389,000
Minerals	25,671,581,851	26,271,000
Total from goods traffic	£55,400,052	£56,408,000

HOW JILTS ARE FURNISHED

DAMAGES AWARDED TO DISCARDED LOVERS.

Male Breach of Promise Actions Are Generally Settled Before They Get to Court.

The unwritten law, that while a woman may seek legal redress for disappointment of matrimonial hopes a man must grin and bear it, is slowly but surely losing force, remarked a solicitor in conversation with the writer.

Whether this is due to the increasing claims for equality on the part of the fair sex I cannot say, but within the past year or two there have been several breach of promise cases in which a man has figured as the plaintiff.

Such actions are usually brought, not to secure compensation for the broken contract, but to recover out-of-pocket expenses, the damages claimed representing the estimated cost of the unfortunate courtship. This not infrequently amounts to a considerable sum. For example, in a case recently heard at Leeds, England, a Mr. Gibbs obtained restitution of £780 in this way. He might very reasonably have claimed something also for disappointed hopes, for the lady he lost was reputed to possess a fortune of \$50,000. The gentleman was clerk to a firm of solicitors, and, as his business brought about his acquaintance with the lady, the law—curiously enough—both began and ended his romance.

A MOST REMARKABLE CASE

was settled at Ottawa last October, after twelve months' litigation. The plaintiff, Mr. Jerome Internosia, an Italian lawyer, sought to recover damages from Mr. Bonelli, whose daughter had broken her engagement to marry him at her father's instigation. The total amount claimed was \$2,323.64, this being the forsaken suitor's estimate of what the courtship had cost him. Judging from the various items in the "bill of damages" the lover regarded the tender passion from a strictly business point of view, and kept a record of his disbursements even down to such details as stamps and car fares.

Most lovers are content to look upon every hour spent with the object of their affections as a gain, but Mr. Internosia—doubtless recognizing that "time is money"—included in his bill an item for 465 hours spent with the faithless lady at the professional charge of \$1.76 per hour. The ceremony of "asking papa" appears to have been somewhat of an ordeal, since no less than \$50 is charged for that alone. Other amusing items were: "Dinner in my garden, \$15; a canoe sail, \$2.12; attending at residence

CAREER OF A BEAUTY

ITALY'S HANDSOMEST WOMAN HAS BEEN ARRESTED.

Undergoing Her Trial for Theft — Says Her Trouble is Due to Revengeful Husband.

At present one-half of Italy is at loggerheads with the other half, hotly discussing the innocence or guilt of a young woman who is undergoing her trial at Como for theft.

"Niny" Bucci, as the young woman is familiarly called, is considered to be the handsomest woman in Italy. Fair, tall, with a mass of golden hair, two large blue eyes set in a face of faultless lines, and a cultured mind, are the chief traits of "Niny's" personality. Her father and mother, Signor and Signora Bucci, both Romans, at one time owned the Union Hotel, facing the Chamber of Deputies, in Rome.

A few years ago her beauty attracted the attention of a young painter, who offered her his hand and heart, but he was repulsed and is now an inmate of the Rome Lunatic Asylum. Later Signor Jacobini, the nephew of a deceased Cardinal Secretary of State of that name, met her at a ball and fell madly in love with her, with the result that they were in due course married.

Signor Jacobini did not belie the time-honored dictum that beauty and capriciousness are inseparable, and after a short period of quiet married life she eloped with a Signor Agostini, who deserted his wife and children.

POLICE ARE PUZZLED.

The runaway couple went to Como where they took lodgings in a large hotel. A few days after their arrival some valuable jewellery disappeared from the room occupied by a lady guest at the hotel. "Niny" took a very active part in the search for the missing jewellery, and insisted on the matter being reported to the police. Shortly afterwards some of Signor Jacobini's jewellery also disappeared and there was a repetition of the same scene.

The police were greatly puzzled, and had Signor Agostini's companion watched, with the result that at Cernobbio her trunks were searched. To the great surprise of everyone, the missing jewellery was found in one of her boxes, and she was at once arrested.

"Niny" declares that she is innocent, and maintains that some unknown hand—a revengeful husband through some agent, perhaps—had placed the lost jewellery in her trunk. A valet travelled with them, and he may turn out to be the villain of the piece.

Great efforts are being made to get the beautiful woman out of her scrap and to assist her in clearing herself of the dishonorable accusation. The cour

France. Was he not William of Normandy?"

"Oh, yes, sir," eagerly.

"Well, where's Normandy, now?"

"In France, sir."

"Good, positively good. By the bye, what is the capital of France?"

With eager response, and gladness on his uncareful for face, he replied: "Why, Normandy, sir."

The medicine was ready, and with a sigh of relief I sent him home. But I learned that there was something amiss, not with the boy, perhaps, so much as with the method of teaching.

And that is what we are paying for.

END-OF-THE-WORLDEERS.

They Predict a Battle With 200,000,000 Demons From Mars.

The annual gatherings of religious societies and crank associations, famous all over the world, are on in full strength. Exeter hall, in the Strand, London, England, has a meeting of some sort morning noon and night.

One of the strangest of the meetings there has been that of the End-of-the-Worlders. The members of this curious league are aged people. Practically all of them had different ideas regarding the end of the world, but the audience applauded each alike. It was generally declared that exclusive signs and wonders will commence in 12 years' time, but nothing serious will happen until 1929. One bushy-whiskered prophet said:

"Socialists will by this time be governing the world and will have adopted as their trade mark the number 666. This will be branded or tattooed on the forehead of all who do not wish to be beheaded and are members of the Socialist Labor party.

"At or about this date the earth will be invaded by 200,000,000 infernal demons, probably from Mars. These demons will begin to kill the population. Finally will come Armageddon, the greatest of battles, in which all the people of the world will fight the demons.

"The result will be a draw, but not until both sides have absolutely exterminated. Then down will come the curtain, for that will be the end of the world."

Another speaker was heroic enough to take some exception to these statements. He said the world would drive out the devil this year but he would come into power again in three years. As regards the big battle with 200,000,000 devils he was sure it wouldn't matter if there were 500,000,000 for the Archangel Michael's bound to win.

Among the signs seriously put forward by some speakers, in connection with the nearness of the end of the world were the San Francisco earthquake, the marriage of the King of Spain, the size of European armaments, the unemployed problems, roaring of oceans, whirlwinds and tornadoes.

Another speaker asked if women would have to be branded with "666" and when the reply was in the affirmative he raised the point that they would refuse the branding, as it would spoil their beauty. The white-whiskered prophet who, fathered the "666" brand said women when the time came would, he felt assured, rather lose their looks than their heads.

AUTHENTICATED GHOST.

Rayham Hall, the family place in Norfolk, England, of the Marquis of Townshend, is the scene, says a writer, of a well-authenticated ghost story. The revenant is Lady Dorothy, who lived in the 18th century. For some reason she was shut up in an upper chamber, lost her senses and died a hopeless lunatic. Ever since those days her disembodied spirit is said to appear before the birth of a Townshend or before the death of a member of the family, and this unquiet wraith was reported to have been seen on the day preceding the demise of the late marquis.

Our idea of a poor housekeeper is a woman who runs the house on business principles.

Total from goods traffic . . . \$255,400,052 \$256,408,000

The authorized capital of all the companies amounted last year to the gigantic sum of £1,396,721,000, and the paid-up capital to £1,282,762,000.

The gross receipts in 1905 amounted to £113,549,000, and the working expenditure to £70,087,000, leaving net receipts for the year of £43,462,000. This is an increase of just over £800,000 in net receipts compared with the previous year.

HOME OF THE HUMAN RACE.

Migrations of the Brute Kingdom Preceded That of Man.

Prof. Wilser, of Heidelberg, Germany, one of the highest authorities of natural history, has just written an interesting article on the original home of the human race. He concludes that not only the larger apes, but also the most ancient hordes of human beings made their way across the European continent. The point at which their ways divided or the centre from which they were distributed can only be looked for in the extreme northern latitude.

Prof. Wilser's opinion coincides with that of Dr. Schlosser that mighty migrations of the brute kingdom preceded that of man. The continuous cooling of the North sharpened the struggle for existence and altered completely the conditions of life, bringing new forms into existence.

It is not true, Prof. Wilser says, that the tropical sun has power to develop the human germ. All progress has come from the North and the new, highly developed races had their origin there.

Prof. Wilser points out that nothing is known of the original home of all those great groups of mammalia which spread themselves with man all over the world. He comes to the conclusion that the home of all mamalia, men included, is to be found in those inaccessible regions to-day buried in eternal ice or covered by the waves of Arctic seas.

A HANGMAN LOST.

Apparently Has Emigrated from Britain to the United States.

Somewhere in the United States is England's public executioner, commonly known as the hangman. If anyone finds him they are respectfully requested to send him back to Herbert Gladstone, Secretary of State for the Home Department. The hangman's name is Alexander Ainsbury Clarence English, and he is believed to have gone to the United States in February last.

English is an old sailor and a member of the naval reserve. Last winter when the job of public executioner became vacant he applied for it, and after a severe test secured the job from a number of other applicants. It is a good paying job if there are plenty of executions, but the Home Secretary has been very merciful of late and the murderers have been reprieved so often that English and his family were on the verge of starvation.

English told his wife he would like to emigrate to the United States. He got a lot of literature and sailing lists about America, and one day in February said farewell to his wife and two children and was gone. He promised to write as soon as he had anything to send or a home to offer them. His wife went back to her parents.

Recently English was sent for by the Government, for a hanging is coming on soon. Then it became public that he had disappeared.

NOTHING BUT SYMPATHY.

"Then you have no sympathy for the deserving poor?" asked the person working for charity.

"Me?" replied the rich and great man. "Why, sir, I have nothing but sympathy for them."

455 hours spent in the rainless day at the professional charge of \$1.76 per hour. The ceremony of "asking papa" appears to have been somewhat of an ordeal, since no less than \$50 is charged for that alone. Other amusing items were: "Dinner in my garden, \$15; a canoe sail, \$2.12; attending at residence and holding Miss B—'s hand (four hours), \$2," and so on. Even the loss— for depreciation, presumably—upon a returned present was not forgotten. After losing his case in the lower court the plaintiff appealed to

THE COURT OF REVIEW.

which reversed the decision and decided that his claim was within his right.

The comparative rarity of male breach of promise actions is due, not to any popular sentiment in the matter, but to the fact that such cases are generally settled by the legal representatives of the parties before they get to the length of a trial. Speaking from my own experience of such compromises, the jilted man's claim is generally both moderate and just.

Take the following case, for instance. A draper's assistant became engaged to his employer's daughter. The business was not in a flourishing condition owing to lack of capital, and the young man, having a small legacy left him, lent the money to the father, it being understood that when the marriage took place he should become a partner. For a time matters progressed smoothly, and the business recovered itself and became profitable. Then, to the assistant's amazement, the girl broke off her engagement, and her father repaid the loan, without interest, and discharged him. In such circumstances one cannot be surprised that the injured man promptly appealed to the law, with the result that the draper, rather than have his ingratitude exposed, handed over a proportion of the profit the victim's money had enabled him to make.

Money spent upon an intended bride may, without doubt, be sometimes regarded as money invested.

HERE IS A CASE IN POINT.

A young gentleman of moderate means fell in love with a girl much below him in social position. Her education being very defective, he undertook to remedy it, and for two years she studied both useful and polite accomplishments at his expense. Apparently the acquisition of learning increased her value in her own eyes as well as in those of her lover, for at the end of that time she heartlessly jilted the man who had done so much for her, and married another who was wealthier. The former, thus robbed of the fruits of his outlay, commenced an action to recover the amount spent on the lady's education. The bill was paid by the husband, who doubtless did not wish his bride's former deficiencies advertised in court.

The above are but a few instances out of many that have come within my knowledge, but they are sufficient to prove that very frequently a discarded suitor has serious excuse for appealing to the law. On the other hand, claims are sometimes made for ridiculous reasons, as witness the case of a man who wished to bring an action solely "to vindicate his position." He argued that the blame of a broken engagement is always laid upon the man, and that his reputation would be seriously damaged. Needless to say, his folly got no farther than his solicitor's office. — London Tit-Bits.

CHRISTIANITY IN POMPEII.

For the first time, it is believed, in history, clear evidence has been found of the influence of Christianity in Pompeii. This is a discovery of high interest for students of archeology. While some excavations were being made on the northwest side of the dead city there was brought to light a terra-cotta vessel bearing the so-called monogram of Christ, surrounded by the crown of thorns. The vessel is attributed to the first century of the Christian era. It was found at a depth of about twelve feet below the surface.

some agent, perhaps—had placed the lost jewellery in her trunk. A valet travelled with them, and he may turn out to be the villain of the piece.

Great efforts are being made to get the beautiful woman out of her scrape and to assist her in clearing herself of the dishonorable accusation. The court at Como will soon give its verdict.

PAT MURPHY'S DOG.

Has Become a National Issue in British Politics.

A common Irish dog of unspecified pedigree has almost distracted a Cabinet Minister, a Government department, an M.P., a Petty Sessions clerk, and a policeman. So important has the obnoxious beast become that he was mentioned in Parliament the other day.

The dog belongs to an Irishman of the name of Patrick Murphy, of Dublin. Murphy applied for a license for it in Irish. The clerk said he could not read it. Murphy left in anger. The police summoned Murphy for keeping an unlicensed dog. The summons was delivered on Good Friday, which was illegal, so a second one was made out. Murphy was fined half a crown. Constable Huggins sauntered in front of Murphy's residence to keep observation on the private life of the dog.

Mr. Sheehan, the member for Mid-Cork, heard of the vicissitudes of Murphy's dog. He put a printed notice on the Parliamentary paper enquiring if the Chief Secretary had also heard of Murphy's dog. He asked him to state the precise position of the clerk of the Petty Sessions who refused a license for Murphy's dog. Mr. Bryce communicated with Dublin Castle. The authorities there enquired in Cork as to the antecedents of Murphy's dog.

Mr. Bryce, Chief Secretary for Ireland, explained the history of the animal in the House the other day. Thus the time of a Cabinet Minister and many Government officials, with some of the nation's money, was wasted because Mr. Murphy applied for a license for his dog in the native tongue.

A MODERN NERO.

Sets Many Buildings Ablaze for Pleasure of Seeing Them Burn.

A man named Kobelt, 32 years of age has been arrested at Marbach, a village near St. Gall, Switzerland, while in the act of setting fire to a large house.

He has confessed to being the author of 18 fires that have taken place in the canton since 1899, but it is estimated that he destroyed at least 60 houses. He was so cunning that he was never suspected. Of late fires became so frequent in the canton that insurance companies doubled their tariffs for the district.

Kobelt explained that after starting a fire he would climb a tree or a hill in the vicinity and watch the building burn with the greatest joy. "Something in side me," said the incendiary, forced me to commit the acts, and the sight of the flames thrilled me with pleasure and excitement. I was not master of myself and could not control the desire to see a flaming mass."

CURIOS KITCHEN.

The imperial kitchen of the Sultan of Turkey is more like a fortress than a place to cook his meals, for it has an armor-plated door and is fitted with locks which can only be opened by one man. As each course is prepared it is placed on a silver dish, which is sealed with red wax by the kelardjhi, the official responsible for his sovereign's food, and then a black velvet cover is placed over the dish to keep it warm. A procession of people follow the meal into the imperial chamber, the seals being broken in the Sultan's presence, and often the kelardjhi is requested to taste some particular dish. The cost of the Sultan's food does not exceed \$5,000 a year, for it is mostly entrees and boiled eggs, but to feed the numerous members of his household and pay all domestic expenses lessens his annual income of \$10,000,000 by \$70,000 a week.

THE BEST FLOUR.

DAFOE'S NONESUCH

DAFOE'S MANITOBA PATENT

By numerous tests by the best Bakers the above mentioned grades have been proven to be the best Flours in the market.

When buying Flour ask for Dafoe's, and patronize your home mill, thereby producing Bran and Shorts that you can purchase cheaper than the product of the Western mills, which has to be transported thousands of miles at great expense, and usually, when it reaches you, of inferior quality.

The grocer complains if the farmer or the mechanic sends to Toronto or to outside points for an article he can get at the home store just as good, but he does not hesitate to buy Flour from mills hundreds of miles away, and sell you an inferior Flour for more money than you can purchase the home product for, every bag of which is guaranteed.

CHOICE CORN MEAL and BUCK-WHEAT FLOUR always on hand.

FEED GRINDING a specialty, with the best feed mills known to the trade.

A full stock of the best ANTHRACITE COAL. Also in the market for the purchase of all kinds of Grain.

S. S. Excursion.

The Western Methodist Sunday School will hold their annual outing on Friday, July 6th. The Excursion this year will be to Glen Island, Glenora and Picton, per Steamer Aletha. In the evening the Epworth League of the church will run one of their popular Moonlight Excursions down the Bay leaving at 7.30 and returning at 11 p.

The good Catholic people of Napanee are to be heartily congratulated on the appointment to that parish of Rev. Father T. P. O'Connor, formerly parish priest of Kemptville. The Rev. gentleman, who is a native Kingstonian, is held in great esteem and respect by all classes and creeds and is one of the brightest priests in the Diocese of Kingston. He is an eloquent speaker, a fine musician and one of the best baritone singers in this part of Canada. Although he has not been enjoying the best of health during the past few months, we are more than pleased to announce that his condition is greatly improved and he is this week at Kemptville taking final leave of his old parishioners, who deeply regret to have to part with one who had the love, esteem and affection, of not only every parishioner, but also of all creeds and classes in the beautiful little town of Kemptville. We understand that the Rev. gentleman will commence his duties at Napanee on Sunday, July 1st, and may he be spared many years of health, strength and prosperity, is the earnest and sincere prayer of his numerous friends and admirers throughout the Archdiocese of Kingston.—Kingston Freeman.

The manse is being thoroughly overhauled and refurbished for Father O'Connor's occupation.

Johnny Get Your Hair Cut.

A. S. KIMMERLY has just got in a car of Potatoes, Roses, Hebsons, Seed Peas and Mandschouri Barley in stock and all kinds of garden and field seeds. I buy clean Timothy Seed, Vetches for sale.

A new bridge across Niagara River for railway and general traffic purposes is authorized by a bill to incorporate the Trans-Niagara Bridge Company, passed by the Railway Committee of the House of Commons.

Edward Huffman, Selby, met with a painful accident last Friday. While painting his house the ladder slipped letting him fall a distance of ten feet. His left arm was broken just below the shoulder and his face badly cut, and bruised.

Bessie, the little daughter of Daniel McCarthy, near Selby, met with a peculiar and painful accident last Saturday. She was running barefoot in the garden and her left foot struck the iron teeth of a drag. A gash was torn on each side of the foot, and the flesh torn from the top of the instep nearly to the toes.

On Saturday last a thief extracted a wallet containing about one hundred dollars from the safe in Boyle & Sons' hardware store. The loss was not discovered until about five o'clock in the afternoon when Mr. W. H. Boyle went to pay his employees. Saturday was a busy day with the firm and a number of clerks were in the store all day long but the thief got away undetected.

Master Harold Herrington, was accidentally injured at school, on Wednesday afternoon. With a number of other lads he was playing “duck on the rock” and was accidentally hit on the head with a stone, making a gash over his eye. On Wednesday evening the report was around town that the lad had died from his injuries but happily the report was unfounded and Master Harold is about as well as usual now.

The regular monthly meeting of the Women's Christian Temperance Union will be held in the W. C. T. U. Hall, Dundas street, on Tuesday afternoon, June 20th, at 3 o'clock. This session will take the form of a parlor meeting. A good programme will be rendered and light refreshments served. As this is the last meeting Miss Cartwright will be able to attend, it is hoped all the members will avail themselves of the opportunity to say good-bye and bid her God speed in her work. Visitors cordially welcomed.

It seems that the town is very much in need of a new system of keeping the account of the assessing and collecting of the taxes. The collector for the present year, reports the collection of over eleven hundred dollars of taxes not placed on the assessment or collector's roll, or in errors in addition in the collector's roll. The question immediately comes up. “Have the former rolls been made out in the same way and has the town lost any money thereby.” If Mr. Rutman had done as probably other collectors have, simply taken the collector's roll as being correct and collected only those taxes appearing on the roll, he would not have had any surplus to report. Of course this year's roll may be an exceptional instance and former rolls may have been correctly made out, but the system must certainly have some serious defects when a discrepancy to the amount Mr. Rutman found, appears in any roll, and it behooves the town council to bestir themselves and adopt a system that will eliminate any chance of the same state of affairs occurring again. A movement is on foot to have the matter investigated by a Government auditor.

Parish of Camden.

Dr. Mills, Bishop of Ontario, will visit this Parish (D. V.) Sunday July 1st, as follows:—Newburgh, St. John's Church 10.30 a.m.; Camden East, St. Luke's church at 3 p.m.; and Yarker, St. Anthony's church at 7.30 p.m. There will be confirmation at Camden East and Yarker. The Sunday schools of Camden East, Yarker, and Newburgh, will hold their annual Picnic at Varty Lake, all being well, Monday, July 2nd. Sports of all kinds will be on hand and as last year a most enjoyable time may be confidently anticipated. Mr. Robert Galbraith has kindly consented to give the children and their parents the use of the grounds adjoining the lake.

The body of the late Rev. J. G. Hooper will be buried at Camden East on Wednesday morning 27th inst., after arrival of the morning train from Napanee. Rev. C. E. S. Radcliffe will read the committal service.

Moonlight Excursion

The second of the popular series of Moonlight Excursions will be run on Thursday evening next, June 28th. The trip will be to Forester Island, when those who wish to get off there may enjoy themselves at the pavilion. Those not wishing to stop at the Island may enjoy a beautiful sail down the bay, returning to the Island at 10 o'clock, and still have one hour at the Island.

MORVEN

The Annual Strawberry and Ice Cream Social will be held in the Brick Church on Tuesday June 29. Uriah Wilson, Esq. M. P. is expected to take the chair, and Rev. J. F. Mears Newburgh to give an address. Abundance of Strawberries and ice cream will be on hand and a splendid programme will be rendered. Tickets 25c. Reduction to children. All come.

The Windows of the Body.

Are the eyes, without them life is dark. The better we can see the more we appreciate the world about us, and the brighter the life within. Monday, July 2—Str. Caspian at 9.55 p. m.

Returning steamers leave Port of Rochester at 8.30 daily. Full information from J. L. Boyes, Agent, Napanee.

Congratulations for Judge Deroche.

At the first Sittings of the County Court and General Sessions presided over by Judge Deroche held at Belleville, on Tuesday the 12th inst. an address was delivered by Mr. E. Gus Porter, M. P., on behalf of the Belleville Bar, to His Honor congratulating him on his elevation to the Bench. Mr. Porter referred to the happy and pleasant relations which had always existed between the different members of the Bar and especially between himself and the Judge, while the latter was in practice at his profession, and trusted the same state of affairs might continue during His Honor's occupancy of his present high position. Judge Deroche seemed agreeably surprised and in replying to the address thanked Mr. Porter and his fellow members of the Bar for the kind words spoken of him, and said that so far as he was concerned he would do everything in his power to make things pleasant and agreeable for all the members of the Bar, at the same time using his best endeavours to see that justice was carried out.

JAMES WALTERS,

Merchant Tailor, - Napanee.

Napanee Lodge No. 86, I. O. O. F. will run their annual excursion to Ottawa, on Civic Holiday.

In Parliament on Tuesday the Government announced that \$80,000 of the sum voted for the San Francisco sufferers had been sent to that city. The opposition made another attack on the Interior Department, moving for the discharge of Philip Wagner, interpreter and assistant immigration agent at Edmonton. The resolution was defeated.

Perth, Ont., June 19.—County Constable M. D. White, working on the supposed Babcock-Martin murder case for the past thirty hours, has left for Rice Lake with a warrant to arrest Frank Beaver.

Constable White visited the spot yesterday, where the lads were said to be buried, for the third time, and expressed the feeling that Mrs. Needle's story is about right.

He would not disclose certain details of his investigation, but he stated that the result would probably end in the apprehension of Beaver and the trial of Beaver and Badore for murder.

Half Holidays.

The local merchants have all signed the half holiday agreement, agreeing to close their places of business each Friday during July and the first three Fridays in August. The half holiday excursions will be run the first Friday in July, and each other Friday during the holidays.

OBITUARY.

MARY ANN EMPEY.

Beloved wife of Mr. Geo. H. Embury passed away on Friday last, aged 67 years. Deceased had been suffering for over a month with cancer of the stomach and death came as a relief to her sufferings. A family of one son, Dr. Alex Embury, Bancroft and three daughters, Mrs. W. H. Boyle, Dr. Elizabeth Embury, Ottawa, and Miss Minnie Embury remain. The funeral took place on Sunday afternoon from her late residence.

Died in Hamilton.

Very sad indeed was the death of Miss Helen Bellhouse, second daughter of Mr. and Mrs. W. A. Bellhouse, which occurred at St. Joseph's Hospital, Hamilton, on Wednesday. Deceased, who was one of Napanee's brightest young ladies, was attending college in Hamilton, where she was taken ill and passed away after but three days' illness. She was a bright and amiable girl of but twenty-one years, and has been studying music for the past six months, and was preparing for her examinations in a few days. A nervous trouble was thought to be the ailment, and nothing of so serious a nature was thought of. Her

Have fitted up some of their best Dressers and Stands, Buffets and China Cabinets, which are samples from their wholesale line. They will be glad to have the public call and see these, as they will only be on exhibition for a few days; especially those interested in good designs and the latest finishes will be well repaid for the time spent in looking over the line, whether they intend purchasing or not.

The Gibbard Furniture Co., of Napanee, - Limited.

LETTER TO THE EDITOR.

Napanee, June 21st, 1906.

Dear Sir—In view of the developments in case of the tax collector's discoveries of lax collections of taxes, in past years, or rather sharp and honest collection of taxes in the present year, I would as a tax payer, suggest that when the Government Inspector comes to look over the Assessment and Collector's Rolls that he be requested to go over the accounts of the Municipal Electric Light, not that I would charge any wrong doing, but it is rumored that things are running in a loose groove and careless way. The people ought to know something of what this Electric Light Plant is costing the town, and the council should give the tax payers the necessary information, and not at the last end bring in a bill that will swamp the town, which some people, even now, prophecy will be the case. The Council must wake up, for the people want to know how it is.

TAXPAYER.

LAPUM.

The service in the school house on Wednesday evening, was conducted by Rev. Mr. Phipper, Holiness Movement minister, Yarker.

John Simpkins has sold his farm to J. E. Boulton.

James Huff spent a few days last week, with Albert Williamson, Adolphustown.

Mrs. Henry Bush, spent a few days last week, with her son, Cyrus Bush, Thompsonville.

The recent showers have improved the crops in this vicinity.

B. Rose and Edwin Bell paid a visit to the Limestone City, on Saturday.

On account of the heavy rain on Sunday, the attendance at Sunday school was small.

The way to catch 'em

Wednesday. Napanee's brightest young ladies, was attending college in Hamilton, where she was taken ill and passed away after but three days' illness. She was a bright and amiable girl of but twenty-one years, and has been studying music for the past six months, and was preparing for her examinations in a few days. A nervous trouble was thought to be the ailment, and nothing of so serious a nature was thought of. Her father, upon learning of her illness, Monday, went to Hamilton and remained with his daughter until the end came. The mother and sisters here are prostrated over the sad bereavement. The funeral takes place at Hamilton to-day. The sympathy of the whole town goes out to the bereaved parents and two sisters, Misses Marguerite and Agnes.

New York's First Sidewalk.
The first sidewalk in New York was laid by a woman, Mrs. Samuel Provoost, about 1716. She was an importer and merchant and laid the sidewalk for the convenience of her customers. She had importuned the authorities to do it, but they refused, saying it was impossible. After her object lesson paving and curbing gradually came in, but for some time her sidewalk was so famous that people journeyed even from Philadelphia to see it.

A. WILLIS.

SHARBOT LAKE:
The Foresters' anniversary sermon was preached in the Methodist church, at 10:30 a.m., Sunday 17th, by Rev. E. Lawson.

Rev. Mr. Munro, an ex-pastor, preached in the Presbyterian church on Sunday evening.

Rev. E. Lawson left on Monday for Lacelle, his pastorate for the ensuing year.

Rev. W. Haipenny, the Methodist minister for next year, will preach his first sermon here on July 1st.

A surprise party at the residence of Mr. and Mrs. J. A. Edwards, on Monday evening, was largely attended and a very pleasant time enjoyed.

Visitors: H. Taylor, Perth, at J. Thompson's; Miss Maud Hutchinson, Kingston, and Mr. and Mrs. Edgar Irvine, Westport, at James Irvine's; Mrs. Lewers, Kingston, at John Allen's; Mrs. A. Hartman returned on Saturday from visiting friends at Ottawa.

One gallon of Prism Brand Paint will cover 360 sq. ft., two coats. Every can guaranteed. The Medical Hall.—Fred L. Hooper, sole agent for Napanee.

YARKER.
The crusher, owned by the township of Camden, is here crushing gravel for Yarker section of the township. The main road through Yarker is now a county road, and work will be done on it later on. There will be expended by the county council about \$8,000 in Camden this year, on bridges, culverts and roads.

The drive of logs is now passing through here, and they are getting along fairly well.

George McDonald is home for a few days when he leaves for Meaford, Ont.

E. W. Benjamin is having brick hauled from Strathcona to Yarker.

Mrs. S. Winter has gone to Tamworth for a few days.

Two baseball games will be played here, this week, likely Friday and Saturday.

Quite a number from here went to Cobourg, wearing the red coats.

Dr. McQuaid was called home to attend his father, who is ill.

Mrs. G. Joyner has gone to the west for a trip.

The Anglican Sunday Schools of Newburgh, Camden East, and Yarker, will picnic July 2nd, at Varty Lake.

Miss Daisy McDonald is home from Enterprise and Violet Ewart from Sydenham.

Bagging the Grapes.
Immediately after the grapes have blossomed cover the bunches with two or three pound manila grocers' bags, according to the size of the variety. This is pre-eminently a fruit garden method, although commercial growers often use it. It is the surest and often the most practical way of securing perfect bunches. Tie or pin the mouth of the bag firmly; leave no opening to catch water. Cut a small piece off the lower corner of the bag, so that no water will stay in it. Leave the bag on until the fruit is ready to pick.

Literary Coincidence.
Resemblance does not always mean plagiarism. There was no plagiarism, certainly, in Newman's line, "The night is dark, and I am far from home," though it has been pointed out that it almost exactly reproduces a line in a play printed in 1599. This play is "Two Angry Women of Abington," by Henry Porter, and the original line runs, "'Tis late and dark, and I am far from home."

Coughs, colds, hoarseness, and other throat ailments are quickly relieved by Cresolene tablets, ten cents per box. All druggists

Result of Public School Competition.

With a view to improving the general written work in our public schools, last year a prize was offered for the neatest exercise book completed by a pupil of our rural public schools. At the end of May, requests were sent out to the teachers for the best books, one from each school. The interest taken in the competition was highly satisfactory. The prize, a gold locket and chain, for the neatest book has been awarded to Mary E. Garrett, a fourth class pupil of S. S. No. 8, Sheffield, under the management of Miss A. Larkin, teacher.

Excellent books were received from the following schools:

Sheffield, Nos. 8 and 10.
South Fred, No. 6.
North Fred, Nos. 13 and 18.
Ernestown, " 19.
Richmond, " 3, 7, and 18.
Amherst L., " 3 and 4.
Camden, " 3.

Good books were received from the following schools:

Denbigh, Nos. 2, 4 and 7.
Kaladar, " 4.
Sheffield, " 1, 5 and 7.
Richmond, " 5.
Camden, " 12, 19 and 29.
Ernestown, " 2, 4, 5, 6, 11 and 18.
South Fred, " 2 and 7.
North " " 9 and 20.
Amherst L., " 1, 3 and 5.
Fair books were received from the following schools:
Sheffield, Nos. 2 and 16.
North Fred., Nos. 10, 11 and 14.
Camden " 4 and 18.

we find many ends ranging at from 4 to 10 yards each when will go Saturday at wholesale prices.

Lace Curtains, Brussels and Nottingham, odd pairs, about 10 pairs in all, regular 75c to \$7.50 pair, clearing Saturday at wholesale prices.

This store will close Friday, July 6th, at 12.30 noon.

Saturday Special at the Staple Department

12 DOZEN ONLY Linen Towels, size 38 x 19 fringed, just a nice size and something needed in every household. Woman of experience in household matters will readily realize the significance of this special offering and take advantage, of which would certainly be exercising good judgment and showing the existence of a good business like housekeeping policy. As the value is exceptional it is necessary to limit quantities which will be 2 pairs to a customer, and the price for Saturday is **2 for 25c.**

MADILL BROS.

Gettin' Wisdom

is a comparatively easy task if you start it while you are young. Don't allow your children's eyes to be ruined for all time because "they look too 'died' with glasses on."

We'll tell you the truth as to whether they need glasses or not, and charge you nothing for the telling.

Headaches in children are suspicious. We are also the best people to guarantee the quality of our frames, it being part of our jewelry business to acquire that ability and knowledge.

All graduates placed in good situations. Write for Catalogue and particulars.

W. H. SHAW. T. N. STOCKDALE.
President. Principal.

Admission 1.00, 1.00 and 0.50. Fair books were received from the following schools: Sheffield, Nos. 2 and 16. North Fred., Nos. 10, 11 and 14. Camden " 4 and 18. Ernestown, " 8, 12, 17, 21 and 23. South Fred. " 1. Kaladar, " 8. Adolphustown, No. 2. Richmond, " 1.

The remainder of the schools sent in either poor work or, worse still, none at all. Something I feel, must be seriously wrong if not a single good book can be produced, and I hope that the good results of this year will be far surpassed by those of succeeding years.

F. C. ANDERSON.

Valuable Zones of Silence.

There has come into modern life a greater variety of sound and a greater volume than assailed the ears of our ancestors. To keep one's freshness there ought to be a zone of silence around every human being during some part of the day. The finest creative work is done, as a rule, in seclusion; not necessarily apart from men nor in solitary places, but away from the tumult and away from distracting sounds. There was organized in Paris years ago a society for the culture of silence. On the occasion of the initiation of a distinguished man of letters a bowl of water was brought out to him in a room where he was waiting in solitude. He studied it a moment, placed a rose upon it and sent it back. The water bore the rose without overflowing. To the members assembled in another room the act was the most convincing evidence that the initiate comprehended the purpose of the fellowship and was prepared in spirit to become one of the company. The act was a symbol which Americans may wisely study.

English Railways and Fog.

It is seldom that there is a sufficiently heavy fog on an American railway to cause serious inconvenience that no special precautions are taken, but in England a heavy fog is so common that there is a regular service made up of the repair gangs, who take the place of the mechanical signals. Every distance signal is guarded by a signal man, who is supplied with flags and torpedoes, the latter being called detonators, while the signal men are pointsmen. Two torpedoes are placed on the track to warn the engineer when the signal is set at danger and are supplemented by a red lantern in the hands of the signal man. As the torpedoes cost a cent and a half each and are used in great numbers there is a machine supplied by which the second torpedo is forced from the rail by the force of the explosion of the first, as only one is necessary, the second being merely a precaution.

Mr. William Hendrie of Hamilton, President of the Ontario Jockey Club, is dead.

A HOLD UP

Napanee's Town Council Submit to a Hold Up to the Tune of \$114.

On Monday evening, 18th inst., at a regular meeting of the council the collector appeared before council and made a statement that he had in his possession a certain amount of money which he had collected from the rate-payers, and would hand over to the Town if Council would pay him 10% on the amount so collected and in his hands, but the amount he would not disclose unless Council granted him the 10% as aforesaid. Thereupon Coun. Graham moved, and Coun. Ming seconded (Resolution written by Graham, assisted by Collector, making it virtually the Collector's resolution) ;—

"That the Collector be paid 10% on all money that he has collected that was not on his Roll, and all other monies he has collected and pay over to the Town, for which he is to give a full explanation to the satisfaction of the council." Carried on the following division ;

Yeas—Mayor Lowry, Couns. Ming, Graham, and Normile.

Nays—Couns. Simpson and Williams. Coun. Kimmerly not present.

A few explanations just here may be out of place.

Collector offered to do the collecting for \$150.00.

The Collector's Roll is said to be returned, but the writer is pretty well informed that Roll is not at this time properly returned, though it has been accepted from the Collector, but this is quite different from a proper return.

Now then for Collector's explanation for his HOLD UP, and for which he was to receive 10% as above resolution specifies.

After paying over to treasurer the monies said to be owing to the Town, taking a receipt therefor, and handing over his Roll, he had in his possession about \$1,100 which he explained was made up as follows: He found that extensions on Roll were not properly carried out, that errors were there to the extent of about \$75.00, that also he had found property that was not assessed, and from owners or tenants of said properties he had collected the sum of \$573.00.

Mark you this was done without any authority from council whatever. Mark his position in this transaction, constituting himself Assessor, Court of Revision, and clerk, he already was Collector. I think this town would like to see the law, Mr. Collector's authority on that point, and where he got it. The whole sum so collected amounted to \$1,148.00.

On Tuesday collector goes to treasurer, pays him \$573.00, the lesser amount, less \$114.00, being 10 per cent. on whole amount and saying he had paid over the larger amount to the treasurer before.

A STRAIGHT HOLD-UP, and what is worse about it is, that more than two members of council were knowing to what was being done, aided and abetted the hold-up, promised him remuneration to the extent of 10 per cent. as mentioned in resolution, and actually had a type written resolution at meeting of council, but did not show it as that would certainly have given the business away.

The rate payers of the town hearing what had been done on this Monday evening, the next day started a petition asking Ontario Government to send a commission to go into and through the accounts for a number of years back, and I am told that over forty names were signed to it at or about 4 o'clock that p.m. Council again met Tuesday evening and passed a resolution asking Ontario Government to send their municipal auditor and have accounts audited. One of the councillors being asked why council did this, said, "we wanted to get ahead of this petition being circulated in the town."

Wherever Tuck's Rheumatic Bone Oil has been introduced everybody is talking about its wonderful curative powers. Here is what one sufferer writes:—

A Letter
Dear Sirs—I want every-

Of Thanks
one to know, what Tuck's Bone Oil did for me. I suffered for a year and nine months from a sore leg and at times the pain was almost unbearable. If I moved about the house I was obliged to go with my knee on a chair. I was under the doctor's care for months and was six weeks in the hospital from which my husband brought me home not much improved. A neighbor told me of Tuck's Bone Oil and advised me to try it. I did so and began to get relief. Four bottles cured me and I can now walk over town and back again at my ease. I think Tuck's Bone Oil is the best medicine ever made.

Mrs. J. Hopkins,
Smith's Falls.

For rheumatism, lame back, neuralgia, sprains, coughs, colds, quinsy or bronchitis, in short for any and all kinds of inflammation there is nothing to equal Tuck's Bone Oil. A bottle should be on the shelf in every home. For sale by all medicine dealers at 50c a bottle or sent prepaid by The Tuck Bone Oil Co., Limited, Smith's Falls, Ontario.

CZAR'S BATTALIONS MUTINOUS

An Exciting Day at the Fortress of Sebastopol.

The Times' correspondent at St. Petersburg cables as follows:—Schepkin has returned from Bialystok with evidence that minor police officials instigated and organized the massacres, higher officials observing a benevolent neutrality.

Disaffection in the army steadily increases. Two garrison artillery battalions at Sebastopol mutinied, but were disarmed. Soldiers at Krasnoyarsk wounded a colonel and killed a captain. Both had sabred men while in a state of intoxication. At Riazan the mutineers killed nobody, because they aimed high. The mutiny is reported over, all the men's demands having been granted. A strike of the dockers at Rybensk seriously interferes with the grain trade.

DETAILS OF MUTINY.

The Associated Press cables from St. Petersburg:—A serious mutiny, which for a time threatened to place the fortress of Sebastopol in possession of the mutineers was suppressed yesterday, according to a special despatch to The Novoe Vremya. The mutiny was started by a battalion of fortress artillery which declined to obey orders, whereupon the men were promptly disarmed. The two battalions then mutinied and took possession of the guns in the north shore batteries, but on the appearance of several loyal regiments of infantry the mutineers abandoned the idea of fighting and returned to their barracks.

General Nepleuff, commander of the

fortress of Sebastopol, is represented to be greatly concerned about the temper of the sailors as well as the soldiers of the fortress.

MORALE OF THE ENTIRE ARMY SHAKEN.

That the morale of the whole army is being shaken by the revolutionary propaganda is proved by the continual extension of the rebellious outbreaks among the troops. It appears to be confirmed that the Boltschoff regiment at Ryazan has driven out its officers and burned the armory. Another report says the soldiers deliberately attacked the officers' club at Ryazan, killing one officer and wounding two others. A panic prevails in the town.

Four companies of the Viborg regiment stationed in St. Petersburg have presented demands which were acceded to, and they have now returned to duty.

The soldiers of the notorious Semenovskiy regiment, whose name became synonymous with repression owing to the deeds committed by these troops at Moscow, are reported to have held a meeting and to have decided that they cannot any longer endure the public opprobrium, and must wipe out the stain on the regiment. The tenderness with which the military authorities are treating these and recurring exhibitions of the mutinous spirit among the troops is sufficient evidence that they fear the entire army is infected.

HOME.

DOMESTIC RECIPES.

Water Crackers.—One pound of flour, one tablespoonful of lard, one tablespoonful of salt, one-half tablespoonful of soda. Mix with water, beat well, roll thin, stick with fork, and bake in a hot oven.

Breakfast Coffee Cake.—Take a piece of bread dough and add one-half cup of sugar, and a tablespoonful of melted butter, then roll out an inch thick and put on a greased pie-pan, brush the top with melted butter, and cover thick with cinnamon and sugar; let it rise and bake quick. Cut in long narrow strips to serve. Eat hot or cold. It is nicely made Saturday with the other baking, to use Sunday morning for breakfast.

Apple Custard Filling.—Two eggs, four or five apples grated, a little nutmeg, sweeten to taste. One-half a pint of sweet milk or cream. Pour into pastry and bake without an upper crust.

Chocolate Filling.—One cup of milk, two tablespoons grated chocolate, three-fourths cup of sugar, yolks of three eggs. Heat chocolate and milk together. Add the sugar and yolks together, beaten to a cream. Flavor with vanilla. Bake with undercrust, spread meringue of the whites over the top.

Parboil a three pound piece of salmon. It should be a broad, flat piece that can be rolled. Prepare the following stuffing: Twelve oysters chopped, a half-cupful of dry bread-crumbs, salt, pepper, a little nutmeg, and a tablespoonful of minced parsley. Mix these and spread on the salmon. Roll together and tie. Place in a hot oven with a large piece of butter. Bake twenty-five minutes and

the water and again fill to overflowing with fresh cold water, seal the jars closely and put away for winter's use. This when opened will be found to require less sugar than fresh rhubarb, and will make delicious pies and sauce. Cranberries and green gooseberries may be canned in the same way, and will keep for years.

For preserved rhubarb, wash, peel and cut the rhubarb into pieces, then weigh. Place in a preserving kettle without water, and cook thirty minutes. Measure time put an equal weight of sugar in a saucepan, allowing a pint of water to each four pounds of sugar. Boil without stirring until a little poured in a cup of ice water breaks like glass. When the rhubarb has been cooked enough pour the syrup over it, cook five minutes stirring gently, so that it will not stick, then pour into jars and close tightly. Keep in a cool place.

In making rhubarb jam allow to each pound of cut rhubarb one pound of sugar and one lemon. Pare the lemon as thin as possible into an earthen bowl, taking care to remove all the white, bitter membrane, and slice the pulp of the lemon into the bowl, discarding all seed. Cut the rhubarb into inch pieces, and put in the bowl on top of the lemon and the sugar on top of the rhubarb. Cover and stand away in a cool place overnight. In the morning empty into the preserving kettle, simmer gently three-fourths of an hour, or until quite thick, take from the stove, cool a little, and pack into jars. Cover with paraffin or buttered paper.

Another delicious jam is made by combining pineapple, rhubarb and cranberries in equal proportions.

SENSIBLE SUGGESTIONS.

A few drops of lemon juice give scrambled eggs a delicious flavor.

A smouldering or dull fire may be cleared for boiling by a handful of salt.

Instead of toasting bread for soups,

DOMINION PARLIAMENT

SUPPLEMENTARY ESTIMATES.

Supplementary estimates to the amount of \$4,867,916 for the nine months ending March 31, 1907, were tabled, making a total of \$72,604,463 to be voted for the period named. Of this \$54,184,698 is chargeable to consolidated fund, and \$18,419,765 chargeable to capital.

WHERE THE MONEY GOES.

Accompanying these supplementary estimates is a further estimate of \$65,340 for the current fiscal year. The biggest items chargeable to capital are:—The Intercolonial Railway, \$1,011,000; public works, \$447,200; Dominion lands for surveys, \$75,000; railways and canals, \$214,550; public works, marine, \$737,200. Appropriations chargeable to income are:—Civil government, \$22,451; legislation, \$13,850; arts, agriculture and statistics, \$155,000; quarantine, \$109,975; militia and defence, \$152,233; railways and canals, \$71,277; public works, \$1,233,808.

SOME INTERESTING ITEMS.

Following are among the chief items of interest:—

Toward the establishment and maintenance of additional branch agricultural stations, \$20,000.

Quinquennial census of Manitoba, Saskatchewan and Alberta (revote), \$70,000.

Dominion Exhibition at Halifax, \$50,000.

Grant to Charlottetown Exhibition, 1906, \$10,000.

Fitting up militia camp grounds, \$35,000.

Construction of new rifle ranges, \$25,000.

Completion of works at Halifax and Esquimalt, \$25,000.

Welland Canal, electric lighting and power plant, \$50,000.

Deepening portions of summit level, \$70,000.

Construction of culvert and dock at Welland, \$50,000.

Purchase of cars for the Governor-General, \$39,000.

Trent Canal improvements, \$15,500.

Addition to Supreme Court library, Ottawa, \$20,000.

Dredging, Ontario and Quebec, \$170,000.

Completion and delivery of additional ice-breaker in lower St. Lawrence and Northumberland Straits, \$75,000.

Breaking ice, Thunder Bay and Lake Superior, \$30,000.

Building and maintenance fish breeding establishments, great lakes, \$12,000.

Cost of an estimation of the present value of gold gravels in the Klondike, \$12,000.

Expenses of Life Insurance Commission, \$10,000.

Royal Commission to investigate grain trade, \$10,000.

ONTARIO PUBLIC BUILDINGS.

Ontario gets the following votes for public buildings:—

Alexandria public building, reconstruction of portions destroyed by fire, \$9,000.

Amherstburg public building, improvements and repairs, \$1,000.

Arnprior public buildings, repairs and improvements, \$2,000.

Barrie public building, renovating interior, etc., \$1,000.

Belleville public building, additions, alterations, and repairs to postoffice fittings, etc., \$2,000.

Hamilton postoffice, alterations to building, etc. (revote), \$6,000.

Galt public building, additional accommodation, alterations to postoffice fittings, etc., to complete, \$1,500.

Niagara Falls public building, improvements, \$1,000.

Port Arthur public building, improvements, \$4,000.

St. Catharines public building, improvements, including renewal of plumbing, etc., \$4,000.

St. Thomas Drill Hall, grading grounds, \$3,000.

REMARKABLE FIND.

Skeleton and Treasure Map in a New Brunswick Cave.

An Andover despatch says: A discovery that has excited the whole community and started scores of eager people treasure-hunting, was made on Tuesday, when John and Charles Stewart, of Johnsville, blasted their way into an old biocaded cave and found there a skeleton with some old books dated nearly 200 years back and some manuscripts purporting to be maps of other caves where wealth is hidden. The discovery was caused by the recent storm, which blew down a large tree, revealing a smoke-blackened hole under its roots, extending far into the ground. The finders got dynamite and forced the entrance, when they were astounded to find twelve stone steps leading down to a passage seven feet long and two feet wide. This opened into a main room, about 12 feet square.

Upon entering the larger room they were startled to find the bones of a human being, lying in a bunk made of stone. The bones were dry and crumbly. Near the bones was a gold ring, on which was inscribed, "John Long, Dec. 4, 1779." A few inches away was a silver watch, which bore the date 1740, but in which can be found no inscription of any sort.

Underneath the bunk they found three books, two in Latin, the third one written in English. One of the Latin books was Suetonius' "History of Rome," dated 1667, and on the fly-leaf were several Latin inscriptions. Inside was the following: "B. A. Strong, Oxford College, May 24, 1676." Underneath this appeared the name, "James Hayward, 1683." The other Latin book was Seneca's "Tragedies," and in was marked the date, "1659." The English book was "The Memoirs of Cardinal de Retz." Inside the cover of this book were written the names, "David Fowles" and "Michael Carney." The books were wrapped in a piece of bark, and the whole were in an old iron kettle. On the bark was inscribed a map and some written instructions, which the Messrs. Stewart are guarding carefully, believing that it contains a clue to secret treasure.

NOT ENOUGH MEN FOR HARVEST.

Cry For Help Will be Great, Says Immigration Official.

A Winnipeg despatch says: "Not for many years has there been such a shortage of labor as this season," said J. J. Golden, Provincial Commissioner of Immigration, on Thursday. "There has been so much railway construction in progress and the roads are so hard up for men that they are snatching up every available hand. However, even with the railways eliminated, it would be impossible this summer to supply the demands throughout Manitoba and the West for farm help to gather the harvests. Even now we cannot meet the demand, and as the summer advances the cry for help is going to be enormous. My estimate now is that there will be needed at least from 20,000 to 25,000 men to harvest the crops."

Among the immigrants who will arrive in Winnipeg on Saturday will be thirty-two fishermen from Stornoway, of the Island of Lewis, which belongs to the Hebrides group. The immigration authorities are puzzled where to place the fishermen from the faraway islands as they know nothing of farming.

CHURCH GUTTED BY FIRE.

Hamilton's Central Presbyterian Badly Damaged.

A Hamilton despatch says: Central Church, the leading Presbyterian church here, situated at Jackson and McNab streets, was gutted by fire early on Wednesday morning. The fire, which was supposed to have been caused by electric wires, broke out shortly before 1 o'clock. There was some delay in giving the alarm, and when the firemen arrived they had work cut out for

Prepare the following dressing: Twelve oysters chopped, a half-cupful of dry bread-crumbs, salt, pepper, a little nutmeg, and a tablespoonful of minced parsley. Mix these and spread on the salmon. Roll together and tie. Place in a hot oven with a large piece of butter. Bake twenty-five minutes and serve with its own gravy.

A writer gives some sensible advice about eggs. There is a general impression that eggs, acknowledged to be a complete food, may be safely eaten on all occasions. On the contrary, as the writer alluded to, points out, invalids and young children should never be given eggs unless they are very fresh. Persons suffering from biliousness, gastritis and several other troubles find difficulty in digesting even fresh eggs. Some physicians declare that the slightest tendency towards rheumatism makes eggs undesirable. The white of eggs whipped to a froth with a little water is a good thing to give fever patients, as a rule, but the physician should be consulted before even this is given to a sick person.

Mayonnaise dressing is a little heavy for a dinner salad, yet this one eaten at a recent club luncheon was very dainty, and also proved to look upon. The salad was shredded pineapples, green peppers, and lettuce hearts, and the mayonnaise was lightened with whipped cream.

Coddled eggs are the perfection of boiled eggs, and once eaten will always be preferred to the other. Have a deep cup or similar receptacle, heated by raising with very hot water. Put in the eggs and pour boiling water over them. Cover closely and let stand five minutes. If the eggs are liked soft; longer, if further cooking is desired.

Walnut Filling.—One cup chopped walnuts, one-half cup sour cream, one-half teaspoonful of vanilla, four teaspoons pulverized sugar.

Lemon Filling.—One cup sugar, one lemon, one egg; boil all, and when thick spread between cakes.

Chocolate Filling.—One cup sugar, one teaspoonful cocoa or chocolate; mix; add seven tablespoons sweet milk; boil five minutes or more, add butter size of a walnut.

Coffee Icing.—Six ounces icing sugar, one tablespoonful each strong coffee and water, mix together in a saucepan, and pour over cake.

Orange Icing.—Quarter pound sugar, tablespoonful orange juice, put in a tin, melt, but don't boil, stir well.

When the bride's health is to be drunk here is a beverage worthy of so important a rite: Grate the yellow rind from twelve lemons and two oranges and mix together with two pounds of sugar. Place in a porcelain lined kettle and cover with one quart of water. Stir until the sugar is dissolved, and after boiling ten minutes strain through a muslin bag. While the liquid is hot add one tumbler of blackberry jelly, one tumbler of raspberry jelly, and one tumbler of currant jelly. Allow the mixture to cool and add half a pint of pineapple chunks, chopped very fine; one pint of canned strawberries, and, if desired, one quart of canned peaches, and one quarter of a pound of canned cherries. Stand away over night, and just before serving stir in three quarts of apollinaris, one bottle of sarsaparilla, one pint of grape juice, and one quart of ginger ale.

WITH RHUBARB.

Rhubarb Sherbet.—Simmer one quart of rhubarb cut in inch pieces with one quart of water until soft. Add the grated rind of one lemon and two cupfuls of white sugar, stirring until the latter is dissolved. Cool and strain. Keep on ice until time to serve. It should be very cold.

To can rhubarb by cold water process select the rhubarb when young and tender and of a pretty pink color. Wash thoroughly, peel and cut into small pieces as for pies. Pack into glass jars that have been sterilized, fill the jars to overflowing with freshly drawn water, put on the covers and let them stand over night. By the next morning you will find that the rhubarb has taken up more or less of the water, and that there is quite a vacuum to be filled. Drain off

SENSIBLE SUGGESTIONS.

A few drops of lemon juice give scrambled eggs a delicious flavor.

A smouldering or dull fire may be cleared for boiling by a handful of salt. Instead of toasting bread for soups, cut into dice and roast in the oven until crisp.

Kerosene will soften leather hardened by water, and render it as pliable as new.

Spots of candle grease or wax may be removed by means of blotting paper and a hot iron.

A bowl of lime in a damp closet will dry and sweeten it.

To keep nuts fresh throughout the year they should be packed in casks between layers of fine sand.

Half a lemon placed in the water in which dish towels and kitchen cloths are soaked is said to sweeten them wonderfully.

When cutting folds it is waste to turn the materials over frequently to make quite sure that it is keeping quite bias. The least deviation will mean that the folds will twist when sewed to the material of the gown.

To Clean Looking Glasses.—First sponge with a little spirits of wine, then dust the glass with powdered blue tied up in a bit of muslin. Rub this off with a cloth, and finally dust with a clean silk handkerchief. Treated in this way the glass will not have that cloudy appearance afterwards.

Restoring Kid Gloves.—Ink and olive oil mixed in equal proportions, painted on the glove with a feather or soft brush, and then allowed to dry, will improve shabby kid gloves immensely. Suede ones also may be treated in the same way. Remember to use as little of the mixture as possible, or you will do more harm than good.

SCREAM SAVED BABIES' LIVES.

Fifteen Tots Deserted in a House in a Paris Suburb.

A despatch from Paris says: Their ability to scream saved the lives of a number of babies at Bilancourt, a suburb of Paris. People passing by there on Wednesday heard a chorus of terrified infants. The screaming was kept up for hours, and finally someone entered the place and found fifteen babies under two years of age the sole occupants. All were screaming distressfully. They had been alone for twenty-four hours, and were hungry and helpless. The crèche was established by Abbe Baganti, who lately upon entering the house found the matron had died suddenly. This so shocked him that he fell dead. The care of the crèche then devolved upon a philanthropic, but infirm lady, 80 years of age, a relative of the Abbe. She was so overcome by distress and the overwhelming responsibility that on the day of the Abbe's funeral she fled, leaving the infants to their fate. The babies are now in the foundling hospital.

WILL ENFORCE LOCAL OPTION.

The Government Appoints a Special Inspector.

A Toronto despatch says: In the appointment of J. A. Ayeart, of Thamesville, to be Provincial Inspector, under the Liquor License Act, the Ontario Government has again exemplified its desire to enforce fully the law as it is at present. This new official will be employed for the special purpose of seeing that there are no violations or evasions of the statutes in local option districts. Such a position was provided for by the Liquor License Act, as it stood, prior even to the amendments of last session, but no steps were taken to fill it. The duty of seeing that liquor was not sold in local option municipalities was left to the inspectors of licenses within whose jurisdiction such places existed. These officers are not absolved from that duty now, but they will have the aid of a new authority, who will travel about the province, visiting local option districts.

Port Arthur public building, improvements, \$4,000.

St. Catharines public building, improvements, including renewal of plumbing, etc., \$4,000.

St. Thomas Drill Hall, grading grounds, \$3,000.

Toronto Custom House, Government share of paying Esplanade in front of Custom House property (revote), \$3,315.

Toronto Drill Hall and Armories, Government share of paving University and Chestnut streets (revote), \$1,900.

Toronto postal station B—Improvements and repairs, \$1,500.

Toronto postal station C—Government share of cost of street pavements, etc., \$500.

Toronto Postoffice—Work of restoration to make good damage done by fire, \$25,000.

Windsor Dominion buildings—To pay municipal corporations for local improvements, \$1,771.78.

HARBOR APPROPRIATIONS.

Appropriations for harbor improvements in Ontario are:—

Colchester—Completion of wharf improvements, \$2,000.

Collingwood—Harbor improvements, \$20,000.

Cumberland wharf—Improvements, \$1,100.

Echo Bay wharf—To complete, \$800.

Magnetawan—Wharf on River Magnetawan, \$1,000.

Mallorytown landing piers—Repairs and additions to, \$1,500.

McGregor's Creek—Renewal of bank protection works, \$3,000.

Mitchell's Bay—Improvements, \$3,000.

Jordan harbor—Towards erection steel bridge of increased span over Twenty-mile Creek, \$1,500.

Addition to Monetteville wharf, on Lake Nipissing, \$900.

Removal of boulders from Magnet Channel, north shore Lake Superior, \$1,000.

North Bay wharf—Replanking, \$1,200.

Oliphant wharf—Improvements, \$600.

Penetanguishene—Wharf improvements, \$1,000.

Point Edward—Dredging, \$5,250.

River Thames—Wharf near mouth of river, additional amount, \$800.

Roach's Point—Wharf, \$3,200.

Sault Ste. Marie wharf—Dredging approaches, \$50,000.

Sault Ste. Marie wharf—Improvements, \$5,000.

Savern River—Deepening over rocky shoal at Washago, \$400.

Silverwater. Manitoulin Island—Wharf, additional revote, \$1,500.

Steamboat route on south side of Parry Sound Island, Georgian Bay—Repairs to piers, \$2,500.

Toronto harbor—Works at eastern entrance, balance due Contractors Murray and Cleveland, \$63,685.

Wendover wharf—Reconstruction of ice pier, \$2,000.

Wiarion breakwater—Additional amount for reconstruction of superstructure in concrete and stone filling, \$4,000.

Winnipeg River—Improvements, \$10,000.

Among the mail subsidies is an item of \$1,500 to provide for steam communication with Pelee Island.

EXPRESS COMPANIES.

Mr. Alcorn's efforts to bring the express companies under the jurisdiction of the Railway Committee promise to be successful. His bill was repeatedly challenged in the House as being unconstitutional, and it was decided to get the opinion of the Minister of Justice upon the subject. Mr. Aylesworth evidently agreed with Mr. Alcorn, as Mr. Emmerson has given notice of a series of amendments to the Railway Act practically embodying Mr. Alcorn's bill.

The erection of 38 fine residences is well under way at Welland for the partial accommodation of the 500 or 600 employees of the Plymouth Cordage Company. The houses are all on modern plans, and will be owned by the company.

streets, were gutted by fire early on Wednesday morning. The fire, which was supposed to have been caused by electric wires, broke out shortly before 1 o'clock. There was some delay in giving the alarm, and when the firemen arrived they had work cut out for them. The smoke was so dense that it was hard to locate the fire, but after water was poured into the building for some time flames burst out of the front and side windows, which were all blown out. The firemen prevented the flames from spreading to the Sunday school, but the inside was gutted. The loss will be heavy. The church was built many years ago, and was one of the handsomest in the city, having been improved several years ago. A short time since a fine new organ was installed. Rev. Dr. Lyle is the pastor.

CATHEDRAL DESTROYED.

Magnificent Structure at Nicolet, Que., a Prey to Flames.

A despatch from Nicolet, Que., says: Fire broke out in the cathedral on Thursday night, utterly destroying the magnificent structure, together with the old parish church, Convent of the Sisters of Assumption and the residence of Monsiegnur Suzor, late Bishop of Nicolet. The loss is estimated at about \$400,000, on which there was partial insurance. Three hundred Sisters were in the convent when the fire broke out, but they had time to escape, not, however, before some had fainted and some of the old nuns had become hysterical. Fortunately, the children who go there to study had returned to their homes for holidays. It is not known how the fire originated. The local fire brigade was quite overpowered, but assistance came from St. Hyacinthe.

TO BE HANGED AT REGINA.

Magyar, the Hungarian, Found Guilty of Murder.

A despatch from Oxbow, Sask., says: Vincent Magyar, the Hungarian farm laborer, who shot his employer, Donald Campbell, at Frohisher last March, was on Thursday found guilty of murder and sentenced to hang in Regina September 6. The crime was peculiarly brutal. Magyar was of a sullen disposition, and wished to leave Campbell, who refused to give him his discharge, owing to the approach of seeding. Baulked in his desire, the incensed foreigner walked into the house, got a shotgun and fatally wounded Campbell, who was one of the best known farmers in that district. The murderer put in a plea that he acted in self-defence, stating that Campbell had attacked him with a fork. When the sentence was pronounced the prisoner seemingly was very little affected, only trembling slightly.

MUCH WORSE IN LONDON.

How Cheap Foods Are Made in Meat-preserving Factory.

A despatch from London says: As an outcome of the Chicago meat scandal, the Daily Mail employed Dr. Forbes Ross, a hygienist, to inspect the London meat-preserving factories, and it has printed several reports on the caterers of the best goods. Dr. Ross has now begun an investigation of the methods employed by the makers of German and other cheap food that is sold in the poorer districts. Of three places he visited on Thursday, two, apparently fearing exposure arising from the agitation, were busily installing new hygienic equipments. One, which the report does not name, was in a filthy condition. Every appliance was unsanitary. The details given equal, if they do not eclipse, the worst alleged against the Chicago packing houses.

THE WORLD'S MARKETS

REPORTS FROM THE LEADING TRADE CENTRES.

Prices of Cattle, Grain, Cheese and Other Dairy Produce at Home and Abroad.

Toronto, June 26. — Flour — Ontario wheat patents are quoted at \$3.15 in buyers' sacks, outside, for export. Manitoba first patents, \$4.40 to \$4.60; second patents, \$4.10, and strong bakers', \$4, Toronto. Bran is steady, being quoted at \$16 to \$16.50 outside, in bulk; shorts, \$19 outside.

Wheat—No. 2 Ontario white was 82½¢ bid on C.P.R. outside, and No. 2 mixed, 82c bid on C.P.R. with sellers at 83c. G.T.R. No. 1 Northern, Manitoba, offered at 87½¢, Point Edward or Owen Sound, and No. 2 at 84½¢ without bids.

Peas—No. 2 wanted at 82c outside, without sellers.

Oats—No. 2 Ontario white offered at 40c outside, with 39½¢ bid.

Corn—No. 2 American yellow offered at 61c to arrive Toronto, without bids.

THE DAIRY MARKETS.

Butter—Pound rolls are quoted at 17 to 18c; large rolls, 15 to 16c, and inferior at 14 to 15c. Creamery prints sell at 20 to 21c, and solids at 19 to 20c.

Eggs—Sales at 17 to 18c per dozen in case lots; splits, 14c.

Cheese—New are quoted at 11½ to 11¾c, the latter for twins.

COUNTRY PRODUCE.

Beans—Hand-picked selling at \$1.75 to \$1.80, and primes at \$1.50 to \$1.60.

Honey—Strained honey quoted at 8½ to 9c per lb, and combs, \$1.50 to \$2 per dozen.

Hops—14 to 17c per lb.

Hay—Car lots of No. 1 timothy are quoted at \$10 to \$10.50 on track, Toronto, and No. 2 at \$7.50 to \$8.

Straw—\$6 per ton.

Potatoes—Ontario stock, 90c per bag, and Eastern, \$1 per bag on track.

Poultry—Turkeys, fresh killed, 14 to 16c; chickens, last year's, 10 to 11c; spring chickens, 20c; live chickens, 8 to 9c.

HOG PRODUCTS.

Dressed hogs in car lots are nominal. Bacon, long clear, 12 to 12½¢ per lb in case lots; mess pork, \$21 to \$21.50; short cut, \$23.

Hams—Light to medium, 14½ to 15c, do., heavy, 14c; rolls, 12 to 12½¢; shoulders, 11½¢; backs, 17 to 18c; breakfast bacon, 15 to 16c.

Lard—We quote—Tierces, 11½¢; tubs, 11¾¢; pails, 12c.

UNITED STATES MARKETS.

Duluth, June 26. — Wheat — No. 1 Northern, 85½¢; No. 2 Northern, 84c; July, 85½¢; Sept., 83½¢; Dec., 83c.

Milwaukee, Wis., June 26. — Wheat—No. 1 Northern, 86½ to 87½¢; No. 2 Northern, 84 to 86c; Sept., 83½¢ bid. Rye—No. 1, 65 to 65½¢. Barley—No. 2, 56 to 57c; sample, 47 to 55c. Corn—Cash, No. 3, 51½ to 52c; Sept., 52¼ to 53c.

St. Louis, Mo., June 26. — Wheat—Cash, 87c; July, 80½¢; Sept., 81c; Dec., 82½¢.

Minneapolis, June 26. — Wheat—July, 83½¢; September, 82½ to 82¾¢; December, 83 to 83½¢; No. 1 hard, 85½¢; No. 1 Northern, 84½¢; No. 2 Northern, 83½¢; No. 3 Northern, 81½ to 82½¢. Flour—First patents, \$4.35 to \$4.45; second patents, \$4.20 to \$4.30; first clears, \$3.50 to \$3.60; second clears, \$2.45 to \$2.55. Bran—In bulk, \$12.25 to \$15.50.

.. BUSINESS AT MONTREAL

Montreal, June 26.—Grain — The demand for Manitoba wheat from foreign sources was limited to-day. Dealers still reported a dull market for oats at steady

Three sanitary inspectors are making a thorough investigation of the small packing plants throughout Chicago. The truth of the claim made by the big packers that the former really were to

THE "FIGHTING RECTOR."

Rev. A. E. Dalton Prepared for Emergencies in East End Work.

The "Fighting Parson" is a familiar figure on the stage. He appeared in real life, in the person of the Rev. A. E. Dalton, of Stepney, London, and gave evidence at the Thames Police Court on behalf of a prisoner named Toomey, charged with assaulting a policeman.

Mr. Dalton described modestly how on two occasions he went into the middle of a group of fighting men, to the help of Toomey, but, in spite of the evidence, Toomey was sentenced to three months.

"The case is only one of many that we have done here," said the Rev. A. E. Dalton, at St. Dunstan's rectory, Stepney. "All we East End parsons do our best to stop a fight if we see one. With men we generally succeed, but with women—" the rector raised his hands in an attitude of despair.

The rector is by no means a young man; he has iron-grey hair, and looks nearer fifty than forty.

VETERANS COMMUTE GRANTS.

Applications for Cash Payment Instead of Land Are Being Received.

A despatch from Toronto says: Large numbers of veterans are applying to the Government for the right to exchange their certificates for land grants for a cash payment of \$50. Under the legislation of last session, old soldiers who have received the scrip and have not located their property may commute their grant for that sum of money. It looked at first as if few were going to avail themselves of this opportunity, but now the requests are coming in readily. As soon as the applications are certified by the military land grants branch of the Department of Lands, Forests and Mines, the treasury issues cheques without delay.

FOR THE WESTERN HARVEST.

Shiploads of Binder Twine Arrive at Fort William.

A Fort William despatch says: The first signs of this year's harvest season in the western wheat fields were to be seen on Thursday afternoon at the C. P. R. freight sheds, where the U. S. steamer Pere Marquette discharged a cargo of fifteen cars of binder twine for Massey-Harris agencies through the west. The binder twine was taken on at Cleveland, and three more steamers will arrive within a week loaded with binder twine. By the arrival of Thursday's cargo it creates a new freight record, being the first time in the marine trade that a boat arrived with a full load of twine.

TURKISH TROOPS MUTINY.

Soldiers Turn Weapons Against Their Comrades.

A despatch from Constantinople says: Marshal Feizi Pasha, commanding the Turkish troops in Yemen Province, whose hands are already full in attempting to subdue the rebellious Arabs, has been obliged to deplete his slim stock of ammunition in employing his artillery against his own mutinous soldiers. Whole companies of regiments anxious to get home mutinied and decided to proceed to the coast. A stubborn fight between the loyal and disaffected troops ensued. The latter finally were vanquished by the fire of the artillery and surrendered after sustaining heavy losses.

ALL NEW ZEALAND MOURNED.

Funeral of Premier Seddon a Striking Demonstration.

A despatch from Wellington, N. Z., says: The funeral of Premier Seddon took place here on Thursday and was a striking demonstration of public grief.

ON THE FARM

HANDLING CLOVER HAY.

Clover hay is more difficult to cure and handle and shows up worse when badly made than timothy or most other grasses. As a rule, the leguminous plants have more sap than the grasses. Many farmers are asking questions about my crop of alfalfa and stopping at my door as they pass, writes Mr. R. S. Seeds. I certainly have a beautiful stand. In my opinion there is no rough feed equal to clover hay. Stock will do better and stand more on less grain if they are fed clover hay than any other feed, provided it is well made. I place the emphasis on well made.

Many farmers can cut and put up hay which they think is first-class, but which really comes out in bad shape and they wonder what is the matter with it. As a rule, it is burned and dried out, not made at all. It is cut down and allowed to lie until it is practically scorched, then raked and hauled in. This kind of hay-making is more disastrous to the legumes than to timothy and other grasses. In my opinion more hay is spoiled by dampness and the scorching rays of the sun than by rain. It has always been a source of amusement to me to see farmers wait until Saturday before starting the mower, so that they can haul it in the following Monday. Saturday above all days of the week is the one I would avoid.

Farmers who resort to this method are the losers and not the gainers. While they may gain a day, they are losing in quality and quantity a great deal more than the real value of the wages and labor of one day's work. Suppose it begins to rain Monday morning, just about the time the hay is fit to rake up or looking at it in another way, suppose the sun is strong Monday morning when the hay is fit to take up, nine times out of ten, the two dews and the two days' hot sun are sufficient practically to cure the hay.

I like to mow in the late afternoon or early evening, using a 6-foot mower. The next morning before the sun gets hot, I take a tedder and knock the dew off and set it up so as to let the air and sun get through it. I "ted" it again about noon; immediately after dinner start the hay rake, hauling it in at once or putting it in cocks. If it is put in cocks, I do not scatter them out until the dew is off the next morning. If I think it will rain near the middle of the day, I put the clover in cocks.

If it rains the morning after the hay was tedded and before I can get it into cocks, I start with the tedder when the sun comes out and stir up the hay to knock the rain off. I have had about half an acre of hay in cocks on Tuesday, and after an almost continuous rain have torn the cocks apart the following Friday and hauled in nice, green-colored hay.

In my experience, I consider a ton of good alfalfa hay ground worth almost as much as a ton of wheat bran. I like to cut clover when most of the heads are out and red. I always work ten hours a day, except in harvest. Then this rule does not apply. When a man is in the midst of his clover and timothy, the old saying is a very important one, "Make hay while the sun shines."

MANAGEMENT OF THE DAIRY HERD

In the first place, too much emphasis cannot be laid on the practice of a dairy farmer always, as far as possible, breeding and rearing his own heifers, paying the greatest attention to selecting the calves from the best butter-producing cows. The productiveness of a herd can be greatly improved in a few years by this practice, and there is less risk of introducing disease.

To fill up the places of old cows, and those which prove unlucky or unprofitable, young heifers to the number of

BUSINESS AT MONTREAL.

Montreal, June 26.—Grain.—The demand for Manitoba wheat from foreign sources was limited to-day. Dealers still reported a dull market for oats at steady prices, being 43½¢ in store for No. 2, and 43¢ for No. 3, and 42¢ for No. 4. Flour.—The market continues steady under a good demand; Manitoba Spring wheat, \$4.60 to \$4.70, strong bakers', \$4.10 to \$4.20; winter wheat patents, \$4.30 to \$4.40; straight rollers \$3.90 to \$4.10; do., in bags, \$1.80 to \$1.85; extras, \$1.40 to \$1.50. The market for millfeed is steady, there being a fair demand; Manitoba, in bags, \$18 to \$19; shorts \$20 to \$21 per ton; Ontario bran in bags \$19.50 to \$20; shorts, \$20.50 to \$21; milled meal \$21 to \$22 per ton, and straight grain, \$28 to \$29. Provisions.—Barrels heavy Canadian short cut pork, \$23; light short cut, \$21.50; barrels clear fat Lucks \$22.50; compound lard, 7½ to 8¢; Canadian pure lard, 11½ to 12¢; kettle rendered, 12½ to 13¢; hams, 13½ to 15¢; breakfast bacon, 17¢ to 18¢; Windsor bacon, 16 to 16½¢; fresh killed abattoir dressed hogs, \$10.50; alive, \$7.65 to \$7.75 per 100 lbs. Eggs.—New laid, 16 to 16½¢ per dozen. Butter.—Choicest salted creamery, 20½ to 21½¢; unsalted, 22½ to 23½¢. Cheese.—Ontario, 11½ to 11¾¢, Quebec, 11½ to 11¾¢.

LIVE STOCK MARKET.

Toronto, June 26.—Moderate offerings of cattle at the Western Market to-day produced an active trade.

Several loads of good exporters were brought forward. The range of prices recorded was \$4.80 to \$5.25 per cwt.

Choice butchers' heifers, ranging around 1,000 pounds, sold remarkably well. Quotations were as follows:—Best butchers', \$4.75 to \$5.12½; fair to good butchers', \$4.40 to \$4.70; medium butchers', \$4.15 to \$4.40; mixed lots and cows, \$2.75 to \$3.90; fat cows, \$2.75 to \$3.75 per cwt.

Trade was fair in feeders and stockers. Short-keeps, \$4.60 to \$4.85; feeders, \$5.00 to \$5.15; \$4 to \$4.50; stockers and stock calves, \$3.25 to \$3.90 per cwt; inferior and common animals were not wanted.

The liberal deliveries of milch cows have somewhat overstocked the market. The range of prices was \$30 to \$50 each.

Export ewes, bucks, and lambs were steady and unchanged. Export ewes, \$4.25 to \$4.50; export bucks, \$3.50 to \$3.75 per cwt; lambs, \$3 to \$6 each. Calves were steady at ¾ to 6¢ per lb.

Hogs were unchanged. Selects were quoted at \$7.25, and lights and fats at \$7 per cwt.

FEES SHOW INCREASE.

Payments to Provincial Secretary for May Were \$15,074.

A despatch from Toronto says: The increasing number of concerns incorporated in the province has resulted in the augmentation of the fees paid into the Provincial Secretary's Department. During the month of May the incorporation of companies and other sources of income produced a revenue to the province of \$15,074. Last year during the same period the fees were \$14,431. Indications are that the total fees for the year will be very large. Already since Jan. 1 they have produced \$25,000 more than in the first five months of 1905.

TAMARACKS GROW AGAIN.

Trees in Northern Ontario Thought to be Dead, Are Reviving.

A Toronto despatch says: Some years ago the tamarack trees in the northern portions of the province as far north as Hudson's Bay, and including Algonquin Park, assumed every appearance of being dead. It was thought that they had been attacked by the saw-fly and destroyed. This season they seem to be reviving. Reports from fire-rangers in the north say that the trees are commencing to sprout and grow again.

River, near Philadelphia.

Three sanitary inspectors are making a thorough investigation of the small packing plants throughout Chicago. The truth of the claim made by the big packers that the former really were to blame for the meat scandal will be tested.

Mrs. Charles Skinner, of Jackson, Penn., a 71-year-old woman who on Wednesday took her first ride on a railroad train, was so frightened that the train was stopped and she was permitted to alight owing to fear that she would die of fright.

Nine hundred and ninety-nine years in the penitentiary is the penalty imposed upon Show Williams, a negro, for catching a young white woman by the foot. The negro entered the girl's room at Belton, Texas, a few nights ago and seized her by the foot, but her screams brought aid and he was arrested.

The parents of Miss Sarah Rhodes, of Urbana, Ohio, who was thought to be ill from overwork at the University of Pennsylvania, on Thursday received word that she coughed up a needle. The parents remember that when she was a small child she had a needle broken off in her arm, and the piece has been in her body all these years.

During the funeral of Michael O'Connor at Marion, Ohio, on Wednesday, Rev. Joseph Denning told how the blind mother, Mrs. Anna O'Connor, 80 years old, had dreamed her son was dead on the night he died in Austin, Texas. "She beheld his form draped in a shroud and knew her boy was dead before the sad news came by telegram," said the preacher.

GENERAL.

The Japanese Minister of Finance will probably show a substantial surplus.

The Persian Ambassador has complained to the Turkish Government of the further despatch of troops and armaments to the Persian frontier, pointing out that it constitutes danger to the good relations existing between the two countries.

PLENTY OF RAIN.

The Western Crop Reports Continue Favorable.

A Winnipeg despatch says: The weekly crop report of the C. P. R. was issued on Wednesday and shows that the average growth is about eighteen to twenty inches, which is quite satisfactory at this time of the season. The west occasionally suffers from dry weather, but this season the only question is whether there is to be damage from excessive rain. Eighty hours' rain is reported at Poplar Point and Marquette, which suggests a damage of 5 per cent. With this exception, agents of the C. P. R. agree in stating that no harm has yet been suffered from the rains of the past week, and practically the unanimous opinion of the reporting agents is that the crop was never in more promising condition than it is at the present time.

TWO NEW TURBINERS.

Allan Line Will Further Improve Its Service.

A despatch from Glasgow, Scotland, says: The Allan Line has decided on the active development of its American service, and as a beginning contracts have already been drawn up for the construction of two new turbine liners, larger than the Virginian and Victorian, lately built for the Canadian traffic.

CZAR AND KAISER TO MEET.

Nicholas to Attend German Naval Manoeuvres on the Baltic.

A despatch from Berlin says: It is stated that the Czar and the Kaiser will meet at the end of July on the Baltic on the occasion of the German naval manoeuvres, which the Czar is likely to attend.

Demonstration.

A despatch from Wellington, N. Z., says: The funeral of Premier Seddon took place here on Thursday and was a striking demonstration of public grief. An enormous number of people followed the hearse on foot to the grave through streets packed with spectators from all parts of the colony. The day was observed as a general holiday throughout New Zealand.

GIVEN STIFF SENTENCE.

Montreal Child Slayer Gets 25 Years in Prison.

A despatch from Montreal says: In the Court of King's Bench on Wednesday Chief Justice Lacoste sentenced Hackett, found guilty of manslaughter in connection with the death of the Ahearn child in April last, to twenty-five years in penitentiary. In a statement the prisoner claimed that he was innocent of the crime.

SLEEPING SICKNESS.

Lieutenant Tulloch Dies a Victim of the Disease.

A despatch from London says: Lieut. Tulloch, who accompanied the Royal Society's commission to Uganda to investigate the "sleeping sickness," which disease he contracted while dissecting an inoculated rat, died on Wednesday in London of the sickness.

CUBAN TOWN DESTROYED.

Sagua La Grande a Prey to Flood and Fire.

A New Orleans, La., despatch says: Cablegrams reporting the destruction of Sagua La Grande, a town of about 15,000 inhabitants in Santa Clara Province, Cuba, were received here on Wednesday night by Stauffer, Eshelman & Co. Two messages were received, the first announcing that the town had been flooded, and the second saying that it had been entirely destroyed by fire. The messages came from the firm's representative at Havana.

GUILTY, GETS FIVE YEARS.

Man Who Robbed Offerory Boxes in Winnipeg.

A Winnipeg despatch says: Joseph Kaiser, who was arrested on Wednesday on a charge of burglarizing Rev. J. L. Gordon's residence on May 1st and also of several other similar crimes, including the robbery of the offertory boxes in St. Joseph's Church, pleaded guilty in the Police Court on Thursday morning and was sent to the penitentiary for five years.

DOWN WITH FATHER NEPTUNE.

The greatest depth ever reached by a diver has just been attained by a young naval engineer, who dived to examine the French vessel sunk near Saigon. To protect himself against the pressure of the water he clothed himself in metal plates, and he made breathing possible at a depth of 327 feet by a chemical arrangement of his own invention. He discovered that at a depth of 1,094 yards all submarine monsters change in shape because of the enormous pressure of the water. At thirty feet below the surface one gets odd effects in light. Seen through the pale, moving water it assumes strange rainbow hues. At a depth of 129 feet the sandy bottom of the sea, in intense sunlight, looks like molten gold. Below 200 feet darkness commences, and at 327 feet pitchy blackness surrounds one that must be illuminated to make moving safe.

WHAT WILL HAPPEN TO IT?

"That flimsily constructed public building is a scandal," exclaimed the patriot.

"Never mind," answered Mr. Degraft, smoothly, "it will soon blow over."

herd can be greatly improved in a few years by this practice, and there is less risk of introducing disease.

To fill up the places of old cows, and those which prove unlucky or unprofitable, young heifers to the number of one-third or one-fourth of the total herd should be available each year. The time at which heifers should bear their first calf depends a good deal upon how they have to be reared, which, needless to say, should be as well done as possible. Everything possible should be done to develop the frame, as it has been proved that the largest animals in any particular breed are the most economical producers of butter. Then, provided heifers have been well reared, they can be put to the bull at a year and nine months. Some breeders like them to come in at a year and nine months, or two years, and then let them as long as they will, and then let them have a season's spell. Anyway, the aim should be to develop the frame, to give large digestive capacity.

Heifers, after their first calf, should always be milked for as long a period as possible, say ten months, even if only stripping, and never allowed to go dry about six months after calving, as they often will if precautions are not taken. This encourages a most valuable habit, that of persistent milking.

A cow should never be dry more than six or eight weeks out of the year, but she requires this time to regain strength for the following season. A good cow will often milk up to the time of calving, but if allowed to do so will not produce as good results next year. She must be dried off systematically: first by milking only once a day, and then once in two days, then say twice a week till perfectly dry. Great care must be taken not to finally turn her out until the udder is perfectly clear, or the loss of a quarter may result.

PASTURE CROPS FOR HOGS.

Vetches.—A crop remarkably palatable to pigs and one that gives a fairly good return per acre is the common black vetch. It is very little, if any, superior to peas, however, and the seed is usually more expensive.

Hay Vetches.—Make a very good green feed for swine, but the seed is exceedingly expensive, and a large amount is required per acre. It has, however, not infrequently stood through the winter here, and so might be utilized for an early spring pasture. Like rape, it will grow up again if not too closely pastured or clipped.

Oats and Peas.—These two sorts of grain mixed in equal parts by weight and sown at the rate of three bushels per acre, furnish a pasture or soiling crop that gives very good returns per acre. Either sown alone is fairly satisfactory, but not nearly so valuable as the combination.—J. H. Grisdale.

A DOUBLE MURDER.

A Quarrel Between an Indian and a Half-Breed.

A despatch from Hazelton, central British Columbia, says: A double murder was committed here on Tuesday. Alexander McIntosh, a halfbreed, and Max Leclaire, a guide, from Kamloops, are the victims, and the murderer is alleged to be Simon Johnson, an Indian of the Kispiox tribe. McIntosh and Johnson quarrelled on Monday night, and when the halfbreed was found next day in the middle of the road a mile and a half from town, suspicion at once pointed to the Indian. McIntosh had been shot from behind, apparently while riding into town. A man was at once sent on a hunt for Johnson. Half an hour later an excited Indian rode into town from Kispiox to say he had discovered another body. It turned out to be that of Leclaire. He too had been shot in the back while returning to his camp on Kispiox trail, north of Hazelton. Leclaire's horse is missing, and it is supposed the Indian killed the guide in order to get the animal so that he might escape on it. Several Indians are on the trail of the supposed murderer.

DON'T TRY OXYGEN HABIT

THE VICTIM'S SENSATION IS MOST EXHILARATING.

Induces Premature Old Age—Bright Today, But Utter Wreck To-morrow.

Drug takers have discovered a new habit, which is claiming more and more slaves every day. It is known as the oxygen habit. Most exhilarating, almost intoxicating effects, so its devotees claim, can be obtained by the inhalation of pure oxygen.

The faculties are sharpened, the brain acts more clearly, and a general feeling of robust health follows its administration.

This may be quite true, but the reaction that follows is as terrible as the after-effects of morphine or cocaine. A feeling of drowsiness and oppression comes on as the effects of the oxygen pass away, leaving the victim utterly unable to withstand a fearful desire to again intoxicate himself.

Not only is this the case, but while under the influence of the gas the subject lives at a tremendous pace, the oxygen taken setting his various organs to do many times their normal work. The victims system is soon worn out, and he dies in a very short time, of premature old age and decay.

SHORT LIFE AND MERRY.

"The habit is, fortunately, not very common yet, said a prominent London, England, specialist.

"Oxygen is administered medicinally in some lung diseases—pneumonia, most commonly—but we always find that a rise of temperature follows even in those cases.

"Nature has ordained that human beings should take a limited amount of oxygen, and for that reason pure air is diluted with five parts of nitrogen to one of hydrogen.

"If then you take your oxygen 'neat,' your system cannot but suffer; you completely disorganize it; you set it to do a tremendously increased task, and, like any mechanical engine set to do work it is not strong enough to do, you will knock it to pieces in a very short space of time.

"I put this view before a victim of the habit a short time ago, and he replied with a laugh, 'Well, a short life and a merry one, you know.'

"That, of course, is the usual view held by the drug taker, but to see the wreck of a man who has been, say, taking opium for a few years does not suggest a merry life by any means."

The London Daily Mirror has had under its notice a disciple of the new habit. After taking the potent gas he is as happy as a school boy. His movements are quick and active, he is in boisterously good spirits, and is incapable of looking on the dark side of anything. Only the uncanny dilation and contraction of the eye-pupils—like the symptoms of a man who indulges in the Turkish "Hashesh"—tell that he is in an abnormal condition.

He is like an ordinary man, who has just heard a startling piece of good news, and his happiness lasts, as a rule, through the whole of the day.

But, on the next, he is as he confesses moodily himself. "an utter wreck." And when his depression is more than he can bear, his natural relief is in the gas again.

PERSONAL POINTERS.

Interesting Gossip About Some of the World's Prominent People.

Lord Tweedmouth, First Lord of the Admiralty, is an assiduous collector of old china.

The new Queen of Denmark is a passionate admirer of Charles Dickens, and

LONDON EXTRAVAGANCE

LARGE SUMS SPENT ON PRIVATE ENTERTAINMENTS.

Wealthy Londoners Dine at \$50 Per Head — Green Peas at \$1.55 a Spoonful.

There seems to be no falling off in the practice of spending enormous sums in private society entertainments in London, England.

The manager of one of the largest catering houses has remarkable extravagances to cite.

"The cost of ball and at home suppers varies according to the season of the year," a representative of the firm said.

"A leader of society gave a small dinner party last winter which cost her thirty guineas per head, exclusive of wine.

"Young green peas were valued at 7s 6d a spoonful, and asparagus at 5s a stick. Peach-fed Virginian hams, with brandy and champagne sauce, cost half a guinea a plate. New potatoes were 1s each. The strawberries and peaches worked out at three guineas per head."

\$1,915 FOR FLOWERS.

"We have just sent in a bill for \$2383 to a hostess who gave a dinner party," said the manager of a West End firm of florists the other day. "That sum represents only the floral decorations, which consisted of pale pink roses and lilies of the valley. The roses cost 2s 6d for each bloom, and they were used not only on the table, but for massed effects on the staircase and rooms."

One evening's musical programme may cost anything from £200 to £300.

"Many hostesses pay a first-class artist from 200 to 300 guineas," said the representative of a well-known agency. "The services of other performers must also be engaged, so you can readily see that music is a very expensive item."

It is suggested that entertainments can be made considerably cheaper, and yet be seemingly extravagant.

WHO LUCULLUS WAS.

For instance, a talking machine can be hired for two guineas a night, and concealed in a bank of greenery. None of the guests would suspect its presence until from a bower of roses att's voice suddenly rang out in "Voi che sapete," or Meiba trilled the valse aria from "Romeo and Juliet," or Caruso pealed out in "Di quella pira."

"Why should not hostesses invest in the finest artificial flowers, which can be used again?" the superintendent of a charitable school of artificial flower-makers asked.

"We can produce most perfect specimens of the 'Caroline Testout, rose,' for which florists are charging 2s 6d, at 6d each.

"It is impossible to detect these artificial flowers unless they are handled, especially if arranged with real foliage. We scent the blossoms with rose perfume."

"We decorated a dinner table last month with magnonette and yellow roses, with trails of real smilax and maidenhair fern. The hostess was asked how she had obtained magnonette so early in the year. The flowers cost 15s, and can be used on many occasions."

Lucullus was a rich Roman soldier and gourmet noted for his signficence and self-indulgence.

It is recorded that he spent more than £1,700 on a single meal. To a questioner who asked him who were to be his guests at a particularly splendid supper, he answered, "Lucullus will sup to-night with Lucullus."

HAUNTED BY HOGS.

Sailors Reported Weird Things About Bermuda.

"Hog money" is the name by which

PORTUGUESE BULL FIGHT

BLOOD IS NOT SHED, NOR HORSES GORED TO DEATH.

Fighters in Picturesque Costumes — Splendid Exhibition of Horsemanship.

The Portuguese bull fight, which, while not without danger and some humanitarian objection, has none of the painful details of the Spanish bull fight, writes Major H. C. Evans in the London Express. Blood is not shed, horses are not gored to death, and it certainly necessitates in its participants nerve, courage and agility.

At the beginning of the fight the great doors opposite the royal box are thrown open, and the procession of bull fighters in their picturesque costumes enters, crosses the arena, and halting under the royal box salutes its occupants and asks the necessary permission to begin the entertainment.

The espadas, or fighters on foot, then retire, followed by those on horseback, who in making their exit give a splendid exhibition of horsemanship and the manner in which their splendid horses are trained. With hardly any movement of their hands they rein back their mounts in a perfectly straight line across the arena, and through the gates that had served them as an entrance. The entrada is over, and everything is

READY FOR THE FIRST BULL.

In obedience to a trumpet call the doors opposite the royal box are again swung open, and a caballero, or mounted fighter, comes in. His horse is a thoroughbred, carrying his ribbon bedecked head proudly and arching his neck in a way that shows plainly how conscious he is of the attention he is attracting, while his perfectly groomed coat shines like burnished metal in the sunlight.

On his back, seated like a centaur, his feet in the old Spanish buck stirrups, is a man wearing a three cornered, feather trimmed hat, a scarlet coat reaching below his knees, trimmed with silver lace, a pair of mouse colored breeches and long boots of soft black leather. In his right hand he carries a long banderillo. Scattered about the ring are four or five men carrying cloaks, whose business it is to attract the bull and place him in favorable positions for the caballero to plant his banderillos. The trumpet again sounds, the smaller door to the left of the royal box is opened and in rushes the bull. His horns are covered with leather to prevent his doing any harm should any hapless actor in the fight make a slip and get within their reach.

The bull rushes straight to the centre of the ring, looking rather perplexed, and wondering what on earth he is there for. A scarlet cloak is flashed before his eyes, and he is after it in a second, giving it an angry toss as it hangs on the barrier, the man manipulating it having lost no time in placing himself on the other side. No sooner does the bull think that he has got rid of his baiter than another cloak is

FLASHED IN FRONT OF HIM,

and he gives chase once more. Soon he sees the scarlet coat on the horseman, and makes for that.

With consummate skill the rider, looking as if he were glued to his saddle, draws the bull on, checking his pace so as not to get too far away, yet at the same time leading the bull to think that the horse will fall an easy prey to his horns. On and on they go, and now the bull, thinking the time and distance just right, lowers his head preparatory to goring the horse. Something must have gone wrong, for the bull stops dead in his tracks with a sharp pain in the upper part of the neck, while the horse breaks into a walk a few yards away.

The band plays a triumphal strain

THE WIZARD OF COAL TAR

DR. PERKIN AND THE TREASURED HOUSE HE OPENED.

Industries Based Upon the Discovery—Fiftieth Anniversary This Year.

The fiftieth anniversary of the discovery by William Henry Perkin of the first coal tar color, mauve, occurs this year. Plans are on foot in England, Germany and the United States for a celebration of the event.

The importance of Dr. Perkin's achievement lies not in the production of the one color, mauve, from coal tar, but in the successive steps in chemical development which were built upon that discovery. Before Dr. Perkin's time coal tar was an almost worthless by-product of the process of making illuminating gas. Since his investigations were made public not only are all the colors of the spectrum made from coal tar, but in addition it has become the source of numberless drugs and chemicals, of artificially prepared perfumes, of saccharine, the sweetener, with 300 times the strength of sugar; of photographic developers, of powerful explosives. Besides these direct benefits from the discovery all synthetic chemistry has been revolutionized by the new method made possible through Dr. Perkin's work.

William Henry Perkin left the City of London School in his fifteenth year to enter the Royal College of Chemistry in Oxford street. Two years later he became a private assistant to Prof. Hofmann.

During his Easter vacation in 1856 Perkin showed his enthusiasm for his work by staying at home trying to produce guanine artificially. In this work he was led to oxidize aniline, and the dyestuff known as mauve resulted.

HE WAS ABOUT 18 AT THIS TIME.

He resolved to enter upon the manufacture of the product. Having patented his discovery on August 26, 1856, he began building works at Greenford Green, near Harrow, in the following June. In this he was aided by his father and brother. By the end of the year the new dye was on the market.

The second dyestuff to receive Perkin's attention was madder red, or alizarin. Graebe and Liebermann, the German chemists, announced a method of artificially producing this color in 1868. Perkin immediately set about perfecting a process for making it in large quantities and was successful within a year. The Germans were not in a position to compete with him in the manufacture of this, their own discovery, until four years later.

The founding of the artificial perfume industry may also be attributed to Perkin, since he discovered a method of producing in the laboratory coumarin, hitherto obtained from the tonka bean and sweet clover. This odoriferous compound is used in the flavoring of tobacco. His work along this line also aided materially later in the manufacture of indigo artificially.

Following Perkin's successful work, chemists in France and Germany set about the task of obtaining other colors. The resulting industry has become of vast importance, especially in Germany, where it is often spoken of as the one which may best be called

THE NATIONAL INDUSTRY.

Statistics show that five of the largest firms engaged in color manufacturing in Germany have a combined capital of about \$24,000,000.

Dr. Perkin has devoted himself of late years almost entirely to research work, leaving business details in the hands of younger men.

Prior to Perkin's time no one had been able to manufacture dye stuffs artificially in large quantities. Dyers depended entirely upon the natural colorings furnished by plants and animals.

Lord Tweedmouth, First Lord of the Admiralty, is an assiduous collector of old china.

The new Queen of Denmark is a passionate admirer of Charles Dickens, and knows many of his books by heart.

Mr. Whitelaw Reid, the American Ambassador to Great Britain, diets himself with the utmost care. He consumes quantities of milk and oatmeal, but neither tea nor coffee, and very little meat.

This year will see the first statue of Queen Alexandra erected in England. It is to be placed outside the London Hospital by the Governors of that institution as a recognition of Her Majesty's care for the poor and suffering. The only other statue of the Queen is at Copenhagen, where it was erected shortly after her marriage.

Earl Cromer is one of the most thorough students of the Bible among Britain's public men. Probably the Old Testament has a special interest for him, seeing that he has such a wide knowledge of Egypt. Thirty-four years ago he became private secretary to the late Earl of Northbrook, who was also a deep student of the Bible.

M. Fallieres, the new French President, gets up between seven and eight, and does his hardest work directly after his morning walk. He never smokes, and he reads a great deal. In his own words: "I devour all manner of books—historical, philosophical, and literary. Tolstoi and Vigny are my favorite authors, and I am a great lover of handsome books. My morning walk often takes me to the old book-dealers' stalls on the Quay. Book-hunting is, indeed, one of my hobbies. My other hobby is playing billiards."

Mr. Walter Vaughan Morgan, the Lord Mayor of London, at the recent prize distribution of the City of London Police Athletic Club, remarked that he was "known to the police." Forty years ago he stayed late at his business premises, and on leaving he was arrested by a couple of stalwart constables, taken to the police-station, and there charged with maliciously breaking out of his own establishment. But the inquiries that followed resulted in his being discharged "without a stain on his character."

One can hardly imagine that dignified and zealous temperance advocate, Lady Henry Somerset, as a practical joker, and yet it is a fact that she, together with her cousin, Lady Dudley, once dressed up as a pair of French tourists, and in this guise and heavily veiled visited her place at Eastnor Castle and went all over it. But apparently she was not sufficiently impressed by the beauties of her own residence, for afterwards her housekeeper confided to her that "that Duchesse de Montmorency"—the name which Lady Henry had given herself—"was a disagreeable creature."

Sir Charles Wyndham tells a good story against himself. One day he was in the Garrick Club—"David Garrick," by the way, was being played at his theatre—and the famous actor sat down in the corridor, under Garrick's portrait, and in Garrick's chair, which is one of the treasures of the club. Harry Hamilton, the dramatist, came in, gazed at Wyndham, then at the portrait, at Garrick, then at Wyndham. "Charles," he said, finally, "do you know, you are growing more like Garrick every day?" "Do you think so?" returned the actor, pleased with the compliment: "I am very glad." "Yes, indeed," the friend replied, "and less like him every night."

Some of Britain's best-known and most popular duchesses have not themselves sprung from titled families. The Duchess of Bedford is an instance of this, and her Grace of Sutherland another. The latter lady is a daughter of Major Robert Poore, and sister of the famous cricketer of the same name. The latter married Lady Flora Hamilton, the Duke's sister, and in 1901 the Duke fell in love with and married Miss Nina Poore. The Duchess is a beauty—very fair, tall, with blue eyes and golden hair. She is much more fond of country than of town life, and especially of her husband's beautiful place in Scotland—Hamilton Palace. The Duke is premier peer of Scotland and hereditary keeper of Holyrood Palace.

HAUNTED BY HOGS.

Sailors Reported Weird Things About Bermuda.

"Hog money" is the name by which the brass money which began to be struck in Bermuda in 1650 came to be known. On one face of it was a hog, on the other a ship of that period. These old coins are very rare, and highly prized by collectors.

The history of this device is curious and interesting. A Spanish vessel, commanded by Juan Bermudez, and on its way to Cuba with a cargo of hogs, was wrecked there. This was in 1515. Later in the same century, when the English discovered this land, they found a country inhabited by hogs.

It is also interesting to note that the English discovered it in the same way as the Spaniards. An English ship was wrecked there. Is it any wonder that the treacherous coast got from the Spaniards and English alike the name of "Devil's Land"? Yet it is one of the most beautiful coasts in the world, and it has been claimed that in brilliancy Mediterranean effects are not at all equal to those of Bermuda.

Bermuda is said to be the island of Shakespeare's "Tempest." The strange noises which mariners heard coming from this island, and which they did not then know were produced by hogs, caused them to say that it was haunted, and to report weird things of it.

CHILD SACRIFICE.

National Conference in London to Consider Slaughter of Innocents.

The abnormal infantile mortality in England has led to the summoning of a national conference, which met in London the other day, under the presidency of John Burns, president of the local Government Board.

"In the days when there were no canned meats and children were fed naturally," said Mr. Burns, "there was no such sacrifice of child life." He believed he would be well within the mark in saying that 100,000 lives are sacrificed yearly through neglect, carelessness and ignorance.

Drinking among women, Mr. Burns further declared, was one of the most serious tragedies which confronted Great Britain. This was daily increasing the mortality of infants under five years of age, and constituted a national reproach, demanding immediate attention.

ATTENDANCE RECORD.

The four children of Mr. E. Hallworth, jeweller, of Great Harwood, England, have created a unique record by their remarkable attendance at the Congregational Sunday-school in that town, for a period totalling fifty-one years. There was only one solitary absence during that time, that being on account of illness. Alice Ann, the eldest daughter, aged twenty-one, has never missed for fifteen years, and Clara, aged eighteen, James, aged sixteen, and Archibald, aged thirteen, have respectively a record of twelve, thirteen, and eleven years' unbroken attendance.

GLASS BROKEN BY THE VOICE.

It is scarcely credible, but it is a fact, that a glass can be broken by the voice. If you strike a thin wine-glass while you hold it by the stem it will emit a certain note—in most cases a pretty deep one. On approaching the glass rapidly to your mouth, and shouting into it the same note as loudly as possible, the vibrations of the glass being thereby extended, it will be shattered into fragments. This used to be a favorite experiment of Labache, the renowned singer, who would thus break, one after the other, as many glasses as were handed to him.

DOES SMOKING CAUSE CANCER?

As the result of official inquiry in Jamaica, it is stated that cancer of the tongue and lip is curiously uncommon in a country in which smoking is almost universal among both sexes.

I have gone wrong, for the bull stops dead in his tracks with a sharp pain in the upper part of the neck, while the horse breaks into a walk a few yards away.

The band plays a triumphal strain and various colored paper flags unfold themselves from the short end of the banderillo that remains planted in the bull's neck in spite of his wild efforts to shake it off. Mad with rage, the bull goes for the nearest man, who, slipping quickly out of the way, directs the infuriated animal towards the horse.

The bull recognizes his tormentor, and starts off in mad pursuit, bent on retaliation. Now he is close to him—so close that the onlookers hold their breath, expecting to see the horns enter the horse's body in spite of their leather protection. Down goes his head, sure of success, but he has failed again. He feels another sharp prick in his neck, and again the band proclaims the success of the caballero.

Two banderillos are now planted, whose bite is accentuated by each movement of the bull's fine head. Another pause and the bull stands pawing the ground in the centre of the ring. He seems to have made up his mind that he has had enough of this game, where he gets all the kicks, and can never succeed in getting any satisfaction in return. Four or five more darts are planted, and then, as he appears to have become bored,

THE TRUMPET AGAIN SOUNDS.

a herd of cows is driven in, which surrounds the bull and leads him out.

The next bull is then sent into the ring and faced by an espada. The procedure is much the same as before, except that the banderillos used are much shorter. The man stands still while the bull rushes at him, and as the latter lowers his head for the charge the former plants his darts, and steps deftly out of the animal's way, though from the spectator's point of view it seems as if it was almost too late. When the bull fighter is dismounted the coup de grace is given with a sword, not with the view of killing the bull—that is never done—but to make the show resemble its more cruel and barbaric Spanish prototype. The animals are just pricked over the shoulder.

To provide a diversion, the mozos forcados now enter the ring. Their business is to seize and lead out the bull. The process of seizing the bull is by no means an easy one or free from danger. The mozos forcados, dressed in gayly colored shirts and knee breeches, advance in line toward the bull, one of their number who acts as leader, being slightly in front of the rest. On approaching the animal, out of whom the fight has not by any means been completely knocked, the leader makes a dash at him and grasps his horns.

If he can stick to the bull all is well, and his comrades close around, overcoming the bull by sheer weight of numbers. If, however, the leader loses his grip, he will fare badly. He will get tossed and possibly rather badly hurt. Generally, however, he obtains a firm grip, plants himself firmly between the bull's horns and defies all the latter's attempts to dislodge him.

MAKING SPARROWS WHITE.

The Japanese are ruthless in their tampering with Nature. If they decide that they want a bird or an animal of a certain shape or color they set about manufacturing the article, so as to speak, by the exercise of exceedingly clever ingenuity and untiring patience. Here, for example, is how the white sparrows are produced. They select a pair of greyish birds, and keep them in a white cage in a white room, where they are attended by a person dressed in white. The mental effect on a series of generations of birds results in completely white birds. They breed the domestic cock with enormously long tails after the same principle. They first select a bird with a good tail, giving him a very high perch to stand on; then with weights they drag the tail downward, carrying on the same system with the finest specimens of his descendants till a tail almost as long as a peacock's is produced at last.

HANDS OF YOUNGER MEN.

Prior to Perkin's time no one had been able to manufacture dye stuffs artificially in large quantities. Dyers depended entirely upon the natural colorings furnished by plants and animals. Hofmann, Perkin's master, taught the production of aniline from coal tar benzol, but it was left for Perkin to realize the color possibilities which lay in coal tar.

The development of the industry thus founded by Perkin is shown in the large establishments now devoted to the manufacture of coal tar products. One of these factories employs 4,500 workmen, including 145 graduate chemists, all having received their doctor's degree, 175 engineers and 500 clerks. This firm alone owns 1,200 German and 1,400 other patents.

The possibilities still lying dormant in coal tar fire the imaginations of chemists. One chemist concluded a paper read before a body of chemists in February as follows:

"What these raw materials obtained through the distillation of coal tar will furnish in the future is a matter of conjecture, but if you will permit me to prophesy I think we will surely find remedies which will

CURE CONSUMPTION.

and other diseases caused by bacterial infection. We will have perfumes which will be stronger and more beautifully scented than anything which nature can produce.

"We shall find explosives which will not endanger human lives in the handling, but which will be more effective than nitro-glycerine and all others known at present. We shall be able to preserve materials of food for any length of time without injury to the health of the consumer."

It is in honor of the man whose researches have made possible these results that the jubilee this fall will be held. Those in charge of the arrangements in this country hope to have Dr. Perkin present at a banquet to be held in New York on October 6. At this time a personal token will be presented to Dr. Perkin.

In England, the suggested honors include the presentation to Dr. Perkin of an oil portrait of himself, the portrait to become the property of the nation at Dr. Perkin's death, the execution of a marble bust of the chemist to be placed in the rooms of the Chemical Society in London, and the establishment of a Perkin research fund for the promotion of chemical investigation.

EARTH CURRENTS.

Interesting experiments have recently been made at the Kew Observatory near London on the effects of the electric traction systems of the British metropolis. The delicate magnetic instruments of the observatory are affected by the currents. Metallic plates buried in the ground were connected with a photographic recording apparatus, and the tracings recorded by the instrument formed a picture of the time-table of the London Central Railway, although the nearest point of approach of that line is six miles from Kew. Even accidental breakdowns occurring on the traction-line were indicated in the photographic record. By connecting the earth-plates with a sensitive galvanometer, the effect of the movements of the tramway controllers was rendered evident, and a telephone being attached, sounds were heard at each controller movement.

FUMES HAVE NO TERRORS.

A new appliance for enabling firemen to work in the midst of smoke and fumes has just been tried in San Francisco. A hood, lined with oilskin, covers the head, and receives a supply of air from three cylinders. The fresh air is inhaled from a tube in the hood and the exhaled air is expelled through a kind of respirator over the mouth. A fireman worked for an hour in the midst of sulphur fumes, and the hood enabled him to do it without the slightest discomfort to his throat and lungs.

\$5,000 REWARD will be paid to any person who proves that Sunlight Soap contains any injurious chemicals or any form of adulteration.

Sunlight Soap

is better than other soaps, but is best when used in the Sunlight way.

Sunlight Soap contains no injurious chemicals.

Sunlight Soap is pure soap, scientifically made. Every step in its manufacture is watched by an expert chemist.

Sunlight Soap saves labor, and the wear of rubbing which common soaps require in washing fabrics.

Your money refunded by the dealer from whom you buy Sunlight Soap if you find any cause for complaint.

Lever Brothers Limited, Toronto

NEGROES AS SOLDIERS

AFRICAN TRIBES RECRUITED IN THE BRITISH ARMY.

Equipment and Discipline of Black Warriors for West African Warfare.

It can be safely said of most of the West African tribes recruited in the British service that they are a splendid body of men, who take fighting as they take their binchi (Hausa for food). In fact the only time they are ever known to really grumble is when provisions are hard to obtain. The ration allowance on service is one or two yams per diem, according to size. This dietary is, however, regulated by circumstances, and not infrequently they are left to their own resources to find food when it is not possible to obtain supplies at friendly villages. The native will never admit having eaten sufficient, and will, when questioned after a hearty meal, invariably place his hand on a hugely extended stomach, and, with a smile on his face, say, "Babu binchi" (No food).

The bases from which the expeditions are fitted out and start are at Sierra Leone, Accra, Axim, Gold Coast, with its military headquarters at Coomassie; Lagos and northern and southern Nigeria, with their respective bases at Lokoja and Calabar the whole comprising the West African Frontier Force, under the Colonial Office, and officered by officers seconded from their respective regiments from all parts of the British Empire.

ACTIVE SERVICE KIT.

The fitting up of an expedition is by no means such a long and difficult undertaking as the uninitiated would suppose, for the active service kit of the West African native soldier is by no means a large or luxurious one. It consists of:

- 1 blanket and cloak (a waterproof sheet is now often carried instead of one or both of the articles).
- 1 khaki shirt.
- 1 pair of khaki knickers.
- 1 pair sandals.
- 1 pair puttees.
- Rifle and bayonet, belt, haversack, etc.

The officer himself is at the most allowed only seven carriers; the load that each carries may not exceed sixty pounds. This total of 420 pounds embraces provisions for perhaps two months camp equipment, such as bed, bath, cooking utensils, etc., and does not permit, as can be readily imagined, of the inclusion of any unnecessary articles. No more odd spectacle can be imagined than to see a column of these fine swarthy negroes marching along in Indian file, as most of the paths are not broad enough for any other way, each carrying, in most cases, his rifle and perhaps a yam or two balanced on his head. It matters not whether the load be of sixty pounds or a box of matches, for preference he will carry it on his head.

Naturally, in a country such as this, where the rainy season is of such long duration, expeditions into the interior can only be undertaken between the months of December and May, which is the dry season.

TRIBES CHIEFLY ENLISTED.

So many tribes are recruited from, it would be too great a task to enumerate the various types fully. In northern Nigeria the Hausa is chiefly enlisted. He is a Mohammedan and is a born fighter. The battalion at Lagos is also mainly composed of Hausas, who come down trading from Kano, Sokoto, Zaria and other up-country places. Then there is the Fulani, who is—though not so ardent a soldier as the Hausa, being usually engaged in cattle raising—in features and color quite different from the Hausa.

The Yomba, who comes from the Lagos Hinterland, is inclined to be of a

ANNUAL REPORT THE SOVEREIGN BANK OF CANADA.

The fourth annual meeting of the shareholders of The Sovereign Bank of Canada was held at the Head Office, Toronto, 15th inst., and was largely attended. The following reports were presented:

GENERAL STATEMENT (Condensed)

30th APRIL, 1906.

LIABILITIES.		ASSETS.	
Notes of the Bank in Circulation	\$ 1,416,050.90	Cash on Hand and at Banks	\$ 2,615,237.56
Deposits	11,856,256.31	Bonds, Debentures, etc.	911,563.59
Balance due to other Banks	431,833.29	Call and Demand Loans, secured by Bonds, Stocks, etc.	2,902,731.11
Capital Stock Paid Up	3,585,410.00	Commercial Loans and Discounts	11,691,781.94
Reserve Fund and Undivided Profits	1,777,400.15	Bank Premises and other Assets	447,556.58
	\$18,569,000.75		\$18,569,000.75

DIRECTORS' REPORT.

Profit and Loss Account for the year ended 30th April, 1906:	
Balance at credit of Profit and Loss Account on 29th April, 1905	\$ 10,028.32
Net Profits for the year ended 30th April, 1906, after deducting Charges of Management, Provincial Government and Municipal Taxes, Advertising Expenses, and Accrued Interest on Deposits, and after making full provision for all Bad and Doubtful Debts	187,467.38
Premium on New Stock issued at \$150 per share	\$ 1,500.00
Premium on New Stock issued at \$150 per share	662,550.00
	767,800.00
	\$965,355.67

This has been appropriated as follows:	
Four Quarterly Dividends at 6 per cent. per annum	\$102,923.90
Transferred to Reserve Fund	\$30,000.00
Written off Bank Premises	10,000.00
Reserved for Rebate of Discount on Bills	5,000.00
Donations to Hospitals, etc., including South African Memorial Fund	1,500.00
	949,423.90
Balance carried forward	\$15,931.77

RESERVE FUND.

Balance at Credit of Account, 29th April, 1905	\$400,000.00
Transferred from Profit and Loss Account	62,203.00
Premium on New Stock, as shown above	767,800.00
Total, 30th April, 1906	\$1,169,999.00

All the Branches of the Bank have been duly inspected during the year. The most important event during the year was the sale of a large block of stock to the Dresdner Bank at \$150 per share net to the Bank. This, with the new stock issued in Canada, increased the Bank's paid-up capital to \$3,585,410 on 30th April. The Directors recorded their gratification at the unanimity expressed by the shareholders. Out of 1,040 shareholders there were but two dissentients, and their total holdings aggregated only 15 shares.

Comparative statements of the past four years were submitted, and were highly satisfactory to the shareholders. The increase of \$3,542,000 in the deposits, which now aggregate nearly \$12,000,000, affords the most satisfactory evidence of the ever-increasing confidence of the public in the Sovereign Bank of Canada.

The number of shareholders in the Bank on 30th April, 1906, was 1,120, as compared with 887 in 1905 and 841 in 1904. This wide distribution and the fact that the shareholders include some of the most powerful financial interests in the world, afford the investing and borrowing public, and all who do business with the Bank, a bulwark of strength and security of incalculable value.

The Directors record their appreciation of the zeal and efficiency of the staff, through whose efforts the Bank has now grown to such important dimensions.

The President spoke as follows:

In addressing the shareholders a year ago, when I also had the pleasure of announcing an increase in the dividend, I remarked that even with the increased capital then being issued, we anticipated no difficulty in paying a 6 per cent. dividend and still making handsome additions to the Reserve Fund and otherwise strengthening the Bank. You will understand how fully these anticipations have been realized when I tell you that we paid some \$103,000 in dividends during the past year, and, after doing this, had a surplus from the ordinary net earnings of \$94,500, as compared with a surplus of \$68,800 the year before over dividends aggregating only \$45,000. On this basis we could easily have paid 7 per cent. and still have had as much to appropriate for Reserve Fund, Bank Premises, etc., as we had at the end of April, 1905.

I will ask the General Manager to discuss the statement submitted to you, and before doing so, I wish to state that in Mr. Stewart we have a gentleman of proven ability and sound judgment, and under his management the shareholders may look forward to even greater results in the future.

The First Vice-President said: "One thing I have noticed which has pleased me very much is that the enlargement of the Bank is attracting a more important and influential class of business than might have come to us if we continued to be a comparatively small institution."

The greatest difficulty we have to contend with is the securing of premises to accommodate our business, as in a short time after we open at any important centre, the business outgrows the building.

GENERAL MANAGER'S ADDRESS.

The General Manager said the statements submitted were as complete as it was possible to make them, and hoped that with a few explanatory remarks the shareholders might form a fairly accurate conclusion as to the present position of the Bank and an intelligent idea of its future prospects.

The Profit and Loss statement shows the result of the year's business to be quite satisfactory; the Bank made more money than in any previous year. He quite commented on the appropriation of \$1,500 to hospital, etc., and stated that such contributions were both necessary and desirable. He felt sure the shareholders would always approve of donations of this kind if confined to moderate amounts. He referred generally to the improvement in the Bank's position indicated by the following figures:

Capital paid up increased	\$2,285,419
Reserve fund increased	\$60,774
Circulation increased	\$17,860
Deposits increased	\$5,542,091
Commercial loans and discounts increased	\$6,999,107
Total assets increased	\$8,999,107

The following figures show that the Bank's staff and customers have doubled within the past two years:

	1904	1905	1906
No. of officers on the staff	151	247	358
No. of depositors	17,710	26,725	37,538
No. of discount customers	3,531	6,185	7,364
Total number of customers	21,241	32,910	44,902

Since the previous Annual Meeting the Bank had moved into its new building, ten-storey building in Montreal, in which every office was rented. This building, after charging a moderate rental to the Bank, is now netting a clear 5 per cent. on the total investment. The balance of the items under this heading represented on the total investment for furniture, safes, vault doors, etc., all of which were of only \$1,800 per Branch for furniture, etc., and these assets to date.

The General Manager stated that during the past year the Bank had received \$2,000,000 for 9,921 discount accounts, of which 1,714 were declined. He also

ABOLISH THE NURSERY

"SOLITUDE" ON FACE OF EVERY NURSERY CHILD.

Platonic Philosopher Shocks Brilliantly Dressed Society Women.

Dr. Reich, in applying Platonic philosophy to the education of woman at Claridge's hotel, London the other afternoon, shocked his audience of brilliant

Dr. Reich, in applying Platonic philosophy to the education of woman at Claridge's hotel, London, the other afternoon, shocked his audience of brilliantly dressed society women by making a suggestion, which, if carried out, would effect a radical alteration in the lives of many of them.

"One of the greatest needs in England to-day is the abolition of the nursery," he declared bluntly. "Begin to educate your daughters when they are young, and do not leave them to hired persons. Let mothers infuse everything good in their personality into their offspring by close contact and care."

"SOLITUDE."

"Over the face of every child in your nurseries is written one big word—'solitude.' Diogenes went about with a lamp in search of a man. I am afraid that some one will say in years to come that in England a person went about with an Edison lamp in search of a mother who wanted to educate her own child."

These home thrusts roused the women to protest. "If we abolish the nursery, what becomes of the husband?" asked one matron. "We cannot look after both."

"Does the wife look after the husband?" Dr. Reich inquired, with just a tinge of astonishment in his voice. "She ought to, ought she not?" was the reply.

PAINTED MEN.

Dr. Reich thought, that husbands did not care for too much attention, and would be glad if their wives directed more attention to the children.

An American expressed the opinion that the abolition of the nursery would at the same time destroy the repose of the home. The general view of the audience, in fact, seemed to be against any such change.

Dr. Reich, who seemed to be in an especially severe mood, also condemned what he called the absurd attempt of girls to intimate man in various ways. "They take to gymnastics too early, and become too tall and thin," he said. "Consequently, their sons, when they marry and have any, are also tall and thin, with narrow chests."

As evidence of this the lecturer pointed to the average British officer, whose face was fine, dignified, and noble, but whose chest was poor, and not that of a real soldier. "Your women ought to be wider and not so tall," remarked Dr. Reich.

The great point aimed at in the education of woman should be tact, concluded Dr. Reich, and if she possessed tactful adaptability that was all she wanted. "A tactful woman is like a painted man, who is no man at all," he said.

TREASURE TROVE IN SAND PIT.

Several massive gold bracelets, each weighing more than three pounds, and said to be of Roman workmanship have been discovered in a sandpit on the borders of Dartford, Heath, England, a short distance from the historic Roman road through Kent known as Watling Street. The workers in the pit did not realize the nature of the articles, and a boy remarked their brightness, and remarked that common metal would not have lain under the soil untarnished. The workmen considered that they would make excellent quoits, but the manager of the sandpits at once recognized the value of the articles, which are now in the possession of the treasury.

GEYSERS AT WORK.

Apparently in sympathy with Vesuvius on this side of the Equator, the New Zealand geysers have been abnormally active of late. They have been throwing mud and boiling water to a height of hundreds of feet. The "hot lakes" district in the north island of New Zealand is a favorite tourist resort, and doctors frequently send patients there, with excellent curative results.

The Fulani, who is—though not so ardent a soldier as the Hausa, being usually engaged in cattle raising—in features and color quite different from the Hausa.

The Yomba, who comes from the Lagos Hinterland, is inclined to be of a more cheerful disposition than the Hausa, and is a much cleaner soldier, enjoying when possible a daily wash, to which the Hausa, like most other natives, has usually no great affinity. Though it cannot be said that the Yomba is a better fighter than the Hausa, he has the very desirable qualification of remaining steadier under fire, so that it is best when possible to operate with a mixed body of Hausas and Yombas. The maintenance of order and discipline is a difficult task with such bodies of men, and it needs one possessing a good temper, patience and tact at the head of affairs.

DOES NOT BEAR MALICE.

One strong point in favor of the West African soldier is that he does not bear malice for any punishment inflicted upon him. His confidence in the justness and impartiality of the Baturi (white man) is so strong as to quite obliterate any feelings of resentment. The usual answer given to the question, "Are you 'fit' to do?" a certain thing, put to a soldier, is, "Supposin' you tell me make I go do so, I go do so."

Taking into consideration the fact that the West African soldier receives the same pay as the British imperial soldier, i. e., 1 shilling per diem, with 1 shilling per diem good conduct pay, and is really more generously treated in the way of kit, his lot is by no means a poor one, since he can support himself and his family on about 3 pence per diem. Nothing could better illustrate the unhealthiness of the climate in these parts than the granting by the Colonial Office of four months leave, not counting the voyage to and fro, after every twelve months residential service out there on full pay. And it is a hard matter to get permission, should one desire it, to remain a short while overtime. A medical examination is held and it rests entirely with the doctors as to whether the applicant is permitted to do so or not.

AN UMBRELLA EXCHANGE.

A company is now in process of formation in London which aims at supplying the public with umbrellas on loan on much the same principle as the circulating libraries do with regard to books. That is to say, a subscriber will be able to drop into one of the company's depots when it starts raining, secure an umbrella, and utilize it so long as the necessity to do so continues. When the weather clears he can return it to the same depot, or to another one, and repeat the process as often as it suits his convenience. The depots will be established at restaurants, tobacco-shops, public-houses, etc. Of course, the umbrellas will not be gold-mounted or covered with Spitalfields silk; but they will be good, serviceable, and slightly articles. The charge to subscribers, it is said, will be \$1.25 a year.

VILLAGE OF CRIPPLES.

The strangest village in the world is undoubtedly the little hamlet of Jatte, near Coluz, in France, not far from the Italian frontier, where dwell about 200 deformed men, women and children, who in Paris go by the name of "Culs-de-Jatte." They are deprived of the use of their legs and thighs, and push themselves along in primitive wooden carts with wooden wheels, which they propel by means of a flat-iron-shaped block of wood in either hand.

NEW KIND OF RACE.

Items in the first great athletic meeting held in China, which took place at Canton, were arithmetic races. Pupils from schools carried slates and pencils and in the course of the race they encountered a blackboard containing a sum to be solved. The boys were lined up as they reached the goal, and those whose calculations were wrong were then eliminated. The first three left in the line were counted winners.

Total number of customers 21,241 32,910 44,990
Since the previous Annual Meeting the Bank had moved into its handsome ten-story building in Montreal, in which every office was rented. This building, after charging a moderate rental to the Bank, is now netting a clear 5 per cent. on the total investment. The balance of the items under this heading represented only \$1,800 per Branch for furniture, sales, vault doors, etc., all of which were of good value, as \$30,000 have been written off these assets to date.
The General Manager stated that during the past year the Bank had received applications for 2,993 discount accounts, of which 1,714 were declined. He also referred to the fact that when the Bank opened its doors on 1st May, 1902, the Sovereign Bank was 32nd on the list of chartered banks, while on the 30th of April, 1906, it had moved up into 15th place in point of assets, and to 6th place in point of paid-up capital. He did not intend, however, that the merits of the Bank should be conveyed to the shareholders by such comparisons, but rather by inviting their careful attention to the unvarnished figures and hard facts laid before them at the meeting. He had always had large ideas regarding the position of the Sovereign Bank should take in the financial world, but that his ambition ran towards strength and safety rather than to size. It was none the less pleasing, however, to be able to say that he believed the happy combination of both solidity and magnitude was now within reach, and hoped that when the 5th Annual Meeting was held there would be able to celebrate the occasion in a manner satisfactory to the shareholders and becoming to a great institution.
Votes of thanks were passed to the Directors, General Manager, and Staff, and complimentary speeches in connection therewith were made by Mr. J. G. Young, A. Claude Macdonell, Major Arthur G. Feuchien, Mr. W. J. Barr, and others.
The Scrutineers were Messrs. C. E. A. Goldman and A. C. Macdonell, M.P.
The following were elected Directors for the ensuing year: Randolph Macdonell, A. Allan, D. M. Stewart, Hon. D. McMillan, Hon. Peter McLaren, Arch. Campbell, M.P., John Punsley, W. K. McNaught, M.P.P., and A. E. Dymond, M.P.
Subsequently at a meeting of the Directors, Mr. Randolph Macdonell was elected President, Mr. A. Allan First Vice-President, and Mr. D. M. Stewart Second Vice-President and General Manager.

IN CITIES OF BLOODSHED

CHIEFS PAY THEIR RESPECTS TO THE GOVERNOR.

Six Thousand People Were Killed as the Result of Samory's Raid.

Sir John Roger, the Governor of the Gold Coast has made a remarkable tour into the interior, lasting over three and a half months, says Reuter.

At Kumassi a large number of chiefs came in to pay their respects to the Governor, and there were many imposing displays when the native rulers, in gorgeous raiment, attended by immense followings, arrived from the surrounding country. All appeared to be contented and peaceful.

At Bolo there were appalling evidences of the former ravages of Samory. Hundreds of skeletons still strewed the ground. One old chief told the Governor that he had lost between five and six thousand people as a result of Samory's raids. In another part of the Northern Territories the chief of a tribe said that formerly he had had to render three hundred slaves annually to Ashanti.

Between Gambaga and Kintampo the expedition visited Wa, where over

SEVENTY MOUNTED CHIEFS,

attended by at least 5,000 people, came in to the Governor. Here, again, as indeed throughout the Northern Territories the people expressed their keen recognition of the value of British protection, and compared their present favorable position with the old danger they had, both from the Ashantis and other raiders.

While the Governor was at Wa, the Lobi Dajarti, one of the wildest tribes, against whom several punitive expeditions had been sent, tendered their submission voluntarily.

The scene at the fort when hordes of these native savages, armed with bows and arrows, came in to palaver with the Governor, was striking. These people had never seen a white man before this occasion. So many different languages were represented that it was necessary to employ six interpreters to translate the Governor's address to the assembled tribes.

The tour showed that tranquility and prosperity prevail throughout the Gold Coast, the Northern Territories and Ashanti.

OLDEST OF AFRICANS.

Says a writer in the Cape Times of Cape Town:—"Stuurman, an old bushman who lives on the top of a hill at Stuurman's huts, in the Prieska district of Cape Colony, claims to be the oldest man in the world. He is said to be 146 years old and his wife—hence—over 100. It is known for certain that 35 years ago he was a very old man, and that his son is more than 90 years old."

ALCOHOL AID TO BACILLI

THE PROBLEM WHICH SCIENTISTS HAVE BEFORE THEM.

Drinkers Offer Less Resistance to Invading Germs Than Abstemious Persons.

"It has become generally acknowledged lately that a man may be the host of diphtheria bacilli, cholera vibrios or other pathogenic bacteria without necessarily developing the corresponding diseases," Professor Eli Mechnikoff, of Paris, declared in the first of the Harben lectures, delivered in the lecture theatre of King's College, London, England.

Professor Metchnikoff's subject was "The hygiene of the tissue," that is to say, the problem which scientists now have before them of how to rid the body of the microbes which infect it. He dealt particularly with the typhoid bacillus.

"Until a short time ago we were convinced that the principal, if not the sole, cause of outbreaks of typhoid fever lay in drinking water," he said "yet it has been shown that persons have acquired the disease who never drank water, or drank only boiled water, and who never ate raw food."

CARRY THE DISEASE.

"The fact is that perfectly healthy persons, especially such as have come in contact with typhoid fever patients, or with persons who have suffered from enteric at a more or less remote period often harbor the bacillus typhosus in considerable quantities in their alimentary canals. Such persons have been termed bacilli carriers, and must be considered as important sources of infection for this disease."

"The typhoid bacilli can remain in a virulent state for many years in a body unaffected by their pathogenic action."

"What reason can be given for this remarkable and prolonged immunity. This was a question to which leading scientists everywhere have been devoting their attention."

"An extensive series of experiments carried out in the last few years has shown that the essence of immunity lies in the living elements of the body, and that it is the phagocytes which deliver us from our enemies."

"If bacilli carriers can sow diseases broadcast in their surroundings without themselves falling ill, the reason is that their living cells react efficiently against pathogenic microbes, and can rapidly produce substances injurious to these microbes."

Professor Metchnikoff declared, in closing, that persons who indulge too freely in alcohol show far less resistance to infectious diseases, especially to croupous pneumonia, than abstemious persons.

Many a so-called smart man smart because of his alleged smartness.

My Hair Ran Away

Don't have a falling out with your hair. It might leave you! Then what? That would mean thin, scraggly, uneven, rough hair. Keep your hair at home! Fasten it tightly to your scalp! You can easily do it with Ayer's Hair Vigor. It is something more than a simple hair dressing. It is a hair medicine, a hair tonic, a hair food.

THE PELHAM NURSERY CO.,
Toronto Ont

SEASON OF 1906.

The general public will view with satisfaction the vesting of the control of express charges in the Railway Commission. This has been agreed to by the Dominion Government, and by making the necessary legislation a Government measure it will be carried through this session. The express companies are really freight carriers using the plant of the railway companies. In consideration of more rapid transportation and more certain delivery than can be secured for freight on ordinary trains a higher charge is made for express parcels, and to this there has never been any objection so long as the rates were not exorbitant.

It does not necessarily follow from subjecting them to the oversight of the Railway Commission that there now will be material reductions in the express charges. As in the case of rates for ordinary freight, anyone who thinks he has good grounds for dissatisfaction will have to make his complaint to the commission, which will take evidence and be guided by it in coming to a decision. If the express tariffs are reasonable now and are never exceeded there will be no change. If they are unreasonably high, or if the companies are in the habit of arbitrarily changing them, then the commission may have good ground for interference. The mere enactment of such a law is likely to make the companies very careful in the management of their highly useful business.

WHAT OTHER PAPERS SAY

Montreal Star.

If the Senate is to be reformed, it must be brought nearer to the people—not farther away from them; and if the Senate is to be perpetuated as a House intended to speak for the Provinces, we ought to hit upon some plan by which it would owe its existence to Provincial opinion.

Toronto Globe

It is charged that the Western elevators when presented with No. 1 hard wheat tell the farmers they have no room for that grade, but will buy it and pay them the price of inferior wheat. This is the kind of work that promotes agitations, and brings down the deserved condemnation of the public on dishonest operators.

Kingsdon Whig.

Do you understand the bitter and personal attack on Mr. Aylesworth? He is understood to be a sensitive man, and the idea is to blackguard him out of office. The scheme will hardly succeed.

Toronto Telegram.

"Tis said R. R. Gamney is to receive the honorary degree of LL. D. from Toronto University in recognition of his services as Little Current correspondent of the Globe after the election of 1902.

GREEK COINS.

How the Ancients Tested the Purity of the Metal.

The first coins of gold and silver that have come down to us are now dated as a rule in the time of Croesus, who lived about the middle of the sixth century B. C.

It may readily be imagined that a mere lump of gold, supposed to be of a certain weight, would be subject to skepticism unless it were guaranteed by some recognized authority. So, in order to save reweighing and testing at each transaction, these ingots or coins were stamped with the authoritative mark of a prince or state. So stamped they become the true coins in spite of the fact that, contrary to modern custom, they were not at all regular.

But, in spite of the guarantee that might be afforded by the mark of a state or a prince, we find the Greeks applying certain tests to determine the genuineness of the currency offered to them. Plating was easily detected by jabbing the suspected coin with some sharp instrument. At other times the touchstone was used. One which was known as the "Lydian stone" was supposed to reveal a proportion of foreign metal as small as a barley corn in a stater. Another test, in the case of silver, was to polish the coin and then breathe on it. If the moisture quickly disappeared the metal was pure. Yet another way to detect alloy was to heat the coin or coins on redhot iron. If the metal was unalloyed it remained bright, if mixed with other substances it turned black or red according as it was more or less impure.—Oliver S. Tonks in Chautauquan.

A WONDER OF JAPAN.

The Famous Castle of the Gold Dolphins at Aikima.

Is the novel castle at Nishima, Japan, the palace which Marco Polo described in his tale of the marvels of far Cathay as covered with gold slabs? At the ends of the ridge of the pyramidal structure are large solid gold dolphins. Beneath the pile is a well which is literally a salted gold mine. It is gold lined and will hold sufficient water to supply 5,000 persons. The dolphins, which were placed on the top several centuries ago, have excited the curiosity of foreign relic hunters, as any one might imagine they would. So many have climbed to the top of the high structure to discover by testing if they are real gold that the dolphins have become seriously disfigured. Strong steel wire bags have been put over them to prevent further vandalism.

Only by good fortune does one of these dolphins still grace the old castle. A number of years ago it was taken down and sent to Vienna for exhibition at the world's fair held there as a rare specimen of ancient Japanese art. The vessel on which it was being returned sank, and it lay at the bottom of the sea for several years in spite of every attempt to raise it. Persistence was rewarded at last, for it was finally recovered and placed again in its old position.

The castle is used by the emperor of Japan as his headquarters during the army and navy reviews. State balls are also held there.

Hammocks a fine assortment.

MADOLE & WILSON.

"THE SONG OF THE SHIRT."

It Proved the Most Popular Thing Hood Ever Wrote.

During his last illness Tom Hood in an idle moment made an imaginative sketch of his own tombstone. He drew a thick slab of stone on the ground, which in large capital letters bore the Song the "Song of the Shirt" was the only inscription. Hood himself has said, "That is the end of other."

How much he felt and pined himself upon the song by which he became known and loved by millions is shown by this and the following fact: "If I were embosomed these are the arms I should adopt," said he one day, showing a rough vignette to a friend. The sketch contained a very beautiful and pathetic idea. It represented a heart pierced by a needle threaded with silver tears, and beneath was the motto he had inscribed on the imaginary tombstone.

"The Song of the Shirt" appeared in the Christmas number of the fifth volume of Punch. It was unsigned, but every paper in the land quoted it, and it speedily became the talk of the day. Hood himself did not think it very remarkable, but Mrs. Hood had said to him as she folded it for press: "Now, mind, Hood, mark my words, this will tell wonderfully. It is one of the best things you ever did."

Mrs. Hood was right. The song was translated into French, German and Italian. It was printed on cheap cotton handkerchiefs and parodied times without number.

THE FIRST MONEY.

It Is Credited to the Lydians of Asia Minor.

It is difficult to realize that prior to B. C. 700 there were no true coins, that ingots or buttons of gold and silver were weighed at every mercantile transaction. The Lydians of Asia Minor are credited with having been the first to cast and stamp with an official device small oval gold ingots of definite fixed weight, an invention strangely delayed, but of inestimable importance to industry and commerce. A coin has been described as "a piece of metal of fixed weight, stamped by authority of government and employed as a medium of exchange." Medals, though struck by authority, are only historical records and have no currency value.

The bright, far flashing intellect of Greece saw the import of the Lydian invention and adopted it quickly, and every Greek state, nearly every city, island and colony, established a mint, generally at some one of the great temples, for all early coin types are religious in character. They bear symbols of some god as a pledge of good faith. The offerings, tithes and rents of the worshippers were coined and circulated as money. Temples thus became both mints and banks. Our word "money" is said to have been derived from the Roman shrine of Juno, Moneta, the

We like best to call

earliest human habit.

The first shape of these early coins was that of an enlarged coffee berry, punched on the rounded side with official letters or sinkings, as they are called.

Earth Curvature and Vision.

One of the "seven wonders of the ancient world" was the Pharos, or light tower at Alexandria. If you have a popular account of that great structure handy, read it carefully and note that you are informed that the tower could be seen at a distance of from 100 to 150 miles. Let us see if this could possibly be true. The curvature of the globe is 6.90 inches to the mile. This being true, we find that an object 100 feet high can only be seen at a fraction over thirteen miles. Figuring on the basis of an earth curvature of even seven inches to the mile, we find that the light tower in question must have been over a mile in height if visible even at a distance of 100 miles.

Old Workmen.

An Englishman who is a large employer of labor has been investigating the arguments of those who say that a workingman under modern conditions becomes at an early age valueless. He has kept a record of all accidents that have incapacitated his men for three days and upward. The people engaged in his employment are from fifteen to sixty-five years of age, and he asserts that more accidents occur to men under thirty than to those over fifty. He says, "I would much rather trust an exceptionally dangerous job to a man over fifty than to one of thirty years of age."

Are You Tired, Nervous and Sleepless?

Nervousness and sleeplessness are usually due to the fact that the nerves are not fed on properly nourishing blood; they are starved nerves. Dr. Pierce's Golden Medical Discovery makes pure, rich blood, and thereby the nerves are properly nourished and all the organs of the body are run as smoothly as machinery which runs in oil. In this way you feel clean, strong and strenuous—you are toned up and invigorated, and you are good for a whole lot of physical or mental work. Best of all, the strength and increase in vitality and health are lasting.

The trouble with most tonics and medicines which have a large, booming sale for a short time, is that they are largely composed of alcohol holding the drugs in solution. This alcohol shrinks up the red blood corpuscles, and in the long run greatly injures the system. One may feel exhilarated and better for the time being, yet in the end weakened and with vitality decreased. Dr. Pierce's Golden Medical Discovery contains no alcohol. Every bottle of it bears upon its wrapper *The Badge of Honesty*, in a full list of all its several ingredients. For the druggist to offer you something he claims is "just as good" is to insult your intelligence.

Every ingredient entering into the world-famed "Golden Medical Discovery" has the unanimous approval and endorsement of the leading medical authorities of all the several schools of practice. No other medicine sold through druggists for like purposes has any such endorsement.

The "Golden Medical Discovery" not only produces all the good effects to be obtained from the use of Golden Seal root, in all stomach, liver and bowel troubles, as in dyspepsia, biliousness, constipation, ulceration of stomach and bowels and kindred ailments, but the Golden Seal root used in its compounding is greatly enhanced in its curative action by other ingredients such as Stone root, Black Cherrybark, Bloodroot, Mandrake root and chemically pure tripe-refined glycerine.

"The Common Sense Medical Advice" is sent free in paper covers on receipt of 31 one-cent stamps to pay the cost of stamps and mailing only. For 50 stamps the cloth-bound volume will be sent. Address Dr. R. V. Pierce, Buffalo, N. Y.

Dr. Pierce's Pleasant Pellets cure constipation, biliousness and headache.

While the Play Was On

By Virginia Lella Wentz

Copyright, 1906, by Beatrix Heade

They came in rather late—the first act was well under way. The girl in her soft evening gown swept quietly down the aisle and took the seat indicated by the usher with serene noiselessness. The man with waxed mustaches and flashy diamond studs followed ostentatiously. He sat down, much to the annoyance of the party directly behind, after unduly pompous delay. Ostentation and pomposity were in Mr. Smart's line.

Mechanically the girl drew out her opera glasses from their bag, but she did not use them. Instead, with a little sigh of content, she leaned back against her wrap, a gorgeous thing, ermine lined, belonging to her aunt, which she had been coaxed into wearing. The lights of the house were low, and as she leaned for a second, a billowy mass of chiffon and lace against the ermine, her heavily lashed eyelids half closed, and she smiled faintly.

Ah, it was so good to be faultlessly dressed from the top of her head to the tip of her shoe all at once—just once sure of herself all around! Not as it had always been with her down in dear old Kentucky—a gown achieved just as her hat was going out of fashion, a new wrap when her evening dresses were beginning to look a bit worn, boots a little shabby just as she was able to get fresh gloves and veil. Her eye fell on the billowy blouse of her bodice. How all her life she had loved lace—real, cobwebby lace! And ermine to nestle against—the lordly "feel of the thing!"

Well, now she was in the way to have it all. This month's visit with her aunt in New York had been fecund in results. Dances and dinners, suppers, theater parties, had filled the hurrying days and nights, but still, with her aunt's worldly insistence, she had found time to engage herself to the man beside her. "Capital, my dear!" her aunt had said when she heard the news, kissing her lightly on the cheek. "You see, Alberta, I knew what I was doing when I sent for you to come up from that poverty stricken Kentucky, and you had only to come to conquer. Of course Mr. Smart isn't exactly a paragon of beauty, and he's a bit 'new,' but think of his cool little million, his yacht, his horses, his splendid motor and all that sort of thing. Oh, I'll be proud of you yet, my poor little southern niece!"

"Beastly stupid play!" broke in upon Alberta's reverie. Mr. Smart spoke in a voice a trifle louder than conventional good form allows.

The girl lifted her eyebrows slightly and then nodded her head in indifferent acquiescence. As a matter of fact, she hadn't noticed a single bit of "business" on the boards nor heard a single line. Now, however, she raised her glasses. It gave her right hand some occupation. It had been lying perilously close to his, she observed.

During the second act the man fidgeted more than ever. "Come," he said finally; "don't let's waste any more time on such twiddle twaddle. It's weak tommyrot. We'll run up and order our supper instead."

old New York one day and leaving it the next! Ma says she'll warrant he has a sweetheart in Louisville, for he's dead set on going there immediately. This morning on deck just before we sailed into the harbor"—But "ma," who was from Chicago and full of western enterprise, finished the sentence for herself.

"I came on him unexpectedly, and what d'ye think he was doing? Leaning over the rail and looking at a picture in his watch. 'Ah-ha, Mr. Harvey!' I cried. 'You're caught at last! Will you let me see her picture?' 'In a few moments I'll show you the statue of Liberty instead,' said he, closing his watch softly and unstrapping his field glasses. And, would you believe it, the winning sweetness of his smile took all the sting out of his refusal."

"Why don't you strike for him, Maude, and cut the Louisville girl out?" came a laughing poser. "Or wasn't he looking for a rich wife?"

"Don't know, I'm sure," was the response. "But anyhow he's not rich. Got the information from his chum coming over—the one who's going to take us to the Union League reception tomorrow. He owns some sort of a plantation in Kentucky, however, and people there call him le grand seigneur 'cause he's considered so exclusive. It appears Mr. Harvey in his aristocratic poverty had a horror of the nouveaux riches." She sniffed daintily and giggled.

The lights went down, the orchestra stopped playing, and the curtain went up on the third act.

Presently, having had one glass of whisky and soda too much, Smart came back. He looked at Alberta closely with a look before which she suddenly shrank. She'd seen it focused ere this on many things—his automobile, his diamonds, his horses—but never wholly on herself. That glance of possession shot through her nerves with a sickening humiliation.

"You'll loosen the stone in your ring if you keep turning it round like that," said Smart in a blurred whisper. "An' that sort of diamond ain't stumbled against every day, let me tell you."

At the close of the third act, although there was still the fourth to be played, Alberta turned to her companion.

"We'll go now," she said simply. But s he helped her on with her wrap he wondered at the strange, soft illumination of her face. It was an illumination he had never seen before, an illumination in which he knew instinctively he had no part.

When Smart, having got his hat and coat, joined her in the lobby and was about to call for a cab, one of the girl's hands went out to his ready arm, but the other deftly handed him his ring.

"I've decided you'd better keep it," she said calmly, while, his fingers closing tightly about the jewel, Smart gazed with amazement at her strange smile. "I'll explain to you as we walk along. No; not a cab. I prefer to walk. It isn't far to auntie's." She would not suffer his proximity, however brief, in a carriage.

"Have you gone mad?" he demanded, putting the bauble securely in his wallet. "Of all idiotic nonsense! And, besides, you're not dressed for walking."

"Oh, what does a little thing like that matter?" cried she, with almost a child's fresh joy in her voice. "Nothing matters now but the big things." And, gathering up her skirts, she added, half to herself, with a queer little thrill: "I'm going home tomorrow! I'm going home to Louisville tomorrow!"

Fought the Whole Class.
Many a year ago a "mobe" at the

Why Tea Quality Varies

YOU know how the quality of strawberries from the same patch will sometimes vary from one day to another.

One day sweet, compact, well ripened, well colored, richly flavored—next day it rains, is cloudy,—following picking is soggy, sour, green, coarsely-flavored, poor.

Tea, also, on account of its volatility of flavor, after picking and during the curing process is very susceptible to weather changes. A few hours of sunshine or bad weather after picking may make the difference between good and poor tea.

So that while one picking may be first class, the next from the same garden may be very poor.

I select only the pickings which come up to the Red Rose standards of richness and strength in Indian, and delicacy and fragrance in Ceylon teas, and thus that "rich, fruity flavor" of Red Rose Tea is produced and maintained.

Red Rose Tea

is good Tea

Dr. Von Stan's Pine-apple Tablets

RELIEF IN ONE DAY

Ask half the men or women who have stomach troubles, why it is so and they will tell you that they have to live in such a constant hurry that they have no time to keep well,—if the great army of stomach troubled people would take Dr. Von Stan's Pine-apple Tablets as a traveling companion, they would find pure fruit pepsin, that is pleasant to take,—powerful in the work it does,—but as harmless as milk,—helps all the stomach distresses immediately and will give good relief to the most acute cases in one day.—You go about your business,—eat hearty meals,—take all the pleasures as they come.

mean even. "Come, he said finally; "don't let's waste any more time on such twiddle twaddle. It's weak tommyrot. We'll run up and order our supper instead."

But a girl with an ermine cloak brown over the back of her chair was leaning forward, her elbows resting on her knees, her chin in the cup of her two hands. Her eyes were strangely wistful as she watched the players on her stage.

"No," she whispered oddly without turning to Smart; "I like it. Let's stay."

'Twas a simple enough little scene that she watched; a homely enough setting, too—a lane hedged with wild roses and honeysuckle, at one end of which stood a white cottage, sunny in the light of early morning. Just outside, by the hollyhock bushes, was a nan fair and strong, looking like a young god in his splendid strength. He was catching up a child playfully and holding it high in the air, as is the way with proud fathers. Then out of the cottage, rosy, smiling, came a girlish figure with her sleeves rolled up and an apron on, to say goodby to her lord before he went to his day's labor. The sire kissed his child and set him down, patting the curly head. Then he drew the woman to him. "Goodby, and God bless you, dear, till I come home to-night," he said in a voice softened with reverence.

There were actual tears in Alberta's eyes. Homely as was the setting, simple as was the scene, it had brought to her a revelation. After all, that was the real sum of life, was it not, dear God—love and a home and a clear, unbartered conscience?

"Well, if you still want to stay, I'm going out for a whisky and soda," Smart laughed unctuously, laying his heavy hand on hers as the curtain dropped on the second act. "You don't seem up to conversation tonight. I might as well have taken your aunt out—old lady's a corker when talk's scarce! If I'm not back by the time the curtain goes up don't get frightened. I'll be here before the bloomin' thing's over."

As he was turning out in the aisle unconsciously even to herself Alberta's eyes swept him from head to foot—shambling physique, obtrusive jewels and all. She shuddered involuntarily, pressing his ring which she wore rather sharply into her flesh.

Oh, if only the orchestra would play that "Spring Song" of Mendelssohn! She had been trying so hard to shut

Robert Harvey out from her life, and his fetched him so vividly before her! But, if I live with Idas, then we two on the low earth shall prosper, hand in hand—

Those were the words from Stephen Phillips' "Marpessa" which Harvey had been wont to set to that music, saying, "They seem to be made for each other—just like you and I, sweetheart."

How ever in the world had she made herself able to give him up? It was her cursed love of luxury, she told herself, and what would luxury profit her without him? What a fool she had been! But the worst was yet to do. Tomorrow she was to write the letter which was to stab his dear heart like a knife.

"—and an awfully stunning fellow, regular Gibson type, you know. We tried to induce him to join us tonight; out, you see, he lives in Louisville."

Alberta turned her head ever so slightly. The people back of her who had been annoyed at Mr. Smart's inconsiderateness when he first came in were talking.

"And he leaves for the south tomorrow. Fancy arriving in fascinating

thrill: "I'm going home tomorrow! I'm going home to Louisville tomorrow!"

Fought the Whole Class.

Many a year ago a "plebe" at the Naval academy astonished an upper class man by going to him and announcing, "See here, I don't like the way my class is being treated." The upper class man was nearly surprised out of his wits, but, recovering from his stupor (and only one who knows the full meaning of "treat" among the midshipmen can have a correct apprehension of what that announcement from a "plebe" to an upper class man carried, the "rating" demanded, "Midshipman, do you want to fight?" "That's what I am looking for." The fight was arranged and the "plebe" whipped his man, says the New York Herald. Then another youngster was supplied, and he went the way of the first, and so on until a half dozen had been discomfited. Sometimes several fights would follow in succession, when the "plebe" would say: "Gentlemen, I am tired now. I'll see you again another day." The academy authorities found out what was in progress and sent for the "plebe," and then, before official authority, he announced, "I can whip the whole class." It turned out that the "plebe" had been a prize fighter before entering the academy.

A Picture of Tennyson.

A writer who once saw Lord Tennyson on the platform of a railway station says of him: "He would have been tall, but his shoulders seemed somewhat bent. His hair was long; so was his beard. He wore an ugly Inverness cape and a large slouch hat. He looked like a bandit in a melodrama, and I thought him some poor actor who had come out in some of the stage properties. He seemed so sad I felt quite sorry for him as I watched him walk up and down the platform."

Fiction.

Legitimately produced and truly inspired, fiction interprets humanity, informs the understanding and quickens the affections. It reflects ourselves, warns us against social follies, adds rich specimens to our cabinet of characters, dramatizes life for the unimaginative, daguerreotypes it for the unobservant, multiplies experience for the isolated or inactive and cheers age, retirement and invalidism with an available and harmless solace.—Tuckerman.

Removed the Growth.

DOUGLAS & CO., NAPANEE, ONT.

DEAR SIRS,—During year 1890-91 I was troubled with a large lump growing on the right side of my neck near the ear. Had consulted several physicians and used everything I could hear of, all to no use. Was told to use

Douglas' Egyptian Liniment.

I did, and before I had used half a twenty-five cent bottle was permanently cured. Since then I have used it for everything where outward application is required; am yet to learn of anything in reason that I cannot cure with it. No man has any idea of its value until he has used it; would not be without it under any circumstance!

Respectfully yours,

NATHANIEL W. REID.

Enterprise P. O.

S. BOND & CO., ODESSA.

TO THE PUBLIC—

Our Spring Goods have now arrived and we are able to show exceptional values and patterns in Crum's Prints, Sateen Prints, Dress Ducks, Organdies, Priestley's Lustras, and Silks.

We have a full supply of Groceries, Flour, and Feed, Patent Medicines, Boots and Shoes, and Hardware, in fact everything kept by a general store.

We are able to compete with any general store in the provinces.

We pay Highest Price for all Farm Produce.

S. BOND & CO., ODESSA.

Little Willie's Surprise.

Mr. and Mrs. Blank recently moved from the city to the suburbs. The first night in their new home their five-year-old son climbed into bed as soon as he was undressed.

"Willie," said his mother, "haven't you forgotten to say your prayers?"

"Why, mamma," he replied, "is God way out here too?"

Tombstone Inscriptions.

Three of the commonest tombstone inscriptions are "In the midst of life we are in death." "His end was peace." "He tempers the wind to the shorn lamb." The sentiment of each is comforting and consolatory, but none comes from the Bible.

Daffodil and anemone—the latter, according to Homer, covered the meadow haunted by the shades of departed heroes—are etymologically the same. Old time Englishmen confused the two plants, which are quite different, and it was reserved for later generations to restore its true spelling to the true anemone and restrict daffodil, with its mysterious "d," to the flower now known by that name. Formerly it was "affodille," and the "d" is variously explained as being a childish insertion, like the "T" in Ted, from Edward, or as representing the French "fleur d'affrodille" or the English "th' affrodille" (the definite article) or as the final "d" of "and" in such a combination as "fennell and affodil."

CASTORIA.
Bears the
Signature  The Kind You Have Always Bought.

Bowel Troubles of Childhood

It is impossible to exaggerate the value of FRUIT-A-TIVES as a medicine for children. They contain no alcohol—no morphine or cocaine—no dangerous drugs of any kind.

Fruit-a-tives are fruit juices—concentrated and combined with the most valuable tonics and internal antiseptics known to medicine.

Fruit-a-tives are free of calomel, cascara, senna and the host of violent purgatives that simply act by irritating the bowels. Fruit-a-tives are made from fruit and tonics and are pleasant to take, and so mild in their action that they never gripe or pain.

During the summer, when children are so apt to eat improperly, mothers should have a box of Fruit-a-tives always handy.

At the first sign of Diarrhoea, Indigestion, Headaches, Biliousness, Peevishness, Vomiting—give Fruit-a-tives according to directions. These splendid fruit liver tablets will instantly correct faulty digestion—clean and sweeten the stomach—regulate the bowels, kidneys and skin—and so invigorate and strengthen the whole system, that the little ones can quickly throw off the temporary illness.

Get a box now—to-day. 50c. a box or 6 for \$2.50. Sent on receipt of price, if your druggist does not handle them.

FRUIT-A-TIVES
LIMITED,
OTTAWA.

Franklin on Catching Cold.

It is well known, says the New York Evening Post, that Franklin made a particular study of colds and had his own theory about them, which we believe is pretty much the theory of today. One of his assertions was that catching cold does not come from mere cold, but from unequal temperature over the body and from undistributed moisture. To prove this he made a number of observations on occasions when he did and did not suffer. A few of these follow:

By putting on a damp shirt on a dry body—yes.

By putting on a dry shirt on a wet body, though this wets the body ten times more—no.

By sitting in a room where the floor has been newly washed—yes.

By going into a river and staying there an hour (no sheets so wet)—no.

By wetting the feet only—yes.

By wetting all the clothes through the body and wearing them a whole day—no.

By sitting in a room against a crevice—yes.

By sitting as long in the open air—no.

How Cyanide Was Discovered.

Scheele in 1783 laid the foundations for the manufacture of cyanide of potassium. With prussiate of potash for its base, dried animal matter of any and all kinds was dumped into the superheated vessels containing the potash, together with iron filings and borings. A stonelike black mass resulted from the cooling, and other processes brought the final lemon colored crystals which resulted from evaporations

of the solutions. From these crystals prussic acid was evolved, of which a 2 per cent solution is the pharmaceutical preparation, yet so powerful that four drops will kill a large dog. A chemist, putting a cyanide solution in a gold lined dish in 1844, discovered that the gold was dissolved in the liquid. This was the beginning of the gold plating process by the use of cyanide and the further involvement of the poison came about in electroplating, in photography and in treating refractory gold ores.—Technical World.

A Canadian Paradise.

Temagami is shaped like an octopus, with long stretched out arms, and its shores are indented with deep circling bays, island strewn and culminating in sharp points and curves that add to the beauty of this magical scene. "The lake of deep waters" is the meaning of the Indian word, and they lie very deep and cool in their bed of granite, in stillness a perfect mirror, in storm darkly menacing, with foam edged waves showing fanglike teeth. Being a hundred square miles in area, Temagami forms one of Canada's great natural reservoirs. Mighty rivers from the height of land to the north flow into it, and it in turn feeds the streams that flow southward, carrying their life giving waters through the forests to the peopled lands below. There are 1,400 islands in the lake, and the government has included the whole area in a magnificent forest reserve of a million and a half acres.—Kate Westlake Yeigh in Four Track News.

Jammed Fingers.

Few people have escaped jammed fingers, and as the pain caused when the finger is jammed in a door is excruciating in the extreme for the first few minutes it is well to know of some means of relief. The finger should be plunged into water as hot as can possibly be borne. This application of hot water causes the nail to expand and soften, and the blood pouring out beneath it has more room to flow. Thus the pain is lessened. The finger should then be wrapped in a bread and water poultice. A jammed finger should never be neglected, as it may lead to mortification of the bone if it has been badly crushed, and amputation of the finger must follow. Jammed toes are usually caused through the falling of heavy weights and should be treated in the same way as a jammed finger.

Complete Letter Writers.

One of the earliest of these "guides," dated 1615, was styled "A President For Young Penmen." It was advertised as full of variety, delight and pleasure. The former quality it undoubtedly possessed, as will be seen from the following headings: There is "A letter from a friend to a fantastical, conceited madcap," "A byting letter to a clamorous gentlewoman," with a "byting" answer to the same, which must have relieved the feelings of the writer; also a "Melancholy, discontentive letter upon the frowne of a kinsman," and, as a variation, "A kind of quarrelsome letter upon a frowne of a friend."

A letter to an "unkle to borrow a horse," strikes one as being of more practical value than all the rest put together and infinitely to be preferred as a model to the epistle of "Miss Molly Smith to her cousin, giving her an account of a very remarkable instance of envy in one of her acquaintance who lived in the city of York." How a distracted scribe was to get help or comfort from Miss Molly Smith is more than we are prepared to say.

THE BEST FRIENDS

MR. F. BROOKMAN
WIFE AND CHILD

Per-na Should Be Kept In Every Household

Where There Are Little Children.

Peruna should be kept in the house all the time. Don't wait until the child is sick, then send to a drug store. But, have Peruna on hand—accept no substitute.

Children are especially liable to acute catarrh. Indeed, most of the affections of childhood are catarrh.

All forms of sore throat, quinsy, croup, hoarseness, laryngitis, etc., are but different phases of catarrh.

Per-na Contains No Narcotics.

One reason why Peruna has found permanent use in so many homes is that it contains no narcotic of any kind. Peruna, if taken according to printed directions, is perfectly harmless. It can be used any length of time without acquiring a drug habit. It does not produce temporary results, but it is permanent in its effect.

It has no bad effect upon the system, and gradually eliminates catarrh by removing the cause of catarrh.

Mrs. F. Brockman, 813 Meade street, "I have never had a return of the terrible and unhappy before I began to use Per-na. I would not be without it in the house. I have a baby boy, two years old, and my husband also takes Per-na. I thank you and wish you well."

No Doctor Required.

Mr. Edward Otto, 927 De Soto street, St. Paul, Minn., writes:

"I cannot say enough for Peruna. It has done great work in my family, especially for my oldest boy. We had doctored with three or four different doctors and they did not seem to do him any good.

"We gave up hopes of cure, and so did they, but we pulled him through on Peruna.

"We had several doctors and they said they could do no more for him, so we tried Per-na as a last resort, and that did the work. Since then we keep it in the house all the time, and no doctor is required."—Edward Otto.

There are a multitude of homes where Peruna has been used off and on for twenty years.

Such a thing could not be possible if Peruna contained any narcotics.

THE EIGHTH GIRL

By BELLE MANIATES

Copyright, 1906, by P. C. Eastment

When John Walker was left a widow, although he was in the prime of

overtime that night on the solution of the stepmother problem. A day or two after the eventful visit of Miss Cecilia Kayne, as John Walker was passing a little park, he met two or three kindergarten teachers walking with their young charges. He gave them but a casual glance, when his attention was attracted by a delighted cry of "Papa!"

The littlest and last child in the procession let go of the hand of the young girl with whom she was walking and rushed up to him.

"Papa!" she said, taking her up

Cross Pills!

Pills for crossness? Certainly. They remove the cause—the crossness vanishes. A sluggish liver poisons the blood, spoils the temper. Keep your liver active and your bowels regular. Have a clear brain, a brave heart, a hopeful outlook. One of Ayer's Pills at bedtime. All vegetable. Sugar-coated. Sold for 60 years. We have no secrets! We publish the formula of all our medicines.

J. C. Ayer & Co., Lowell, Mass.

Destroy Worms, Assimilate the Food, Regulate the Bowels, Sweeten the Stomach, give Sound and Refreshing Sleep, Relieve Teething Troubles, Allay Feverishness, Cure Indigestion, Harbinger, Constipation, Colic, etc. **STOPS WALKING IN THE SLEEP, AND FRIGHTENED AWAKENING. CURES FITS.** Do not contain Morphine, Opium, or other narcotic.

WHAT WE WILL DO—Any person sending their address can have sample sent free. We want to give you the proper medicine for children. Have the genuine.

WALTER RATHBUN, President. H. B. SHERWOOD, Superintendent. D. A. VALLEAU, Asst. Superintendent.

When John Walker was left a widower, although he was in the prime of manhood, with a comfortable income and good habits, it was universally predicted that he could never win a second wife.

For what manner of woman—that is, of the type fastidious John Walker would fancy—could contemplate the prospect of stepmothering seven daughters ranging in age from pert thirteen to precocious four?

If the children had been boys, John Walker's prospects would have been more favorable, for a squad of boys can be turned afield, but seven girls to hear and heed until they should come to an age when they would with their lords depart!

John Walker was domestic, and after two years of widowhood he began to yearn for a goddess of his hearth and home. The affairs of his household had not been administered so badly since his wife died. The cook was capable and honest and had been reigning over the kitchen for eight years. The seamstress, who had always spent a month each spring and autumn "sewing up" for the young Walkers, continued her visits, with the added responsibility of selecting and purchasing material.

The eldest girl, Madge, was promising to be quite a practical little housekeeper, but John Walker knew that a wise feminine hand and heart were essential to the guidance of his active, romping, unruly troop of youngsters.

He began to call assiduously upon Cecilia Rayne, a young woman renowned for her intellect, practicality and excellent judgment. She accepted his attentions, though reservedly, and with a general air of careful consideration and "weighing in the balance."

His intentions were regarded as unmistakable when he invited her, with her mother, to visit his home and drink tea one afternoon. The children on this fateful day had never been so noisy or unattractive. Even Madge was boisterous and untidy.

John Walker did not know that it was malice aforethought on the part of his offspring. Madge was precocious and acute eared. She had heard it said that John Walker would marry just as soon as he could find any one to have him. She had sized up Miss Rayne as a home ruler, and in the mother of Miss Rayne she scented a natural enemy.

So she instigated and encouraged rebellion in her many sisters, and their deportment carried the day. John Walker escorted his guests to their home and returned with the firm intention of administering unto his own something stronger than rebuke.

He found his flock white robed and sweet voiced, awaiting with uplifted mouths his good night caress, and he could not bring himself to mar their slumbers by so much as a word.

"If she only could have seen them as they are now!" he thought, with a regretful sigh.

Madge's busy little brain worked

The slightest and last child in the procession let go of the hand of the young girl with whom she was walking and rushed up to him.

"Why, Tot," he said, taking her up in his arms.

Then he looked hesitatingly at the young teacher, who was walking on slowly.

"You must be Mr. Walker," she said naively. "I am Tot's kindergarten teacher."

"Are you?" he asked interestedly. "I didn't know that Tot attended a kindergarten."

"Didn't you?" she asked anxiously. "Madge brought her to school yesterday and entered her as a pupil. I supposed it was your wish."

"Of course it is," he replied promptly. "Only I hadn't thought of it before. I am glad Madge is so wise."

"I've learned lots, papa. I'm going to prick you a card," assured Tot.

"Thank you, darling. Where is your school, Miss?"

"Warden," she said, supplying the name. "The school is on the corner of Wood and Third streets, three blocks below. Are you fond of children, Mr. Walker?" she asked, looking up at the princess enthroned on his shoulder.

"Naturally," he said, with a whimsical smile.

She flushed and laughed a little.

"Come and visit our school some time, then."

"I will walk there with you now," he responded promptly, setting Tot down on the sidewalk.

The child instantly appropriated a hand of each guardian and skipped along between them.

"Who takes her to and from school?" he asked, remembering the automobiles and trolley cars.

"Madge has so far."

"Madge said you could stop for me noons on your way home to luncheon," said the little girl.

"Why, yes, so I can. How did Madge know of your school, Miss Warden?"

"Oh, Madge and I are old friends. I give music lessons afternoons, and her inseparable companion, Grace Landon, is one of my pupils."

"I wish you would give Madge lessons too. Her teacher left the city some time ago, and I have neglected to have her start again."

"I should be glad to teach her," said the girl simply.

"Very well. You may commence tomorrow, if agreeable, and give her two lessons a week."

"She's a sweet little girl," thought John Walker as he pursued his way from the kindergarten. "She must be John Warden's daughter. Poor fellow! His failure took all he had. She's a trump to take hold and help in this way."

The first day that John called for Tot he so cordially seconded the child's invitation to her teacher to come home with them to luncheon that she was forced to comply.

Madge's music hour was from 5:30 to 6, and she would not practice properly unless her teacher would consent to stay to dinner. The children all claimed her as a kindred spirit and called her "Bess," for which they were sternly and ineffectually reprimanded by their parent, who finally followed their example and called her by that name himself.

In the month of July the Walkers went to their summer cottage on a lake some twenty miles from the city.

"You need a vacation more than any one," said John Walker abruptly to Bess one day. "You must go with us."

"Thank you very much," said the girl gratefully. "It's kind in you to ask me, but of course I can't accept."

"Why not?" he demanded. "Your father is going west on an extended business trip, and he won't need you."

ITS CURED

If you, your friends or relatives suffer with Fits, Epilepsy, St. Vitus' Dance, or Falling Sickness, write for a trial bottle and valuable treatise on such diseases to THE LEIBIG CO., 179 King Street, W., Toronto, Canada. All druggists sell or can obtain for you

LEIBIG'S FIT CURE

OF PE-RU-NA ARE THE MOTHERS AND CHILDREN

When Sickness Comes to the Little Ones

It Is the Mother Who Chiefly Suffers.

She suffers even more than the child who happens to be sick. Her sympathy is deeper than that of any other member of the family. The mother looks forward with dread to the torrid heat of summer, thinking of her children and the many liabilities to disease that are before them. Spring and summer are sure to bring ailments, especially among the little folks. It does not take a mother very long to discover that Peruna is the best friend she has in time of illness among the children.

A Multitude of Mothers

Have discovered that Peruna is their stand-by, and that in many of the ailments of spring and summer to which the children are subjected, Peruna is the remedy that will generally quickly relieve.

Whether it is spring fever or stomach derangement, whether it is indigestion or bowel disease, a catarrhal congestion of the mucous surfaces is the cause.

Peruna quickly relieves this condition of the mucous membranes. Its operation is prompt, the children do not dislike to take the medicine, it has no deleterious effects in any part of the body.

It simply removes the cause of the disagreeable symptoms and restores the health.

Every mother who has not tried Peruna in her family should familiarize herself with Dr. Hartman's booklet, 'The Ills of Life.' This booklet should be in every family. It gives most valuable advice as to the use of Peruna for the various catarrhal diseases so general to-day.

Peruna is a household remedy for all catarrhal ailments of winter and summer, acute or chronic.

The mothers all over the United States are the best friends that Peruna has.

The Mothers Hold Per-u-na in High Esteem.

Not only because it has cured them of their various ailments, but because it promptly rescues the children from the throes and grasp of catarrhal diseases.

We have in our files many testimonials from mothers whose children have been cured by Peruna. However, the large majority of mothers who use Peruna, we never hear from.

But we do hear from a great number of mothers who are so overjoyed at some special good they have received from Peruna that they cannot restrain their enthusiasm. They are anxious to share these benefits with other mothers.

et, Appleton, Wis., writes:
*he catarrh, which had made me so miserable taking Peruna.
e house, now.
old, to whom I give Peruna for a cold,
la.
ll."*---Mrs. F. Brockman.

Mrs. J. C. Sterling, 133 Brown Avenue, Norfolk, Va., writes:
"My little boy, Meredith, suffered with indigestion so badly he could not eat anything without it making him very sick, so I thought (as many others have) that I would try Peruna, and it worked like a charm.

"Now he eats anything he wishes, and I would not be without it for anything.

"My other little boy, Alfred, two and a half years old, has taken it and received as much benefit from Peruna as his brother.

"I hope my testimonial may be of some benefit to others, as I feel as though I cannot praise it enough."
---Mrs. J. C. Sterling.

Mr. Howard Andrew Sterner, Muddy Creek, Pa., writes:

"I have Peruna in my house all the time and won't be without it. It is good for children when they take a cold or croup. It cured my baby boy of croup.

"I have introduced Peruna into six families since I received your last letter, and four have seen relief already."

---Howard Andrew Sterner.

Pe-ru-na Protects the Entire Household.

As soon as the value of Peruna is appreciated by every household, both as a preventive and cure, tens of thousands of lives will be saved, and hundreds of thousands of chronic, lingering cases of catarrh will be prevented.

The Benefit Which the Children of the United States Have Received From Pe-ru-na Can Never Be Put Into Words.

The chronic ailments it has prevented, the suffering it has mitigated, will never be fully recorded.

But at least this much can be said that the coming generation owes a great debt to Peruna, for it is in the tender years of youth that slight ailments are liable to develop into lasting disease, thus blasting the whole career of the individual.

The mothers who are bringing up their children to-day to believe in Peruna are speaking from their experience.

These children brought up to believe in Peruna from the start, will, when they become heads of families themselves, use Peruna with unquestioning faith.

A Child's Life Saved.

Mr. G. H. Farmer, New Martinsville, W. Va., writes:

"Our little son, Harry, is well and healthy now and we think if we do as you directed us, he will keep his health and grow strong.

"We know that our little son's life was saved by your wonderful medicine, Peruna, and we shall always praise Peruna and use it in our family when needed.

"Should we have any more catarrhal trouble in our family, we shall always write to you for treatment."

---G. H. Farmer.

Medical Advice.

Class III—Maggie Hunter, Laura Dawson, Tommy Walsh, Jerceides Prescott, Nina Brandon, Vera Armstrong, Martin Murphy, Mabel Murphy, Carmen Perry, Kenneth Stinson, Catharine Barrett, Mary Copeland, Vera Mouck, Mary Barrett, Josephine Dwyer, Clarence Mouck, James Cape.

OLD ROMAN NAMES.

The Peculiar System That Was In Use by the Nobility.

The noble Romans were peculiar in their system of nomenclature. They had the praenomen, the nomen and the cognomen. The first of these distinguished the individual and was equivalent to our Christian or baptismal name. It was usually indicated by a single letter, as A. for Aulus, or b two letters, as Ap. for Appius, or three as Ser. for Servius. The nomen was distinctive of the gens or clan and has no corresponding appellation among us.

The girl blushed, hesitated and then said frankly:

"Why, you see, of course, it would really be all right, but then you know people would talk—they wouldn't approve."

She began to flounder in her explanation, and John suddenly comprehended.

"I see," he laughed, nodding. "But you see you have come to seem to me like one of my own—my eighth girl. I call you—but I suppose you are grown up enough for a chaperon."

"I am twenty years old," she said with dignity.

"Indeed! A great age. Well, I have a second cousin, a meek, elderly wid-

like one of my own—my eighth girl, I call you—but I suppose you are grown up enough for a chaperon."

"I am twenty years old," she said with dignity.

"Indeed! A great age. Well, I have a second cousin, a meek, elderly widow, whom the children rule tyrannically. I presume she would like a month or so at the cottage."

So it was finally arranged.

From that time on John Walker suddenly regarded his children's teacher in a new light.

"I wonder if a beautiful young girl like Bess could come to care for an old duffer like me," he pondered. "I had supposed that she considered me an old man!"

A thrill stirred within him as he looked up at the fair young face gazing happily over the waters of the lake on the first night of their arrival.

"Bess!" he said suddenly.

But the children had also called "Bess," and she was away for a romp on the beach.

"She is only a child, after all," he thought, with a sigh.

In the Walker boathouse was a canoe which the children were forbidden to use, but Bess one Sunday morning ventured forth alone in it. She managed it very skillfully, but on her return a sudden wind came up and made the lake choppy. She had all she could do to keep her little craft right side up.

John Walker, coming out on the veranda of the cottage, saw her danger and rushed to the boathouse, intending to row out after her. Another emotion besides anxiety surged within him, and he knew now that he loved this playmate of his children.

She was making great progress with her tiny canoe, and as he rowed out from the boathouse she was landing at the pier.

It was a very merry, winsome face, alight with the excitement and danger, that was lifted to his.

In the reaction from his fright he was beginning to censure her when he was interrupted by Madge, who had appeared upon the scene and who instantly resented her father's lecture.

"You shall not scold her!" she cried hotly. "I wanted her for our step-mother, but I'll give her up if you aren't going to be nice to her."

Bess turned red and pale by turns. "I'll race you to the house, Madge," she cried, and they were away.

"Bess," said John softly when he had succeeded in getting an interview, "as I said, I had thought of you as my eighth girl. I don't want to think of you as a stepmother, but I do want you to be my wife and a companion to the girls because I love you. Will you try and care for me?"

The verdict of the world was that John Walker had eight girls now and needed a woman in his house more than ever.

Bad Habits.

"It would be a very bad thing if farmers ever got control of the national finances."

"Why so?"

"Because from sheer force of habit they would want to be always watering the stock."

He Knew.

Meekly—Yes, we're going to move to Swanphurst. Doctor—But the climate there may disagree with your wife. Meekly—It wouldn't dare!

The Retort Professional.

Lawyer Quibble—You a doctor? Why, you couldn't cure a ham! Dr. Sawbones—And you, sir—you couldn't try a case of lard!

Our own heart, and not other men's opinions, forms our true honor.—Coleridge.

Mr. John M. Dawson spent Sunday last at Mr. Shorey's Switzville.

Mrs. William Smith, is visiting friends at McLean.

Mr. Thomas Prest at Harrowsmith on Saturday.

Mrs. Sharp and Mrs. Hannah at Odessa, on Friday last.

A number from here attended the campmeeting at Odessa last week.

Mr. J. Deltor, is spending a few days at Tamworth.

Mr. John Druce is visiting friends at Sharbot Lake.

Miss Ella Vick of Kingston, visiting at Mr. Thomas Forest's.

LAPUMS WEST.

We are pleased to know that Rev. Mr. Wattam is to stay with us here for another term.

Straw-berry picking is in full swing this week, the crop will not be quite as heavy as last year.

John Simpkins, B. Rose, A. E. Warriner and H. Edwin, spent a day fishing at Sydenham Lake last week.

On Monday, T. E. Furr, of Colebrook and L. Brown were out there to break the record of course.

Flossie Clyde, Odessa, is spending the week visiting her Grandparents Mr. and Mrs. Wesley Brown.

Mrs. W. Lapum and Mrs. B. Rose were in Napanee on Monday.

Mrs. Ernest Husted, mother and family, of Michigan, old residents of this place are visiting at Mr. Wesley Brown's and elsewhere in the neighborhood.

Mr. and Mrs. F. Brown were in Napanee on Sunday visiting at Mr. C. N. Vanalstine's.

Drew His Picture.

It is told of Major General Sir William Gatacre of the British army that during the Sudan campaign he was one day going the round of the sentries. Stopping before one he asked him what his orders were. "To keep a sharp lookout for the enemy and also for General Gatacre," was the prompt reply. "Do you know him by sight?" asked the general. "No, sir," answered the man, "but I was told that if I saw an officer fussing and swearing and rushing about that would be General Gatacre."

Against a Snap Judgment.

A boy in a Chicago school refused to sew, evidently considering it beneath the dignity of a ten-year-old man. "George Washington sewed," said the principal, taking it for granted that a soldier must, "and do you consider yourself better than George Washington?" "I don't know. Time will tell," said he seriously.

Man never fastened one end of a chain around the neck of his brother that God did not fasten the other end round the neck of the oppressor.—Lamarine.

Gerald will get married? I don't know. I don't want to get tired of you just yet.

Necessity may render a doubtful innocent, but it cannot make it praiseworthy.—Joubert.

gained the individual and was equivalent to our Christian or baptismal name. It was usually indicated by a single letter, as A. for Aulus, or by two letters, as Ap. for Appius, or three, as Ser. for Servius. The women was distinctive of the gens or clan and has no corresponding appellation among us. The cognomen was placed last and designated the families, precisely answering to our surname. Sometimes a fourth name was added, the agnomen, in consequence of a renowned action, some conspicuous event of life or feature of character. Scipio, in addition to his regular names, was styled Africanus after his conquest of Carthage. The name Germanicus was assumed by those who distinguished themselves in the wars with the Germans.

In female names the Romans indulged but small variety of appellation, and fancy had little or nothing to do with their invention and bestowal. When there was but one daughter in a family she received the feminine termination of her gentile name, as Tullia, the daughter of Marcus Tullius Cicero, and Octavia, the sister of Octavius Caesar, etc., which names were retained even after marriage. When there were two daughters one was called Major and the other Minor, as Cornelia Major and Cornelia Minor. If there were more than two they were distinguished by their number, thus: Prima, Secunda, Tertia, Quarta, etc.

A TALE OF SOUTHERN CHINA.

CHAPTER XVI.

When Plympton glanced around the junk's luxurious cabin again, it was with entirely different motives from any that may have influenced his previous hasty surveys.

Then a means of escape had been his only thought, whereas now he was inclined to search the walls for a stock of weapons.

Since the cabin had been occupied by Count Petoskey and his fellows from Neya, it would be only reasonable to suppose that some of their weapons might be left around.

In an affair of this kind a spare revolver or perhaps a repeating sporting rifle would prove quite a God-send to the beleaguered ones.

Larry guessed what motive influenced his comrade, and he, too, commenced to sweep his eyes around the interior, forgetting, such was his earnestness of purpose, to use the noble monocle that dangled unheeded by its cord.

Evidently Larry was of the opinion that this was hardly the time for foolishness. Such follies might do for the gay promenade or the ballroom, but were utterly out of place when the tumult of war was in the air, and human lives paid toll to the passions of men. Again had the heavy thud in the direction of the doors announced the determined purpose of those on deck to force a passage.

It would not be very long ere these tremendous blows accomplished the purpose for which they were intended, and the fight must be renewed.

Such a conviction urged them to better their condition while there was yet time, if it lay within their power to accomplish it.

It was Larry this time who made a discovery that caused him to cry out—Larry, who staggered forward, and, throwing aside some hanging curtains, revealed an object that electrified the other—Larry, who bent down and began to pull and haul as though seized with a sudden desire to become a pack-horse. Lord Rackett was by this time at his side, uttering little whoops of tremendous satisfaction, and when the enormous power in his muscular frame was brought to bear upon the object that riveted their attention, it was speedily dragged into the open.

It was nothing more or less than a little brass darling of a modern breech-loading cannon, which the count possibly had aboard in the hope and expectation of surprising some piratical junk by which he might incidentally be attacked while on one of his many cruises in Chinese waters.

A very careful and prudent man was this same Count Petoskey, and our friends were just now in a position to thoroughly appreciate the thoughtful qualities by which he was distinguished. "Fine! fine! most excellent," gloated Plympton, caressing the little pet, "if only there proves to be some ammunition of the right sort."

Larry had been possessed of the same idea and was already making an exhaustive search in such quarters as he deemed best adapted toward finding a bonanza.

Meanwhile those without were not idle by any means, but continued to force their attentions on the groaning doors that threatened to presently yield up the ghost, being unable to withstand such rude treatment.

laudable design, but not appreciated or understood by their comrades without, who, ignorant of the very warm reception awaiting them beyond, strove with might and main to shove the others on. Lord Rackett waited no longer.

To have done so would have been to invite disaster, since the crush was so great that it must have ended in projecting the whole living mass into the cabin.

He meant to introduce a counter blast that would clear the atmosphere and bring somewhat of order out of chaos. So he let go.

The whole fabric of the junk trembled under the concussion.

Avis gave a scream—for the life of her she could not help it, such was the fearful crash.

Besides, it was a wonderful sight to see that struggling, writhing mass of human beings in the doorway one instant, tumbling over each other and the spar that partially blocked the way, and just as soon as the concussion came to discover the aperture as free from human occupancy as though the whole blessed crew had been blown into the river.

Plympton was satisfied. He would have been indeed hard to please had it been otherwise, for his highest ambition was more than attained.

Indeed, so clean was the sweep that he found it hard to believe his eyes.

"Huzza!" he bellowed, filled with the excitement of battle, that caused every nerve to tingle, "we've got them on the run!"

"Let's follow it up and chase them overboard," suggested Larry, seized with an inspiration to follow the dreadful execution with a charge.

The big man approved the suggestion, since the idea presented some features worth trying.

To strike while the iron was hot applied in a case like this, and promised fair results.

Lord Rackett lingered but a few seconds to place another charge in the little beauty, so that in case they were hotly pressed they might fall back upon the cabin and have the means to spread consternation among their assailants.

Then he called to Avis and begged her to keep an eye on that window so that she might bag any sly miscreant who attempted to utilize it during their temporary absence.

After which he joined Larry in a dash upon deck, to carry further consternation to the already sadly demoralized crew.

The way was clear, save for the boom.

Just outside a number of men were picking themselves up, having been hurled hither and yon by the force of the impact.

Others lay still, and it could be readily surmised that these were the unfortunate chaps who had been directly in the upward line of flight taken by the projectile after it quitted its snug retreat in the brass cylinder of the yacht cannon.

"The Russian, if you can locate him," was what Plympton had suggested in the ear of his companion as they rushed forward, and Larry was quick to see what advantages might accrue from following out this advice.

When a leader is placed hors de combat, the desire for further battle is often taken out of his men; this is particularly

the impulse that led him to thus let loose with his leathern lungs.

There are times in the affairs of most men when silence is golden.

The lack of decent light hampered Plympton in his work of reaching the fountain head, but his was one of those peculiarly aggressive spirits which no difficulties can daunt.

So far as he could judge, the rasping voice of the Russian gamecock proceeded from a natural little barricade formed by a hencock and some water buckets piled up in a certain quarter.

Doubtless the doughty Russian warrior was coiled up behind this barrier, keenly on the watch, noting every point in the game, and keeping his precious body out of sight.

It was really too bad that his valor had not thrust him in the van when the desperate charge was made through the broken door of the cabin; having experienced the peculiarly elevating effect of that blast, when the discharge of the gun swept the whole mass through the choked opening, he would doubtless hardly feel able to urge his bulgies on to another assault.

Lord Rackett believed—indeed, he was quite positive—his Russian rival had been armed in the beginning of the fracas, for bullets had cut by in close proximity to his head, and one Chinaman at least had gone down through a poorly directed shot in his rear.

Whether Petoskey had exhausted his ammunition or not was a problem that could only be solved by actual observation.

Nor was the Englishman averse to making the experiment.

He had the Crimea in mind as he dashed recklessly forward—true, that was before his time, but his sire had led one of the bloody charges in front of the iron-bound Sebastopol, and had yielded up his life on the field, so that the son cherished secret feelings of personal animosity against the people of the White Czar.

Petoskey saw this towering figure heading in his direction—Petoskey, who realized that his Chinese minions were in no condition to come between in order to avert the crisis—Petoskey, whose ideas of valor and daring were of so peculiar a nature that the brave soldiers of the Czar, heroes of many a battlefield during the Turko-Russian war, must have writhed in anguish to have been witnesses to his conduct.

This same Petoskey now gave plain evidence that he was ready to cry quits and resort to every possible means to save his own precious skin.

And, really, who can blame him? He knew just what the result would be in case he fell into the hands of the enraged Briton who plunged toward him with such zeal, and the same end must inevitably be reached should the other obtain a fair crack at him.

As a dead man he would be of no use either to himself or his country; and Petoskey, being something of a shrewd diplomat, had high hopes of becoming an official possessed of great power when the Chinese Empire had been torn asunder and the pieces allotted among the nations that had had a hand in the dismemberment.

Besides, every human being has a right to continued existence—the desire to live is implanted in the heart of man to an extent that astonishes philosophers and students—the hope of the human race really depends upon this natural instinct that compels even the forlorn, aged and half-starved wretch to still hang on desperately in the hope of he knows not what.

Petoskey had much to live for, and really, he saw no reason why he should, like the Chinese generals and the heroic leaders of old, throw himself upon his sword because, forsooth, one battle out of many had gone against him.

There were other days coming when the tables might be turned—at least he was willing to believe so.

When Plympton had located his enemy behind this barricade, he made a dash for it, intending to drop in on the count in a friendly way, and influence him to call the game off.

(To be continued).

BIRDS GOOD FOR FARMER

STUDY THEIR HABITS BEFORE DESTROYING THEM.

Hawks and Owls Kill Mice and Rats—Good Word For The Woodpecker.

A writer in the Washington Star says that the easiest way to learn which birds are beneficial is to go out in the fields and woods and watch the birds. He adds:—

Probably one of the first he will see will be a woodpecker of some kind, and in that case he is sure to see a very useful bird. Of the forty odd species and sub-species of woodpeckers in this country, only one is sometimes destructive to the trees. This is the yellow-bellied sapsucker, but as he does not usually winter north of Virginia it is not likely that he will be seen here. Ten to one it will be a downy or a hairy woodpecker. These two are much alike in general appearance, except that the latter is considerably larger than the former. In either case he will be found very busy searching for and devouring insects' eggs, larvae and adult insects of one kind or another, which have their home on, in or below the bark of the tree.

Some of these insects are pests of the worst sort, and if they were not gathered up by the birds in the winter the trees would be alive with them in the spring, and in many cases they would destroy not only the fruit, but in some cases even the trees themselves. Of course, these birds carry on their warfare all through the rest of the year, eating ants, caterpillars and crawlers of many kinds by thousands, but the farmer, being busy with other matters, will not be so likely to see them at it.

WORK OF THE NUTHATCH.

Perhaps the next bird to appear may be a nuthatch, a bird much smaller even than the downy woodpecker and quite different in appearance and manners. It may be a white-breasted or a red-breasted nuthatch, but in either case he will be seen to be a very important little personage; not a harder worker than the woodpecker, perhaps, but with a greater appearance of bustle. The woodpecker usually moves from a lower point to a higher, or sideways if necessary—seldom down a tree for any distance, and never head first in this direction. The nuthatch seems to have no particular rule about this; when he wants to go up he goes up, and when he wants to go down, down he goes, and head first every time, sometimes pausing in the most absurd attitudes, with his neck stuck out at right angles from the trunk, to eye an observer who may be rude enough to stand and watch him.

Our farmer may see band of chickadees, of whose identity no one can ever be in doubt, since they repeat their own name over and over wherever they go, as they swing, often head downward, among the twigs. Very tame they are at this season, and with but a little patience they will feed from one's hand or lips, as they did from mine more than a hundred times last winter. They are engaged in the same work as the woodpeckers and the nuthatches, viz., the extermination of myriads of insects, which if allowed to increase unchecked would make the work of the fruit grower heart-breaking and unprofitable.

HAWKS GOOD QUALITIES.

Let the farmer now look over the fields beyond the orchard and observe that clear-cut figure of a hawk, sailing in circles against the sky. If he will but believe it, that is a feathered servant, working conscientiously from dawn until dusk, and without pay, to rid his farm of the rats, mice and other rodents which play such havoc with his

force by any means, but continued to force their attentions on the groaning doors that threatened to presently yield up the ghost, being unable to withstand such rude treatment.

It was a period of suspense. After all, Avis was to be thanked for discovering a store of ammunition, and when his attention was called to the fact Larry shouted in glee.

Quickly, then, one of the little brass-bound cartridges was placed in the chamber and the beauty brought to bear upon the doors.

Then Lord Rackett placed Larry where he might be most valuable, and begged Avis to seek shelter at one side, where she might be out of range, and at the same time could keep an eye on that window, of which Plympton still remained suspicious, since it presented an opening for the advance of the crafty foe, unless kept under surveillance.

These little arrangements were carried out while the inexorable battering-ram kept up its steady pounding on the trembling doors.

Another shot or two from this source would do the business, and open an avenue of communication between the cabin and the deck.

Then they could look out for squalls. Lord Rackett anticipated what the climax would be.

He could appreciate the tremendous power that lay back of that swinging boom, when once it was started plunging forward.

On this account he was not greatly astonished when, with a fearful crash, the doors, torn from their moorings, were flung into the cabin, followed by a large portion of the boom itself, together with several of the lusty yellow sailors who had wielded it.

Larry found his opportunity to open fire, and while the light was not all he might have wished, there was sufficient to show him the squirming figures of the two evil rogues who had been born across the threshold by the impetus of their forward rush.

From without arose a babel of confusion.

Many voices shrieked excitedly, and amid all the clamor Lord Rackett felt positive he could detect the gruff tones of the Russian, urging on an advance on the part of his gang.

During the respite that had occurred these fellows seemed to have forgotten the severe handling they received but a short time previous, for they came forward with a rush.

Plympton was ready—Plympton, who knew full well the dreadful power of the little teaser under his control.

"God help them," he muttered, involuntarily, as he waited for the opening to be filled with struggling forms, jostling each other first in their eagerness to get in and immediately by a similar desire to get out.

Of course, no sooner had the leaders pushed into the yawning cavity than they had an indistinct view of what awaited them there.

Naturally, they were frozen with horror. So might a man feel upon discovering that he was in the act of planting his upraised foot upon the coils of a monster rattlesnake or a cobra ready to strike.

Their wish was to back out as hastily as they had started in—no doubt a very

what advantages might accrue from following out this advice.

When a leader is placed hors de combat, the desire for further battle is often taken out of his men; this is particularly true of the Chinese, who depend so greatly upon their generals that if a fight is lost, even with great gallantry shown, the defeated commander is supposed to thereupon commit harikari.

Having, therefore, this brilliant idea in view, to concentrate their fire upon the man from the Neva, Plympton and Larry's first act upon gaining the deck was to strain their ears in the endeavor to locate the fellow.

At sight of the two heroes emerging from the billowy cloud of white powder smoke that oozed from the junk's cabin, those in the immediate vicinity set up a great howl, doubtless believing, after the remarkable experiences of the last ten minutes, that the foreign devils meant to exterminate them; for the awful explosion inside, together with its disastrous result, had knocked away the last props that sustained their wavering courage, and chilling fear now clutched at their hearts.

Such was the confusion at this juncture that the two bold friends listened in vain for the harsh voice of the Russian; he had been barking lively enough just previous to the discharge of the cannon, so that his present silence was the more to be wondered at, and Larry had begun to indulge in a hope that he had jumped overboard, under a belief that the junk was blown up, when something occurred to prove that the Cossack was not yet out of the game.

CHAPTER XVII.

The odor of burnt powder was in the air, and this, together with the shouts of the Chinese crew of the junk, served to lend an atmosphere of genuine battle to the scene.

It was the hope of the two comrades in thus sallying forth to complete the demoralization commenced by the explosion of the brass gun and drive the wretched crew over the vessel's sides.

Such a hope seemed to contain their only hope of gaining control of the junk, so that they might put her ashore and escape.

Perhaps the task might not have been so difficult had they only the ignorant Chinese to contend with, for the recent experience had gone far toward producing a species of panic among these fellows, and one man's fears are speedily communicated to another in a case of this sort.

But then there was the Russian. He had a deep interest in this game, and would demand a hearing ere the case was decided against his cause.

Lord Rackett had been endeavoring to locate the fellow from the start, and at the first sound of his tuneful voice he was ready to turn his batteries in that quarter.

Suppose he killed the Count, personally he would have no regrets in the matter, since the man was engaged in a piece of business of which he should be ashamed—persecuting a lady in order to reap pecuniary advantage from the dead.

On the whole bluff Plympton believed he would be very well satisfied with having accomplished such an act.

The man who kidnaps respectable ladies does so in the full knowledge that his work places him outside the pale of humanity—he is to be treated as a bandit, a wolf preying upon society. Lord Rackett knew how that was himself, though it was love for a woman that had tempted him; and he believed he had some excuse, while with the mercenary Russian there could be none.

When, therefore, the bass voice of this same Petoskey penetrated the night air, and with a great variety of powerful Russian expletives, coupled with the gibberish best understood by the desperate Chinese crew, urged the men to close in on the enemy and pulverize, destroy, annihilate them, Plympton was particularly pleased with the chance that now presented itself to carry his sterling ideas into practice.

Perhaps the doughty count might rue

dash for it, intending to drop in on the count in a friendly way, and influence him to call the game off.

(To be continued.)

DON'T MEDDLE.

One of the most irritating feelings against which the best people need to be on their guard is meddlingness. The chances are that by our meddlingness we mar more than we mend. The probability is that the cook broiled the breakfast bacon better than we could have done it, and the tailor cut the coat better than if he had followed our directions. No one can ever be happy in this world who fancies himself or herself born to "set it right." It would do us all good at times to sit with the pupils, instead of taking, uninvited, the seat of the master and the critic. One of the most useful lessons any man can learn is to let things alone. Let the chair stand where the maid placed it. Let the dinner be served without protest as the good wife ordered it. And remember that the world will have to get along without us some day; that if we keep hands off from it for a little while, it may be learning, as it must learn, to eventually get along without our suggestion or interference.

BABY ALWAYS WELL.

"I have nothing but good words to say for Baby's Own Tablets," says Mrs. A. Dupuis, of Comber, Ont., and she adds: "Since I began using the Tablets my little boy has not had an hour of sickness, and now at the age of eight months he weighs twenty-three pounds. I feel safe now with Baby's Own Tablets in the house, for I know that I have a medicine that will promptly cure all the minor ills from which babies suffer. I would advise all mothers and nurses to use Baby's Own Tablets for their little ones." These are strong words, but thousands of other mothers speak just as strongly in favor of this medicine. Sold by all medicine dealers or by mail at 25 cents a box by addressing The Dr. Williams' Medicine Co., Brockville, Ont.

A DISCOURAGING ANALOGY.

"I have pen, ink, and paper," said the literary girl. "All I need is some ideas in order to write a good novel." "I have similar materials in my room," answered her brother. "All I need is a bank account to write a good cheque."

If attacked with cholera or summer complaint of any kind send at once for a bottle of Dr. J. D. Kellogg's Dysentery Cordial and use it according to directions. It acts with wonderful rapidity in subduing that dreadful disease that weakens the strongest man and that destroys the young and delicate. Those who have used this cholera medicine say it acts promptly, and never fails to effect a thorough cure.

A gentleman who had the gift of shaping a great many things out of orange peel was displaying his abilities before Theodore Hook and Thomas Hill, and succeeded in carving a pig, to the admiration of the company. Mr. Hill tried the same feat, and, after stewing the table with the peel of a dozen oranges, gave it up, with the exclamation: "I must give up the pig! I can't make him." "Nay," exclaimed Hook, glancing at the table, "you have done more; instead of a pig, you have made a litter."

It is an Elixir of Life.—Since forgotten time, men have been seeking for the Elixir of Life, which tradition says once existed. Dr. Thomas' Electric Oil is an Elixir, before which pain cannot live. It is made up of six essential oils, carefully blended so that their curative properties are concentrated in one. It has no equal in the treatment of lumbago, rheumatism, and all bodily pains.

in circles against the sky. If he will but believe it, that is a feathered servant, working conscientiously from dawn until dusk, and without pay, to rid his farm of the rats, mice and other rodents which play such havoc with his property at all times of the year. It has been estimated that the hawk will destroy in one year a thousand mice or their equivalent in noxious insects, and the farmer need not be told what a thousand mice can do to his fruit trees in the course of one severe winter. He knows only too well, perhaps, that they can kill more than as many trees, by girdling them with their teeth, as I saw many a hundred trees killed last winter in the same way.

Now and then a hawk of some species will get a chicken from his poultry yard, but let him not be hasty to revenge the act. What other workman can he get to do so much honest work at so small a wage? In that hollow apple tree by the barn he may find a screech owl dozing, and at dusk this soft-winged bird will take up the work of mouse hunting where the hawk left off.

If the farmer will only study the habits of the birds he sees before undertaking to shoot any of them, and then shoot only those which he proves have done him more harm than good, his crops will be larger.

RECORD FEES FOR SURGEONS.

Woman Received Bill for \$20,000 for Visits from Paris Specialist.

Prof. L. Mann, the German specialist, has been summoned to Constantinople to the Sultan's daughter, who is suffering from appendicitis. This is one more illustration of the desperate and costly measures adopted in the case of serious illness.

In England doctors rarely make exorbitant charges for going any long distance to see their patients. Five dollars a mile is supposed to be a fair average charge, with an ordinary fee at the end of it; and several well-known surgeons are content to visit cases 100 miles away, on a line with reasonably fast and regular trains, for \$200 and their ordinary fee.

It is quite possible to combine several cases in a district. Sir Frederick Treves used to send cases to Westgate, and pay an occasional combined visit to them, and at places like Eastbourne and Torquay every consulting physician has several patients who welcome a visit.

Specialists of world-wide fame, like Prof. Pagenstecker, the German oculist, lose such large sums by two days' absence every symptom and change being care-more. Dr. Pagenstecker has more than once received a fee of \$4,000 for going to England.

French surgeons dislike leaving Paris, and charge exorbitantly for doing so. A famous living surgeon recently charged \$4,000 for going from Paris to Biarritz (a ten hours' journey) to perform a long, but simple, operation; and a well-known Paris ladies' doctor refused an offer of the same fee to go to Nice. An American woman who became suddenly ill at Cherbourg, and was visited twice a week for a month by a Paris surgeon, was horrified to receive a bill for \$20,000.

On one occasion, when the late Cecil Rhodes was ill in South Africa, an English doctor "treated" him by cable. Every symptom and change being carefully telegraphed to London, and instructions sent back.

NO MUSIC.

"I suppose," said Mrs. Nexdore, "you noticed that my daughter is taking music lessons?"

"Oh!" exclaimed Miss Pepprey, "is that what she's doing? I thought it was a typewriter she was working."

"Upon my word," said the surprised barber, "I see this razor has lost its temper." "I don't blame it," growled the man in the chair. "With a year talking I lost mine long ago."

WHAT WOMEN SUFFER.

At All Ages They Need the Rich, Red Blood That Dr. Williams' Pink Pills Actually Make.

A woman needs medicine more than a man. Her organism is more complex, her system more delicate. Her health is disturbed regularly in the course of nature. If anything happens to interfere with that natural course she goes through unspeakable suffering. In fact the health of every function and the health of every moment in a woman's life depend upon the richness and regularity of her blood supply. That is the simple scientific reason why Dr. Williams' Pink Pills are worth their weight in gold to women of all ages from early girlhood up—they actually make the rich blood all women need.

Mrs. Edwin Ward, Brookside, Ont., says: "For years I suffered from those ailments that make the lives of so many of my sex miserable. I would take weak spells and become so nervous that I could not go about. My stomach was out of order, and I frequently vomited the food I took. Headaches and backaches afflicted me nearly all the time. Then I took a severe cold which settled on my lungs, and I went to a hospital for treatment. I had the best of care, but the doctors gave me little hope of recovery. My face and limbs became swollen and my system racked with a harsh dry cough. As the doctors did not look hopefully upon my case I decided to try Dr. Williams' Pink Pills. By the time I had taken half a dozen boxes there was a great change for the better. I still continued to take the pills until I had used thirteen boxes, and I am now enjoying perfect health. I have no hesitation in saying that I believe Dr. Williams' Pink Pills saved my life."

Dr. Williams' Pink Pills cured Mrs. Ward by actually making the new blood her system needed. That is all Dr. Williams' Pink Pills do, but they do it well. They don't act on the bowels. They don't bother with mere symptoms. They go straight to the root of the trouble in the blood. That is why they cure all blood and nerve troubles like anaemia, female irregularities, indigestion, rheumatism, headaches and backaches, sciatica, nervous prostration and St. Vitus dance. Substitutes and imitations won't cure, purging medicines only make you worse, therefore you must get the genuine pills with the full name "Dr. Williams' Pink Pills for Pale People" on the wrapper around every box. Sold by all medicine dealers or by mail at 50 cents a box or six boxes for \$2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

WHERE FIGS COME FROM

HOW THE DIFFERENT VARIETIES ARE OBTAINED.

They Are Brought From Growers on Camel-Back to Packing Houses.

How Smyrna figs are packed for market is described by a correspondent at that Asia Minor city.

Fig trees begin to bear in their sixth year, and are full of vigor in their fifteenth. Those upon low plains yield fruit which is larger and richer in saccharine matter than that of the hills, but the trees often suffer from excess of moisture in wet seasons.

About the middle of August the fruit ripens, when it is picked and dried in the open air from three to six days. It is then packed in sacks holding 250 pounds each, placed upon camels and taken to the nearest railway station or fruit warehouse. Two such sacks make a load for one camel.

WORK OF PACKERS.

THE BIOSCOPE IN AFRICA.

Expedition Will Secure Records of Wild Life in Unknown Lands.

An expedition will leave London shortly, under the leadership of Brian Bellasis and Lionel Cooke, with the object of obtaining bioscopic records illustrating the wild life and the industrial activities of countries along the entire route of the proposed Cape to Cairo railway.

Though the enterprise is mainly commercial, and has the support of many of the most important African companies, it is hoped that it may accomplish something of scientific value. The leaders have been asked by the Zoological Society to try to get a few specimens of rare animals, notably a white rhinoceros, which, they are assured, if captured young enough, may be persuaded to march with them.

Ethnological interests will be subserved by obtaining phonographic records of the dialects of various native races.

In the centre of Nyassaland is a mysterious native city where a warlike native chief holds court. His city is completely surrounded by walls, and is composed of stone kraals.

To the white man it is forbidden ground, no European having as yet entered its gates; but Mr. Bellasis and Mr. Cooke hope, by dint of many presents, to gain permission to enter and take records, which should be of great interest to the outside world.

When Broken Hill, the terminus of the southern section of the railway, is reached, the real difficulty of the expedition will begin. For many months but slow progress can be made, with the aid of native bearers, and when the northern shores of Lake Victoria Nyanza are reached the presence of hostile natives and the extreme danger from fever will render the journey somewhat precarious.

In Abyssinia the Emperor Menelik will be visited, and animated pictures of London will be shown to him, in return for which it is hoped permission will be granted to bring home to London records of life in the most gorgeous court in Africa.

From Abyssinia the expedition will strike back to the Nile, and proceed by steamer and rail to Cairo.

MONTHLY REMINDER.

"Try to forget me," she said, with a look of pity.

"How can I?" he miserably answered, "as long as I have to make monthly payments on the things I have presented to you?"

Give Holloway's Corn Cure a trial. It removed ten corns from one pair of feet without any pain. What it has done once will do again.

"Here comes the old general with his daughter." "So I see—and they say the daughter has been through more engagements than her father."

The Greatest Tonic is "Ferrovin." It is pleasant in taste and contains just the nourishment and strength-giving qualities that are needed by those who are sick and weakly.

Mr. Jones—"My wife is very careful about my health. In fact, her care sometimes becomes very annoying." Mrs. Wise—"You ought to carry more life insurance."

The Demon, Dyspepsia. — In olden times it was a popular belief that demons moved invisibly through the ambient air, seeking to enter into men and trouble them. At the present day the demon, dyspepsia, is at large in the same way, seeking habitation in those who by careless or unwise living invite him. And once he enters a man it is difficult to dislodge him. He that finds himself so possessed should know that a valiant friend to do battle for him with the unseen foe is Parlee's Vegetable Pills, which are ever ready for the trial.

COBALT-The World's Richest Silver Mining Camp

THE COLUMBUS COBALT SILVER CO., Limited.

Authorized Capital Stock, \$450,000. Shares \$1 each.

BOARD OF DIRECTORS:

HON. RICHARD HARCOURT, President, Director of the Ontario Bank, and formerly Treasurer of the Province of Ontario

JAMES TUDHOPE, Esq., M.P.P., Head of the firm of Tudhope Carriage Co., Limited, Orillia.

JOHN FLETT, Esq., Vice-President, Head of the firm of Flett, Lowndes & Co., Director of Ontario Bank

DANIEL SIMPSON, Esq., M.E., Managing Director, Cobalt, Ont. JOSEPH COLUMBUS, Esq., Explorer, Haliburton, Ont.

SOLICITORS—Clark, McPherson, Campbell & Jarvis, Toronto. The company owns as a mining claim, free from any encumbrances, the famous and well-known Columbus Mine of 40 acres, which has a 5-foot vein, one foot being high-grade cobalt, with good silver value, at only four feet depth, located in Coleman Township, near Giroux Lake, in a most favorable location nearby many of the big paying mines, such as the Drummond, Jacobs and others, and only a few feet from the famous Glides timber limit, which is so rich in silver that the Government decided to develop it for the benefit of the public. The undersigned personally offers for sale at par only a limited number of shares, as it is expected that in a short time it will greatly advance. There is now a full force of miners developing the property. Send for full particulars. Mail your order, with marked cheque or express order, to the order of

DANIEL SIMPSON, P. O. Box 129, Cobalt, Ont.

veloped, he finds that he really has got a bad attack of rheumatism. Harvey who discovered the circulation of the blood, records having had a dream in which a bee stung him in his left thigh on a place where a couple of days later appeared an ugly ulcer. The ulcer must have been developing, of course, at the time of the dream, but what the man is

is then packed in sacks holding 250 pounds each, placed upon camels and taken to the nearest railway station or fruit warehouse. Two such sacks make a load for one camel.

WORK OF PACKERS.

These consignments from the country groves are bought by exporters and taken to great packing houses. There small armies of employes, chiefly women and girls, sort, wash, dry and pack the fruit.

Work is provided for thousands in Smyrna during September and October and the prosperity of the poorer classes is largely dependent upon the amount of money put into circulation in that brief season.

In sorting the figs classification is guided by color, size and especially by the thinness of the skin. Inferior grades are thrown aside and sold for purposes of distillation.

A certain quantity of these grades is shipped to Austria, where it is used as a substitute for chicory. It is said that the delicate quality of Vienna coffee is due to the use of fig powder.

Figs of intermediate grades are placed for shipment in bags of linen or other material, while the finer fruit is carefully packed in boxes containing from one to eleven pounds. Each fig of the best grades is subjected to a certain manipulation before being packed.

During this operation the workers continually dip their fingers in sea water. As a result of the treatment, it is said, the fruit is better preserved and retains its sweetness after long keeping.

SEVERAL VARIETIES.

"Macaroni" figs are those which have been gently rolled between the palms of the hand. "Loucouin" figs are those which have been pressed into rectangular shape.

Most of the choicer varieties are packed in layers. The upper side of the fruit is split and the fig is flattened. The "Macaroni" style of packing involves the least disturbance of the fig's internal structure. Boxes of figs are generally exported in crates holding about 330 pounds.

Last year unsorted figs arrived at Smyrna from the interior sold at prices ranging from \$2.80 to \$10.50 a quintal of 25 pounds. Packed for export, the prices ran from \$2.25 to \$12.50 for 112 pounds, according to quality. The crop was exceptionally large, amounting to over 20,000 tons. Much of this was sold long before it was packed.

CHINESE IGNORANCE.

Flynn: "OI tell yez they's no use thyrri'ng to iddic-ate thim Chionnese." Mulhooley: "An' phwy is thot?" Flynn: "OI jist asked wan av thim the Chionnese wor-rud for St. Patrick's Day, an', bedad, he couldn't tell me."

Jackie: "I say, papa, what's the derivation of millionaire?" Papa (who has just got the bill for his wife's new bonnet): "I'm not sure, Jackie, but I think it must be derived from milliner."

Junior Clerk: "Young Jenkins, our invoice, clerk, is the cheekiest beggar ever I came across. He was a quarter of an hour late in coming in this morning, and our gov'nor held up his watch as a hint, you know; but Jenkins merely said: 'What a beautiful watch, sir; I wish I had one like it!'"

Hump Back

SCOTT'S EMULSION won't make a hump back straight, neither will it make a short leg long, but it feeds soft bones and heals diseased bone and is among the few genuine means of recovery in rickets and bone consumption.

man it is difficult to dislodge him. He that finds himself so possessed should know that a valiant friend to do battle for him with the unseen foe is Parmelee's Vegetable Pills, which are ever ready for the trial.

Friend (to Dobson, lately married): "I don't see any change about you since you were married." Dobson (turning his pockets inside out): "There isn't any to see, my boy."

Sunlight Soap is better than other soaps, but is best when used in the Sunlight way. Buy Sunlight Soap and follow directions.

"When a fellow starts to do anything he can always succeed if he only sticks to it." "Not always. How about when you start to remove a sheet of sticky fly-paper that you've sat down on?"

Pleasant as syrup; nothing equals it as a worm medicine; the name is Mother Graves' Worm Exterminator. The greatest worm destroyer of the age.

Teacher: "And why are you so late, Tommy?" Tommy: "If you please, teacher, it is mother's washing day; she lost the lid of the copper, so I've been sitting on the top to keep the steam in."

Just a Word of caution: Where the skin is destroyed by burns or scalds apply Weaver's Corate immediately: the sooner the better.

Brown (sobbing): "The deceased was so kind, so noble, so good-hearted." Friend: "But I heard she cut off her own family without a penny, and left everything to a distant connection." Brown: "I'm the distant connection."

A Magic Pill. — Dyspepsia is a foe with which men are constantly grappling but cannot exterminate. Subdued, and to all appearances vanquished in one, it makes its appearance in another direction. In many the digestive apparatus is as delicate as the mechanism of a watch or scientific instrument in which even a breath of air will make a variation. With such persons disorders of the stomach ensue from the most trivial causes and cause much suffering. To these Parmelee's Vegetable Pills are recommended as mild and sure.

THE BEST HE HAD.

Lady—See here! ain't you ashamed to be hitting that poor horse with that whip?

Driver—I be, mum. He don't mind it a bit. Would yer kindly hand me dat fence rail?

A TORONTO MAN TRIES

SOMETHING NEW AND IS DELIGHTED. FEELS LIKE A BOY.

Mr. M. N. Dafeo, Manager The Dustless Brush Co., 29 Colborne St., Toronto, is telling his friends how he found health after years of illness and pain. He says: "I have been a great sufferer from Dyspepsia for many years. I have been treated by local doctors and have taken nearly all the advertised remedies with only temporary relief, if any at all, but since using Anti-Pill I can eat anything the same as when a boy. I have been taking one Anti-Pill at bedtime for the past three months, and find they regulate both stomach and bowels. My old time vigor has returned, so that my spirits are buoyant and temper normal. As a result of this unhopod for experience I am in duty bound to give all credit to this wonderful remedy, Anti-Pill."

Every druggist sells Dr. Leonhardt's Anti-Pill, or a sample will be sent free by The Wilson-Fyle Co., Limited, Niagara Falls, Ont.

The remedy that cured Mr. Dafeo so completely is surely worth a trial. 508

ARCHDALE WILSON,
HAMILTON, ONT.

BARBER-SURGEONS.

The Society Was Founded in Edinburgh in 1505.

More than 400 years old is the Royal College of Surgeons, Edinburgh. At the time it was founded the surgeons and barbers of the city were united as one of the fourteen incorporated trades of Edinburgh. On July 1, 1505, they received their charter from the Town Council.

The charter of the barber-surgeons was confirmed by James IV., an early Stuart King of great enlightenment and accomplishment, who took much interest in the progress of the surgeons on account of the needs of his army in time of war.

In the charter leave was given to the incorporation to control the medical education of the city, such as it was in these days; of blood letting, to have the sole right of practice and to put down quacks.

They were to get every year the body of a criminal who had been executed to practice anatomy on, and they promised in return to do "suffrage for his soul." Of the first 158 members of the incorporation, six were surgeons to the Kings of Scotland.

As society improved and medical science developed, the gulf between the surgeons and barbers widened, and in 1772, as the result of a process in the Court of Sessions, the connection was finally terminated. The descent or president of the incorporation of surgeons was for more than 320 years a member of the Town Council of Edinburgh ex-officio, and several of the deacons were members of the Scottish Parliament.

WHY DREAMS COME TRUE.

There is a scientific explanation of the fact that illnesses, at least, can be foretold in dreams. The theory is that when a man is dreaming his mind is more sensitive than in his waking hours, for the simple reason that his actual surroundings are not engaging any of the mind's attention. Thus it happens that when some disease has set in, the man awake does not feel it in its earliest stages, although the active mind in a sleeping body does feel it. The sleeper dreams, let us say, that he is suffering some complaint of the leg, and two or three days later, the disease having de-

who discovered the circulation of the blood, records having had a dream in which a bee stung him in his left thigh on a place where a couple of days later appeared an ugly ulcer. The ulcer must have been developing, of course, at the time of the dream, but what the man is full consciousness could not perceive the man with only an active mind—I. e. dreaming—easily noticed.

KICKING.
Balking, Shying, or any kind of a habit cured in a few hours by my system. Particulars free.
PROF. JESSE K. BERRY,
Pleasant Hill, Ohio.

STAMMERERS

The Arnott Method is the only logical method for the cure of Stammering. It treats the CAUSE, not merely the HABIT, and insures natural speech. Pamphlet, particulars and references sent on request. Address

THE ARNOTT INSTITUTE,
BERLIN, ONTARIO.

Combination With No Equal

WAGON BOX, HAY, GRAIN AND STOCK RACK.

Represents combination double box, by lifting off top section it leaves single box.

Same as cut 1, only with top section converted into sugar beet, grain or coal box.

Represents combination converted into stock rack, showing ordinary pitch. The shelvin can be adjusted to nearly a flat pitch, making combination about a foot wide.

Combination converted into stock rack by closing up shelvings, which lock themselves in castings.
We also manufacture pea-harvesters, manure loaders, bushers, washing machines and wheel-barrow, also a full line of cement brick machines. Agents wanted in every locality. Write for catalogue and prices.

WETTLAUER BROS. & SONS,
Stratford, Ontario.

WEALTH OF THE MOST HIGH

All Through the Ages God's Great Love Has Been Seeking Men.

God, who is rich in mercy, for his great love wherewith he loved us.—Eph. ii., 4.

Vigorously as we may protest against the sloth that substitutes analyses and speculations concerning deity for human duties and service, it is not well to lose sight of the fact that a man's character largely is influenced by his conception of the highest form of being he may know or imagine. The trend of a man's life is determined by that which he places highest in the heaven of his ideals.

Now it is better that a man should be a pagan, saying he has no god and looking out only on the world of nature, than that he should be molded by the philosophy of a universe ruled by a dour, crabbed hearted tyrant. For a man always will find things and thoughts sweet, fair, wholesome, elevating, and broadening, moving to gratitude and sympathy, when he looks out on nature, on field, and sky; but only bigotry and bitterness can come from the life whose sky is darkened by the spectre of a god of wrath.

They say that the devil's most happy delusion is the persuading of men that he is dead; rather, if there be a prince of darkness with any favorite message for men, that message well may be that the god of pettishness, animosity, and cheap, theatrical sovereignty is still alive and controlling the destinies of men. It always has been easy to find CRABBED SOULED THEOLOGIANs

who would accept that picture as a portrait because it was the only one that could lie within their experiences.

But only a vision from on high could bring to our dull hearts the great and glorious fact of one who could love us all, whose heart affections pour out, glowing in wealth like the glowing sun of summer, who abounds in all that our hearts are hungry for, the things that seem in the world as the bread from some fairer, sinless land; love and sympathy, happiness and goodness, tenderness, kindness, peace, and joy.

The men who urged the existence of a creator from the wonder of his works

stopped short at the vital and only permanently persuasive part of their argument which would demonstrate the goodness and tender kindness, the overflowing wealth of the creator's love as evidenced in a world so fair and full of beauty. Strange that we should think that he so ungrudgingly would give to all the things that delight our eyes and withhold from any all that for which hearts hunger.

All through the ages this great love has been seeking men. We, because we were like spoilt children, jealous, and desirous of keeping in the tiny channel of our affections the divine heart wealth, have decided his love could not be for all, he only could love the good—such as we are;

HE MUST HATE THE WAYWARD, the light hearted, and all those who could not crowd their mind into our intellectual molds.

We were blind to the bountiful, limitless affection speaking through every upspringing blade and blossoming flower, through the earth's riot of unnecessary happiness, through singing voices or seers, through strange tear commanding thoughts on starry nights. We would not learn even from our lesser love, our affections as father and brothers. Strange blindness and deafness!

And when one voice spoke, a voice that still sounds clear above all others, when he talked of one who could love publicans and harlots, then men turned on him saying, you have a devil!

Still we set up our false gods of selfish hearted philosophies. What wonder the world is hungry with a hunger that bounteous crops and tides of prosperity cannot assuage; it is hungry for the deep things of the spirit, for the impulses, aspirations, and affections, the uplift and comfort that flow from the heart of the infinite to all his children, for the water of the river of life. Would that we might lose the scales from our eyes and see how near and how good God is, how wondrous his wealth and open his hand.

HENRY F. COPE.

THE S. S. LESSON

INTERNATIONAL LESSON, JULY 1.

Lesson I. Jesus and the Children. Golden Text, Matt. 18. 14.

THE LESSON WORD STUDIES.

Note.—The text of the Revised Version is used as a basis for these Word Studies.

Intervening Events. — Descending from the Mount of Transfiguration with Peter, James and John, Jesus healed the leprosy lad whom some of the disciples had been unable to heal. Of his incident Mark gives the longest account (Mark 9. 14-29). Shortly after this, while on a tour through Galilee with his disciples, Jesus again foretold his death and resurrection. Arriving at Capernaum, the incident of Peter's taking a shekel from the fish's mouth and paying therewith for himself and his master the annual contribution to the temple treasury which was expected of every Jew, took place (Matt. 17. 24-27). Our lesson text is part of a longer discourse of Jesus on humility and forgiveness recorded in Matthew 18, and with but a few parallel passages in Mark and

might make his son or his daughter to pass through the fire to Moloch." In our Lord's time the valley was used as a place for depositing pollutions of every kind, even the bodies of criminals who had been executed. From this defilement and from its former desecration, Gehenna came to be used in a figurative sense to express the abode of the wicked after death. "The words of fire" are added either because of the ancient rites of Moloch, or, if a Rabbinical tradition is to be credited, because fires were always burning in the valley; or, further, as a symbol of everlasting punishment. —Carr. From the use of the term "the eternal fire" in the preceding verse it is probable that the last suggestion of Carr is the correct one.

10. —Literally, messengers.

Behold the face of my father who is in heaven—Not as if these messengers brought to God tidings of the wrong done to his little ones on earth, but rather that they stand in the presence of the throne ever ready to do the Father's bidding, and thus ready to speed on errands of help to protect these little ones and avenge their wrongs.

11. Following the reading of several excellent ancient manuscripts the Revised Version omits this verse, but there seems to be equally good authority for retaining the same. The verse reads, "For the Son of Man came to save that which was lost." It fits well into the thought of the discourse at this point.

12. Which goeth astray—Even while

Fashion Notes.

KEYNOTE OF THE STYLES.

For the midsummer frocks, simplicity reigns. But it is the simplicity of exquisite elaboration. Frills and flounces, ruffles tucked and shirred, lace and lawn batiste and embroidery, ribbons and ruchings, and finest of hand stitchery go to make up the simplicity of the summer lingerie frock. While the materials are of a simple nature they require a vast amount of trimming to bring them up to the fashion.

One scarce knows what or what not to dub a lingerie frock now-a-days, since Paris has sent over elaborate creations in fine wool voiles and grenadines wrought elaborately in tuckings and shirings, quite after the fashion of the original lingerie gowns, and termed by the knowing lingerie also. The best of the lingerie frocks are from Paris, and hand sewed. The woman who feels inclined to invest largely should never for a moment consider anything but the imported gown. Next choice comes in selecting the machine made variety. It is the greatest folly to attempt the construction of an elaborate lingerie frock oneself. The endless insertings and tuckings-to-fit, the flouncing and the like require absolute precision and ability. The frock that is home-fashioned should stick to actual, not supposed simplicity, and generously wide embroideries and flouncings may well enter into its construction.

THE BERTHA

Is greatly in evidence in the latest lingerie models. It may be made the means of balancing the figure whose shoulder and bust measure are too scant for the hip girth. This, by the way, is one of the points to be considered in building the princess frock. Unless the figure be absolutely perfect in its balance some sort of a makeshift should be resorted to in the trimmings to preserve the symmetry. The princess skirt is even more trying than the princess frock in its tendency to increase the apparent measure, a fact which has earned it disfavor with many a woman.

The forehanded woman who selected her summer gowns when things were first shown, is now enjoying them to the fullest satisfaction, and pitying the foolish ones who left their summer wardrobe to the last moment. But late shopping has its compensations if one is not too rushed or in too immediate need of the garments. The stores have a way of bringing out lines of most attractive thin stuffs at the last moment, and overstocks and peculiar patterns that may have been a little slow of sale are brought forth and labeled at such tempting prices that madame who bought early is often inclined to regret her forehandedness. Then the exclusive shops start clearing sales of models in gowns and wraps and hats in mid-May, repeating them at intervals.

THE COTTON GOODS.

were never so alluring as they are just now. Chiffon best expresses all of them, for the chiffon quality is everywhere apparent. Some of them are so like the silk and wool weaves that it is only by the price and the microscope that one can judge.

There are chiffon voiles in cotton, in tiny checks with coin spots, pin and cushion embroidered in color that one can buy now for as low as 35 and 40 cents a yard. There are cotton chiffons, printed with the faintest and delicate floral patterns in faint and blurred designs, that show up charmingly over delicate colored linings to match. These linings need not be silk if one wishes to economize, for there are attractive cotton weaves that duplicate silk in effect, at something like one-quarter of the price of the queen fabric.

Dotted swisses that are certainly far from popularity in the early spring, have sprung into favor. They offer advantages to the home-sewer since from their very construction they need little trimming or elaboration to render them effective. They are especially favored by the younger set, girls from sixteen upward, and are worn over pink or blue silks with girlish sashes of the same color.

A GHOST'S ODD PRANKS

MYSTERIOUS OCCURRENCES ON AN ENGLISH FARM.

Horses Removed From Their Stalls and Other Manifestations — District is Alarmed.

Strange, unaccountable things are befalling in the neighborhood of Lamberhurst, Kent, England. The villagers, who in the midst of their laughter exhibit unmistakable symptoms of fear, are convinced that they are sheltering one of the most enterprising, audacious and mysterious "ghosts" recorded in the annals of the unseen.

If "ghost" it be—and the word of the persons chiefly concerned can only be accepted on this point—the visitant has displayed the greatest discrimination in the choice of its field of operations. Lamberhurst is an oldtime cluster of cottages, Elizabethan for the most part, lying midway between Horsmonden and Goudhurst. Two miles further on is the Furnace Mill, owned by J. C. Playfoot, a well-to-do farmer and hopgrower. Here the "ghost" has established its headquarters.

Furnace Mill lies in the wooded hollow, a quarter of a mile from the main road. It is flanked by a darksome lake, in which the tall elms that fringe it cast shadowy reflections. The trickling of a cascade and the calls of bird to bird are the only sounds that disturb the silence. No other dwelling is visible.

LOCKS AND BOLTS OF NO AVAIL.

Mr. Playfoot, a matter-of-fact, businesslike man, recounted with some reluctance his weird experiences: "Whatever the thing may be," he said, "it is playing the very mischief with my place, it operates only in the daytime, and under the very noses of myself and other members of the family who are looking out for it.

It is important to know that I have not discharged anyone, that this place can only be reached by a private road, that the approach of any stranger would be disputed by two watchdogs that would not stand on any ceremony, and that I carry in my own pockets the keys of the mill, stables, hayrooms and other buildings.

"Despite all these precautions, locked and bolted doors swing open, the horses are changed from stable to stable, are sometimes turned round in their stalls so that their backs are against the mangers, and are often seen to run shivering and startled from their stables into the road.

"Bales of hay are cut and scattered about the hayrooms, the contents of sacks in the drying room are emptied and changed about, while in the tool-house barrels of lime weighing hundred-weights are flung down a flight of stairs. These and many other strange things happen in rooms that are locked, barred and bolted, while people watch and listen outside, and the keys are in my pockets. Nobody or nothing is ever seen or heard."

BOY'S ADVENTURE.

Then Mr. Playfoot detailed what was perhaps the strangest "manifestation" of all. "About noon a few days ago," he said, "in the presence of my son I locked and bolted every building on the premises and went into the millhouse for dinner. Suddenly I heard a startled cry from the lad, and rushing into the yard saw the door of the drying-room, only about ten yards away, wide open. Within the room I heard the shouts of the lad, but before I could reach him the door silently closed. I seized the handle. The door was locked! My son was a prisoner inside. The key of the room was in my pocket. I unlocked the door and entered the room. Nobody was there except my son, standing on the stairs frightened and pale."

Young Playfoot, a bright lad about 15 years of age, corroborated this strange story. "As soon as I had entered the room," he added, "I saw the door closed

temple treasury which was expected by a few Jew, took place (Matt. 17. 24-27). Our lesson text is part of a longer discourse of Jesus on humility and forgiveness recorded in Matthew 18, and with short parallel passages in Mark and Luke (Mark 9. 35-50; Luke 9. 46-50; 15. 4-17).

Verse 1. In that hour—Immediately following the miracle of taking the coin from the fish's mouth referred to in the last verses of the preceding chapter. The working of the miracle had again excited in the disciples the hope of a glorious kingdom upon earth, and hence their question, Who then is greatest in the kingdom of heaven?

2. Called to him a little child — The statement of this fact incidentally throws much light on the publicity of our Lord's work as teacher. No other great teacher in the history of the race was so continually and conspicuously in view of the public.

3. Verily — Literally. amen. This word occurring at the beginning of a discourse or sentence, means of a truth, surely, or truly; at the close of a sentence it signifies so be it, may it be fulfilled. The repetition of the word, as often in John, gives it the superlative significance of most assuredly.

Except ye turn — From the haughty and self-seeking spirit revealed in the question which the disciples had just put to Jesus.

In no wise enter — Much less be great therein, since the kingdom of heaven is a spiritual kingdom of humility.

4. Greatest — Literally greater; that is greater than others. So also in verse 1 above.

5. Whoso shall receive one such little child—To be taken in its literal sense as pointing to the function and calling of the disciples as teachers.

Receive him — A kindness rendered to a friend is in a very real sense a kindness rendered to us as well. In this sense the words of Jesus are to be taken.

6. One of these little ones that believe on me—The usual interpretation of this verse is that Jesus here refers not to children, but to those young and weak in faith. This application of the words of Jesus is perhaps justifiable and permissible, but since we have so few passages in which the attitude of Jesus toward children and their training is set forth, we should be slow to divert by a method of figurative interpretation such a passage as this one which, taken literally, as actually referring to those young in years, yields such a rich fund of spiritual truth.

7. It is profitable for him—And more especially also for those whom his life might, if prolonged, influence for evil.

A great millstone — Literally a millstone turned by an ass, that is, one too large to be turned by hand.

Sunk in the depth of the sea — The manner of death here referred to was common among the Greeks and Romans, though probably not well known among the Jews.

8. Occasions of stumbling—To others who were seeking to live an upright and righteous life.

It must needs be—It is natural and in harmony with the actual course of events.

9. Verses 8 and 9 are a light divergence from the immediate thought of the preceding and following verses. From persons who give occasion for stumbling Jesus turns to that within the disciple's own life which may be a hindrance to his Christian life.

The eternal fire—The use of the article seems to indicate that Jesus referred to some place of torment, either well known in current teaching, or at least familiar to his hearers from his own previous teaching on the subject.

10. The hell of fire—Literally the Gehenna of fire. Gehenna is the Greek form of the Hebrew Ge-Hinnom or "Valley of Hinnom," sometimes called "Valley of the Son of Hinnom"; also Tophet (Jer. 7. 31). This Valley of Hinnom was a deep, narrow gulch or glen south-west of Jerusalem, where in earlier times the cruel practice of human sacrifice to the god Moloch had been carried on. It was during the reformation under Josiah (2 Kings 23. 10) that the king "defiled Tophet, that no man

seems to be equally good authority for retaining the same. The verse reads, "For the Son of Man came to save that which was lost." It fits well into the thought of the discourse at this point. 12. Which goeth astray—Even while the sheep is yet in the act of going astray the careful shepherd has already begun his search. This parable in Luke is given in connection with two others, the parable of the Lost Coin and the parable of the Lost Son.

BETWEEN AN ELEPHANT'S FEET.

Narrow Escape of a Hunter in the Wilds of Africa.

Toward the end of the summer of 1850 William Cotton Oswald was on an elephant-hunt in Africa, and nearly lost his life. In his biography his own description of the adventure is given. An elephant was close to him. There was no time to wait if the hunter was to get a shot. The beast was on the move and the dust flew from his side as the heavy ball struck him.

Screaming angrily he turned full front in the direction of the tree by which I stood, motionless. For a moment we confronted one another, and then the rumbling note of alarm uttered by his companions decided him on joining them. I regained the path, and rode along the line of their retreat, which, as shown by the yielding bush, was parallel to it. After a time the thorns thinned out, and I caught sight of the wounded elephant, holding a course of his own a little to the left of his fellows; and when he entered the tropical forest beyond I was in his wake, and very soon compelled to follow where he broke a way.

A little extra noise from the pursuers caused the pursued to stop; and while clinging like Gilpin to the horse, and peering at the broad stern of the chase I saw him suddenly put his head where his tail ought to have been. The trunk was tightly coiled. Forward flapped the huge ears, up went the tail, and down he came like a gigantic bat ten feet across.

Pinned above and on each side, by dismounting I could hope neither to escape nor to kill my opponent. I therefore lugged my unfortunate animal round, and urged him along. The elephant thundered straight through obstacles which we were obliged to go round, and in fifty yards we were fast in a thick bush, and he within fifteen feet of us.

As a last chance I tried to get off, but in rolling round in my saddle my spur galled the pony's flank, and the elephant screaming over him at the same moment, he made a conclusive effort and freed himself. That deposited me in a sitting position immediately in front of the uplifted forefoot of the charging bull.

So near was it that I mechanically opened my knees to allow him to put it down, and throwing myself back, crossed my hands upon my chest, and obstinately puffed myself out with the idea of trying to resist the giant tread. I saw the burly brute from chest to tail as he passed directly over me lengthways, one foot between my knees and one fourteen inches beyond my head, and not a graze! Five tons at least.

Out of all my narrow escapes this is the only one that remained with me in recollection for any time. One hears of nightmares. Well, for a month or more I had nightelephants.

WOMEN'S CHANCES OF MARRIAGE.

The women of Great Britain have nearly twice as many chances of being married as the women of any other nation in Europe. This is one of the many remarkable facts shown in the annual statistical abstract for the principal nations of the world, issued by the Board of Trade recently. The period covered by the figures is from 1893 to 1903, in each of those ten years there have been fourteen or sixteen marriages per 1,000 of the population in Great Britain, while in other countries the rate has remained steadily at between seven and eight per 1,000.

their very construction they need little trimming or elaboration to render them effective. They are especially favored by the younger set, girls from sixteen upward, and are worn over pink or blue slips with girlish sashes of the same color, and pumps and stockings also matching.

Fancy-work shops are showing a wonderful amount of stamped items which country-goers are buying. Sets of chemise and cuffs or undersleeves, blouses galore, lingerie hats, smart little separate boleros and elons and parasols of all kinds, are among the trifles that will afford piazza work until August at least. Rised French satin embroidery is having quite an extensive inning; eyelet work still maintains, and the novel shadow embroidery will find many adherents. This, in addition to being new, is easily worked and rapidly done; so that the house of this summer's work will not have to wait for wear until next season.

PETS OF QUEENS.

Queen Alexandra Breeds Cats For Her Friends.

Queen Alexandra's fondness for cats has evidently descended to Princess Victoria, who not only keeps a large number of feline pets herself, but breeds some of the finest specimens for her friends. She possesses several very valuable chinchilla kittens, and some beautiful Persians, and most of them have grown so fond of their Royal mistress that they follow her about like dogs.

Mrs. Longworth—better known as Miss Alice Roosevelt, has a passion for animals of all kinds. She rides a spirited pony which, she says, is "worth his weight in ten-dollar notes," and she has three dogs which she has trained so well that they could earn for her a living at a circus.

The Queen of Norway, who, it will be remembered, is a daughter of King Edward, never took any particular interest in pets until she made her home in Denmark. Then, possibly because she felt rather lonely in a strange land, she suddenly developed quite a craze for birds, and her canaries, parrots, and cockatoos are probably the finest private collection of such birds in the world.

STRANGE WILL FORGERY.

Concealed Phonograph Disposes of Dying Man's Estate.

A peculiar will forgery case has occupied the law courts at Szegedin, Hungary, for the past few days. It should be explained that the Hungarian law recognizes as valid a verbal will uttered by a dying person in the presence of witnesses. It was a knowledge of this point of law that enabled a certain Alois Szabo to gain the sole control of his deceased father's estate. When the old man lay on his death-bed, the son called all the servants to the sick room where they heard, as they thought, the dying man dispose of all his worldly goods in favor of Alois. This will was afterwards contested by other relatives, who had reason to doubt its genuineness and it came to the ears of the authorities that it was not the father who had spoken, but that the sounds had issued from a phonograph cunningly concealed about the bed. A domiciliary visit paid to Alois' residence brought to light the fateful record, which was seized, and is to be produced as the incriminating object at the forthcoming trial.

TO BE EXPECTED.

Pat—Casey punched me in the nose because I owed him tin cents.
Mike—Well, he always was close-fisted in money matters.

LOOKS DIDN'T COUNT.

"Are these strawberries the best you could get, Jane?"
"They were the best looking strawberries on the market."
"Buy the worst looking ones next time, Jane."

there except my son, standing on the stairs frightened and pale."

Young Playfoot, a bright lad about 15 years of age, corroborated this strange story. "As soon as I had entered the room," he added, "I saw the door closed in some mysterious way. The latch rattles and the lock creaks, but, although I stood only a foot or two away, neither the latch nor the lock made the least sound."

A strong-man feat performed by the "ghost" was the overturning of a large waterbutt. One morning, according to Mr. Playfoot, as he was working near one of the stables the lock was screwed off. He substituted a bolt. Shortly afterwards he found that the bolt had been removed and the lock neatly restored to its place. "And yet I saw nothing," he said.

Mr. Playfoot conducted the reporter who interviewed him to one of the stables. The double doors were locked and bolted, and the entrance was spanned by a stout timber bar secured by a hidden fastening designed by the millowner in the hope of circumventing the "ghost." In the stable was a grey mare.

SPIRITED AWAY.

"Now such strange things had happened to this horse," he said, "that one day I decided to watch the stable closely. I made everything secure and put the keys in my pockets. Presently I crossed over from where I was standing, and unlocking the stable door, looked in. The stable was empty. I found the horse in an adjoining hayroom, which was padlocked."

"How the horse got there — how it got through a communicating door scarcely wide enough to allow a man to pass—how it got up the steps—all these things are beyond me. If they had been done by human agency (and I hesitate to believe in ghosts), I must have seen or heard something, for I was only a yard or two away. In ordinary circumstances the stamp of the horse's hoofs on the wooden floor of the hayroom would have reached me. Besides, although the doors must have been unlocked, I had all the keys in my pockets. It is impossible that there can be duplicates."

The police have attempted to investigate the circumstances, but without any result. They are as mystified as Mr. Playfoot. Meanwhile, something like alarm exists among the scattered inhabitants of Lamberhurst, Horsmonden, and Goudhurst, and they hope that the "ghost," as they firmly believe it to be, will confine its operations to Furnace Mill.

WHY FASTING MEN LIVE LONG.

Everything We Eat is Condemned by Some Doctor.

Doctors have expressed countless theories concerning cancer, one being that an excessive use of salt promotes it. Pork and tomatoes have also been condemned as being causes of the disease. People who never eat pork are said to be almost immune from cancer, while many of those suffering from the complaint show a marked liking for salt.

Tea-drinking impairs the digestion, ruins the nerves, and causes heart-disease. So, at least, certain doctors tell us. Yet we remain as confirmed a nation of tea-drunkards as ever. Our Continental friends, who seldom touch tea, are more "jumpy"-nerved than we; but then they drown their sorrows in coffee, and coffee, say the experts, is as ruinous in its own way as tea.

One cannot eat a pork pie, swallow an oyster, or partake of any kind of tinned fish, flesh or fruit without being reminded that "that way death lies!"

It is dangerous to eat any sort of stoned fruit—particularly such as raisins or grapes—for the seed is commonly swallowed, and leads to appendicitis. In fact, it would be difficult to find a food which has not been condemned by some learned physician, and the professional fasting-man would appear to have the best chance of living over a century.

YOUNG FOLKS

MARIE'S ACCIDENT.

"Now tell me why you cry, Marie?"
"I've had an accident," sobbed she.

"Where are your bruises? Deary me! What was your accident, Marie?"

"I almost tumbled down," she said,
"And very nearly bumped my head!"

WHAT LOTTIE SAW.

Lottie Smith lives in the country. She had an errand at a neighbor's, and she set down her basket on the floor as she came into the kitchen, where her mother was frying doughnuts.

"Well, daughter, are you tired?" said her mother.

"Yes, I am pretty tired," said Lottie. But she added, smiling, "While I was gone, mamma, I saw twenty-five of the prettiest little kittens you ever saw."

"Lottie Smith!" exclaimed her mother, reprovingly.

"Really, mamma," said Lottie; "and I wish you could see them, they are so pretty and cunning."

"Twenty-five kittens are a great many, little daughter," said her mother, gravely. "Where did you see them?"

"Over at Mrs. Dunton's, where I went to buy the eggs; and, now, mamma, I'll tell you all about it. After Mrs. Dunton had put the eggs in my basket, she said:

"Come out this way a minute. I want to show you something."

"So she took me into the woodshed, and there, in an old cheese-box, were five lively little kittens. After I had seen them long enough I started for home, and Willie met me just by the well, and said:

"Oh, Lottie! come back just a minute. I want to show you something."

"So he took me in at the back shed door, and showed me five cunning little kittens."

"In a few minutes Mrs. Dunton called Willie, and I started for home again. And Grandpa Dunton met me just by the side steps. He said:

"Why here's Lottie Smith, just come back! Child, I want you to see something we have in the shed."

"So I went back, and he showed me five kittens, all in a heap in a cheese-box."

"Then I started for home again, and got as far as the gate, when Joe met me, and said:

"Hello, Lottie Smith! you are just the girl I want to see. I want to show you something. Come back to the house a minute."

"So I went back with him, and he showed me five fat little kittens in a cheese-box."

"After I looked at them, I said good-by to Joe and started to come home by the back way. And Grandma Dunton met me going down the garden walk. She kissed me, and said:

"How bright you look, my dear! I want you to see something at the house. Just come back a minute."

"So she took me back and showed me five sleepy little kittens in a cheese-box. And now, mamma," said Lottie, smiling triumphantly, "didn't I see twenty-five little kittens?"

Her mamma's eyes twinkled, and she said:

"It looks a good deal as if you did."

THANK YOU.

Everybody likes little Carl Rosenbloom, he is so cunning and small and fat. He has lived in America just a little while, and he can speak only two English words. It sounds so funny to hear him say, "Thank you," to what is ever said to him that no one can help

A WILD ANIMAL DENTIST

SOME OF THE RISKS RUN IN BIG TOOTH-PULLING.

Mr. Howard Kent's First Operation Was on a Ferocious Siberian Wolf.

It may not be generally known that the work of pulling big animals' teeth is just as much a profession as the more ordinary kind of dentistry, besides being a good deal more exciting. One of the most successful animal dentists of the day is Mr. Howard Kent, who has probably attended a greater number of ferocious patients than any other man living. His work takes him into almost every circus and menagerie in the United States, while his services are also in constant requisition at the principal zoological gardens both there and abroad.

"It is not a profession I should recommend my best friend to enter," Mr. Kent remarked to the writer, "for, there is no doubt about it, the man who attempts to yank out an aching tooth from the jaw of a lion or a tiger runs a certain amount of risk. Why I took up the work I can hardly say, for it is not one to which big fees are attached, but I have been in the business now for some thirty odd years, and I don't suppose I shall ever quit until I get past working."

"I remember the first animal I operated on was a particularly ferocious Siberian wolf that had a malformation of an upper tooth which was beginning to grow into the roof of his mouth. I was new to the work then, and consequently a bit nervous. The keepers bound my patient all right, and after the gag had been placed in his mouth

I BEGAN TO OPERATE.

I had just got my hand between his jaws, and was beginning to work the pliers, when the gag slipped and the brute's jaw almost met. There was, however, still sufficient of the gag remaining to keep his mouth open about an inch and a quarter, so that only the skin and flesh of my wrist were lacerated. But I can tell you I was not sorry when the keepers rushed up, forced the wolf's mouth open, and released my hand. I put off the job of removing the tooth for a week or so, while my hand was healing, when I performed the operation without further mishap.

"Lions and tigers are not so difficult to manage as one would think and when suffering badly from toothache they are only too glad to have the molar out. Sometimes the extraction causes them so much pain that, like human patients, they forget themselves and retaliate on the dentist. I remember a couple of years ago rather an exciting incident happened while I was operating on a lion called Rhaja for an ulcerated tooth. Rhaja occupied a cage with Victoria, a very fine lioness, and both beasts were very tame and tractable. So tame were they, in fact, that I thought it unnecessary for my patient to be roped."

"As soon as I entered the cage Rhaja, who knew me well, opened his big mouth and allowed me to examine his swollen jaw. I soon located the offending tooth and at once decided to extract it. I had provided myself with a pair of

BLACKSMITH'S NIPPERS

(an excellent instrument for the purpose), and having laid hold on the aching molar I proceeded to pull with all my strength. But the tooth wouldn't budge, and, as the animal seemed to be very forbearing, I began to twist the instrument round.

"That was a little bit too much for Rhaja, and with a roar of agony he raised his paw and struck me a blow on the shoulder that cut it open and almost exposed the bone. I still hung on to the tooth, however, at which he let out his left foot, and one of his claws caught in a heavy signet-ring which I wear on my left hand, and I thought my finger was off. Then Victoria, thinking, probably, that I was ex-

that tooth," Mr. Kent continued, "and when the molar came out the nerves, which were attached, looked like a big bunch of coarse seaweed. The animal must have endured torture, and when he and the tooth parted company he was so grateful that he licked my hand."

"Beasts often suffer from toothache, and, as a rule, they are the most unreasonable of all wild animals when having their teeth extracted."

"No, I have not done much in the way of stopping animals' teeth, though I did perform that operation once on an old hyena that had only a few teeth remaining in his head. The work was not very successful either, and scarcely worth the time spent on the job. It was done more as an experiment than anything else, and perhaps as an advertisement also, for the animal belonged to a travelling circus, and people came from all parts to see the animal that had had his teeth stopped. The filling consisted of a porcelain composition, and lasted well, though a few months afterwards the poor beast became so feeble that it had to be destroyed."

ANCIENT IRISH CAVES.

Furnish Many Facts About Early Inhabitants of Island.

There has just been published by the Royal Irish Academy a bulky report on the result of three years' exploration work among the caves of County Clare. No fewer than 70,000 specimens of bones were forwarded in parcels to the Dublin Museum for identification. Each of these parcels were carefully labelled, bearing a number corresponding with a map of the cave giving the exact position and depth from the surface at which the specimens were obtained. The bulk of the material collected consisted of bones of various animals, including man, and these throw an interesting light on the old-time fauna of Ireland. Among the more important mammalian remains were bones of brown bear, wolf, Arctic fox, Arctic lemming, Irish elk, red deer, reindeer, ox, and wild bear.

One rather surprising discovery is that the bones of the wild cat, which occurred in some numbers, belonged not to the European, but to an African species, known as the Caffre cat (*Felis creata*). The larger of these caves furnished dwelling places for prehistoric men, for arrowheads and other implements of flint and bone, as well as bronze ornaments, have been recovered, many in a perfect state of preservation; and these were associated with human remains. From the form of the bones of the ankle joint it would appear that these skeletons represent the remains of people who habitually assumed a squatting posture, as is done by many savage races to-day. Charcoal and burnt stones afford further evidence as to the use of these caves.

Ornaments belonging to the early Christian era, including a gold bracelet, bronze pin and buckle, show that these same caves were used, at least temporarily, by much later generations of men. Artificially fractured bones of the Irish elk and reindeer show that these animals were hunted, at any rate, by the earliest human inhabitants of the island; but they probably were soon exterminated. Wolves, however, survived until comparatively recent times. The exact date of their final extermination is not known, but they existed in the great forests on the borders of Wicklow and Carlow as late as the year 1700, and it is supposed that they finally became extinct about 1776.

HUMAN SACRIFICE.

Strange Society Discovered in a Russian District.

The following remarkable description of the rites of the "Society of Scarlet Death" is quoted from the Ural by a St. Petersburg correspondent, who states that the votaries of the strange society are located near the Savodsk Lake, and that the exposure has been made in consequence of the disappearance of one of

HEALTH

THE SPONGE BATH.

While the great majority of women have neither the facilities nor the time to take a full bath every day, nearly all can take a sponge bath, which is all that is necessary for cleanliness. A basin, a sponge, and a cork mat comprise the essentials, and five minutes' application a day will keep the pores of the skin open and the body in a healthy condition.

RELIEF FOR NERVOUS HEADACHE.

The ordinary headache from which so many women suffer will be greatly relieved, and, in many cases entirely cured, by removing the waist of the dress, knotting the hair high up on the head out of the way, and, while leaning over a basin, placing a sponge soaked in water as hot as it can be borne on the back of the neck. Repeat this many times, also applying the sponge behind the ears.

SLEEPLESSNESS.

A Swedish servant-maid, finding that her mistress was troubled with sleeplessness, told her of a practice of the people of her country who were similarly afflicted. It was to take a napkin, dip it in ice-cold water, wring it slightly and lay it across her eyes. The plan was followed and it worked like a charm. The first night the lady slept for hours without waking—something she had not done for several months. At the end of that time the napkin had become dry. By wetting it again she at once went to sleep, and it required considerable force to arouse her in the morning.

CLIMBING STAIRS.

In stair climbing keep the weight well over the advanced foot with the chest the farthest point forward.

To strike only the ball of the foot on the stairway gives buoyancy of step to most people, although some claim that they can place the whole foot lightly on the stair to good advantage.

Be sure to take your time. Remember, you are lifting the weight of the body many times and it is no light exercise. The work the back has to do ought to be no greater going upstairs correctly than when on a level. The legs are the members of the bodily community which ought to perform that service.

Medical authorities have recommended walking upstairs correctly as good exercise for reducing prominent abdomen and relieving indigestion. The commonly conceived bugbear of some housekeepers may become a boon. They ought to reach the top of the stairs exhilarated, feeling a healthful glow.

LOOK TO THE CELLAR.

Sickness in families frequently can be traced to the cellar, for the cellar not unusually opens into the kitchen. The kitchen is heated and the cellar is not. Following natural laws, the colder air of the cellar will rush to take the place of the warmer and therefore lighter air of the kitchen. This would be well enough if the cellar air was pure, but often it is not; partly decayed vegetables may be there, or rotten wood, etc. A day should be taken to throw out and carry away all dirt, rotten wood, decayed vegetables, and other accumulations which have gathered there. Then brush down the cobwebs, and with a bucket of lime give the walls and ceiling a good coat of whitewash. If a whitewash brush is not at hand take an old broom that is partly worn out and spread the whitewash on thick and strong. It will sweeten up the air of the cellar, the parlor and the bedrooms and it may save the family from many afflictions.

TRY THE "ALWAYS HAPPY" CURE.

It will pay you to get the "always happy" habit, by which is simply meant cultivating the taking of a hopeful view of everything and everybody. It will increase your enjoyment of ordinary

Everybody likes little Carl Rosenbloom, he is so cunning and small and fat. He has lived in America just a little while, and he can speak only two English words. It sounds so funny to hear him say, "Thank you," to what ever is said to him that no one can help from smiling.

One day Carl was trudging along with a basket of clothes. He was a droll little figure, with his chubby legs and round, fat arms.

Some boys playing marbles on the pavement were quite amused at this comical sight, and they began to laugh and shout, "Sausage bags!"

Now, Carl did not understand a word; but he saw they were speaking to him, so he turned his dear little face to them with the sweetest of smiles, and said, "Thank you."

You should have seen how ashamed the naughty boys looked then! One of them smiled and nodded at little Carl, another gave him a nice red apple, while another took his big basket and carried it for him.

SEVEN BRAVE CHICKS.

"It's a queer looking thing," said the first little chick, and he bent his right eye down to look at it.

"Go away!" said the second, "go right off from here," and the downy head wobbled and shook at it.

"I would make it run quick," said the third little chick, "if my mother would give me a chance at it."

"It's only a worm," said the fourth little chick, as he cast a disdainful proud glance at it.

"It doesn't scare me," said the fifth little chick, "though I don't like the shining small eyes of it."

"And I don't like its tongue," said the sixth little chick, "but I'm not afraid of the size of it."

"I could swallow it whole," said the seventh small chick, "and leave not a single bright scale of it."

And then the long milk snake slid off in the grass, and all of them pecked at the tail of it.

REVOLUTION IN SURGERY.

Clever London Surgeon Originates New Method of Skin Division.

A revolution in operation has been achieved by a clever surgeon, who has discovered a method of incising the skin without leaving any visible scar.

Well known operators at Guy's and other hospitals in London have arranged with this surgeon to do what may be described as the superficial part of their operations, leaving him to begin the operation and to attend to the concluding part of it.

The fact that glands, tumors, and so forth can now be removed without there being the slightest outward trace after the operation is the most important item of progress which has occurred in surgery for many years. When the operation is made in the region of the face or the neck the advantage of the new method will be at once realized.

Not a little of the success of this method is of course due to the practice and skill of this surgeon, but the fundamental difference between the old method and the new is that the new method of skin division consists of dividing it up in the slant, in contradistinction to the usual practice of dividing the skin at right angles to the surface. The reason why a cut through the skin upon the slant and subjected to properly applied pressure heals so perfectly is simple enough. Contact is perfect, and the greater the pressure, within limits, the better is the result.

This surgeon made his first experiment with an adapted hollow ground razor. He now uses hollow ground scalpels made especially for him.

After the operation a magnifying glass is used to see that the edge of the skin is in proper position and a rigid dressing of glass and wool is used to prevent the skin contracting. In many cases massage is used. Old scars and the indications of former operations can be removed by this method.

on the shoulder that cut it open, and almost exposed the bone. I still hung on to the tooth, however, at which he let out his left foot, and one of his claws caught in a heavy signet-ring which I wear on my left hand, and I thought my finger was off. Then Victoria, thinking, probably, that I was exceeding my duty, joined in the scrimmage, and I should have fared badly indeed had not the keepers entered and beaten off the animals. I was not much injured, and when the scratches were healed I had Rahja properly bound and soon extracted the tooth, for which he was becomingly grateful. I find almost all animals of the cat tribe show gratitude when one relieves them of pain, and are slow to forget a kindness.

"But it is not only for the purpose of extracting teeth that our services are required at menageries and zoos. If that were so we should not have enough work to make it pay. No, the teeth of wild animals must be examined and attended to just the same as those of horses and dogs. Every once in a while it is well to have

THE ANIMAL'S TEETH SCRAPED.

for tartar seems to gather quickly on the grinders of wild beasts confined in cages, and if not removed will lay the foundation of decay. But it is a quick job, and the animals get so used to the inspection and the scraping that they come to look upon it as a matter of course.

"All my instruments, most of which are made specially for me, are constructed of the best tempered steel and are graded according to the class and size of the animal to be operated upon. For instance, in the case of lions and tigers one set of four instruments for extracting purposes is all that is necessary—two pairs of nippers for the top jaw, left and right, and two pairs for the lower, left and right. These instruments are so constructed that one can, with the minimum amount of exertion, obtain so firm a hold of a tooth that even a lion cannot dislodge it. Then, with a few twists of the wrist, the molar usually comes out as cleanly and evenly as though it were a child's tooth.

"Some of the extracted teeth I used to keep as mementoes, though now I generally give them to the keepers, who regard them as charms. Here is the tooth of a big African lion which I extracted about five years ago"—and Mr. Kent handed me an object that looked like

A MINIATURE MILKING STOOL.

"There was an abscess at the root of

The following remarkable description of the rites of the "Society of Scarlet Death" is quoted from the Ural by a St Petersburg correspondent, who states that the votaries of the strange society are located near the Savodsk Lake, and that the exposure has been made in consequence of the disappearance of one of the citizens:

"The Scarlet Death is surrounded with much 'circumstances.' In the house designed for the sacrifice there is a room in which there is neither window nor fireplace. It is a grave without a tenant. The room is lined with scarlet material, but one of the walls is covered with a black cloth. The floor is covered with scarlet. Two cushions are placed in the middle of the floor.

"The victim is then led in, and his or her head is placed on one of the cushions. Then all the attendants leave the room. After a few minutes the young woman, clad in scarlet, comes from behind the black cloth. She slowly approaches, takes the second cushion, and places it over the face of the recumbent figure. Then she sits upon the cushion, and does not rise till the condemned one has ceased to show signs of life.

"What leads up to the sacrifice is variously explained by the local inhabitants. Some say that it is to expedite the progress of the sacrificed to Paradise; and others hold that it is a punishment for the commission of some mortal sin."

CONTROLLING FLOWER COLORS.

It is generally known that the colors of vegetation vary in intensity in a direct ratio to the amount of sunlight combined with coolness of temperature, within certain limits. Examples are the intense redness of apples grown in northern climates, and the deep colors of Alpine vegetation. But the soil, and other influences, also have an effect upon plant colors. Mr. Henry Kramer has recently experimented upon the artificial control of the colors of plants through the introduction of chemicals into the soil they grow in. In very small quantities such chemicals are absorbed without apparent injury, but the effect upon the colors is slight. Yellow roses, for instance, appeared to become deeper in color under the influence of aluminum sulphate and potassium sulphate. With the use of these same chemicals the petals of the white carnation showed a tendency to develop red streaks, whereas when fed with ammonium sulphate, aluminum sulphate, iron citrate and citric acid, scarlet carnations tended to form white streaks.

the family from many afflictions."

TRY THE "ALWAYS HAPPY" CURE.

It will pay you to get the "always happy" habit, by which is simply meant cultivating the taking of a hopeful view of everything and everybody. It will increase your enjoyment of ordinary pleasures, improve your health, and make of you a more efficient worker. It is based on the following contentions:

All the evil passions are traceable to one or two roots—anger and worry.

Anger is the root of all the aggressive passions.

Worry is the root of all the cowardly passions.

Envy, spite, revenge, impatience, annoyance, selfishness, unrest, and the like are all phases of anger.

Jealousy, fear, the belittling of self, the "blues," and all the introspective forms of depression are the children of worry.

Anger and worry are the most unprofitable conditions known to man. While they are in possession of the mind, both mental and physical growth are suspended.

SOME CURIOUS EPITAPHS.

Effort Being Made to Preserve Those in English Churchyards.

The Suffolk Institute of Archaeology has just issued an appeal to incumbents in the county to transcribe the epitaphs in their churchyards so that a permanent record may be kept, says the London Daily Mail.

Some curious epitaphs come to mind. Here is one, reminiscent of "Omar Khayyam":

Beneath this stone lies Catharine Gray, Changed to a lifeless lump of clay. By earth and clay she got her pelf, And now she's turned to clay herself—Who knows but in a course of years, In some tall pitcher or brown pan, She in her shop may stand again?

Short and succinct is the following:

Here lies Robert Wallas,
The King of Good Fellows,
Clerk of All Hallows,
And maker of bellows.

The following punning epitaph is inscribed on the tomb of a Liverpool brewer:

Poor John Scott lies buried here,
Although he was both hale and stout,
Death stretched him on the bitter beer;
In another world he hops about.

There is a delicious blending of the spiritual and temporal in this:

Beneath this stone, in hope of Zion,
Doth lie the landlord of the "Lion."
His son keeps on the business still,
Resigned unto the heavenly will.

Temperance advocates should not read this epitaph:

She drank strong ale and punch and wine,
And lived to the age of ninety-nine.

There is a touch of malice in this inscription to the Rev. Mr. Chest:

Here lies at rest, I do protest
One chest within another.
The chest of wood is very good—
Who says so of the other?

Here is a curious one on a tombstone in Hartland churchyard:

Here I lie outside the chancel door,
Here I lie because I'm poor.
The further in the more they pay
But here I lie as warm as they

RETORT COURTEOUS.

Mrs. Dolan (boastfully): "Mrs. Carney, the wife of the rich grocer, called on me to-day."

Mrs. Nolan: "Well, well, d'y'e moind thot, now! 'Tis a shame for Carney t' be makin' his wife collect his bad bills."

"Jones is kicking because he only got ten thousand dollars out of the Gotrox estate."

"Was he one of the heirs?"

"No—he was one of the lawyers."

THE BEST FLOUR. DAFOE'S NONESUCH DAFOE'S MANITOBA PATENT

By numerous tests by the best Bakers the above mentioned grades have been proven to be the best Flours in the market.

When buying Flour ask for Dafoe's, and patronize your home mill, thereby producing Bran and Shorts that you can purchase cheaper than the product of the Western mills, which has to be transported thousands of miles at great expense, and usually, when it reaches you, of inferior quality.

The grocer complains if the farmer or the mechanic sends to Toronto or to outside points for an article he can get at the home store just as good, but he does not hesitate to buy Flour from mills hundreds of miles away, and sell you an inferior Flour for more money than you can purchase the home product for, every bag of which is guaranteed.

CHOICE CORN MEAL and BUCK-WHEAT FLOUR always on hand.

FEED GRINDING a specialty, with the best feed mills known to the trade.
A full stock of the best ANTHRACITE COAL. Also in the market for the purchase of all kinds of Grain.

Ask for prices at the big Mill before purchasing your Flour, Feed or Coal.

NAPANEE,
16th January, 1906.

Corn-off takes off Corns and Warts too, no pain, price 15 cents at THE RED CROSS DRUG STORE—T. B. Wallace.

A team of horses belonging to Martin Deline, who lives on the main road, a short distance north of Roblin, became frightened at an automobile early Tuesday morning and ran away. Four or five milk cans on the wagon were dumped off along the road, and the tongue of the wagon was broken. One of the horses received a nasty wound on one of its fore legs, just above the hock, and the other escaped with a few scratches.

The Napanee base ball team went to Yarker last Friday and in a game with the team of that village were defeated by a score of 13-0. The score does not properly indicate the merits of the game, as after the first few innings it was closely contested. Costly errors by the Napanee team netted the Yarker boys the most of

OBITUARY.

LUCINDA FRETTS.

A former resident of Morven, relict of the late Henry K. Perry, and mother of Mr. R. J. Perry, formerly a druggist of Napanee, now of Boston, passed away on Friday last, at Boston at a ripe age. The remains were brought to Napanee on Monday, and interred in the Morven cemetery on Monday afternoon.

MRS. CHAUNCEY LAPUM

Passed away at the residence of her son, Mr. E. S. Lapum, on Saturday last, after an illness of some weeks, aged eighty-three years. Deceased was a daughter of the late Jacob Shibley, a member of one of the oldest families in the county. The surviving children are Messrs. E. S. Lapum, Napanee; Jesse Lapum, Chilliwack, B. C., and Mrs. W. Thomas, Napanee, and a sister, Mrs. Clute, lives in Deseronto. The funeral took place on Monday to the Eastern Cemetery.

MISS ADDA REID.

Miss Adda Reid, Reidville, passed away on Saturday night at her brother's home, Enterprise, after a long illness from tuberculosis. Over four years ago deceased was taken ill and obliged to give up her position as a teacher. A few months later she went to the Sanitarium at Gravenhurst where she remained a year, and received some benefit, but on returning home she again became ill and for twenty-two months she was confined to her bed and death came as a relief to her sufferings. Deceased was well known in Napanee, having spent most of her teaching days in this vicinity, and was a dear girl, loved by her friends for her many good qualities. The funeral took place on Monday, from her brother's residence to the English church at Enterprise, and the remains were brought to Napanee for interment, a large number of friends gathering around her grave to pay their last respects to their dead friend. The pall bearers were Messrs. Teskey and Hanna, of Reidville, and Messrs. F. C. Anderson, Dr. Milsap, S. R. Wales and E. J. Pollard, Napanee.

FAREWELL ADDRESS.

At the last meeting of the Local Branch of the W. C. T. U., the following address was presented to Miss Cartwright.

DEAR MISS CARTWRIGHT,

As the time has arrived when you sever your connection with our Union we feel we must give some expression of our appreciation of your life and work among us.

For sometime previous to your coming, we realized our inability to successfully carry on one of the most important departments of the W. C. T. U., namely—the Home Missionary Department. This called for mother's meetings, sewing and kindergarten classes for their children, visitation and benevolent assistance to the aged and infirm, and numerous other duties that was impossible for busy housekeepers to perform. Then it was suggested we secure a Deaconess. A fear of the financial side caused some hesitation, but, finally by the wise and systematic management of our President, all obstacles were overcome, and for nearly two years we have literally enjoyed all that it means to have a Deaconess going in and out of our homes and up and down our streets.

We can truly say you have fulfilled in yourself, your life and character, as well as in the performance of your many and varied duties, our highest conception of all that a Deaconess should be, you have won the respect of the business portion of the town and of our town officials, you have gained the good-will, and more, the affection of the social element, you have become an angel of mercy in homes of sickness and poverty, the little children look upon you as their best friend and you have endeared yourself to every member of our Union.

While deeply feeling our loss and knowing you will be greatly missed by all classes, still we recognize your self

Most housewives judge the purity of a flour by its whiteness. White somehow signifies purity. But while pure flours are always white, white flours are not always pure.

Royal Household Flour is the whitest flour that is milled. It is also the purest. You may think the flour you are using is about as white as flour can be. Yet if you place it beside Royal Household Flour it will look yellow by comparison. Ask your grocer for Royal Household, and make sure that he understands that you mean it.

Ogilvie Flour Mills Co., Ltd.
Montreal.

The way to catch 'em

at least to "clinch things."
No girl that's worth having will marry you for your diamonds, but few will say

direction of the social element, you have become an angel of mercy in homes of sickness and poverty, the little children look upon you as their best friend and you have endeared yourself to every member of our Union.

While deeply feeling our loss and knowing you will be greatly missed by all classes, still we recognize your call of God, and rejoice that you are accounted worthy of a larger field of labor.

We can assure you that wherever you go in the future, to prosecute your mission of love, either in the home land or in foreign parts, you will ever retain a warm place in our affection and those fields of labor will possess for us a greater interest because of your presence there.

We pray God's choicest blessing may attend you, your life be precious in His sight, and many jewels be in your crown of rejoicing.

Signed, on behalf of Napanee W. C. T. Union,

M. E. A. GIBSON,
Napanee, June 25th, 1906.

Dress Skirts Tweed effects, Medium and Dark Grey, pleated and circular. This week's arrivals are decidedly new and popular.

A HOLD-UP ON JUNE 18th, AND A COMPLETE BACK DOWN ON JULY 3rd.

Council resolves to reconsider and then to rescind former resolution passed on memorable 18th June, which was to pay to collector 10 per cent. on all moneys collected by him, and did really pay him \$114, and also instructed clerk to notify Collector to re-pay to treasurer the sum so unlawfully paid to him, viz: \$114.00.

At the meeting of council on Tuesday evening last resolutions as above were moved by Councillor Williams, and seconded by Councillor Simpson, and carried, only one voting against them, he being Coun. Graham, who voted nay in each case.

Mr Graham seemingly took exception to an article which appeared in last week's "Express" and headed "A Hold Up," and in referring to it said the writer of that article was a liar and a coward.

When you throw a stone into a crowd, let that crowd be members who sit around the council board for the Town of Napanee, if you will, you feel a certain satisfaction when you hear a howl, a cry of pain emanating therefrom, because you then know your missile has not been in vain, that it has touched a tender spot.

As to the epithets of coward thrown at the writer, I have no bad names to return, will allow Mr. G. to do all that, and as to liar, I do not care to submit without showing to your readers who is the FABRICATOR.

Mr. Graham perhaps was hit in a rather tender spot, for it seems he did the howling.

And now let us look into last week's Express, go through the article, and see who is telling the truth.

1. Will Mr. Graham deny writing the resolution there mentioned?
2. Will he deny calling collector to him to help word his resolution? So that it was virtually collector's resolution?

3. Will he say that he knew nothing of a type-written resolution brought to council and handed to one member and asked him to second this resolution, and this same councillor refused doing so?

4. Will he deny that Collector offered to do the collecting for the year 1905 for the sum of \$150.00?

5. Will Mr. Graham say that Collector's Roll was legally returned?

6. Will he deny that he knew Collector had a certain amount of money in his hands, illegally collected in some cases, that he had not paid over to Treasurer?

7. Will Mr. Graham say that any or all collectors have a right to collect moneys from rate-payers and withhold moneys so collected, not pay it over to Treasurer?

8. And will he also deny that Collector said on that memorable 18th of June evening, that he had in his possession about \$1100.00 which he would pay over to Treasurer, if Council would grant him an extra 10% for collecting this \$1100.00?

9. And will he also deny that not 1148 00 was paid to Treasurer, but \$537.00 less \$114.00 was really paid?

10. Will Mr. Graham also deny knowing of this hold-up for weeks? and by so doing was he not aiding and abetting the Collector?

11. Will Mr. G. say that he was only member of Council who knew that Collector had retained moneys which should have been paid over to Treasurer, and he did not report?

12. And will Mr. G. also deny that he, C. A. Graham, Councillor for the Town of Napanee, promised collector 10% on those moneys so collected.

DA-FRIDAY, JULY 6th 1906

\$1 per Year in advance: \$1.50 if not so paid.

TOWN COUNCIL.
Council Chamber,
Napanee, July 3rd, 1906.
Council met Tuesday evening in regular session, Mayor Lowry presiding.
Councillors present—Simpson, Ming Williams, Graham, Kimmerly, Normile.
The minutes of the last regular session were read and confirmed.
COMMUNICATIONS.
From W. G. Wilson, County Clerk, stating that the County Council, at its June session, equalized the assessment of this municipality and struck the rate at 3½ mills on the dollar for county purposes. The town of Napanee will therefore have to pay \$2800. Filed.
From E. McLaughlin, stating that he had paid taxes on \$800, when it should only have been \$300, therefore paying \$8.50 additional taxes. Filed, as it was not in the power of the council to deal with the matter.
From W. L. Bennett, assessor, saying he regretted very much the trouble and annoyance occasioned by the omissions which unfortunately occurred in copying assessment of the Town of Napanee, for the year of 1905. If he could be of any assistance in explaining anything in connection therewith he would be only pleased to do so. Filed.
Wilson Bros. and several other residents of Robert street, petitioned the council for tile for a drain from J. P. Ellison's property to the corner of Dundas street. The old drain on the east side of Robert street has been clogged up for sometime, which causes inconveniences, and at the same time is insufficient to meet the requirements of residents along said street. They purpose laying drain in the street inside the trees. Laid on the table until later in the evening.
A large number of residents of south Napanee petitioned the council for electric lights in the vicinity of the suspension bridge. They asked that one lamp be placed at Webster & Boyes' Carriage shop, one at Herring's foundry, one at the end of bridge, and two on the hill across the river. Referred to Fire, Water and Light Committee to report.
Coun. Simpson, Chairman of Finance Committee, reported in reference to having Provincial Auditor visit Napanee. He had written about the matter in question and in reply had been informed that a petition, signed by thirty-five duly qualified ratepayers would have to be sent before the request could be granted. This petition had been filled out and forwarded to the Lieutenant-Governor in Council. The reply to this was, that J. P. Lang, the Provincial Auditor, would visit Napanee as soon as possible. The auditor was going away on a previous engagement and on his return would come to Napanee. The auditor's charges are \$8 per day, travelling expenses, board, etc. The report was adopted.
Councillor Normile stated that the Medical Health Officer had called his attention to the bad drainage on Mill street, at the exit of the Royal Hotel yards.

This is one of the very best farms in the county, well drained and fenced, and free from foul seed. 160 acres under good cultivation, 10 acres woodland, 30 acres new land ready to stump. Good orchard, 4 splendid wells. Fine brick residence, lawn and shade trees. 2 large barns, tenant house, new poultry house, hog house, etc. Very convenient to church, school, post office and blacksmith shop. 8 miles from Napanee, 4 miles from Bath, and 3 miles from station. For further particulars enquire of
30-4m **JOHN M. HAWLEY.**

MERCHANTS' BANK OF CANADA.
ESTABLISHED 1864.
PAID UP CAPITAL \$6,000,000.
RESERVE \$3,600,000
UNDOUBTED SECURITY FOR DEPOSITORS
SIR. H. MONTAGU ALLAN, Pres.
E. F. HEDDEN, General Manager.

FOR SALE.
That desirable farm known as the Blanchard Farm, situated about one mile south of Napanee containing 210 acres more or less. Will be sold as a whole or in two parts (1) The north part with the buildings containing 140 acres more or less, and (2) the south part containing 140 acres more or less; on which there is a good barn.

Oddfellows'

Oddfellows' Excursion to Ottawa

on Wednesday, Aug. 8th, Civic Holiday.

Special train both ways. Fare \$2.00.

Tickets good to return until following day, 9th.

Moved by Councillors Normile and Williams that the question be referred to the Street Committee with power to act. Carried.

Moved by Councillor Kimmerly, seconded by Councillor Graham, that the resolution re engagement of Mr. Close, Deseronto, as engineer for electric light plant, be reconsidered. Lost.

Moved by Councillor Williams, seconded by Councillor Simpson, that the motion passed on June 18th, granting the tax collector, 10 per cent upon collections by him be reconsidered. Carried on the following division.

Yeas—Kimmerly, Lowry, Ming, Normile, Simpson, Williams.

Nays—Graham.

Moved by Councillor Williams, seconded by Councillor Simpson, that the motion passed on June 18th, granting the tax collector 10 per cent, upon certain collections made by him, be rescinded.

Yeas—Kimmerly, Lowry, Ming, Normile, Simpson, Williams.

Nays—Graham.

Moved by Councillor Williams, seconded by Councillor Simpson, that the Clerk be instructed to write the tax collector, Mr. T. F. Rutan, requesting him to place a full report and explanation of the additional moneys collected by him as such tax collector, in the hands of the council, said report to contain the names of all persons from whom said moneys were so collected, and the amount collected. Carried.

Moved by Councillor Normile, seconded by Councillor Simpson, that the prayer of Wilson Bros. and others re drain on Robert street, be granted; and that six inch tile be used, said work to be executed under the supervision of the Street Committee. Cd.

The following accounts were paid: W. C. Vine, teaming, \$5.00; B. of Q. Ry. for iron, \$3.60; John N. Wallace, \$1.80; Napanee Band, \$31.35; E. B. Perry, nightwatch, \$16.00; Chas. Polard, pound-keeper, \$1.50; B. Mowers, work at park, \$7.50; A. E. Paul, stationery, \$1.61; T. S. Henry, stationery, \$6.70; Geo. Greer, E. Smith, and W. Barnes, constables on July 2nd, \$2 each. The treasurer was granted a voucher for sundry payments amounting to \$1761.26, less \$114.81, paid T. F. Rutan, Tax Collector. Council adjourned.

Fishing Tackle, all the new Baits, Landing Nets, Gaff Hooks, Reels, Lines, Jointed Poles.

BOYLE & SON.

Use Prism Brand Poor Enamel. It dries quickly, has a varnish gloss, and is true to color. The Medical Hall.—Fred L. Hooper, sole agent for Napanee.

DENBIGH.

Mrs. A. L. Stein, of Brockville, and children are enjoying a visit with relatives here.

Miss Martha Marquardt, of Renfrew is also spending a few weeks with her parents, Mr. and Mrs. E. Marquardt. Her sister Emma, of Ottawa, is expected to arrive home in the course of next week and enjoy life on the farm for a while.

Miss Matilda Stein, of Douglas, has enjoyed a couple of weeks visiting her numerous friends and relatives in the vicinity.

Mrs. C. Boths has undertaken a journey to Barwick in New Ontario, where she intends to visit her brother Samuel Both, and her daughter, Mary; and Mrs. M. Rodger has left for Syracuse, N. Y. accompanied by her daughter, Nora, where they intend to remain some time visiting friends.

George A. Snider, principal of the village school, and Mrs. Snider, are leaving Denbigh and will reside at Napanee for a while. The attendance at the school was very small lately, as many pupils are afflicted with whooping cough.

A meeting of the ratepayers of the school section (Denbigh village and vicinity) was held at the school house on Thursday last and it was decided to exchange the present school site for a more suitable one, and to build a new school house thereon this summer.

Charles Both has torn down his blacksmith shop and is replacing it by a larger two storey frame building. He intends to fit up the upper part and use it as a public hall.

E. Berndt is building a fine big frame barn. A Lockwood is the architect.

Walter Thompson has his new frame dwelling house nearly finished. When completed it will be best dwelling house in Slate Falls settlement.

After you have tried hot springs, sulphur baths, patent medicines, electricity etc, bring your case to the Supreme Court of rheumatism—Tuck's Rheumatic Bone Oil. This is a powerful, penetrating oil, which as its name implies, acts directly on the bone or joint—the lodging seat of rheumatism.

If you are troubled with rheumatism, sciatica, lame back or kindred troubles and have not been able to get anything to help you don't get discouraged and make up your mind that nothing can cure you until you have tried Tuck's Rheumatic Bone Oil. It has cured hundreds of cases just as bad as yours. H. S. Brown of Merrickville, Ontario writes as follows:—

Dear Sirs.—I am free from rheumatism today because I used Tuck's Bone Oil. I had rheumatism in my hands and feet and thought at one time that my life was going to be ruined by it. I consulted a doctor and tried various remedies, but while some of them that I took internally made me feel better for a time none of them took the pain away. After I had suffered for six months or more, doctoring all the time, I was advised one day to try Tuck's Rheumatic Bone Oil. I did and I never can be thankful enough to the man who told me to get it. I had not used a bottle until I was better and before the second one was done my joints were loosened up, the pain was gone and I was well. Tuck's Bone Oil did it. That was six years ago and I have not been bothered since.

H. S. Brown, Merrickville. For all inflammation arising not only from rheumatism but from colds, coughs, bronchitis, quinsy &c. Tuck's Bone Oil is a sure and speedy cure. Sold by all medicine dealers at 50c a bottle or sent by mail prepaid by The Tuck Bone Oil Co. Limited Smith's Falls, Ontario.

E. F. HEBDEN, General Manager.

Savings Bank Department.

Deposits of \$1.00 and upwards received and interest at best current rate paid on same. Farmers' Business Solicited and General Banking Business transacted.

Tenders Wanted.

Sealed tenders will be received by the undersigned up to

JULY, 9th, 1906,

for building two abutments in connection with Brandon Bridge, on Selby Road.

1st—Price per cubic yard, abutments to consist of first-class stone, size 8 by 11 inches, laid in cement.

2nd—Price per cubic yard, abutments to be concrete, tender to specify brand of cement to be used, and the proportion of cement to be used with broken stone and sand.

Offers in each case to cover cost of all material and labor required to make a first-class job, and to include cut work and all necessary excavating to reach hard pan or rock bottom.

For dimensions and further information enquire of

W. G. WILSON, County Clerk.

Napanee, June 25th, 1906.

Brockville, July 1—While bathing at Star Lake three young ladies, Misses Jennie and Alice Burgess and Katie Love were drowned. Miss Love got beyond her depth, and, shouting for help, her companions went to her assistance. Grasping them both, she took them to the bottom with her. The Burgess sisters, aged seventeen and eighteen, were accomplished musicians. Miss Love was a few years their senior. The bodies were recovered in a few minutes, but all died after being taken from the water.

On page 8 will be found announcement of third annual six day excursion to Montreal and Ottawa per Steamer Alouha. The growing popularity of this event, is evidenced by the numerous enquiries and bookings of former patrons and, many new ones. "Finest Water Trip in America," the verdict of past two seasons. The Thousand Islands; The Rapids of the St. Lawrence; The Grandeur of the Ottawa River; and the marvellous beauty of the Rideau (all to be seen by daylight); with a chance to visit Canada's commercial and political capitals are among the many attractions.

Binder Twine, Plymouth Special and Deering Hay Fork Rope and Pulleys, Binder Covers.

MADOLE & WILSON.

THE CROWN BANK OF CANADA

Head Office, Toronto.

Authorized Capital \$2,000,000.

President, Edward Gurney; General Manager, G. de C. O'Grady.

To accommodate the people of Napanee and district, The Crown Bank of Canada will be open SATURDAY EVENINGS from 7 to 9.

INTEREST PAID ON DEPOSITS 4 TIMES A YEAR AND CALCULATED FROM DATE OF DEPOSIT.

Farmer's notes discounted—farmers' sales notes collected.

A general Banking business transacted.

Your Account is Solicited.

BURNETT LAING, Acting Manager.

Napanee Branch.

with the buildings containing 140 acres more or less, and (2) the south part containing 140 acres more or less; on which there is a good barn.

For terms and further information apply to M. C. BOGART, Real Estate Agent, Napanee, Ont. 42-3-m

HOUSE AND LOT FOR SALE.—House and lot for sale on Centre Street in Napanee, opposite Mr. John Hamblin's. A good brick house with all the modern improvements. Fine bath room, electric light, a new furnace and a new verandah. On the property is a large building, built for a tea house, or store house, which cost \$500 to build. The owner, Mrs. Finkle has decided to move to Providence, the reason for disposing of this property. On her return from Sharbot Lake about the 16th of July, she will be pleased to show the property to any intending purchaser, and will give possession on the 1st of September.

For further particulars apply to 23d H. WARNER, Napanee.

IN THE SURROGATE COURT OF THE COUNTY OF LENNOX AND ADDINGTON.

In the matter of the estate of Bernard Lacey, late of the Township of Sheffield, in the County of Lennox and Addington, Farmer, deceased.

Notice is hereby given pursuant to the Revised Statutes of Ontario, 1897, Chapter 124, Sec. 28, and "Amending Acts" that all persons having any claims against the estate of the said Bernard Lacey, deceased, who died on or about the Nineteenth Day of March, A. D. 1906, are required on or before the 9th DAY OF JULY, A. D. 1906, to send by post, prepaid, or to deliver to the under-signed solicitors for James A. Lacey, Executor of the said Bernard Lacey, deceased, their names, addresses and descriptions and full particulars of their claims or claims, and the nature of the security (if any) held by them duly verified.

And notice is hereby further given that after the said 9th day of July, A. D. 1906, the said Executor will proceed to distribute the assets of the said estate among the persons entitled thereto, having regard only to those claims of which he shall then have had notice, and the Executor will not be liable for the assets or any part thereof to any person or persons of whose claims he shall not then have had notice.

DEROCHE & DEROCHE.

Solicitors for Executor, James A. Lacey Dated at Napanee this 7th day of June, A. D. '06 23d

Belleville, July 3. The Board of Police Commissioners met yesterday, when three new policemen were engaged, Thomas Downs and Purdy Cook two members, being released. The new men engaged are Wm Hawkins and Geo. E. Snider of Toronto and Francis Nappin of Tyndinaga. The force is now constituted as follows: John Newton, chief, salary \$850; Patrick Hayes, sergeant, \$600, and three above, at \$150 for the first year with \$25 increase for next three years. The Commissioners are Judge Deroche, Police Magistrate Flint and Mayor Sudman. The men are all 25 years of age.

KAI WANG;

A TALE OF SOUTHERN CHINA.

CHAPTER XVII.—(Continued).

Some luckless Chinamen by chance were in the way, which was a sorry thing for them, as the big Englishman kept his left arm moving with a flail-like, double-jointed action, and when his fist came in contact with the cranium of a pigtail celestial, the fellow bowled over very much as do the pins in an alley when a well-directed ball strikes the kingpin in the van.

Thus in a measure he was plowing his way through all obstructions, intent only upon accomplishing the duty in hand.

When such a man directs his whole endeavors to reaching a certain end he is apt to cut a pretty wide swath during his advance.

Lord Rackett certainly did. Petoskey saw him coming, and knew he had about reached the end of his rope for the present. He was a soldier, and had learned the art of deserting his entrenchments.

The first duty was to embarrass the enemy as much as possible while covering his own retreat.

Thus he suddenly sent hencoop and buckets whirling in a hurricane mess directly in the path of the advancing foe, and in the semi-darkness Lord Rackett had about as much as he could manage to avoid sprawling over the numerous rolling objects that bumped against his shins.

These few seconds were valuable to the diplomatic count, and, in fact, they were just what he depended upon in order to carry out his little design.

The bulwark of the junk was but a few feet away, and an energetic man could reach it easily enough with a single bound.

Doubtless the spirits of the vasty deep were calling to Petoskey just then; he may have even heard the mermaid voices such as proved so seductive in the ears of ancient mariners.

At any rate, the man evinced a most decided fancy for immersion that was certainly not founded upon any suddenly contracted religious fever.

Lord Rackett might have let fly at his disappearing figure as it shot over the side, but he saw no reason for wasting ammunition in this reckless way.

Since the bold Russian had accommodated himself to the conditions, and accomplished just what was most earnestly desired of him, what was the necessity for putting a bullet somewhere within the limits of his anatomy or crippling his wing? He would need both arms to gain a landing.

So Plympton brought up at the rail. He had plainly heard the great splash that betokened the arrival of the man-frog in the water, and could even tell about where he might be at the time, from the series of wavelets that marked his course.

This was fine progress. Now to scatter the remainder of the Chinese crew like chaff before the wind, and sweep them over the side.

Larry was already engaged in this laudable task, and had succeeded in rounding up several of the followers of Confucius, just as he would have done a flock of sheep.

The wretched Mongolians bore no little resemblance to sheep, and evidently placed the utmost dependence on their bell-wether, for when Petoskey vanished from the scene, with him went the last

In this endeavor he seemed to meet with continued disappointment.

Plympton was, however, a man of fertile resources; when one idea failed to pan out as favorably as he expected, it was his way to turn and utilize other methods.

The end and not the means, was his motto.

Hence he wasted no more time with the pole that was too short, but slammed it on the deck with a growl of disgust.

They were floating with the current, and unless something was speedily done to counteract this insidious influence they might so continue to pass on down the stream.

Then he cast his eye aloft.

There were the big, mat-like straw sails, quite useless in their clewed up condition; could they not be utilized in some way in order to bring about the desired result?

It was a bright thought.

But even broad sails need wind of the right sort in order to carry the craft on! Was there such a disturbance of the air?

Plympton plainly remembered that some time before he had felt a night zephyr blowing, but had not noticed it particularly of late, which was not strange, considering the series of amazing adventures through which he and his little companion had passed.

As he faced around, he believed he caught a faint puff of cool air; it was not much, to be sure, but possibly all that would be required once the big mating sail had been dropped.

Next he sprang to the mast to discover where the ropes lay and how they were to be manipulated.

Plympton was something of a sailor—that is, he had at various times owned yachts and sloops, and knew about as much as the average amateur nautical man.

What was better and more to the point in the present case, however, he had been on junks before, and the little stock of knowledge thus obtained was likely to prove valuable to him now.

Whether he unfastened the ropes or used his knife upon them, the sail came down with a rush and a roar.

The vast area caught the zephyr at once, as was evident in the turning of the boat.

All that was required now lay in the line of a steady hand at the tiller, by means of which the junk could be turned to the shore line.

It may seem strange that all this racket and riotous proceeding could be carried on without attracting a fleet of other boats around them; but the Chinese are a peculiar people, apt to mind their own business to an extent that may take them past serenely on the other side of the highway while a fellow is being despoiled by thieves, doubtless acting upon the principle that it is none of their funeral after all.

Besides, the junk had been carried below the city itself, with its floating population.

This was a feature of the case that never disturbed Plympton a particle, so accustomed was he to depending upon his own powers.

Indeed, more than likely, if the truth were told, he was grateful at heart that their little circus on board the drifting junk had been without witnesses, for all the chances seemed to indicate that had

Plympton believed he was able to accomplish this readily enough if given half a chance. They drifted on, gradually closing the gap existing between them and the shore, and yet in their impatience it seemed as though precious minutes were being wasted while this went on, minutes that were fraught with momentous consequences to them.

Besides, they were all the while increasing the distance between themselves and the walls of the city, and their task of returning would be made the more difficult; indeed, even Lord Rackett was a little appalled at the trials and tribulations likely to fall to their lot while endeavoring to make ignorant and bigoted natives understand what they wanted; and, as for Larry, he would likely pray for the friendly comfort and guidance of the astute Kai Wang, if only for a short half hour.

All of them breathed a sigh of relief as the boat approached land, and preparations were made for quitting the junk with as much expedition as possible, no one being in the least sorry that the tragical voyage had reached its conclusion.

(To be continued).

AROUND THE WORLD.

Strange and Curious Things in Foreign Lands.

"An amusing scene was witnessed in the fourth magistrate's court the other day," says the Straits Times of Singapore. "A Javanese was arraigned on a charge of theft. As the man entered the dock, he threw on the ground a hen's egg and then commenced to chew some 'serih.' This was supposed to work a spell on the magistrate and cause him to discharge the accused. Unfortunately for the schemes of the Javanese, he was seen by the Malay constable in charge of him. This Malay seized the Javanese by the throat and choked him until he spat up the 'serih' and so broke the spell. The case was postponed."

A correspondent of the Peking and Tientsin Times writes—"I asked a friendly Chinaman the other day why he was burning some books he had been reading. His reply was that they were the old-fashioned sort, and should they be found later in his possession he would be regarded by the new school as one who did not sympathize with the new regime. This, you see, is turning the tables the other way. A few years ago to be seen with anything foreign was dangerous."

A large white swan recently killed a young woman in Geneva, Switzerland. One wintry day the girl was crossing a bridge in that city when the swan, driven headlong by the gale, collided with her. The great bird's beak struck the young woman in the ear. Her injuries were so severe that she died three days later.

FRAGMENTARY.

Probably it is useless to inquire why some women insist on talking simultaneously. The fact remains that they do it, and since they do it they must like it, and no one has the right to complain.

Occasionally, however, the mixture as it reaches the ear of the attentive listener is, to say the least, quaint, and a man dining alone at a restaurant the other night was observed to smile hugely as he listened to the prattle of two ladies seated immediately behind him. They were discussing divergent topics. One was devoted to the art of cookery, the other could think and talk of nothing but her children.

"Thank goodness, my Polly is blessed—"

"With a calf's head and a pig's face—"

"I love to see little Johnny well dressed—"

"In the fish-kettle over a charcoal fire—"

"To see the darlings dancing before one—"

"In the frying-pan—"

"And to hear their guileless ton-

LETTER FROM DICKENS!

AN OLD COMMUNICATION ON PUBLIC EXECUTIONS.

Started Agitation That Eventually Brought About Their Abolition.

Charles Dickens was so horror-stricken by the revolting spectacles seen among the enormous crowd, gathered to witness the hanging of fellow human beings, that he wrote a powerful letter, which was published in the London Dispatch, protesting against public executions. The great novelist's letter is of particular interest as it not only gives a graphic picture of the horrors of that scene, but it started that agitation which never ceased until nineteen years later, in 1868, executions were no longer carried out in public. Charles Dickens wrote:—

AN EYE WITNESS.

Mr. Editor,—I was a witness of the execution at Horsemonger-lane. I went there with the intention of observing the crowd gathered to behold it, and I had excellent opportunities of doing so, at intervals all through the night, and continuously from daybreak until after the spectacle was over. I do not address you on the subject with any intention of discussing the abstract question of capital punishment or any of the arguments of its opponents or advocates. I simply wish to turn this dreadful experience to some account for the general good, by taking the readiest and most public means of advertizing to an intimation given by Sir G. Grey in the last session of Parliament, that the Government might be induced to give its support to a measure making the infliction of capital punishment a private solemnity within the prison walls (with such guarantees for the last sentence of the law being inexorably and surely administered as should be thoroughly satisfactory to the public at large) and of most earnestly beseeching Sir G. Grey, as a solemn duty which he owes to society, and a responsibility which he cannot for ever put away, to originate such a legislative change himself.

HORRORS OF GIBBET.

I believe that a sight so inconceivably awful as the wickedness and levity of the immense crowd collected at that execution could be imagined by no man, and could be presented in no heathen land under the sun. The horrors of the gibbet and of the crime which brought the wretched murderers to it faded in my mind before the atrocious bearing, looks, and language of the assembled spectators. When I came upon the scene at midnight the shrillness of the cries and howls that were raised from time to time, denoting that they came from a concourse of girls and boys already assembled in the best places, made my blood run cold. As the night went on, screeching and laughing and yelling in strong chorus of parodies on negro melodies, with substitution of "Mrs. Manning" for "Susannah," and the like were added to these. When the day dawned, thieves, low prostitutes, ruffians and vagabonds of every kind flocked on to the ground, with every variety of offensive and foul behavior. Fightings, faintings, whistlings, imitations of Punch, brutal jokes, tumultuous demonstrations of indecent delight when swooning women were dragged out of the crowd by the police with their dresses disordered, gave a new zest to the general entertainment.

IMAGE OF THE DEVIL.

When the sun rose brightly—as it did—it gilded thousands upon thousands of upturned faces, so unexpressively odious in their brutal mirth or callousness that a man had cause to feel ashamed of the shape he wore, and to shrink from himself as fashioned in the Image of the Devil. When the two miserable creatures who attracted all this ghastly sight about them were turned quivering in the air there was no more emo-

a flock of sheep.
The wretched Mongolians bore no little resemblance to sheep, and evidently placed the utmost dependence on their bell-wether, for when Petoskey vanished from the scene, with him went the last vestige of their valor.

Panic-stricken, they chased hither and thither about the deck, and the advance of either Larry or his big comrade in any direction sent one or more overboard in hot haste.

A little more of this hustling and the coast seemed clear: no living, moving objects other than themselves and a couple of wounded wretches occupied the deck.

Larry surveyed the scene with some little complacency—indeed, truth to tell, he puffed out his small chest very much as might a pointer pigeon, for such a splendid victory meant considerable in his estimation.

Lord Rackett was more sensible, knowing their victory was not yet won.

"See how Avis is getting along—then look to the wounded wretches. I have other work cut out for me here," he called in a voice of authority.

CHAPTER XVII.

Larry was only too glad to have some one along with him capable of handling the tiller, of assuming command and giving orders; for being himself modest by nature he did not feel capable of undertaking such a part unless absolutely compelled to do so.

Accordingly he paddled away on his short legs to the cabin, where he found Avis on guard, watching the window eagerly, ready to carry out her instructions to the letter should the occasion have arisen.

She received her cousin gladly, and was apparently well satisfied to know there would be no present necessity for heroism on her part—not that she would have shrunk from the performance had it come to that point.

When she heard what work Larry had upon the deck she insisted on assisting him, nor could he dissuade her.

Of such material are Anglo-Saxon women of to-day made: the cries of the wounded women appeal to their brave yet tender hearts, and with gentle hands they bind up their wounds.

In the late Spanish-American conflict the doctors learned many things that had not previously entered into their philosophy, and among them was the chivalrous spirit in which most English-speaking people treat a fallen foe.

Those wretched Chinamen who gasped upon the deck of the junk, writhing in the torture of their wounds, must have been amazed when the lady, whom they had been instrumental in abducting from her friends bent over them, and with the rare skill of an army nurse bound up their hurts in a crude but efficient manner, considering the paucity of material at her command.

As for Plympton, there was never a minute that he was not in it.

He knew it was imperative that they should get ashore with all speed, and while Larry had been about the business assigned him, the big man had taken hold of a sailing pole with which he was vigorously probing the water alongside, in the hope and expectation of reaching some stable foundation through means of which he could push ashore.

Indeed, more than likely, if the truth were told, he was grateful at heart that their little circus on board the drifting junk had been without witnesses, for all the chances seemed to indicate that had a fleet of officious sampans fluttered around them, the occupants must, through the ties of race and religion, have sympathized with the coolies who were being worsted on board, and as a result our gallant rescuers would have found their self-imposed task made doubly difficult.

Everything considered, then, Plympton saw no reason to regret the fact of their strange isolation.

It had taken all of their resources, backed by the ever-welcome auxiliary of luck to manage the business in hand, and had their enemies been encouraged by fresh arrivals, the affair must of necessity have gone heavily against them.

There was considerable satisfaction in realizing that they were alive, and with fair chances of ultimate success ahead of them, instead of floating upon the bosom of the dark river filled with punctures from Chinese knives. Lord Rackett seemed to think so, for he moved toward the rounded stern of the junk, in order to grasp the steering gear, with a light step and an air of animation strangely in contrast with the despondency that had grasped him but a short time before.

The tiller, bent in the Chinese way, was knocking back and forth in aimless fashion when Plympton reached it.

He had put out his hand to clutch this adjunct of the primitive steering gear, when he suddenly sprang back as though the deadly hooded head of a poisonous cobra had appeared alongside the crooked stick.

The cause of this action was not far to seek, for a grim, dripping figure had suddenly shot into view from behind the stern, and the gleam of a knife as it sliced the air told how eagerly the yellow-faced native had aimed to take his life.

He had been overboard, and had clambered up to his present position without trouble; this was a significant fact, since there might be and probably were others.

Well, a miss is as good as a mile, they say, although a close shave is apt to send a cold shiver down one's back; and Plympton, being a man of unbounded nerve, knew just what remedy was needed for the present disease.

His revolver had never left his hand, for he could not tell at what instant such a ready reckoner might be needed, and when a man has use for such a tool he wants it very badly.

So that the ambitious Neptune, who had come up as it were out of the sea, had little time to figure on whether valor or discretion were the better after the absolute failure of his vindictive attack, when Plympton sent his compliments, and the vicinity of the rudder was again free from foes.

Perhaps that particular sailor man would stay where he belonged after this—at least he had been led to believe that was his place.

His coming had given Lord Rackett something of a chill.

In imagination he could see all the other natives who had jumped overboard clinging to the sides of the junk, gleaming knives clashed between their teeth, only waiting for a favorable opportunity to strike and spare not.

The prospect was so filled with grim suggestions that it alarmed him, not so much on his own account as for the others, who, chancing near the rail might fall victims to a waiting blade.

Accordingly he called Larry and bade him bring his cousin to the stern, giving both sides of the boat a wide berth.

He had already brought the tiller hard alee, and such was the influence of the air that the boat drifted in toward the low shore, evidently a rice field, and which could be faintly discerned through the gloom.

Once alongside the bank, a landing could be made, and then the boat sent adrift in such a way that it would take time and patience on the part of any who climbed aboard to make the shore a second time.

fire—"To see the darlings dancing before one—" "In the frying-pan—" "And to hear their guileless tongues—" "Bubble and squeak—" "I always see the children put to bed personally—" "And smothered in onions—" "And if they have been good bairns, I invariably order—" "The heart to be stuffed and roasted, the gizzard to be peppered and devilled, and the sole to be fried—" And so on, and so on.

FOIBLES OF LITERARY MEN.

Keats liked red pepper on his toast. It was the only sure way to keep it warm.

Disraeli wore corsets, believing that they would enable him to cut quite a figure in the world.

Joachim Miller nailed all his chairs to the wall. He was afraid some of his visitors might take a seat.

Ernest Rehan wore his finger nails abnormally long, having a wholesome dread of Parisian manicures.

Edgar Allen Poe slept with his cat, thriftily believing that it always paid to have his mews within reach.

Zola would pass whole weeks in the belief that he was an idiot. Thousands of his readers have had the same idea for whole years.

Robert Browning never could sit still when writing. He had to move around to keep from falling asleep over his work, like the rest of us.

Dickens was fond of wearing flashy bow-ties and showy waistcoats. This first attracted attention to the fact that he was a dandy novelist.

Thackeray used to lift his hat whenever he passed the house in which he wrote, "Vanity Fair." It is supposed that he did this to relieve the pressure on his half-and.

KEEP CHILDREN WELL.

In thousands of homes throughout Canada there are bright, thriving children who have been made well and are kept well by the use of Baby's Own Tablets. In many homes parents say this medicine saved a precious little life. Dr. A. Danais, L.D.S., Riviere du Loup, Que., says: "At the age of five months we thought our little girl dying. Nothing we did for her helped her until we gave her Baby's Own Tablets, and only those who have seen her can realize what a change this medicine has wrought in our child. She is now about eighteen months old, eats well, sleeps well and is a lively, laughing child, and weighs 37 pounds. We always keep the Tablets in the house now for we know their great value." If mothers wish to feel absolutely safe, they should keep a box of Baby's Own Tablets in the house always. They cure all the minor ailments of children and are absolutely safe. Sold by medicine dealers or sent by mail at 25 cents a box by writing The Dr. Williams' Medicine Co., Brockville, Ont.

"Did you say your husband was out looking for work?" "No; I believe he's out looking at work. There are some men digging a cellar down at the corner, and he doesn't seem able to get any further."

Help your children to grow strong and robust by counteracting anything that causes ill-health. One great cause of disease in children is worms. Remove them with Mother Graves' Worm Exterminator. It never fails.

HELPING HER PA.

"Young man," said Miss Spooner's father, "I want you to know that I always close up the house and turn out all lights at 10 o'clock."

"Indeed?" replied Mr. Nervy: "well, don't bother to-night, sir. I'll attend to that for you."

of the shape he wore, and to shrink from himself as fashioned in the image of the Devil. When the two miserable creatures who attracted all this ghastly sight about them were turned quivering in the air, there was no more emotion, no more pity, no more thought that two immortal souls had gone to judgment, no more restraint in any of the previous obscenities than if the name of Christ had never been heard in this world, and there was no belief among men but that they perished like the beasts. I have seen, habitually, some of the worst sources of general contamination and corruption in this country, and I think there are not many phases of London life that could surprise me. I am solemnly convinced that nothing ingenuitly could devise to be done in this city in the same compass of time, could work such ruin as one public execution, and I stand astounded and appalled by the wickedness it exhibits. I do not believe that any community can prosper where such a scene of horror and demoralization as was enacted outside Horsemonger lane jail, is presented at the very doors of good citizens, and is passed by unknown or forgotten. And when in our prayer of thanksgiving for the season, we are humbly expressing before God our desire to remove moral evils from the land I would ask your readers to consider whether it is not time to think of this one, and to root it out.

AWFUL SLEEPING SICKNESS.

African Game Hunters Now Run a Deadly Risk.

To the excitement of big game hunting in Africa there will henceforth be added the knowledge that the hunter risks contracting one of the most dreadful of all known diseases—sleeping sickness—dreadful because it is incurable and ultimately fatal. Until very recently it had been supposed that Europeans were immune, but it has recently been proved that this belief was wrong. Sleeping sickness is caused by a parasitic protozoan known as "trypanosome," which infests the blood and the spinal cord. These minute but terrible organisms are carried and distributed by the bite of a species of tsetse fly. This terror has appeared in Uganda only within the last year or two, having made its way along the river systems from the west coast of Africa. Yet during the first two years of its appearance in Uganda no less than 30,000 of the native inhabitants have fallen victims.

PRINCE'S MENAGERIE.

Indian Gifts Which Will Shortly be Seen at Zoological Gardens.

Within the next few days the fine collection of animals and birds presented to the Prince of Wales during his Indian tour is expected to arrive in England.

This somewhat considerable menagerie, consisting of gifts made to the Prince by various rajahs, will be housed temporarily, if not permanently, at the Zoological Gardens.

Among the animals are elephants, lion cubs, tigers, pumas, bears, rhinoceroses, buffaloes and antelopes, whilst the birds include several rare specimens hitherto unknown in England.

In preparation for the collection several additional sheds have been erected and paddocks constructed near the north gate of the gardens.

WATER THING TO DRINK.

Mrs. Wagg (with paper): "Oh, John, here's something good to know. It says a few drops of lemon juice in a glass of water will kill all the living things in it. We'll try it."

Mr. Wagg: "Pardon me, my dear, not for mine. I'd sooner swallow an aquarium than a morgue any day."

FUNNY BLUNDERS IN TYPE

TYPOGRAPHICAL ERRORS CULLED FROM SCRAPBOOK.

The Printers Made "Death of a Prelate"
Read "Death of a Pirate"—
Snouts of 10,000.

An old New York newspaper man, now turned farmer, kept a scrapbook in which for years he pasted hundreds of the typographical blunders and other errors that always annoy, but sometimes amuse, newspaper writers. A few selections from this collection are given here to show that vagaries of the types and blunders which writers sometimes make when driven at top speed may be compared favorably with some of the current humor of the day.

It was a New York newspaper which announced that "A long line of scorpion's feathers filed into the church," instead of "surpliced fathers." A journalist once famous under the press name of "Gath," wrote a Fourth of July article in which he told with fervid eloquence how the effete monarchies of the old world trembled in their boots when they read the immortal declaration penned by Thomas Jefferson. "Thrones reeled," he began a sentence, and next morning he wished he hadn't, when he saw in cold type "Thomas reeled."

A daily newspaper up the Hudson reported the speech of a Fourth of July orator who had something to say about the "Flat of the Almighty." It got into the paper "the fist of the Almighty."

BOY VERY DEAD.

The old-time reporter, with the howl for copy ringing in his ears, sometimes perpetrated remarkable English. A young Chicago newsgatherer wrote of a man who had died of asphyxiation "Mr. Johnson was found reclining on the bed, while his legs extended over the floor and toward the outer edge of the room."

A Chicago daily found a little boy who, according to its voracious chronicler, was very dead indeed. The reporter wrote, "The boy was quite dead. No efforts could resuscitate him in the least."

This is quite as good as the "bull" culled from a feuilleton in the Paris Figaro, which ran:—"Not a cry did she utter nor give any sign of life, not even when her brother-in-law put his hand to her heart and said to Vague, 'She is dead.'"

A steady and venerable evening journal solemnly informed its readers in a complimentary notice to the Catholic Fireside that "its stories are not of a nature to destroy the morals of the youngest child."

This is what the London Globe called "an inadvertence":—"By an inadvertence our recent notice of Dr. Macaulay's new book commented on the absence of illustration as a defect. We now find, however, that it contains twelve wood cuts of much merit."

CLOTHED WITH SCANTITY.

The Winnipeg Times, on the death of a reverend gentleman, meant to say "the death of a prelate," but printed "the death of a pirate."

A Cardiff newspaper, reporting the sermon of the Rev. Dr. Mellor before the Congregational Union, where the clergyman spoke of "Women Clothed with Sanctity," by an unfortunate transposition of the "c" printed the phrase, "Women Clothed with Scantity."

A London paper said that Ernest Renan had occasion to telegraph across the British Channel the title of a lecture he was to deliver in Westminster Abbey. The title as written by him was "The Influence of Rome on the Formation of Christianity." It was published in England as "The Influence of Rum on the Digestion of Humanity."

THE SNOOTS OF 10,000.

It was in a New York paper's report

SUSPICIOUS.

Little Sarah—Oh, pa! here's burglars in the house! I stuck my chewing gum on the bedpost and I can't find it!

SUMMER FAG.

Dr. Williams' Pink Pills the Best Tonic for Summer.

The long, hot summer thins the blood and leaves you weary, worn and wretched. Nothing can cure that summer fag except Dr. Williams' Pink Pills—because they actually make new blood and thus strengthen every organ and every tissue in the body. Every dose fills you with new strength, new energy, new life. Purgative pills only weaken you more. Common tonics only stimulate for the moment. But Dr. Williams' Pink Pills actually make new blood, and nothing but good, pure rich red blood can brace you to stand the summer. That is why you should take Dr. Williams' Pink Pills now. Mr. W. J. Norfolk, White Horse, Yukon Territory, says: "I am thirty-nine years of age and have been an athlete who scarcely knew the meaning of illness. Last year, however, my health gave way. I became nervous, did not sleep well and grew as weak as a kitten. It seemed as though I was completely worn out. I tried several so-called tonics, but it was only a waste of money, for they did me no good. Finally I began using Dr. Williams' Pink Pills, and they put me on my feet again, and gave me new health and strength."

Every weak and easily tired man and woman will find new health, new strength and new energy through a fair use of Dr. Williams' Pink Pills. They cure all blood and nerve diseases like anaemia, nervous exhaustion, headaches and backaches, indigestion, neuritis, rheumatism and the special ailments that afflict most growing girls and women of mature years. Sold by all medicine dealers or by mail at 50 cents a box or six boxes for \$2.50 from the Dr. Williams' Medicine Co., Brockville, Ont.

THE KILLARNEY OF AMERICA.

Nestling in a frame of beautifully wooded shores lies a series of beautiful lakes 145 miles north of the city of Toronto, Ontario, and known as the "Lake of Bays Region." A chain of seven lakes sludded with lovely islands, with hotels throughout the district and a good steamboat service to all points attracts the tourist, angler and sportsman. Just the out-of-the-way sort of place to visit during the summer months. For all particulars and free illustrated publication apply to J. D. McDonald, Union Station, Toronto, Ont.

DIFFICULT FEAT.

Hicks: "In a few years the telephone will be so perfect and the rate for it so low that everybody will have it. The messenger boy must go."

Dwicks: "I'm afraid there's no power on earth that can make the messenger boy go very fast."

No person should go from home without a bottle of Dr. J. D. Kellogg's Dysentery Cordial in their possession, as change of water, cooking, climate, etc., frequently brings on summer complaint, and there is nothing like being ready.

cut a bottle of Dr. J. D. Kellogg's Dysentery Cordial in their possession, as change of water, cooking, climate, etc., frequently brings on summer complaint, and there is nothing like being ready with a sure remedy at hand, which oftentimes saves great suffering and frequently valuable lives. This Cordial has gained for itself a widespread reputation for affording prompt relief from all summer complaints.

HOUSEKEEPER.

"They say his wife is a good housekeeper."

"Yes, she kept his house all right when he failed last spring. But of course he had to put it in her name."

Sunlight Soap is better than other soaps, but is best when used in the Sunlight way. Buy Sunlight Soap and follow directions.

He: "When I was small I was a most extremely intelligent child." She: "Yes. How very unfortunate that you should have grown up!"

Yes, indeed, "blood will tell." When blotches and eruptions mark the skin, Weaver's Cerate and Weaver's Syrup make short work of all blood and skin troubles.

Peck (despondently): "I said something my wife didn't like and she hasn't spoken to me for two days." Peck (eagerly): "Can you remember what it was you said?"

To Know is To Prevent. — If the miners who work in cold water most of the day would rub their feet and legs with Dr. Thomas' Electric Oil they would escape muscular rheumatism and render their nether limbs proof against the ill effects of exposure to the cold. Those settling out for mining regions would do well to provide themselves with a supply before starting.

EMPLOYED ANOTHER.

The Preacher: "I hope you never lie about your business."

The Merchant: "Never—but I have a very optimistic 'ad' writer."

\$1000 PILE CURE

A Thousand Dollar Guarantee goes with every bottle of Dr. Leonhardt's Hem-Roid—the only certain cure for every form of Piles.

George Cook, St. Thomas, Ont., writes:—"Dr. Leonhardt's Hem-Roid cured me of a very bad case of Piles of over ten years' standing. I had tried everything but got no permanent cure till I used Hem-Roid. I had Blind and Bleeding Piles, and suffered everything. Ointments and local treatments failed, but Dr. Leonhardt's Hem-Roid cured me perfectly."

Hem-Roid is a tablet taken internally which removes the cause of Piles. \$1.00, all druggists, or The Wilson-Fyle Co., Limited, Niagara Falls, Ont. 7

Customer: "Are you sure that this is real crocodile-skin?" Dealer: "Absolutely certain, madam! I shot the crocodile myself." Customer: "It looks rather soiled." Dealer: "Naturally, madam. That is where it struck the ground when it tumbled out of the tree!"

They Never Knew Failure.—Careful observation of the effects of Parmelee's Vegetable Pills has shown that they act immediately on the diseased organs of the system and stimulate them to healthy action. There may be cases in which the disease has been long seated and does not easily yield to medicine, but even in such cases these pills have been known to bring relief when all other so-called remedies have failed. These assertions can be substantiated by many who have used the Pills, and medical men speak highly of their qualities.

"Why do you suppose the dog howls so when I play the piano, Mr. Caustic?" "A dog cannot be taught to conceal his feelings."

It is surprising how many really good people there are in this wicked world—if one can take their word for it.

KAFFIR WOMAN'S COURAGE.

One of the first explorers of the interior of South Africa was William Cotton Osstell, a noted hunter and a friend of Livingstone, to whom he rendered important aid. In his biography the following story was given from one of his African letters: An incident highly creditable to Kaffir womanhood occurred just as we reached Mahotse. The women, as is their custom, were working in the fields, for they hoe, and the men sew. A young man standing by the edge of the bush, was chatting with them. A honess sprang on him, and was carrying him off, when one of the women ran after him, caught her by the tail and was dragged for some distance. Hampered by the man in her mouth and the woman behind her, she slackened her pace, whereupon her assailant straddled over her back and hit her across the nose and head with a heavy, short-handled hoe until she dropped her prey and slunk to cover. The man was the woman's husband. Would Mrs. Smith do as much for Mr. Smith? Could she do more?

EFFECTS OF HEAT ON MILK.

Doctor Jensen, chief of the Swiss bureau of superintendence over the milk industry, says that it is a common error to suppose that milk submitted for a considerable time to a temperature of 120 degrees Fahrenheit is better for nourishment than that boiled for a short time. When the heating is prolonged the alteration in the valuable properties of the milk begins as low as 100 degrees, but with quick heating it does not begin below 110 degrees. Tuberculosis bacilli are destroyed by heating to 150 degrees for five minutes, and such heating does not alter the properties of the milk. Doctor Jensen advises that the pasteurization of milk be done in the home, and but shortly before the milk is used, care being taken not to go above the temperature necessary to kill the pathogenic germs.

CAREFUL.

Friend: "Haven't you named the baby yet?"

Proud Mother: "No; we must be very careful to give him a nice one, because there will be so many named after him when he is Premier."

NOBODY IN PARTICULAR.

"Who is that man with your mother?" "That ain't a man; that's father."

You cannot be happy while you have corns. Then do not delay in getting a bottle of Holloway's Corn Cure. It removes all kind of corns without pain. Failure with it is unknown.

Bored: "The lamp seems to be going out, Miss Cutting." Miss Cutting (suppressing a yawn): "Yes; it seems to be more considerate than some people."

If You are Nervous and Irritable take "Ferrovin," the great nerve and blood tonic; you will be a new person by the time you have used a bottle. All dealers.

Lieutenant: "Who's the idiot that told you to leave that pile of rubbish in front of headquarters?" Recruit: "It was the colonel, sir." Lieutenant: "Very well, leave it there; but your leave will be stopped for four days for calling the colonel an idiot."

A Purely Vegetable Pill.—Parmelee's Vegetable Pills are compounded from roots, herbs and solid extracts of known virtue in the treatment of liver and kidney complaints and in giving tone to the system whether enfeebled by overwork or deranged through excess in living. They require no testimonial. Their excellent qualities are well known to all those who have used them and they commend themselves to dyspeptics and those subject to biliousness who are in quest of a beneficial medicine.

"I wouldn't be a donkey if I were you," said Jenkins to a friend. "If you were me you wouldn't be a donkey, of course," was the telling reply.

A LABORER.

Mrs. Jones: "No wonder she looks tired; she's up most all night with a sick baby."

Mr. Jones: "What's the matter with her husband?"

Mrs. Jones: "He's busy all the time trying to get an eight-hour day for workmen."

It is easier to break the will of a dead man than the will of a live woman.

ISSUE NO. 26—06.

AWFUL RAILWAY DISASTER

Train Carrying Passengers From Atlantic Liner Demolished:

A despatch from London says: Passengers by the American Line steamer New York, who left Plymouth by special train at midnight, on Sunday were the victims of one of the most deadly disasters in English railway history, at Salisbury, 83 miles distant, two hours later, when the locomotive jumped the rails at a sharp curve and dashed first into a milk train on a siding and then against the girders of a bridge over the River Avon. The whole train was literally demolished. The engine mounted the girders of the bridge and turned turtle. Out of 42 passengers 23 were killed and ten injured. Only nine escaped.

STORY OF THE WRECK.

The New York, with a full passenger list, had had a rather slow voyage. She should have arrived at Plymouth in the middle of the afternoon. In that case all the London-bound passengers would, according to custom, have landed at that port. They had the option, however, of continuing to Cherbourg and Southampton. A majority of the passengers decided, when it became evident that the lateness of the steamer's arrival would necessitate a long night journey, to stick to the ship and make a more comfortable daylight trip from Southampton in the afternoon. Each passenger in making this apparently unimportant choice literally decided the question of life or death.

It was a comparatively small company who bade their fellow-passengers good-bye when the tender went alongside the New York inside the Plymouth breakwater. It is customary to run these boat specials at an average of fifty miles an hour for the whole distance of 230 miles to London, and the engineer, with a clear track before him put his locomotive to its best pace from the start. He had a light train, and only three passenger coaches and a baggage van. He reached Salisbury, 85 miles from London, at just 2 o'clock. The signals were set for safety, and the train dashed through the covered station at a speed reported to have been no less than 70 miles an hour.

Nobody is able to explain what happened next. Just at the eastern exit of the station the engine leaped the rails. To the left a milk train on an adjoining track was drawing slowly out in the same direction as the boat special, and the derailed engine dashed first into the guard's van at the rear of the milk train. This was demolished in a twinkling, and the guard within was instantly killed. Passing through this wreckage, the engine struck diagonally the heavy iron girders which hold up the bridge over the principal street of the town, over which the railroad passes. The glancing blow threw the great machine in a rebounding semi-circle against an engine standing on the opposite track, and both were reduced to a steam-clouded wreck. The engineer and fireman of the second engine were scalded to death.

The first passenger coach also dashed against the girders, and its whole left side was torn out as though it were paper. In fact, the car was literally cut in two lengthwise, half of it falling in bits to the road below. One passenger was shot through the car twenty-five feet to the bridge, landing dead and terribly mangled in the shrubbery.

There were several miraculous escapes among the occupants of this carriage.

NO CHANCE OF ESCAPE.

The second coach swung to the right,

general wreck, but it was not entirely destroyed, and three or four of its occupants escaped almost unhurt.

The scene for a few moments was one of indescribable horror. Most of the dead and injured were imprisoned in the general wreck, which formed a great heap thirty feet high. The first danger was fire, and within five minutes flames became visible at the bottom of the awful pile, where the two locomotives were mixed with the general debris.

It was fortunate that the scene of the accident was within easy reach of means to combat the danger. Otherwise the dead and living alike would have been consumed in a funeral pyre. Rescue was at hand with remarkable promptitude. The local fire apparatus and a considerable force of railway employees were on the spot within ten minutes, and the incipient blaze was quickly drowned out.

74 MILES AN HOUR.

The latest information makes the cause of the disaster only too clear. It was the result of reckless running in an attempt to make a new record against a competing road. There has been competition for the past two years between the Great Western and the London and South-Western on the time to Plymouth. The Great Western last week took a party of German editors from London to Plymouth, 246 miles, in about four and a half hours, establishing a new record. The South-Western attempted to beat this, with the resulting death-roll. The distance run from the start to the place of the accident, 146 miles, occupied 147 minutes. The first portion of the journey, from Plymouth to Exeter, is over heavy grades, where the speed was necessarily slower. There is a straight run of 12 miles before Salisbury is reached, and this was taken at a flying pace. There is a long but not sharp curve at the station, and it was in the middle of this that the train jumped the track. It is clear that the speed was not reduced, and the comparatively light engine and cars could not stand the strain.

CANADIAN VICTIMS.

In the wreck of the American line special from Plymouth in which twenty-three passengers out of a total of forty-seven were killed, three prominent citizens of Toronto are numbered among the dead. The cable bulletin announcing the catastrophe caused deep sorrow and anxiety. It soon spread that Walter Barwick, K.C., the eminent barrister, Charles A. Pilon, passenger agent, International Mercantile Agency, and Rev. E. L. King, vicar of St. Thomas' Church, were numbered among the victims, but as the details were of the most meagre descriptions, friends of the other Toronto passengers were extremely anxious as to their fate. In the first bulletins, it was announced that Messrs. Barwick, Pilon and King were reported among the killed, and their friends grasping at any consolation refused to credit the intelligence. It had been Mr. Barwick's original intention to remain over at Plymouth for a day, and it was hoped that he had carried this into effect. The three men were all fast friends and were companions on the voyage. This was particularly true of Messrs. Barwick and Pilon, as they had a conference and decided on all their arrangements together before leaving Toronto. It was thought that if one remained over the

UNITED STATES.

Three small children of Charles Wuesthorne, of Harrison, Ohio, were burned to death by the explosion of a gasoline stove at their home. Their mother was painfully burned in trying to rescue them.

Reports from all sections of Southern Texas are that as the result of the drought the corn crop is an utter failure. Cattle are beginning to die for the lack of water in the coast districts, where it has not rained since the middle of February.

The discovery of two tin boxes containing 200 dynamite blasting caps, in Flint sand, shipped to the Federal Match Company's plant at Garfield, N. J., leads the authorities to believe that an attempt was made to blow up that plant and kill several workmen.

GENERAL.

Another massacre of Jews is feared at Orum and Kieff.

The Ministry at St. Petersburg are taking vigorous measures to protect the Jews.

An attempt was made on Friday, at Warsaw to assassinate the Chief of Police.

Senor Peres Caballero has been appointed Spanish Minister of Foreign Affairs.

The Douma will be asked to authorize a foreign loan of £7,500,000 for famine-stricken provinces of Russia.

AGRICULTURAL EXPERT.

Representative of German Government Touring Canada.

A Toronto despatch says: Dr. Hucho, representative of the Department of Agriculture of the German Government, was at the Parliament Buildings on Wednesday obtaining general information and statistics from the Department of Agriculture on the farming industry of Ontario. He has travelled throughout the western part of the province, and intends spending a year travelling

ITALIANS RIOT AT KINGSTON.

Police were Attacked With Knives and Pistols.

A Kingston despatch says: Twenty Italians are in police quarters, and Vincenzo Delalla, the ring-leader, is in a separate cell with a deep cut over the left eye as the result of a riot which broke out at the Grand Trunk station on Thursday afternoon, in which knives and pistols were used and a police sergeant and detective badly handled.

The trouble began this morning, when the Italians repairing the G. T. R. tracks refused to go to work near Collins Bay, demanding higher wages. They grew demonstrative, and the city police were called, but by the time they reached the depot quietness reigned. Again in the afternoon rioting was resumed, and the men, who were in a very rebellious mood, were ordered away from the station. They refused, and the police attempted to enforce obedience.

In the melee which followed Sergt. Robt. Nesbitt, of the Kingston police force, and Detective McRae were badly stabbed. Nesbitt was slashed down the arm, and deeply cut on the breast and on the leg. The doctors fear his lung is punctured. McRae is in the General Hospital with a bad wound in the groin, with possible injury to the bowels.

Mayor Mowat was at once notified, and a hurry call was sent to the artillery barracks. In a short time 50 mounted and armed regulars arrived at the station, but by this time peace had been restored and the Italians had dispersed to their quarters. Ten arrests were quickly made, and a dozen of the rioters who fled were pursued by a detachment on a handcar. Nine were arrested at Cataract.

Shortly before 8 o'clock Dr. Evans brought in another Italian he had captured on the Perth road. He is alleged to be the man who did the stabbing. Constables Navlon and Driscoll being positive in their identification.

A BATTLE FOR LIFE.

Fishermen in Dories Picked Up and Taken to St. John's.

A Halifax, N. S., despatch says: Six members of the crew of the American fishing schooner Paragon, who lost their vessel while fishing in dories on the Grand Banks on June 17, were brought in here by the steamer Sylvia, on Wednesday. Eight men were blown out of sight of their vessel by a severe north-east storm. Three of the dories came together, and the six men decided their only hope for life was to get into one dory. All the food was placed in the strongest dory, and the six men then began a battle for life. For two days and nights they drifted, cold, wet, and half-famished, until within 30 miles of land, they were picked up by the schooner Vera at 5 o'clock in the morning. A few hours later the remaining two men were picked up, and all were taken to St. John's.

VICTIM OF THUNDERBOLT.

Port Dalhousie Fruit Grower Killed and Wife Shocked.

A despatch from Port Dalhousie, Ont., says: During a severe thunderstorm here on Friday afternoon Thomas J. Farmer, a well known fruit grower of this section, was killed. He, with his wife, was picking berries in the field when the storm came up, and they took refuge under a tree. Mrs. Farmer was badly shocked. Her skin, as well as that of Mr. Farmer, was burned almost black. Mr. Farmer had lived here nearly all his life.

A. Roberts, a neighbor, was plowing in the next field and he and his horse were knocked down, but, beyond a bad shaking up, they are all right.

RIGHT TO CUT TIMBER.

Special Rights to be Granted to Owners

mangled in the shrubbery.

There were several miraculous escapes among the occupants of this carriage.

NO CHANCE OF ESCAPE.

The second coach swung to the right, shot over the other, and landed on top of the wreck of the two engines, where it collapsed like a house of cards. Its passengers were all jammed in the centre in an awful mass, and here most of the fatalities occurred.

The third coach dashed into the

SIR JAMES HECTOR'S MONUMENT.

Memorial of the Discoverer of the Kicking Horse Pass.

A despatch from Vancouver says: High up in the Rocky Mountains there has just been erected by scientists and railway men of Canada and the United States monuments to the memory of Sir James Hector and his son of New Zealand. The former is a memento of the great services rendered by Sir James Hector as scientist of the Palliser expedition, which discovered the Kicking Horse Pass, through which the Canadian Pacific Railway runs. The Kicking Horse River was named after an incident of this expedition, when Sir James Hector was laid low by a kick from a horse. So badly injured was he that his Indians thought he was dead, and were preparing his grave, when he came round just in time to avert being buried alive. Mount Hector, one of the highest peaks of the Rockies, is named after the veteran explorer. The monument to his achievements is under the shadow of that towering hill.

CAUGHT IN THE ACT.

Attempt to Set Fire to St. Thomas Hotel Stables.

A despatch from St. Thomas says: Peter Vincent, a former Pere Marquette machinist, was arrested on Wednesday night for setting fire to the Duke House stables. He was seen lighting matches and firing hay in a stall. Revenge because of being put out of the hotel, where he registered with a woman not his wife, was the cause of the act. The fire was extinguished without much damage.

CUTTING SMALL TREES.

Serious Charge Against a Lumber Firm in Quebec.

A Montreal despatch says: For some time reports have been reaching the Provincial Government that cutting of immature trees was being practised by at least one large lumber company, and as a result A. Morency, the expert Provincial culler of Sherbrooke, has been commissioned to make an inspection and report thereon. It is said that as many as 80,000 trees have been cut by one firm. Should this be true and the charge proved, the company would be liable to a fine of \$240,000, at the rate of \$3 a tree.

WIFE REFUSED HIM MONEY.

Double Tragedy Followed at Buffalo Last Night.

A despatch from Buffalo says: Fred Haas, of Cleveland, on Wednesday night shot and instantly killed his wife, Maud Haas, probably fatally wounded Mrs. Ida McElroy, of 129 Oak Street, and then shot himself through the head, dying a few minutes later. Mrs. Haas' refusal to supply her husband with money was the cause of the murder.

SULPHITE IN SAUSAGE.

Analysis of Hamburger Steak, Bologna Sausage, Etc.

A despatch from Kansas City says: A chemical analysis of hamburger steak, bologna sausage, loose sausage, Polish

sausage, frankfurters and wienerwursts, bought in the open market from three leading packing companies, has convinced Dr. B. W. Lindberg, professor of chemistry and toxicology in the Kansas City Hahnemann Medical College, that the samples contain sulphites. In every sample from two houses and in two out of five of the other samples, sulphites were found.

VANHORNE ROBBED.

Summer Residence Rifled of \$1,000 of Goods and Silver.

A St. John, N. B., despatch says: When the summer residence of Sir William C. VanHorne, on Ministers' Island, St. Andrew's, was opened on Tuesday afternoon it was found that burglars had been through the place and had cleaned out the linen and silver closets, carrying off fully \$1,000 worth of goods.

EDUCATING THE DOUKHOBORS.

Delegates Sent by Philadelphia Quakers Report Great Success.

A despatch from Winnipeg says: Delegates sent by the Philadelphia Quakers to initiate the work of education among the Doukhobors have returned from visiting the communities, and report most encouraging success. They have ignored Peter Verigen in their negotiations, and found the people quite willing to secure educational facilities. Several schools will be built in various villages by the Quakers, and teachers will be sent.

THE ART OF INTRODUCTION.

There are few people who have not suffered at one time or another by the off-hand manner in which they are introduced to others. This kind of introduction is likely to embarrass some people, just as the careful and gracious introduction is one of the essentials in putting strangers at ease. In introducing people the greatest care should be taken to pronounce both names distinctly. If one name has escaped the introducer's memory it is safest and best to excuse oneself, and ask for the forgotten name. The most delicate sensibilities should not be wounded by such a slip of memory, for who is there who has not at some time or another quite forgotten a well-known name? The debatable question as to whether a woman should shake hands with a man who is being presented to her, has been solved by making it only obligatory for the woman to offer her hand to the man when the occasion is informal, and the man is being introduced to one person at a time. When he is meeting a group of people it makes it embarrassing and awkward to shake hands with all.

"I say, Miss Wright," remarked a young man admiringly, "that hat becomes you exceedingly, but I shouldn't care to sit behind it at the theatre!" "Oh, well, you're not obliged to do that," replied the lady briskly, "you may sit beside it!" He bought seats the same day.

Thomas Lee Sing, a Hamilton Chinaman, who prosecuted Chang Sing a few days ago, has asked for police protection. He claims that the Highbinders Society has put a price of \$400 on his head.

panions on the voyage. This was particularly true of Messrs. Barwick and Pilon, as they had a conference and decided on all their arrangements together before leaving Toronto. It was thought that if one remained over the other would be likely to do so. The friends were deprived of this small grain of comfort as a second cablegram was received, definitely announcing the deaths of the three gentlemen, who were in all probability travelling in the same compartment.

REDEMPTION BY PRAYER.

Chinese Criminals Get a Novel Chance of Escape.

A Tien-Tsin despatch says: Yuan Shih Kai, Viceroy of Chili, delivered an original judgment the other day in the case of five prisoners, who were liable to the death penalty. He gave them a chance of redemption by prayer. It is a period of extreme drought, and the Viceroy ordered the men to pray for rain. If their prayers were not answered in three days they were to be executed. God mercifully sent a small rainfall, and the prisoners were liberated. The success of the experiment induced its repetition, and five other prisoners are now fervently praying for more rain on behalf of the community, but more particularly on behalf of themselves.

FOUR WILL BE HANGED.

Egyptians Sentenced to Death for Killing Capt. Bull.

A Cairo, Egypt, despatch says: The trial of the natives concerned in the attack June 13 on the party of five British officers while the latter were pigeon shooting at the village of Demshawai, near Tintah, resulting in the killing of one of the officers, Captain S. C. Bull, of the 6th (Inniskilling) Dragoons, and the serious maltreatment of the others, has resulted in four natives being sentenced to death, four to penal servitude for life, and five to receive fifty lashes. Thirty-one of the accused were acquitted. The executions and the flogging will occur at Demshawai. All the men sentenced to death will be hanged by turns on gallows in the presence of the villagers.

ANOTHER LOAN ON RAILWAY.

Canadian Capitalists Will Have a Chance to Invest.

A despatch from Toronto says: The Provincial Treasurer, Hon. A. J. Matheson, is advertising for a \$3,000,000 loan with which to complete the Government railway 94 miles north of New Liskam and to recoup the amount of money drawn from the treasury since the expending of the \$6,000,000 English loan. This latter amount was exhausted last July and since that time the money expended on the railroad has been supplied by the provincial chest. As the previous loan cleared off all outstanding liabilities the new one will be applied, after the overdraft on the treasury is paid off, to the completion of the road. It will be offered for public subscription, at the rate of 3½ per cent. interest, payable half-yearly.

FIND NEAR WENDIGO LAKE.

The Surface Ores Assays Twenty-three Per Cent.

A despatch from Cobalt says: Another splendid find comes to light from the Wendigo Lake district. The find was made by three young men a few days ago. The assay shows 23 per cent. silver, and this is considered an excellent showing for a surface assay. The district promises good returns.

were knocked down, but, beyond a bad shaking up, they are all right.

RIGHT TO CUT TIMBER.

Special Rights to be Granted to Owners of Sawmills.

A despatch from Ottawa says: An order-in-Council has been passed authorizing the Minister of the Interior in his discretion to grant authority to the first applying sawmill owner to cut over not more than a square mile of timber land on payment of Crown dues and a fee of \$100 per mile for each permit. Permits will be good for one year and renewal once. A mill must be in actual operation within three months of the date of the permit.

FREE GOLD DISCOVERY.

Rich Samples Taken Out in the Temiskaming District.

A despatch from Temiskaming, Que., says: A wonderful discovery of free gold has been made about 70 miles north of Ville Marie at the narrows on Opasatica Lake, two miles south of the height of land. The finders, A. Rensault and A. Ollier, are now en route to Quebec to perfect their discovery. One sample is about 20 pounds in weight, and is covered with free gold.

BANK ROBBERY CHARGED.

Arrest of G. H. Sanderson, the Former Accountant.

A despatch from Medicine Hat, Alta., says: Geo. H. Sanderson, former accountant in the Union Bank here, was arrested on Sunday at Rosenroll, where he has been engaged in the grain business for some months. He is charged with misappropriating \$1,200 of the bank's funds last September while acting as teller. He has been committed for trial. Nothing has yet been learned of the whereabouts of Crompton, another defaulting clerk of the same bank, who disappeared a few weeks ago.

THREW STONE AT TRAIN.

Hit Passenger and Gets Three and Half Years in Kingston.

A despatch from Port Arthur, Ont., says: Louis C. Rioux, arrested for throwing a stone at a Canadian Pacific train near White River a few days ago, was on Thursday morning sentenced to three and a half years' imprisonment in Kingston Penitentiary. The stone which Rioux threw struck a passenger on the head, necessitating his removal to Port Arthur Hospital.

WINNIPEG BY-LAWS.

Sunday Cars and a Civic Electric Power Plant.

A despatch from Winnipeg says: All four by-laws voted upon on Thursday passed with good majorities. This includes a Sunday car service and the establishment of a civic electrical power plant at a cost of \$3,500,000 and the inauguration of a Board of Control. The expenditure of \$200,000 for school extension also received very hearty endorsement.

SPEEDING TO BE STOPPED.

Special Constables Appointed to Enforce Automobile Law.

A despatch from Toronto says: Five constables have been appointed by the Provincial Government for the special purpose of enforcing the provisions of the Act to regulate the speed and operation of motor vehicles on the public highways. They will be engaged in this work during the three months beginning July 1. The names of the new officers are John Stanley, Toronto; Edward T. Van Hierop, Ottawa; Robert Mackay, Fallowfield; William Kavanagh, Queensville, and Eleazer Frisby, Aurora.

THE WORLD'S MARKETS

REPORTS FROM THE LEADING TRADE CENTRES.

Prices of Cattle, Grain, Cheese and Other Dairy Produce at Home and Abroad.

Toronto, July 3. — Flour — Ontario wheat patents are quoted at \$3.20 in buyers' sacks, outside, for export. Manitoba first patents, \$4.40 to \$4.60; second patents, \$4.10 and strong bakers', \$4, Toronto.

Bran — The market is steady, at \$15.50 to \$16 in bulk outside. Shorts are quoted at \$18.50 to \$19 outside.

Wheat — No. 2 white quoted outside at 88c; mixed and red about the same. No. 1 Northern Manitoba, sold at 87½c lake ports. No. 2 Northern quoted at 85 to 85½c lake ports.

Corn — No. 2 American yellow is quoted at 59½c to arrive, Toronto.

Oats — No. 2 white nominal at 41 to 41½c to arrive, Toronto, and at 38½c outside.

Peas — Scarce, and prices purely nominal around 82c outside.

Rye—No. 2 quoted at 60c outside.

COUNTRY PRODUCE.

Beans—Hand-picked selling at \$1.75 to \$1.80, and primes at \$1.50 to \$1.60.

Honey—Strained honey quoted at 8½ to 9c per lb, and combs at \$1.50 to \$2 per dozen.

Hops—14c to 17c per lb.

Hay—Car lots of No. 1 timothy are quoted at \$9.50 to \$10 on track, Toronto; No. 2 at \$7 to \$8.

Straw—\$6 per ton.

Potatoes—Ontario stock in small lots from store, \$1 to \$1.10 per bag; East Delawares, \$1.25.

Poultry—Turkeys, fresh killed, 12 to 14c; chickens, 12 to 13c; hens, 9 to 12c; Spring chickens, 17 to 18c per lb.

THE DAIRY MARKETS.

Butter—Pound rolls are quoted at 16 to 18c; large rolls, 15 to 17c, and inferior at 14 to 15c; tubs, 14 to 16c. Creamery prints—sell at 20 to 21c, and solids at 19 to 20c.

Eggs—12c per dozen.

Cheese—New are quoted at 12 to 12½c, the latter for twins.

HOG PRODUCTS.

Cured meats in good demand, with prices generally firm. They are quoted as follows: Bacon, long clear, 12 to 12½c per lb, in case lots; mess pork, \$21 to \$21.50; short cut, 23c.

Hams—Light to medium, 14½ to 15c; do heavy, 14c; rolls, 12 to 12½c; shoulders, 11½c; backs, 17 to 18c; breakfast bacon, 15 to 16c.

Lard—Tierces, 11½c; tubs, 11½c; pails 12c.

BUSINESS AT MONTREAL.

Montreal, July 3. — Grain — There is no improvement in the demand for Manitoba wheat from over the cable, and business continues quiet. The market for oats was again dull. There is little or no change in the syndicate, holders being fairly firm in their views, and demanding full quotations for the most part; these are still 42½c for No. 4 oats, 43c for No. 3, and 43½c for No. 2. Flour—A fairly active business continues to be done in Spring wheat grades of flour, and the undertone to the market remains firm; Manitoba Spring wheat, \$4.60 to \$4.70; strong bakers', \$4.10 to \$4.20; winter wheat patents, \$4.30 to \$4.40; straight rollers, \$3.90 to \$4.10; do, in bags, \$4.85 to \$1.90; extras, \$1.40 to \$1.50. Feed—There is fair enquiry for bran for export account, which might result in some further business; in shorts and mouille a fairly active trade is passing; Manitoba, in bags, 18; shorts, \$20 to \$21 per ton; Ontario bran, in bags, \$17 to \$18; shorts, \$20.50 to \$21; milled mouille, \$21 to \$25 per ton, and straight grain, \$28 to \$29. Provisions—Barrels heavy Canada short cut pork 82½c; light

LONDON WORSE THAN CHICAGO

The Slaughtering Plants are in a Bad Condition.

A despatch from London says: Jacob Meyers, editor of the Butchers' Advocate, of New York, after a fortnight's investigation here, declares that the majority of English slaughtering plants are in a worse condition than those in New York and Chicago.

"In the United States," he said on Wednesday, "the assembling of cattle, hogs and sheep and their conversion into beef, pork and mutton take place in broad daylight, and anybody may see the whole show. In England the private slaughter-house and petty packing places are hidden away in remote streets and lanes, where the inspectors seldom or never go. The cheapest meats, coming from nobody knows where, are bought in the open market to be ground up and preserved in tin, earthenware and glass, and then sent by the tens of thousands of packages to the small shops throughout the country."

"This part of the industry is of an utterly wildcat character, with no supervision, no real knowledge of the science of meat preservation, and no sanitation except such as individuals may chance to think worth while."

"I am compelled to believe that most of the outcry in England is made with tainted commercial motives. If so, the instigators are incredibly foolish, for the meat-packing business, irrespective of nationality, will be involved in common disaster."

"We feel that no impartial man, accustomed to weighing matters carefully, could confirm the sweeping denunciations which have caused so much mischief. The English trade will get the full force of the boomerang before long, and then the people on this side will have some conception of this loss and suffering needlessly caused America."

GUARDS DEFIANT.

Favored Regiment of the Czar in Disgrace—Commander Censured.

A St. Petersburg despatch says: The commander of the ultra-loyal Preobajensky Regiment, Gen. Alasnite, to which belong the men who recently held a meeting in the guard camp at Krasnoye-Selo and drew up resolutions, addressed to their commander, upholding all the actions of Parliament and declaring that they want no more police duty entailing the slaying of brother or father, has been severely reprimanded by the Emperor.

This is the most honored regiment in the Russian service and the reprimand is the clearest comment possible on the serious spread of the revolutionary propaganda in the army.

The Preobajensky is the oldest regiment of the Guards and has first choice each year in the selection of recruits throughout the whole Empire. The Emperor is titular Colonel of the regiment and almost invariably wears its uniform on State occasions. The demands of the men, which were published in full to-day, show clearly by their adoption of the motto, "One for All, All for One," that the movement was engineered by revolutionists. The demands of the first battalion were adopted at a meeting held in the barracks yard in open defiance of their officers. Instead of this entailing punishment, their demands received the respectful consideration of the commander of the division, Gen. Ozeroff, who, arriving the next day, promised to satisfy some of them and refer the others to his superiors.

FOR PURE FOOD.

Bill Is Agreed on by Senate and House of Representatives.

A Washington despatch says: The Pure Food Bill was agreed upon by the conferees for the Senate and House on Wednesday, and was reported to the Senate just before adjournment. The bill, as agreed upon, makes it a misdemeanor to manufacture, sell, or

DOMINION PARLIAMENT

PENSIONS CUT OFF.

Mr. Fielding introduced his bill to repeal the act respecting annuities to certain Privy Councillors. The measure is brief and to the point, its one clause simply setting forth that the act of last session is repealed from July 1st, 1906. In reply to a question for an explanation, Mr. Fielding recalled the fact that near the end of last session a series of financial measures were presented to the House, including resolutions increasing the salary of Judges, increasing the indemnity to members and Senators, and increasing the salary of the Prime Minister, providing a salary for the leader of the Opposition, and last, but not least, in one sense, providing for an allowance of pensions for Cabinet Ministers under a certain condition. For all these measures, he thought, reasons more or less forcible could be given. Nevertheless, it must be confessed that the whole of these financial matters, coming forward at that stage of the session, had not been received with any wild enthusiasm by the general public. Perhaps more than a fair share of criticism had been centered on the measure which was now proposed to repeal. At all events, whatever might be said of the policy at the time the measures were passed, this particular measure had been the subject of very special criticism, and the Government had come to the conclusion to present to the House a bill repealing what was regarded as an obnoxious measure.

Mr. Foster inquired whether the Government had taken into consideration the matter of vested rights, which might have been created under the bill. Certain action might have been taken by the beneficiaries of the act which involved others. Had any provision been made to meet such cases.

Mr. Fielding replied that, having regard to the circumstances under which the matter was brought forward, he thought it could not be argued successfully that any vested rights had been created. Although some persons might have regarded the legislation of last year as settling the policy of the country, there was no bargain or contract constituting an arrangement between the beneficiaries and the Government.

ELECTIVE COUNCIL FOR YUKON.

Mr. Borden called attention to resolutions adopted by a mass meeting of miners at Dawson in favor of an Elective Council for the territory, and also asking for the cancellation of the Boyle concession. He desired to know what had been done with regard to the other concessions.

Dr. Thomson said he could only emphasize once more the desire of the people of the Yukon to elect their own Council. With reference to the Boyle concession it took in the hillsides, ground which the miners naturally were anxious to work, and the Ministers should heed the request of the people.

Mr. Oliver said the notice of cancellation of the different leases was not because of any allegation of fraud in securing them or in carrying them on. The Government held that the mere placing of machinery on the ground and the expenditure of \$5,000 a year did not fulfil the conditions. There must be efficient working of the claim. Proceedings had or would be taken in the courts, and the rights of the concessionaires would turn upon the court's decision. The Government was willing to recognize that for any bona-fide expenditures compensation should be allowed to a reasonable degree to the concessionaires if they decided to throw up their locations. With reference to the Boyle concession, he did not feel like interfering with it, by reason of the large expenditure of the Detroit people who had become interested in the enterprise. These people had spent \$300,000 in a dredge, and the Government desired to see the result of their work.

TWO PICTURES.

Scene I.

A group of people sitting under some apple trees. The ground covered with apples. A little boy begins to pick them up and eat them. The father noticing this, cries out, "Stop eating those green apples, Ralph."

The child pays no attention to the command.

"Stop eating those green apples, I say. They will make you sick. They are green and not fit to eat."

"But, papa, they are good."

"No, they are not, and you must not eat them. Now you mind me, or I will have to punish you."

After a time, observing that the child still continues to eat the apple, the father calls out, "If you will persist in eating those apples, Ralph, pick out those that are the ripest. Here, bring those to me and let me see them."

The child not obeying, the father rises and goes to him, takes an apple out of his hand and throws it away; picks up another and hands it to the child, saying, "This is a better one."

Then, taking out his knife, he peels several apples and gives them to the boy, who accepts and eats them without a word of comment from either.

A few minutes later the father observes the boy trying to climb a tree, and calls out:

"Stop climbing that tree; you'll tear your clothes. You are always in some mischief."

The child persists in trying to swarm up the trunk of the tree, which is too large for him to compass. After watching his futile efforts for a time and telling him to desist the father at last says:

"Well, if you are going to climb that tree anyway, why don't you take that box to stand on. Here you bring the box and I'll give you a boost. There, now, you are up in the tree. See if you can't sit still on those lower branches."

The father returns to his conversation. The boy, instead of sitting still, climbs everywhere at the risk of limbs and clothes, and in spite of warnings and scoldings he continues to climb until he wants to get down when the father comes to his aid and sets him on the ground rather roughly, saying to his friends, as he does so, "I never saw such a persistent little rascal. He always manages some way to get what he wants." The child overhears the remark and shrugs. It is not hard to foresee the result of such training, a persistently disobedient son made so by the father's unwisdom, and finally, perhaps, bringing disgrace to himself and sorrow to the father.

Scene II.

As before an orchard and the ground strewn with apples. A child who begins to pick up the apples and bite them.

Noting this, the father says:

"Please bring me some of those apples. I want to see if they are ripe enough to eat."

The child obeys. The father examines the fruit, saying, "These are all too green to eat. I will see if I can find you a good one. Here, this is fairly good. I will peel it for you."

After peeling a couple of apples for the child, the father says, "That will now. You must eat no more to-day. To-morrow we will see if we can find some more good ones."

The child, seeing that the father is not exercising an arbitrary power of dictation, but is seeking the child's best interests, yields readily to the command and seeks other pleasures. He soon begins to climb a big apple tree. The father, who is ever watchful, observes this and says, "Look at your coat, John; see how you have soiled it. It will never do to make extra labor for mamma in this way."

"But, papa, I want to get up in the tree. I won't wear my clothes."

"If I will help you up in the tree will you sit quietly on these lower branches,

the market a fairly active trade is passing; Manitoba, in bags, 18; shorts, \$20 to \$21 per ton; Ontario bran, in bags, \$17 to \$18; shorts, \$20.50 to \$21; milled mouille, \$21 to \$25 per ton, and straight grain, \$28 to \$29. Provisions—Barrels heavy Canada snort cut pork, \$23; light short cut, \$21.50; barrels clear fat backs, \$22.50; compound lard, 7½ to 8c; Canada pure lard, 11½ to 12c; kettle rendered, 12½ to 13c; hams, 13½ to 15c; breakfast bacon, 17 to 18c; Windsor bacon, 16 to 16½c; fresh killed abattoir dressed hogs, \$10.50 to \$10.75; alive \$7.75 to \$8 per 100 lbs. Eggs—Straight receipts, 16 to 16½c; straight candled, 17 to 17½c. Butter—Choice salted creamery, 20½ to 21½c; unsettled, 22½ to 23½c. Cheese—Ontarios, 11½ to 12½c; Quebecs, 11½c.

UNITED STATES MARKETS.

Milwaukee, July 3. — Wheat — No. 1 Northern, 87½ to 88½c; No. 2 Northern, 84½ to 87½c; September, 83½c asked. Rye—No. 1, 65 to 65½c. Barley — No. 2, 56c; sample, 54c. Corn—No. 2 cash, 51½ to 52½c; September, 52½c bid. Minneapolis, July 3. — Wheat — July 83½ to 83½c; September, 83½c; December, 83½c; No. 1 hard, 86½c; No. 1 Northern, 85½c; No. 2 Northern, 83½c. Flour—First patents, \$4.35 to \$4.45; second do., \$4.25 to \$4.30; first clears, \$3.50 to \$3.60; second do., \$2.45 to \$2.55. Bran in bulk, \$15.25 to \$15.50.

LIVE STOCK MARKETS.

Toronto, July 3. — The offerings of strictly stall-fed exporters were limited, and the bulk of the receipts in this line henceforth will consist of grass cattle owing to the exhaustion of supplies of the better classes in the country. The quotations to-day ranged from \$4.85 to \$5.25 per cwt. The call for butchers' cattle was well maintained. Good cattle of this class sold at \$4.40 to \$4.60. Choice stall-fed animals were worth \$4.80 to \$5 per cwt. Good butchers' cows brought \$3.75 to \$4; medium, \$2.50 to \$3.40; canners, \$1.50 to \$2.25 per cwt. The situation was steady in short-keeps, feeders and stockers. Choice short-keeps, \$4.75 to \$5; feeders, 1,000 to 1,150 lbs., \$4.25 to \$4.70; stockers, 400 to 800 lbs., \$3 to \$3.75 per cwt. Sheep were weak, and indications pointed to a decline. Lambs were steady. Export ewes, \$4.25 to \$4.40; export bucks, \$3.50 to \$4; culls, \$3.50 to \$3.75; grain-fed ewe lambs, \$6 to \$6.50; bucks, \$5 to \$5.50 per cwt; Spring lambs \$7.50 to \$8.50 each. Calves were quoted at 3 to 6c per lb. Hogs are firm. The supply in the country does not seem to be abnormally large. Quotations were \$7.50 for selects, \$7.25 for lights and fats.

COBALT STOCKS.

Mr. H. C. Barber, of 45 Adelaide Street east, Toronto, and Cobalt, New Ontario, furnishes the following quotations for Cobalt Stocks:

Clement Wilkinson, the Hamilton tailor who ran into the street firing a revolver and wounding pedestrians, has been pronounced insane.

A letter to Premier Whitney from Sir Wilfrid Laurier is to the effect that the Dominion Government has no intention of selling the military training grounds at Niagara-on-the-Lake.

A Washington despatch says: The Pure Food Bill was agreed upon by the conferees for the Senate and House on Wednesday, and was reported to the Senate just before adjournment.

The bill, as agreed upon, makes it a misdemeanor to manufacture, sell, or offer for sale any article of food, drugs, medicines, or liquors which is adulterated or misbranded or which contains any poisonous or deleterious substance. It prescribes for each offence a fine not to exceed \$500, one year's imprisonment, or both, and for each subsequent offence a fine of not less than \$1,000 or one year's imprisonment.

Section two prohibits the introduction into any State or any foreign country or the shipment to any foreign country of any article adulterated or misbranded, under penalty not exceeding a fine of \$200 for the first offence and \$300 or one year's imprisonment, or both, for each subsequent offence.

Concerning shipments to a foreign country it is provided that no article shall be deemed misbranded or adulterated when no substance is used in conflict of the laws of the foreign country for which it is intended.

ONE DEAD FROM SHOCK.

Result of Explosion Near Amherstburg—Caused by a Bullet.

A Windsor, Ont., despatch says: As a result of the explosion of dynamite and nitro-glycerine at Fox Island, near Amherstburg, on Wednesday afternoon, Mrs. Mary Moore is dead, while a number of other persons are suffering from the shock of the explosion, which was felt for a distance of nine miles or more.

The cause of the explosion is believed to have been due to a bullet fired by someone in a small boat on the river striking the magazine on the island.

MAIDS PART WITH TRESSES.

The Annual Hair Fair Held at Limoges, France.

A Paris despatch says: The market place at Limoges was filled on Tuesday with girls bargaining for the sale of their hair. It was the periodical hair fair, where dealers find the best tresses in the world. The girls stood demurely while dealers from Paris, Berlin, London, Moscow and elsewhere critically examined their hair, and a price being agreed upon, they accompanied the buyers to appointed places to have their tresses cut off. The prices varied from 43 to 53 francs a pound. One family unitedly parted with 86 pounds of hair, realizing for it over 4,500 francs (\$900).

KING'S BIRTHDAY HONORS.

Emilius Irving, K. C., of Toronto, Receives a Title.

A London despatch says: Among the long list of King's birthday honors are Hon. Mr. Turgeon of Quebec and William Lyon Mackenzie King of Ottawa, to be commanders of St. Michael and St. George; Hon. R. L. Weatherbe, Chief Justice of Nova Scotia, and Emilius Irving, K.C., Toronto, to be Knights; Sir Charles Parsons, on the commanding staff of the regular forces of Canada, to be an ordinary member of the military division of the third-class of the Companions of the Order of the Bath; George L. B. F. Fraser (Chief Clerk of the Department of Justice), L. K. Jones (Secretary of the Department of Railways), Juchereau de Saint Denis Lemoine (Sergeant-at-Arms in the Senate), Joseph Pope (Under Secretary of State), and E. Sutherland (Assistant Auditor-General), are all appointed to the Imperial Service Order.

Sir Robert Linton Weatherbe, Chief Justice of Nova Scotia since 1905, was born at Bedegue, Prince Edward Island, April 7, 1853. He was educated at Prince of Wales College and Acadia College, Wolfville. He edited The Acadia Recorder, and was admitted to the Bar in 1883. He became Judge of the Supreme Court of Nova Scotia in 1878.

people who had become interested in the enterprise. These people had spent \$300,000 in a dredge, and the Government desired to see the result of their work.

EARTHQUAKES IN WALES.

Chimneys and Houses Were Thrown to the Ground.

A despatch from Cardiff, Wales, says: Violent earth shocks were experienced throughout South Wales at 9.45 on Wednesday morning. Houses rocked and many of the cheaper ones were damaged. Hundreds of chimneys fell, pictures were shaken from walls, occupants of dwellings were thrown to the ground, and people fled from their houses, shrieking in panic, with visions of the San Francisco disaster before them. Though there were many narrow escapes from falling chimneys and copings there were no casualties so far as known. Shocks were also felt at Bristol, Ilfracombe and elsewhere. They were accompanied by loud rumblings.

BRITISH SHOE TRADE SAFE.

Expert Who Toured United States Says Invasion Need Not be Feared.

A London despatch says: Mr. Swaysland, a shoe trade expert, who made a tour of the United States on behalf of the Northampton shoe industry, reports that English shoemakers need not be frightened by an invasion of American shoes. The American makers have no direct advantage over their English competitors, while they were seriously handicapped by the fact that the cost of production in America was 5 per cent. more than in England. Nevertheless, Mr. Swaysland says, he found the Americans far superior in push, sharpness, and organization, while the operatives have a whole-hearted belief in the superiority of their workmanship and system.

RECEIVED 2,000 VOLTS.

Engineer in Supreme Court Building Had a Narrow Escape.

A despatch from Ottawa says: William Hill, engineer of the Supreme Court Building, Bank Street, had a remarkably narrow escape from death by electrocution on Wednesday. He received a shock of over 2,000 volts. Lightning struck one of the transformers in the Supreme Court engineering room. A fire resulted and the engineering staff had a busy few minutes in putting out the flames. On the fire being subdued, Mr. Hill went over to the switchboard to cut off the electric current and received the shock. He fell unconscious, but recovered in a short time. The arm was badly burned.

MAY BE CRIPPLED FOR LIFE.

Essex Farmer Committed for Brutal Assault on Wife.

A despatch from Windsor, Ont., says: Magistrate Bartlett on Thursday committed Zepher Baillargeau, a farmer living at Puce, near this city, for trial for a brutal assault committed upon his wife several days ago, and from the effects of which she may be crippled for life. She is still confined to bed, and Crown Attorney Rodd found it necessary to go to her bedside to secure the evidence against Baillargeau.

BRANTFORD MAN KILLED.

John Wonch Struck by a Train at Harrisburg.

A Brantford despatch says: John Wonch of Brantford, aged 62, was struck by a Grand Trunk train at Harrisburg on Wednesday night, thrown over the embankment and killed. He was walking along the tracks and did not hear the whistle, which was sounded as a warning to him.

see how you have soiled it. It will never do to make extra labor for mamm in this way."

"But, papa, I want to get up in the tree. I won't tear my clothes."

"If I will help you up in the tree you sit quietly on these lower branches. I can't let you climb to-day. Another day when you have on your old clothes you shall climb. For I want you to learn to be a good climber. Are you willing just to sit up there?"

"Yes, papa."

The father helps him to his seat and returns to his friends.

Presently the boy calls out:

"Can't I climb up just to those branches there? I won't tear my clothes."

The father looks up presently, saying, "A bargain's a bargain. Isn't it? I kept my part of this agreement. I you can't keep yours I will come and help you down. Business men always keep a contract."

The boy laughs and sits still for a while. Then he calls out, "I'm ready to come down, papa."

The father gives his assistance and the boy thanks him, saying as he runs away, "I'll make a good business man won't I?"

"He's such a dear little chap," says the father, as he rejoins his friends. "Full of mischief and life, but he knows I am his friend, and that I forbid him nothing except I think it is for his good. We have many jolly larks together, he and I, and he says we'll be partners in business some day and I think we will."

A MURDERER'S RELICS.

Brisk Bidding for Diamond Rings and Other Effects.

A San Francisco despatch says: The diamond rings and other personal effects of Milton Andrews, slayer of Bessie Boulton, at Mount Cutler, in Colorado, and who, with Nulda Olivia, lured Wm. Ellis from Australia to Berkeley, where they attempted to take his life, were sold in Oakland on Tuesday at public auction by the public administrator. The valuables were those left by Andrews and the Olivia woman last winter when he killed his companion and himself to escape the clutches of the police. The bidding for the gems was brisk, and from these relics of a life of crime the estate of the noted criminal has reaped upwards of \$1,000. The money, belonging to the estate is to go to the widow of Andrews, who lives in the East.

HIDING IN A VAT.

Much-Wanted Anarchist Captured in Spanish Province.

A despatch from Madrid says: An Anarchist, who is believed to be Parros Avino, wanted in connection with the attempt to kill King Alfonso and President Loubet in Paris, was arrested on Wednesday at Ubeda, Province of Jaen. He was hiding in a vat in the garden of a well known Carlist. The man has been going about disguised as a pilgrim, selling images of saints.

MORE POVERTY AHEAD.

Ranks of Destitute Will Be Swelled Next Winter.

A Toronto despatch says: The officials at the immigration office at the Union Station are becoming anxious about the new system adopted by farmers to hire help. Formerly agreement would be made for six months or a year, but owing to the immigrants asking as high as \$30 a month, because they know that help is so badly needed, the farmers are now offering \$1 a day for terms of three or four months. This will mean, as the officials claim, a heavy influx into the city at the approach of Winter, and a large increase in the ranks of the destitute.

Creditors of the Atlas Loan will receive a little over forty cents on the dollar. There will be absolutely nothing for the shareholders.

Is Your Hair Sick?

That's too bad! We had noticed it was looking pretty thin and rough of late, but naturally did not like to speak of it. By the way, Ayer's Hair Vigor is a regular hair grower, a perfect hair tonic. The hair stops coming out, grows faster, keeps soft and smooth. Ayer's Hair Vigor cures sick hair, makes it strong and healthy.

WHAT OTHER PAPERS SAY

St. Thomas Times (Con)

If our old boys put forth the same energy when formerly in the city as residents as they have done in other places since they left us so many need not have gone away.

Kingston Whig.

The repeal of the ex-ministers' pensions is a concession to public opinion. By the way the same public opinion has been expressed with regard to the members' indemnities without effect.

Hamilton Times.

Better than the (Sunday) bill should be defeated at once than that it should be passed as the triumph of the views of some in religious legislation that would outrage the consciences of many.

Brantford Expositor

The United States folks are beginning to wake up to the fact that they have to consider not only the immigration, but emigration, not only the keeping out of undesirable people, but the keeping in of desirable people. In the western States in particular, the drain to the Canadian Northwest is being severely felt.

Uxbridge Journal.

It does seem as if we ought to allow any man who will take the trouble of retailing postage stamps for nothing to do so. It is a good idea to have certain fixed places where they will be always on sale, and to pay these places by commission or in some other way for their trouble. But why should it be made a crime for other willing volunteers to oblige the public.

Hamilton Spectator.

If the Parliament desires to do justice to the people it will not listen to the Shearer proposals. To make the law to suit Shearer would be to oppress those who do not hold with him concerning Sunday observance. To ignore his proposals would do him and those who think with him no injury, for they would still have a perfect right to observe Sunday precisely as they pleased.

American and Canadian Coal Oil and Gasoline. MADOLE & WILSON.

THE SAVAGE MORO.

His Terrible Religious Frenzy Which
Riots In Murder.

The Moro is a savage, a primal man, a Malay, which is a branch of one of the oldest stocks of which we know. He is subject when not under the influence of a self contained ruler to strange, murderous fits of insanity. When a Moro, without effort on his part, becomes seized with a desire to murder he is said to have "run amuck," and at such times he will rush wildly, slashing and killing every one he chances to meet, even his own people. When, however, he purposely works himself into a religious frenzy it is with the desire to kill Christians and by the faith of the prophet ascend forthwith into paradise. The Moro in this state of passion is said to be "juramentado." He has then taken a religious oath, perhaps administered by some sacred "hadji" who had duly made his pilgrimage to Mecca. He has bound himself up so that he suffers excruciating agonies and through physical suffering is reduced to a nervous frenzy. Having once taken the oath, the Moro "juramentado" is doomed to slay until at last he himself is slain. The Moro is a Mohammedan, but he

stay until at last he himself is slain.
The Moro is a Mohammedan, but he has perverted the Mohammedan belief until at times it is a weird, grotesque and terrible religion. In the heart of the Moro there is no fear of death. It is to him but an incident of life, and his belief, as he has fashioned it, is that he who dies in battle is cleansed from sin and goes straight to the bosoms of the hours in paradise. The Moro's idea of government is force. He has never known anything else. If you are kind to him he thinks you fear him. His world is ruled by fear, not love.—Hamilton Wright in Leslie's Weekly.

A MODERN ARCADIA.

Nowhere Are Life and Property So
Safe as in Labrador.

A traveler who recently visited the coast of Labrador says that nowhere on earth are life and property held so sacred as in that little known and barren land. A thousand miles of lonely seaboard, along which is scattered a population of some 10,000 people, about one-third of whom are white, would seem to give every opportunity for crime, yet there is no police officer of any kind, no court and no jail. Nor are they needed. The only criminal charge within fifty years was one against an Eskimo, who shot a rival in love.

In addition to the resident population the coast is visited every summer by about 10,000 Newfoundland fishermen, and, while Newfoundland itself is not by any means free from criminals, none appear to come among the fishers or else the example of the natives of Labrador causes them to refrain from any wrongdoing while there. Years ago a circuit court visited the coast every summer, but as it found nothing to do it was abolished. Now should any serious charge be made against a man a magistrate would be sent from Newfoundland to investigate it.

Satisfying Honor in India.

They had a peculiar way of going into bankruptcy among the Marawaris in India, now unhappily giving way to the less picturesque method of the white man. When a man could not pay his bills he would summon his creditors. They were ushered into a room in which the thakur, or household god, was enshrined, but covered up with a cloth and with the face turned to the wall in order that it might not witness the scene that was to follow. The insolvent would then, in garb of mourning, lie on the floor, presenting his back to his creditors, who, on a given signal, would fall on him with shoes and slippers and belabor him till their wrath was exhausted. The beating finished, honor was declared to be satisfied all around.

Condemned to Slavery.

Two hundred years ago, when men and women were condemned to death for trivial offenses, it was the custom in Scotland to commute the death sentence into perpetual servitude to specified masters. In other words, the condemned person became a slave. It was further ordained that he should wear a metal collar round his neck recording his sentence and punishment. The Society of Scottish Antiquaries owns one of these collars, fished out of the Forth above Alloa. It is brass, with this inscription: "Alexander Stewart, found guilty of death for theft at Perth, 5th December, 1701, and gifted by the Justiciars as a perpetual servant to Sir John Aresken of Ayr."

Hammocks a fine assortment.
MADOLE & WILSON.

like a dusty, plowed field, and wild gardens trailing around and over white thatched cottages. Each cottage is one storied, with old world eaves and a veranda which runs along the whole front. The thatched roof seems to lean with all its strength upon a toy shaped colonnade, while the creepers afford a contrast to the whitewashed walls. If you walk down the road at dusk you will find at each door one of the household vigorously brushing clouds of dust away from the footpath, while long files of clean, curly pigs are trotting swiftly homeward and lean mongrels "bay the whispering wind" unceasingly. The men wear linen shirts and kilts. On workdays the costume has the appearance of a long, dirty night-dress tied with a leather girdle. On heydays the kilt is white and stiff, with accordion plaiting, while the shirt is of dainty embroidery and sets off an elaborate worsted waistcoat. The girls' full dress is still more picturesque, owing to the harmonious blending of the brightest prints—all shades and depths of blue and red and pink; no other colors—and to the graceful fall of the short petticoats, which do not reach the ankle, and are inflated by a slight sprinkling of crinoline.—Saturday Review.

Cause of Warm and Cold Periods.

Experiments of the Swedish physicist Arrhenius, supplementing the investigations of Professor Langley, indicate that in order to explain the origin of the warm climate which prevailed over the earth in the tertiary age, when even the polar regions seem to have abounded with life, and of the intense cold that caused the glacial periods, when half the northern hemisphere was buried under ice, it is only necessary to look to slight changes in the composition of the atmosphere. The active agent in these changes is thought to have been carbon dioxide. It has been shown that this gas possesses so great a power to retain solar heat that its addition to the extent of only one-tenth of 1 per cent of the present atmosphere would suffice to produce a tertiary climate and that taking away only one-fiftieth of 1 per cent from the present atmosphere would bring on glaciation. It has been conjectured that the fall of meteors was the source of the extra supply of carbon dioxide in former geological periods.

WOMEN HOTEL CLERKS.

How Those in Europe Impressed a
Woman Traveler.

In most European hotels in the smaller places the visitor is met at the desk by a woman instead of by the perfumery clerk so familiar to Americans at home. I think this is because a woman can be more successful in the art of common, everyday robbery. One doesn't like to argue about the prices with a sweet, smiling little lady, who seems to be exerting herself to an extreme degree to secure one's comfort and happiness, but if one happens to be making short stops here and there it

occasional mild protestation.

When madame smiles benignly and tells you that the room you have chosen, with everything included, will be 20 francs a day it is well to remember that "everything included" doesn't include everything by any means. There are a hundred and one little "extras," like tea, after dinner coffee, coffee and rolls in your room in the morning and such like luxuries, to say nothing of service, which must be paid for first hand if it is to be enjoyed at all. So at 20 francs madame is probably taking chances against a protest and will be enormously pleased with herself if none is forthcoming. It is the same all up and down the scale of prices, but I suppose those who can afford to go up the scale never care particularly.—Eleanor Franklin in Leslie's Weekly.

The "Bere" of 1542.

It is curious to find in a "Dietary" of 1542 the information that "bere is made of malte, of hopps and water. It is a naturall drynke for a Dutcheman. And now of late dayes it is much used in Englande to the detryment of many Englishe men." The author was speaking of "beer," the then new liquor distinguished from "ale" by being hopped. In this sense a seventeenth century rhymist says that "turkey, carps, hops, piccadell and beer came into England all in one year," "piccadell" being a kind of ruff or collar.

In Doubt.

Ethel (who is not famous for her good looks)—I don't see why you should call Miss Whitmore plain. I'm sure I only wish I were half as good looking as she is. Fred—You are, Ethel; you know you are. (And Ethel is wondering whether he meant to compliment her.)

Is Disease a Crime?

Not very long ago, a popular magazine published an editorial article in which the writer asserted, in substance, that all disease should be regarded as criminal. Certain it is, that much of the sickness and suffering of mankind is due to the violation of certain of Nature's laws. But to say that all sickness should be regarded as criminal, must appeal to every reasonable individual as radically wrong.

It would be harsh, unsympathetic, cruel, yes criminal, to condemn the poor, weak, over-worked housewife who sinks under the heavy load of household cares and burdens, and suffers from weaknesses, various displacements of pelvic organs and other derangements peculiar to her sex.

Frequent bearing of children, with its exacting demands upon the system, coupled with the care, worry and labor of rearing a large family, is often the cause of weaknesses, derangements and debility which are aggravated by the many household cares, and the hard, and never-ending work which the mother is called upon to perform. Dr. Pierce, the maker of that world-famed remedy for woman's peculiar weaknesses and ills—Dr. Pierce's Favorite Prescription—says that one of the greatest obstacles to the cure of this class of maladies is the fact that the poor, over-worked housewife can not get the needed rest from her many household cares and labor to enable her to secure from the use of his "Prescription" its full benefits. It is a matter of frequent experience, he says, in his extensive practice in these cases, to meet with those in which his treatment fails by reason of the patient's inability to abstain from hard work long enough to be cured. With those suffering from prolapsus, anteversion and retroversion of the uterus or other displacement of the woman's organs, it is very necessary that, in addition to taking his "Favorite Prescription" they abstain from being very much, or for long periods, on their feet. All heavy lifting or straining of any kind should also be avoided. As much outdoor air as possible, with moderate, light exercise is also very important. Let the patient observe these rules and the "Favorite Prescription" will do the rest.

Dr. Pierce's Medical Adviser is sent free on receipt of stamps to pay expense of mailing only. Send to Dr. R. V. Pierce, Buffalo, N. Y., 31 one-cent stamps for paper-covered, or 50 stamps for cloth-bound.

If sick consult the Doctor, free of charge by letter. All such communications are held sacredly confidential.

Dr. Pierce's Pleasant Pellets invigorate and regulate stomach, liver and bowels.

Culver's Joke

By Suse Clements Willis

Copyright, 1906, by E. N. Parcells

"I don't know any girls; simple reason," laughed Blake Narbel. "You see, the pater grew to be a woman hater after mother's death. We have, re-treated before civilization ever since."

"I'll give you a couple of mail introductions back east," laughed Culver. "I know a lot. You write a nice little letter, and I'll send it."

"I guess you'd have to write the letter, too," chuckled Narbel. "I never wrote to a woman in my life."

"You never can tell till you try," suggested Culver. "I wish you'd try now. It would keep you busy until I finish this letter."

He went on with his writing, and Narbel good humoredly, picked up a pen. There was a pack train going down from the mines tomorrow, and he could understand why Culver wanted to finish off the letters he was writing back east. The train went down one week and back the next, affording them bimonthly communication with the outside world.

"Whom shall I address it to?" he demanded.

"Miss Lucy Mears," laughed Culver. Then two pens scratched over the paper, Narbel's with easy, rapid movement, Narbel's painstakingly. He was less accustomed to writing, and Culver had finished half a dozen letters before the other's pen was still.

Culver laughed over the effusion, in which the writer had pictured his dull life and had pleaded for permission to open a correspondence. He explained fully his relations with Culver as business partner and chum and hinted at possibilities of matrimony.

Had he been in earnest instead of merely seeking a means of killing time while Culver was occupied he could not have done better.

In the morning Culver came across the sheets and, with a wicked chuckle, slipped them into an envelope and addressed them to Lucy Mears, anticipating that elderly lady's surprise when she should open the envelope back in the New England town.

Narbel, clearing up the table that evening, noted the absence of the sheets, but concluded that Culver had torn them up along with his own odd sheets and thought no more of the matter until a month later a letter came

which marked the track of the long line of wagons across the alkali, but the figure in the buggy beside Narbel was so swathed in duster and veils that no hint of her appearance could be gained, and the men, with many a nudge and smile, fell in behind and rode along.

They all turned in at the ranch gate, but Narbel swung his wife out of the buggy and took her into the house. "Mrs. Narbel will be glad to meet you when she has had a chance to tidy up," he said, with a grave face, "but she wants the dust off first."

Culver took the horse to the stables and then rejoined the waiting group on the grass plot in front of the house. (Culver knew now why Narbel had insisted upon a grass plot.) They had not long to wait, for presently a gasp from the crowd caused Culver to turn, and there on the step stood Narbel and the very girl of the picture. "She was smiling now as she acknowledged the various introductions. Culver was the last to come up, for he had not recovered from his amazement until Narbel called to him.

"I feel that I ought to be very grateful to you," she said in a low voice, "even though you were trying to play a joke."

"The joke seems to be on me," he said lamely.

"I don't think there is any joke," she said decidedly. "It was just the working of fate."

He turned to receive the farewells of the men from the mine, and more than one joked him on his vivid imagination. It was clear that they thought he had been fooling them, and he was glad that he was at least saved their jeers, but it was with no pleasant anticipation that he followed Narbel and his wife into the house.

"You builded better than you knew, Jack, when you sent that letter I wrote in jest."

"But this is not Lucy Mears," he stammered. "I thought you were going to keep faith at any cost."

"Aunt Lucy died a year ago," smiled Mrs. Narbel. "I suppose no one wrote you. As I was the only Lucy Mears I got the letter."

"And I got the sweetest little woman on earth," supplemented Narbel.

"And I," wound up Culver, "I don't know whether I should be praised or kicked. I think I'd prefer the latter."

But instead he received the praise.

Firmness of Purpose.

Firmness of purpose is one of the most necessary sinews of character and one of the best instruments of success. Without it genius wastes its efforts in a maze of inconsistencies.—Chesterfield.

A LUCKY ESCAPE.

Quick Wit and Daring Race of a Russian Revolutionist.

Nowhere outside of the pages of fiction would we expect such an incident as the following from the personal story of the Russian revolutionist Narodny. Narodny had just jumped from a window to escape the police. "When I scrambled to my feet I discovered myself in the yard and among half a dozen soldiers. I was without overcoat and hat—a very suspicious figure—and, having neither, I could not escape even could I get by the soldiers who surrounded me," he said.

"I jerked a card from my pocket—to this day I do not know what it was—and handed it to one of the soldiers. 'Here is my card,' I said rapidly. 'I am a member of the secret police. One of these revolutionists is trying to escape. I am after him. Quick! Give me your coat and hat!'"

"He automatically obeyed. I slipped

Why Tea Quality Varies

YOU know how the quality of strawberries from the same patch will sometimes vary from one day to another.

One day sweet, compact, well ripened, well colored, richly flavored—next day it rains, is cloudy,—following picking is soggy, sour, green, coarsely-flavored, poor.

Tea, also, on account of its volatility of flavor, after picking and during the curing process is very susceptible to weather changes. A few hours of sunshine or bad weather after picking may make the difference between good and poor tea.

So that while one picking may be first class, the next from the same garden may be very poor.

I select only the pickings which come up to the Red Rose standards of richness and strength in Indian, and delicacy and fragrance in Ceylon teas, and thus that "rich, fruity flavor" of Red Rose Tea is produced and maintained.

Red Rose Tea

is good Tea

BLOOD DISEASED MEN

If you ever contracted any blood disease you are never safe unless the virus or poison has been eradicated from the system. Have you any of the following symptoms? Sore throat, ulcers on the tongue or in the mouth, hair falling out, aching pains, itchingness of the skin, sores or blotches on the body eyes red and smart, dyspeptic stomach, sexual weakness—indications of the secondary stage. Don't ruin your system with the old foggy treatment—mercury and potash—which only suppress the symptoms for a time only to break out again when happy in domestic life. Don't let quacks experiment on you. Our New Method Treatment is guaranteed to cure you. Our guarantees are backed by bank bonds, that the disease will never return. Thousands of patients have been already cured by our New Method Treatment for over 20 years. No names used without written consent.

Mr. E. A. C. writes: "Your remedies have done me more good than Hot Springs and all the doctors and medicines I had previously tried. I have not felt any of those pains or seen any ulcers or blotches for over seven years and the outward symptoms of the loathsome disease have entirely disappeared. My hair has grown in fully again and I am married and happy."

RHEUMATISM FLIES

IN ONE TO THREE DAYS

WHAT A "HEAVEN BEGUN BELOW" IT WOULD BE TO MANY A WEARY SUFFERER FROM RHEUMATISM, NEURALGIA AND ALL THE KINDRED AILMENTS, IF FAITH WOULD TAKE HOLD OF AND USE SO RADICAL A CURE AS THE GREAT

South American Rheumatic Cure

Why, its very nature makes it the most natural and easy cure that human intuition and diligence have discovered. Its wonderful power is in its simplicity; its effectiveness is in its going right to the seat of the trouble, dispelling the causes that "bode evil," give pain, stiffen joints, distort limbs, twist muscles, and when it reaches vital spots, oftentimes cause death. South American Rheumatic Cure is as harmless as milk. One of its marvels is the rapidity with which it effects a cure and the testimony of the thousands who have "thrown away their crutches" and climbed from the valley of suffering to the mountain top

Hot Weather HEADACHES

Tablets, powders, drugs, of any kind will NOT cure headaches. Simply because they never reach the CAUSE of the headache.

What causes headaches? Poisoned blood, always.

If the bowels are constipated—

If the kidneys are weak—

If the millions of pores of the skin are not active—

There are bound to be headaches.

Fruit-a-tives

OR "FRUIT LIVER TABLETS"

cure headaches because they cure the cause of headaches. They do not drug the nerves. They go to the root of the trouble, invigorate and strengthen the liver and increase the flow of bile into the bowels, which cure constipation. Act directly on the kidneys, heal all kidney irritation. Act on the skin, stimulate and open the pores.

With bowels, kidneys and skin all healthy and working in harmony, the blood is kept pure and rich and there can be no headaches.

FRUIT-A-TIVES are pure fruit juices—combined by a secret process with tonics and intestinal antiseptics.

50c. a box or 6 boxes for \$2.50. Sent on receipt of price if your druggist does not handle them.

FRUIT-A-TIVES LIMITED - OTTAWA.

HOW BEAST MEN ARE MADE.

The Hideous and Cruel Practice of Flesh Sculpture in China.

"Victor Hugo in 'The Man Who Laughs,'" said an ethnologist, "tells of the sculptors of living flesh—those horrible people of the middle ages who kidnapped tender little children and turned them into all sorts of monsters, dwarfs, hunchbacks and the like, selling them afterward for jesters or for showmen's freaks."

"The hideous and cruel practice of flesh sculpture still continues. There is a tribe of Chinese gypsies who steal children and turn them into so called wild men. The practice is, of course, illegal."

"A kidnapped child is flayed alive, bit by bit, and the shaggy skin of a dog is grafted on him. This takes a year. At the year's end the poor creature is shaggy, like a bear, from head to foot."

"The child's vocal chords are destroyed with charcoal in an unspeakably cruel way. He can never speak thereafter. He can only growl and moan like a beast."

"He is imprisoned in a perfectly black hole until every vestige of reason leaves him. Nine months is usually a sufficient confinement to accomplish this."

"Finally, speechless, shaggy, lunatic, the victim is sold to a traveling showman and is exhibited throughout China as a genuine wild man or beast man. I am bound to say he looks the part."

HOG MONEY.

Origin of the Curious Old Brass Coins of Bermuda.

"Hog money" is the name by which

the brass money which began to be struck in Bermuda in 1650 came to be known. On one face of it was a hog, on the other a ship of that period. These old coins are very rare and highly prized by collectors.

The history of this device is curious and interesting. A Spanish vessel, commanded by Juan Bermudez, on its way to Cuba with a cargo of hogs, was wrecked there. This was in 1515. Later in the same century, when the English discovered this land, they found a country inhabited by hogs.

It is also interesting to note that the English discovered it in the same way as the Spaniards. An English ship was wrecked there. Is it any wonder that the treacherous coast got from Spanish and English alike the name of Devil's Land? Yet it is one of the most beautiful coasts in the world, and it has been claimed that in brilliancy Mediterranean effects are not at all equal to those of Bermuda.

Bermuda is said to be the island of Shakespeare's "Tempest." The strange noises which mariners heard coming from this island, and which they did not then know were produced by hogs, caused them to say that it was haunted and to report weird things of it—Pearson's.

PUBLIC IMPROVEMENTS.

Money Wisely Expended Is Safely and Profitably Expended.

Beautified utility is never too costly. Over and over again the cost benefits of public improvements have been proved, defined, established. It is true of public betterments of a sanitary character; it is true of public betterments that look to commercial advancement; it is true of public betterments that have primarily an art value. The practical and the ornamental betterment are alike in this—that money wisely expended for good purposes is safely and profitably invested.

The limitations of expenditures for civic betterment are of course very obvious. The work undertaken must be good in itself and serve some good purpose. Money expended for a worthless filtration plant, for example, is money worse than wasted. Money spent for bad art is not always considered as so completely lost as money that might be wasted for worthless sanitary apparatus. The statue causes no ill health and may be avoided by passing down the next street, while an impure water supply brings death and destruction to many helpless persons.—Homes and Garden.

English and Scotch Precedence.

At the coronation of Charles I., the kingdoms of England and Scotland having been united during the reign of his father, considerable friction took place with regard to the order of precedence of the English and Scottish noblemen. An arrangement satisfactory to all parties was finally concluded, in virtue of which English peers while in England took precedence of Scottish peers of the same rank, while in Scotland this order was reversed, and the Scottish peers went first.

Lots of Chatter.

"What is he playing?"
"Oh, Mendelssohn's 'Songs Without Words,' you know."

"Hm! Well, the audience seems to be doing their best to supply the deficiency."—London Bystander.

The words of the good are like a staff in a slippery place.—Hindu Maxim.

NATURE'S COURSE

By NORA BRYANT

Copyright, 1908, by Ruby Douglas

Mrs. Humphrey shelled the peas in silence, waiting for the outburst. She was a meek little woman accustomed to listening to her beautiful, tall daughter and obeying her behests unquestioningly. Alice possessed all the independence of spirit which her mother lacked.

"No, mother," said Alice, seizing viciously on a pea pod and breaking it open, "no, you can't. It just isn't born in you. I've got to do it alone."

"Why, Alice!" exclaimed her mother with hurt inflection.

"Oh, I know it, mother. I'm a horrid cross girl, but I can't help it. Father's gone off again and left us with no wood. This has been going on for three years now. Sometimes he remembers to buy a load, but when he does we have to split it. And in the meantime we have to scratch and scramble for wood just as if we were as poor as poverty. Just look, we've burned most of the fences till the place looks more ghastly than ever, if possible."

"Alice, Alice," sighed Mrs. Humphrey, "you shouldn't talk so of your father."

Alice's face flushed deeper and she shelled a handful of peas before replying. Then she looked out of the door at the junco weeds.

"Everything is all wrong, and it's all father's fault. Why shouldn't I marry Bob Phillips? Tell me that? Just because he is a college man and his people live in town father has set himself against him. Now, why does father send me to college if he expects me to settle down to chopping wood and cooking for the rest of my life? No, mother. I'm a sophomore now and I know more than I did once. I am going to marry Bob and father is going to agree to it too."

Alice looked at her mother sternly. "See your hands, blistered and hard. You creep out and chop wood every time I turn my back. Look at my hands." She held up slender fingers. "Nice things to carry back to the college just this fall! Now, I'm going out to chop enough to get dinner with." And, pulling a shade hat over her eyes, Alice walked out into the hot harvest sun and picked up the ax.

Straight up to the new brooder house she went and with a neat swing of the ax began battering up the brooder house door. In a few moments the door had disappeared and in its stead on the ground near by lay a neat pile of stove wood. Still not quite satisfied, Alice looked about her. A hayrack lay on the ground waiting for the afternoon trip to the oat field. A few firm blows from the broad of the ax, and the side boards showed signs of weakening. Half a dozen clever cuts with the blade and the boards dropped to the ground. In five minutes the pile of wood by the brooder house was augmented by a pile of heavy sticks, and before Mrs. Humphrey could catch breath to inquire the source a brisk blaze lighted up the front of the old cooking stove.

A little after 12 Mr. Humphrey appeared at the door.

"Mother"—Mrs. Humphrey paused, with a bit of bacon poised on her fork—"mother, can you tell me what has

your father. But this is going to stop! This architect business is slow in starting, but I've got enough to keep the pot boiling. I'm on my way out to the Scotts' summer home now. They want me to plan an addition for them. But tonight I'm coming back to tell your father that we are going to be married at once."

Alice shook her head a little fearfully. "No, Bob, dear," she said. "I can't leave mother that way, and I want to finish college first. No; father has got to change. There is no sense in his acting so to such a dear as you."

Bob grinned appreciatively as he drew her to him, but he lost none of his look of determination. "That's all very well, Alice, darling, but I've a few rights, and after supper I'm coming back and read the riot act to your father."

Alice sighed. Then she nodded her head. "Yes, come back. I don't know just how, but some way I'm going to shame father."

"Don't you worry," said Bob. "I'll fix him."

As Bob disappeared Alice's glance wandered toward the broad stump of a tree that stood in the dooryard. As she looked her eyes lighted with a mischievous smile. Then she began her preparations for supper. In a short time she appeared in the yard with two covered dishes in her hands. These she placed on the top of the old stump where the sun blazed down on their shining covers. Then she returned to the house to set the table.

The hay wagon rattled into the yard.

"Well," called Mr. Humphrey, seeing Alice in the door, "isn't supper ready?"

Alice looked anxiously toward the old stump. "I'm afraid things have not begun to boil yet," she answered.

Mr. Humphrey looked at the strange array of utensils on the stump. "Alice," he said, "what nonsense is this?"

"It means just this," answered Alice bravely. "You refuse to buy wood for us, and this noon you forbade me to destroy any more of your property. So when it came time to get supper the stump seemed the hottest place at hand, and I put the vegetables out there to let nature take its course. It is much easier for me."

Mr. Humphrey stood in silence. Alice watched him anxiously. Slowly the angry flush died away, and the corners of his mouth twitched. He turned to the man who had been an interested spectator.

"Jim," he said, "you might as well finish up the old hayrack. Split up enough wood to get supper with." Then he walked into the house with never so small a twinkle in his eyes.

That evening, as Alice and her father sat on the steps waiting for Mrs. Humphrey's return, Mr. Humphrey broke the silence.

"I've been thinking it over, Alice," he said, "and—and—well, I guess father has been negligent of his two girls. You see, I didn't realize how hard some things are for women folks. Now, do you suppose you could plan a—a porch or a—a window or something?" he asked vaguely. "And we'll surprise your mother on her birthday."

For a moment there was silence; then he heard a low sob beside him. He reached out an awkward hand and drew his daughter toward him.

"Why, little girl," he said, "I didn't know it meant so much to you."

Alice nestled against his shoulder. "It means more than a porch," she sobbed; "it means that, after all, you are nice, like other fathers."

Mr. Humphrey cleared his throat. "And I've been thinking, Alice," he went on, "that I've been hard on Bob. A rough old fellow like me gets prejudiced against these college chaps. I've been at the college and Bob gets

Unless you are 70 or 80! Then keep it! But why look old at 35 or 40? Why have an early old age? Hall's Vegetable Sicilian Hair Restorer always restores color to gray hair. Stops falling hair, also. 9 15 " 8 30 " Daily. All other rains run dull Sundays excepted).

"Mother" — Mrs. Humphrey paused with a bit of bacon poised on her fork — "mother, can you tell me what has happened to the old hayrack and to the brooder house door?"

Mrs. Humphrey looked at Alice. "Why — why, father, I don't know. Alice, do you know?"

Alice poured the steaming peas into a china dish and then glanced at her father. "Well," she said calmly, "you will find part of the door still in the wood box, but the last of the hayrack is just going up the chimney." Then she carried the dish of peas into the dining room and set it carefully down on the table.

Then Mr. Humphrey began: "Alice, if you were not grown up I'd send you to bed for two days."

Alice squared her shoulders, looking into her father's eyes with an expression strangely like his own. "Father," she said, "you are not fair. You give your men the best sort of implement with which to do their work. You keep the horses and cattle in buildings that are for their greatest comfort, but you expect mother and me to find our own means for doing work that neither of us is strong enough to do and to live in a building that scorches us in summer and freezes us in winter. To say the least, you are not fair."

The great veins swelled in Mr. Humphrey's forehead, and he took a single step toward Alice and then stopped as if controlling himself by a physical effort.

"Alice," he said, "I forbid you to destroy any more of my property. Just how to punish you for what you have already done I don't know. I shall wait until tonight."

That afternoon Alice was left alone as her mother was called away to see a sick neighbor. For awhile she sat quietly, then suddenly she flushed a little. Far down the road she could see the figure of a man and a horse moving leisurely through the heat. Alice smoothed her hair and glanced down at the dainty whiteness of her gown. Then she waited. Soon the rider turned into the yard, with an eager shout at the sight of Alice. A fine looking young fellow was Bob Phillips in his native riding togs, sitting his saddle with the ease of a westerner. And a charming figure was Alice in the doorway with the color deepening in her cheeks, her great dark eyes brightening and her dimples coming to the corners of her

"Oh, Bob," she cried as he dismounted and tied his horse, "I've been wishing for you. Everything is so topsyturvy in this horrid place!"

Bob looked anxious. "Is it your father again?" he asked as he drew her down on the step beside him. Alice told him of her morning's experience. Bob's face darkened.

"Look here, Alice," he exclaimed. "I'm not going to stand this. I knew things were pretty bad, but I never knew you had to do this sort of work." He took her hand, looked at the pretty pink palm with the row of blisters across it. "I'm not going to say any of the things to you that I think about."

went on, "that I've been hard on Bob. A rough old fellow like me gets prejudiced against these college chaps. When you finish school and Bob gets a start—well, you'll find that father wants you to be happy after all."

Indians Are Poor Shots.

During a residence of many years among four different tribes of Indians I found, with very few exceptions, they were poor shots, either with the gun or rifle. When one considers that from young boyhood they have been in the habit of using a gun almost daily and their very living depends in a great measure on accurate shooting, their poor marksmanship is to be wondered at; nevertheless such is the case. A good wing shot is a rarity among the Indians. The Montagnais of the Labrador and north shore of the gulf of St. Lawrence are no exception, and this in a country where most of the wild fowl are killed flying. It is admitted they kill wild geese and ducks while on their passage north and south, but this is only possible from the immense numbers of birds and a lavish expenditure of ammunition.—Forest and Stream.

© 2005 Blackwell Publishing Ltd *Journal of Internal Medicine* 258: 103–110

It would be difficult to find a more quaint announcement of death than that published in an old newspaper in 1774, at the time of Oliver Goldsmith's demise.

"1774, April 4. Died, Dr. Oliver Goldsmith. Deserted is the Village; the Traveller hath laid him down to rest; the Good-natured Man is no more; he Stoops but to Conquer; the Vicar hath performed his sad office; it is a mournful task from which the Hermit may essay to meet the dread tyrant with more than Grecian or Roman fortitude."

Brothers and Sisters

It has been proved again and again that a boy without a sister is much to be pitied; that a girl without a brother is to be condoled with. And why? Because the mutual society improves both. The boy teaches the girl to be wider minded, less petty and narrow, more manly physically, and, above all, to understand something of the opposite sex. Again, the boy is a hundredfold nicer for having a sister. He confides his little scrapes to her, and she, with her gentle inborn goodness, helps him and advises him to avoid the pitfalls again.—London Queen.

Solitude

Solitude is a matter of taste. It has been the subject of much discussion. Volumes have been written in praise or condemnation of it. But perhaps the real value of solitude has never been so subtly and so accurately expressed as by the girl who was asked if she liked being alone. "That depends," she answered sweetly, "on

Abstract

The Shepherd's Crook.
Although most people have seen a shepherd's crook, many do not know the use of it. Some people think that all the shepherd carries it for is to use it as a walking stick when he tramps to and from the fold. But the crooked end itself serves a purpose. It enables a shepherd to catch refractory sheep. If a sheep shows signs of running away the crooked end has only to be placed round his leg, and he is a captive.—London Standard.

A Long Way Off.

Creditor (determinedly)—I shall call at your house every week until you pay this account, sir. Debtor (in the blandest of tones)—Then, sir, there seems every probability of our acquaintance ripening into friendship.

FITSCURED

If you, your friends or relatives suffer with Fits, Epilepsy, St. Vitus' Dance, or Falling Sickness, write for a trial bottle and valuable treatise on such diseases to THE LEIBIG CO. 179 King Street, W., Toronto, Canada. A druggist will sell or can obtain for you.

LEIBIG'S FIT CURE

THREE FACTS

For Sick Women To Consider.

FIRST.—That almost every operation in our hospitals performed upon women becomes necessary through neglect of such symptoms as backache, irregular and painful periods, displacements of the female organs, pain in the side, burning sensation in the stomach, bearing-down pains, nervousness, dizziness and sleeplessness.

SECOND.—The medicine that holds the record for the largest number of absolute cures of female ills is Lydia E. Pinkham's Vegetable Compound. It regulates, strengthens and cures diseases of the female organism as nothing else can.

For thirty years it has been helping women to be strong, curing backache, nervousness, kidney troubles, inflammation of the female organs, weakness and displacements, regulating the periods perfectly and overcoming their pains. It has also proved itself invaluable in preparing for childbirth and the change of life.

THIRD.—The great volume of unsolicited and grateful testimonials on file at the Pinkham Laboratory at Lynn, Mass., many of which are from time to time published by permission, give absolute evidence of the value of Lydia E. Pinkham's Vegetable Compound and Mrs. Pinkham's advice.

Mrs. Pinkham's Standing Invitation to Women.—Women suffering from any form of female weakness are invited to promptly communicate with Mrs. Pinkham, at Lynn, Mass. All letters are received, opened, read and answered by women only. From symptoms given, your trouble may be located and the quickest and surest way of recovery advised.—Mrs. Pinkham is daughter-in-law of Lydia E. Pinkham and for twenty-five years under her direction and since her decease she has been advising sick women free of charge. Out of the vast volume of experience in treating female ills Mrs. Pinkham probably has the very knowledge that will help your case. Surely, any woman, rich or poor, is very foolish if she does not take advantage of this generous offer of assistance.

THE WHALE'S SENSES.

Ability of the Ponderous Animal to Hear Under Water.

It seems perfectly evident that whales must hear when in the water, says the London Field. This inference is confirmed by the comparatively small development of the other sense organs. The eye, for instance, is very small and can be of little use even at the comparatively small depths to which whales are now believed to descend.

Again, the sense of smell, judging by the rudimentary conditions of the olfactory organs, must be in abeyance, and whales have no sense organs comparable to the lateral line system of fishes. Consequently it would seem that when below the surface of the water they must depend chiefly upon the sense of hearing. Probably this sense is so highly developed as to enable the animals in the midst of the vibrations made by the screwlike movements of the tail or flukes to distinguish the sound (or vibrations) made by the impact of the water against the rocks even in a dead calm, and, in the case of piscivorous species, to recognize by

FRUIT CROP REPORT.

APPLES.—As was to be expected the reports for the month of June on apples are not quite so favorable. There are many reports of serious dropping, and the general tone of the reports would place the crop at not more than medium. In forming an estimate of the crop the classification of apples into early, fall and winter should be kept in mind inasmuch as the three classes may have an entirely different value.

In District 1 early apples are reported almost a full crop, the fall and winter apples a medium crop, Baldwins and Spies light. If, however the season should prove a warm one the whole of the apples in District 1 will be classed by apple buyers as early shipping stock.

In District 2 early apples are almost a full crop, the fall apples less and the winter apples only a medium crop.

In District 3 21 per cent of the correspondents reported the crop light, 53 per cent and 27 per cent a full crop.

Reports from the Annapolis and Cornwallis Valleys, District 9, indicate a crop above medium but not quite a full crop. The Tent Caterpillar, the Bush Moth and Canker Worm have all been particularly severe as well as several minor pests in different parts of the Valleys and it is not improbable that the Codling Moth will appear later. Wind storms and other contingencies will probably reduce the crop of winter apples to medium or less. Summer and fall apples will be slightly above a medium crop. Gravenstein has set very heavily, and, where they are sprayed thoroughly, will doubtless yield a large crop. Nova Scotia Kings and Russet have also set well. The Baldwins in Nova Scotia will be light.

The British Columbia crop of apples will be about the same as last year.

PEARS.—The prospects for pears have deteriorated during the month. In District 1 and 2, producing the largest commercial crop, Kieffers are reported a full crop, Bartlett's, a medium crop with many failures, Clapp's Favorite, Anjou, Bosc and similar varieties, less than medium. This condition will also hold good for British Columbia.

PLUMS.—Plums are almost a failure no large section reporting even a medium crop. The American varieties are producing best; the Japanese varieties are almost a total failure.

PEACHES.—Correspondent report 17 per cent of the crop of early peaches a failure, 17 per cent light, 35 per cent medium and 31 a full crop; late peaches, 12 per cent of the crop is a failure, 51 per cent light, 43 per cent medium and 24 per cent a full crop. Early peaches will probably be sufficient to supply the demands of the market, but there will probably be some shortage of good canning peaches.

CHERRIES.—Cherries are everywhere being marketed a large crop, of good quality and freer from insects than usual.

GRAPES.—Grapes are reported in good condition almost equal to last year, with some complaints of winter killing especially north of Lake Ontario.

SMALL FRUITS.—The strawberry crop is maintaining the conditions reported last month. The principal markets report fair receipts of good quality; prices are 10 per cent higher than last year.

The estimate for raspberries, black and red, is about the same as for strawberries.

FOREIGN COUNTRIES

The Continental apple and pear crop is reported medium to good. The prospects for the English apple and plum and pear crop have fallen off seriously

RICHMOND MINUTES

Selby, June 25th, 1906.

The Council met at Selby. The members present—Messrs. Z. A. Orooms, Reeve, and Councillors, Fred Sexsmith, Chas. Anderson, E. R. Sills, and Alf McCutcheon. The Reeve presiding.

The minutes of the last meeting were read and confirmed.

Communications read from the County Clerk, re County rate. Filed. From Herrington, Warner & Grange re Otter Creek Drainage Works. Laid on the table.

From F. F. Miller re Otter Creek Drainage Works. Filed.

An account of Herrington, Warner and Grange was read. Laid on the table.

An account of Madole & Wilson was read, and laid on the table.

A By-law was introduced and received its first reading for the appointment of F. F. Miller, Township Engineer, under the Ditches and Water Courses Act.

Council adjourned for the second reading of the above By-law.

A notice of Wm. Dowling through his Solicitors, re ditching in the 2nd, concession was read and ordered filed.

The Council resumed for the second reading of the By-law for the appointment of a Township Engineer under the Ditches and Watercourses Act.

Moved and seconded that the By-law for the appointment of an engineer under the Ditches and Water Courses Act be read the second time. Carried.

Moved by Alf McCutcheon and seconded by Chas. Anderson, that a grant of \$10.90 be made to road Section No. 34, to be laid out under the instruction of the Pathmaster. Carried.

Moved by Chas. Anderson and seconded by Fred Sexsmith, that the Treasurer be authorized to draw from the Trust Funds in the Dominion Bank to the amount of Five Hundred Dollars. Carried.

The By-law for the appointment of an engineer under the Ditches, Water Courses Act, was read the third and last time and signed and sealed.

Moved by F. Sexsmith, seconded by Chas. Anderson that the following accounts be paid, Geo. Haines, 35 loads stone \$1.75; H. Kellar 79 loads gravel \$6.50; J. H. McHenry 105 loads gravel \$7.35; Wm. McConnell, building culvert \$4.00; C. H. Spencer bridge covering \$114.00; W. F. Ferguson, supplies for crusher \$8.21; Madole & Wilson bridge covering, \$6.30. Carried.

Moved by Chas. Anderson, seconded by Fred Sexsmith, that the Collector be granted a voucher for the following errors in the Collector's roll, W. Davey \$1.60; Bell Telephone Co. \$5.25, also that the following be remitted: Mrs. Graham, Selby, \$1.25; Mrs. McFarlane Roblin, 65c; Fred Hall, business tax \$2.60. Carried.

Moved and seconded that the Council adjourn to meet on the first Monday in August at the hour of 10 o'clock a. m.

ABRAM WINTERS,

Tr. Clerk.

How's This?

We offer One Hundred Dollars Reward for any case of Catarrh that cannot be cured by Hall's Catarrh Cure.

F. J. CHENEY & CO., Toledo, O. We the undersigned have known F. J. Cheney for the last 15 years, and believe him perfectly honorable in all business transactions and financially able to carry out any obligations made by him.

WALDING, KINNAN & MARCIN, Wholesale Druggists, Toledo, O. Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system. Testimonials sent free. Price 75 cents per bottle. Sold by all druggists. Take Hall's Family Pills for constipation.

SOURCE OF SHELLAC.

MDE. JOSEPH BEAUDOIN. CATARRH OF STOMACH RELIEVED BY PE-RU-NA.

Mde. Joseph Beaudoin, 59 Rue St. Olivier, Quebec, P. Q., Can., writes:

"Peruna is wonderful for indigestion. I eat whatever I want and no longer feel any oppression.

"Having had dyspepsia for a long time and having tried various other remedies, I decided to try Peruna and with the fourth bottle of it I was perfectly cured.

"For this reason I recommend it to all those who are suffering with that terrible malady, dyspepsia.

"I hope that all who are afflicted in this way will take Peruna as I did."

The experience of Mde. Beaudoin ought to be sufficient proof to any one of the value of Peruna in cases of catarrhal dyspepsia. If you suffer from stomach catarrh in any of its various forms, give Peruna a fair trial, avoiding in the meantime all such indiscretions in diet as would tend to retard a cure, and you will soon be rewarded by a normal appetite and healthy digestion.

FIGHTING FISH.

Peculiar Animals That Are Found Only in Siamese Waters.

A favorite recreation in Siam is watching the fighting fish, a species of fish found in the waters of no other country. The fish cannot live in unity, and if two are placed in a bowl they will instantly engage in a struggle "to the death."

It is no unusual thing to see in the streets of Siam crowds of natives chattering and gesticulating around a bowl containing a number of these fish, which they bet on in the same way as more civilized people do on race horses. Intense excitement reigns among the natives as they watch the fish fighting within the bowl.

These peculiarly quarrelsome fish are very similar to the common pike in appearance, with the exception that they are not in the possession of gills. Their fins, too, are remarkably sharp, and these they use with terrible effect upon one another. Blood oozes from their sides, and yet they persist in fighting until perhaps only two are left alive, and then the survivors turn on one another until only one is left out of perhaps a dozen placed in the tub.

the tail or flukes to distinguish the sound (or vibrations) made by the impact of the water against the rocks even in a dead calm, and, in the case of piscivorous species, to recognize by the pulse in the water the presence of shoal fish.

Failing in this explanation, it is difficult to imagine how whales can find their way about in the semidarkness and avoid collisions with rocks and rockbound coasts.

LAUGHTER.

Even if It Be Emotional Insanity, Let Us Have Plenty of It.

Some English scientist has reached the conclusion that laughter is insanity. He regards a fit of laughter as an emotional insanity of short duration. All right, then, give us a little more insanity. There is not laughter enough in the world—at least the right kind of laughter. We will let the Englishmen keep their faces straight if they want to, but it befits the American civilization better to break out into laughter once in awhile. Laughter is good for the facial muscles. It develops the muscles of the neck as well as the face. It makes the corners of the mouth turn upward instead of downward. It gives the wrinkles of the face a pleasing outline, quickens the action of the heart and gives new life to the nerve centers. Yes, we can afford to let the Englishman look wise and idiotic if he wants to. He can stare with fish-eyed bigotry whenever a joke is perpetrated, never allowing a ripple of merriment to disturb the placidity of his countenance. He can do all these things that he wishes to, but let us go on laughing. This kind of insanity mixes very well with sanity and prosaic life. A little burst of emotional insanity breaks nicely the monotony of facts and figures.

The Chow Dog.

The chow, the solemn, black tongued dog which comes from China, is, the London Chronicle thinks, the 'ideal city dog. It says: "He never barks unless there is something serious to bark at. You open the door, and the dog marches out with fine solemnity. This writer's chow has a range of about ten square miles, and he has never hurt a baby, though he has gathered innumerable friends during his solemn march through London. He never loses his head, and his morning walks, embrace Chelsea, Putney and the sacred precincts of the Brompton oratory. Indeed, he once followed a bicycle to Hendon and found his way back within forty-eight hours with an honorably empty stomach. The unaccompanied chow is the very least of the nuisances of the London streets."

Artificial Honey.

The honey had some foreign substance in it—the leg of a bee and a shred of broken wing.

"Well," said the wife of the food expert, "this is pure at any rate." She held up the bits of bee on a fork before her husband. "No benzoic acid, formaldehyde, boric acid or salicylic acid here, eh, John?"

But John, the food expert, laughed scornfully. "Those bits of bee in the honey," he said, "prove its artificiality. Genuine honey never has dead bees in it. They who make genuine honey are too clean and careful for anything of that kind to happen. It is as rare to find in real honey a bee's wing or a bee's leg as it is to find in a loaf of bread a baker's hand or foot."

THE ART OF ACTING.

What Amateurs Who Would Become Stars Must Learn.

It is surprising to discover how very differently people who have played parts all their lives deport themselves before the footlights. I was acquainted with a lady in London who had been the wife of a peer of the realm, who had been an ambassador at foreign courts, who at the time had been a reigning beauty and who came to me longing for a new experience and imploring me to give her an opportunity to appear upon the stage.

In a weak moment I consented, and, as I was producing a play, I cast her for a part which I thought she would admirably suit—that of a society woman. What that woman did and didn't do on the stage passes all belief. She became entangled in her train, she could neither sit down nor stand up, she shouted, she could not be persuaded to remain at a respectful distance, but insisted upon shrieking into the actor's ears, and she committed all the gaucheries you would expect from an untrained country wench.

But because everybody is acting in private life every one thinks he can act upon the stage, and there is no profession that has so many critics. Every individual in the audience is a critic and knows all about the art of acting. But acting is a gift. It cannot be taught.

You can teach people how to act acting, but you cannot teach them to act. Acting is as much an inspiration as the making of great poetry and great pictures. What is commonly called acting is acting acting.—Richard Mansfield in Atlantic.

OLD ROMAN BATHS.

They Held Theaters, Temples, Feasting Halls and Libraries.

The ancient Romans were extravagantly fond of bathing. They got their notions about the bath as a luxury from the Greeks and at one time there were nearly 900 public bathing establishments in Rome, some of which were the most beautiful and elaborate structures in the world.

The baths of the Emperor Diocletian covered more than half a square mile and contained, besides immense basins and thousands of marble recesses, theaters, temples, halls for feasting, promenades planted with trees, libraries, schools for youth and academies for the discussions of the learned. The bathers sat on marble benches below the surface of the water, around the edge of the basins, scraping themselves with dull knives of metal and ivory and taking occasional plunges into the water.

Dissipated Romans would spend whole days in the bath, seeking relief from overindulgence in eating and drinking the night before. Everybody, even the emperor, used these baths, which were open to every one who chose to pay the price of admission.

It was not usual for the old Romans to have baths in their houses, though at a date 1,500 years before that, or 3,500 years ago, the noblemen of ancient Greece had their dwellings supplied with baths of terra cotta.

Take Hall's Family Pills for constipation.

SOURCE OF SHELLAC.

The East India Insects That Produce the Resinous Substance.

India is the home of the Coccus lacca, the insects that produce the resinous substance known as shellac. The females puncture the twigs of several different kinds of trees, among them the bo, the bihar and the butea, and the twigs become incrustated with a hard, nearly transparent, reddish, resinous substance that serves the double purpose of protecting the eggs and finally furnishing food for the young insects.

The incrustated twigs are broken from the trees before the young insects escape and are thoroughly dried in the sun. These dried twigs are called "stick-lac," and from them shellac and a dye analogous to cochineal are prepared. "Seed-lac" is the resinous concretion separated from the twigs, coarsely pounded and triturated with water in a mortar, by which nearly all of the coloring matter is removed.

To prepare shellac the seed-lac is put into oblong cotton cloth bags and warmed over a charcoal fire. When the rosin begins to melt the bags are twisted, and the pure, clear rosin is allowed to flow over fig wood planks or the smooth stems of the banyan tree and cools in the thin plates or shells which constitute shellac.

Pure shellac is very valuable. It is much harder than colophony and is easily soluble in alcohol.

Truthful.

"My dear," said a vain old man to his wife, "these friends here won't believe that I'm only forty-five years old. You know I speak the truth, don't you?"

"Well," answered the simple wife, "I suppose I must believe it, John, as you've stuck to it for fifteen years."—Exchange.

one another. Blood oozes from their sides, and yet they persist in fighting until perhaps only two are left alive and then the survivors turn on one another until only one is left out of perhaps a dozen placed in the tub.

Although the fighting fish are exceptionally good to eat, the majority of natives esteem them only for their fighting propensities, which affords them amusement and excitement every day.

London's Last Public Hanging.

The gruesome spectacle of a public execution in England is happily a thing of the past. The scaffold used to be erected in the roadway outside the prison, and crowds would assemble to witness the sight, the last time a man was hanged in public being when Michael Barrett suffered the extreme penalty in May, 1868, in Old Bailey, outside Newgate prison, for exploding a cask of gunpowder under the walls of Clerkenwell prison to release the Fenian prisoners Burke and Casey, a mad act that killed several and injured still more.—London Graphic.

Why He Liked It.

"Do you mean to tell me that you have lived in this out of the way place for ten years?"

"That's right, stranger. Just ten years."

"I'm surprised. I can't see what you find here to keep you busy."

"I can't find anything. That's the reason I like it."

Only In Chemistry.

Tommy—Paw, doesn't precipitation mean the same as settling? Mr. Figg—It does in chemistry, but in business you'll find that most men in settling don't show any precipitation at all.

TRUTH OF CHRISTIANITY

Surrender of All Things Is the First Law of Christ.

Whoever will be chief among you let him be your servant, even as the Son of Man came not to be ministered unto but to minister.—Matt. xx., 27-28.

A surprise awaits him who carefully will compare the emphasis laid upon the individual soul and its salvation by the modern church with the place given this in the teachings of the Bible. Perhaps he will find in modern preaching, with its insistent appeal to men to save their own souls, an explanation of prevalent selfishness. The moral effect of urging a man to save his soul is not much better than that which comes from advising him to save his skin at any cost.

The most serious objection ever made to religion is that it produces a narrow, self-centered type of mind. That type of religion cannot be right, regardless of its doctrinal orthodoxy, which produces a wrong type of men and women. But may not failure here be accounted for by the selfish basis on which men build the plea for what they call personal salvation?

The concentration of mind on the self, whether in the name of religion or in any other name, is but moral suicide. People who have no other object in life than that of saving their own souls are but little better than those whose whole object is to fatten, protect, and

KEEP SAFE THEIR BODIES.

But Christianity must be perverted greatly to make it teach men to set their own interests first. It is the religion of the other man. Its appeal is not to the love of self, but to the love of society. It offers a way of salvation, not as a thing desirable for your exclusive use, but as the pathway for all lives, for all the people. Its tree of life is not for a single pair, but for the healing of the nations.

True religion is not self-centered culture, but in the culture of all through the service of the single ones and the culture of the one through his service for all. Only in the atmosphere of service does the soul grow, expand, and find itself. To live in a circle is to die; it is the centrifugal life that finds salva-

tion. They court death who seek only their own lives; they find life who, disregarding death and loss, seek only to make others live.

Religion is not simply a cure for my ills. True, it does cure many of them, but only that I may be better able to do its work. It is a great cause, a mighty project, commanding the noblest enthusiasms and the highest efficiency of effort, the project of bringing this whole world to salvation. And that not the salvation of a mental condition but of the perfection of its whole being, the realization of its highest possibilities, the full noon-tide of the day of God.

Is not this enough to satisfy any man and to call forth the best in him, that he should in some way serve this glorious ideal? Is not this man's purpose in this world even as it was the purpose of the one who called himself the Son of Man? What nobler summary could any life have than his, that he went about doing good? How quickly would that kingdom of heaven come if this were the

PROGRAM OF EVERY LIFE!

Let but a man do his duty toward this shining ideal, let him but be lifted up, carried along in the mighty enthusiasm it ought to engender, and his own soul, his own development, his character perfection will take care of itself. No man ever did any great work without becoming greater himself, and greatness never was found in any other way. This is an unvarying law. Service is the secret of culture.

In the right life the hour of prayer, the quiet thought, the search for abstract truth, may all have their place; but it is only the place that the wise workman gives to his meals. He does not live for these things; they are but ministrants to his work. He uses everything that will make him a better workman; but not because he sees the workman as his end. He forgets himself in the perfection of that he seeks to make. The saving of the soul, the culture of the self, as an end is shame and suicide; as a means to service it is life and peace and perfection.

THE S. S. LESSON

INTERNATIONAL LESSON,
JULY 8

Lesson II. The Duty of Forgiveness.
Golden Text: Matt. 6. 12.

THE LESSON WORD STUDIES.

Note.—The text of the Revised Version is used as a basis for these Word Studies.

Verse 21. Then came Peter—Having spoken on occasions of stumbling, both external and internal, in the lives of his disciples, Jesus called their attention to the attitude which they themselves as his disciples should assume toward those who went astray into sin, that is, those who gave occasion for stumbling (verses 15-20). The suggestion of Jesus that they should first seek in every possible way to bring an erring brother to acknowledge and forsake his evil way prompted Peter to ask the question, How oft shall my brother sin against me, and I forgive him?

Seven times.—According to Rabbinical

WORLD'S RICHEST WOMAN

HER INCOME IS ONLY \$5,000,000 PER ANNUM.

Fraulein Bertha Krupp, of Essen, Germany, is to marry a penniless Young Nobleman.

Fraulein Bertha Krupp, the world's wealthiest woman, has decided to marry a penniless young nobleman who occupies an extremely insignificant diplomatic post as Secretary of Legation at the Prussian Legation to the Vatican.

The lucky suitor, Gustavus von Bohlen-Halbab, comes of a blue-blooded aristocratic family tracing its descent back to the twelfth century, but otherwise would be regarded as an undesirable partner for the heiress.

Hundreds of suitors have been candidates for Fraulein Krupp's hand. They included princes, dukes, innumerable noblemen, millionaires, geniuses, and so forth, but Fraulein Krupp refused them all, and insisted on choosing a husband according to the dictates of her heart.

Her mother, relatives, and guardians were at first opposed to the match, but

WIFE HUNTING FESTIVAL

IT WAS THE FOURTH YEARLY MARRIAGE MART.

Two Thousand Would-be Benedicts Visited Eccausines in Search of Brides.

Two thousand bachelors from all parts of Belgium, many from France, and some from Germany, swept down on the village of Eccausines-Lalain to find brides.

It was the fourth yearly marriage mart as established by the maids of Eccausines, Belgium, and as there are only ninety-seven marriageable young ladies in the quaint little place, the supply of matrimonial partners fell deplorably short of the demand. All the same the proceedings were a great success.

The men began to arrive early in the morning, but it was towards noon before train-loads of them appeared. There were all sorts and conditions of men. One man of seventy-two had travelled all the way from Luxemburg to find a wife, to whom he promised a dowry that would place her beyond want. There were tradesmen, clerks, mechanics, miners, laborers—indeed no branch of trade appeared to be unrepresented.

HOPE ON "LONELY."

Gay banners of welcome, triumphal arches with mottoes of encouragement for the prospective husbands, figures of hearts pierced with arrows were to be seen everywhere; but the local authority had not accepted the young ladies' proposal to name the main streets, "Place des Fiancailles," "Place Conjugale," and "Place de la Concorde."

At noon the bachelors were formally welcomed at the gates of the village by the spinster committee. Last year's president and several members of the committee are now married as the result of the festivities twelve months ago, and others had been elected in their place.

All marched to the "Grande Place," where there was an open-air concert. The bands played nothing but nuptial marches and love songs. At the close an adjournment was made to the town hall, where the young ladies took their places at tables on which stood bowls of pink roses with such mottoes as "Hope on," "Love," "Be trusting," and "Have faith."

A vacant chair was left beside each girl, and at a given signal the men with matrimonial intent made a rush to secure the seats. Then coffee and sweet cake were served, followed by a bon-ton tasting of liquorice. When this was over the lady president made a speech on "The art of pleasing man," which was wildly applauded. Dancing in the open air ended the programme of the festivities.

Hundreds of letters, many of them very amusing, were received this year from intending husbands. A railway official from Paris anxiously enquired whether, in the event of not finding the girl to his taste, he could refuse to marry and would be allowed to leave quietly.

Some bachelors from Gilly, France, explained that they were young, good looking and earning \$60 a month, and were anxious to find wives from Eccausines, where the girls are known for their good looks and quiet domestic life.

Two friends, a butcher and a hair-dresser, asked to be recommended to two nice girls by the president, but so mixed up their qualifications that it seemed as if the butcher shaved his animals with antiseptic treatment, and the hair-dresser slaughtered his customers humanely.

COLONY OF CAVE-DWELLERS.

Fashion Notes.

FROCKS FOR MIDSUMMER.

Gowns of light-weight summer silk are generally worn, their vogue increasing as the season progresses. As an attractive substitute for the warmer appearing costumes of woollen material they have no equal. They are as light in weight as a cotton gown and as dressy as the most elaborate lingerie frock with which they enjoy an equal fashionableness.

The wearing qualities of the silk suits together with the daintiness of their designs and textures are values recognized by many shopkeepers who are making big showings of these gowns.

Hairline checks of pink, blue, black or green design, many of the white and cream louisennes and taffetas, are made into short skirted Eton or bolero jacket suits. Trimmings of velvet ribbons matching the hairline checks in color appear on these—several rows, frequently of graduated widths on the skirt and touches on the coat.

The demand for foulards bids fair to become a feature of the season. Dark blue is the favorite color of these silks. A charming gown combined trimmings of blue and white dotted foulard, cut into bands showing but one line of the dots. The gown appeared to be embroidered with these big white disks, the illusion being helped somewhat by the actual embroidery of disks, exactly matching the woven dots in size, upon the smart little blouse. These dotted foulards are used to fashion entire gowns as well as for trimmings. They present a chic appearance trimmed with applications of white lace or toned with bands of wide white braid or braid motifs.

A recently designed taffeta silk suit showed apricot colored shadow squares lined with golden brown stripes. The skirt had bias bands of taffeta separated by folds of white net through the wide meshes of which were seen glimpses of the brown silk drop skirt. The little coat was also trimmed with these net bands, each one of which was edged with folds of pink silk matching the lovely shade of the check and embroidered with a scroll design of narrow brown velvet ribbon.

ECRU COLORED SILKS

represented by the Shantung, pongee or tussah weaves are enjoying greater vogue upon the other side than they do here. The Parisian is making them in to dressy afternoon or formal frocks trimmed with expensive laces dyed to match the silk, and with these laces embroidered where there is a possibility with colored Egyptian motifs.

Over here we are using these rough silks mostly for the building of tailored suits or for the making of full length craching coats. The suits copy the styles of the linen and mohair box coat costumes, made with short skirted skirts the simple coats supplemented with detachable collars and cuffs of embroidered linen laid over the colored cloth collars and cuffs of the silk coat to which the linen covers are attached by means of embroidered buttons or with jeweled gold safety pins—these last set with colored flowers fashioned either from colored stones or with enamels.

Plain colored chiffon taffetas, including the always desirable black taffetas are used for both Eton and bolero jacket suits. The skirts convey variations of either the pleated, kilted or circular styles. All these skirts are fashionable. A new circular skirt combines both plaited and circular features in its double box pleated front and back with the circular sides, trimmed with battlement cut bands, matching the battlement finished edges of the little Eton coat accompanying it.

Accordion or sunray pleated skirts made from handsome designs of plaided silk are accompanied by either black or colored taffeta coats piped with the plaided silk. They have broad Eton collars tied with Windsor ties of plaid.

Others of these coats are fashioned with circular shaped peplums showing high raised waistline, suggesting the empire modes and as loose fitting as the pony coats. They are consistent with

sible way to bring an erring brother to acknowledge and forsake his evil way prompted Peter to ask the question, How oft shall my brother sin against me, and I forgive him?

Seven times—According to Rabbinical rules no one could ask forgiveness of his neighbor more than three times. Peter, prompted by a generous impulse, ventured to suggest one more forgiveness than twice: the number permitted by the Rabbinical rule.

22. Seventy times seven—An infinite number of times is the real meaning of the answer of Jesus. The limit to forgiveness had already been pointed out by him in verses 15-17 of this chapter. The limit is fixed by the attitude of the one committing the wrong. An impatient spirit on the part of the wrong-doer makes impossible even the first forgiveness, but where sorrow and repentance are found, there is to be no limit.

23. The picture given us in this verse is of an Oriental court. Governors, and farmers of taxes, and other officers of the king are summoned into the royal presence to give an account of their administration.

Servants—Literally bond-servants, or slaves. So throughout the narrative. Every subordinate of an Oriental monarch is his slave.

24. Talents—Probably the Attic talent is here referred to, in which case the amount would be approximately \$10,000,000.

25. Had not wherewith to pay—The printing of a word in italics, as the word "wherewith" is printed in this verse, indicates that the word does not occur in the original but is added to make the meaning clearer in English.

Commanded him to be sold, and his wife, and children—According to the cruel custom of the time.

26. Worshiped—Bowed down to him. An act of humble obedience merely, not an act of worship in a religious sense.

Forgave him the debt. The sense of the word forgave is here "remitted."

28. Went and found—Possibly even hunting out his fellow-servant.

A hundred shillings—Literally a hundred denarii. The denarius was worth about seventeen cents. In actual purchasing value, however, one hundred denarii was equivalent to about three months' wages for an ordinary laborer. The amount of the indebtedness, therefore, for one who was apparently of equal rank with this tax collector who had squandered the fabulous sum of many millions, was very small, and payment of the sum quite within the range of possibility.

31. His fellow-servants—In reality the fellow-servants of both men.

They lord. The king.

32. Called him. The man to whom he had remitted the immense debt.

Forgave—In the sense of remitted, as above.

34. Wrath. In a state of wrath or anger. The word is now archaic, that is, old and going out of use.

To the tormentors—Those whose business it was to inflict cruel punishment in accordance with the decrees of the king.

35. From your hearts—That is, fully and freely.

A CONSIDERATE PARENT.

Clarence—Have you any idea, dearest, what your father would say if I asked him for your hand?

Clarice—No, I haven't. He never uses that kind of language before his family.

The man who wouldn't tell a lie to save his life has taken up the business of an advertising agent.

A lawyer never gives up a case until he has exhausted all the means at his client's disposal.

Teacher—"How many bones have you in your body?" Tommy—"Two hundred and eight." Teacher—"Wrong. The human body has only two hundred and seven." Tommy—"But I swallowed a fish bone this morning."

noblemen, millionaires, geniuses, and so forth, but Fraulein Krupp refused them all, and insisted on choosing a husband according to the dictates of her heart.

Her mother, relatives, and guardians were at first opposed to the match, but Fraulein Krupp remained firm, and finally had her own way.

\$5,000,000 PER.

She is the sole owner of the world-renowned Krupp Works at Essen, which supply nearly all the armies and navies on earth with artillery. Her workmen number 40,000, and with their families make over 300,000 people dependent on her. The entire city of Essen, with a quarter of a million inhabitants, is her property. Her income is stated to be \$1,000,000 a year.

She is a handsome self-possessed girl of twenty-two, with lovely fair hair and bright, sparkling eyes. She is a fine horsewoman, and fond of all kinds of outdoor recreations, including cycling and golfing.

She lives with her mother at the Villa Hugel, the magnificent palace built by her father. It is filled with priceless treasures gathered from the four quarters of the earth, but her private apartments consist of two small rooms furnished in white.

The Kaiser, who was a friend of her father, has always taken great interest in Fraulein Krupp, and it was under the special protection of his Majesty and of the Empress that she made her debut in Berlin society.

WAR ON RABBITS.

New South Wales Will Try to Stamp Out the Pest.

A determined attempt is to be made to stamp out the rabbit pest in New South Wales by the introduction of animals inoculated with disease. About a year ago negotiations were entered into with Dr. Danysz, of the Pasteur Institute at Paris, and that eminent bacteriologist has just arrived with an assistant and all the necessary apparatus for conducting his experiments, which may extend over a period of two years.

Dr. Danysz is to be well remunerated for his services. His fee, paid in advance, is \$5,000, and he will receive in addition \$1,000 for every month of his stay in Australia. His assistant receives a monthly salary of \$170 for the same period.

The pretty Island of Broughton, which is situated about thirty-one miles north of Newcastle and ten miles beyond Port Stephens, has been set aside for the experiment. Its area is about 1,000 acres, and the inoculated rabbits will have to be imported, as there are none at present on the island. It is an essential condition, of course that the germ cultures shall be fatal to rabbits only. The disease must be innocuous to human beings, sheep, cattle, horses and other live stock.

It could hardly be expected that such drastic measures would leave the rabbit skin and frozen meat industries indifferent, and there are already signs of a strong agitation against the experiments. Pressure is being upon the Federal Government to prohibit the landing of the germ cultures, scientific opinion is loudly proclaimed to be hostile to Dr. Danysz, and the industries affected declare that they will take legal action against those who thus threaten their existence.

ENGLISH INDISPENSABLE.

"The fact that nearly one-half of the shipping traffic to and from Antwerp is carried on under the British and American flags has made Antwerp almost an English-speaking port," says the American Consul-General at Antwerp in a report to Washington. The authorities are awake to the fact, and the encouraging the study of the English language in all classes of society. Free night schools for exclusive classes in English, organized by the city authorities, are attended by thousands of pupils, while special attention is paid to the study of English in all the grades of the day schools, public as well as private.

"Back to Nature" Is the Motto of This Strange Sect.

The strange colonies of hermits who have taken up their abode in the neighborhood of Locarno, Ronco and Orselina, Switzerland, are increasing in numbers.

One group which occupies the wooded plateau known as Monte Verita, is 125 strong, and counts in its numbers six German professors, three military officers, one of whom is married to a countess, who also belongs to the sect, two doctors and a priest.

The majority are well-to-do, and some are wealthy. As these pay well for anything they buy and do not trouble about making converts, the inhabitants are on friendly terms with them.

They sleep in caves, are vegetarians, and do not wear ordinary clothing. A linen hood and a shroud of the same material are the only garments they wear. Their feet, legs, arms and neck are uncovered, and the hair is never cut, though the men trim their beards in a patriarchal way. The women allow their tresses to float in the air.

The motto of all is "Back to nature."

"The height of wisdom and philosophy," they say, "is to understand nature; that alone brings peace and happiness."

They rise at dawn and go to sleep with the setting of the sun; they eat only fruit and vegetables and drink only water. In the summer they have daily sun baths, and in the winter snow baths.

Some of them have extraordinary theories, which they carry out with great perseverance. One beautiful woman of 30, who was formerly a well-known singer at the Berlin Opera, refuses to touch money, which, she says, is the root of all evil. Her theory often lands her in difficulties, from which she occasionally extricates herself by singing to her debtors.

Another member only eats vegetables that ripen underground. A third confines himself strictly to raw eggs and potatoes.

A fourth spends a week among the poor villagers, and keeps the doctors busy by bringing to their notice cases for which he pays.

All the colony are in the best of health and always appear perfectly happy, amiable, and polite.

WHY WAIT TO BE TOLD?

The problem of "making" a living is not a particularly difficult one to solve in these days. To be really successful in the art of "earning" a living is the difficult matter. The commercial world is crowded with people who are paid for services which they do not perform. Some of them succeed in giving their employer the impression that they are interested in his business. By obeying his commands with alacrity they lead him to imagine that they are serving him faithfully, whereas, on the contrary, they are constantly scheming to see how little work they can actually perform without being branded as incompetent. It makes no difference what sort of work a man is engaged to do, there is no excuse for him if he does not give proper attention to the task with which he is entrusted. If he lets his time out for a wage, such brains as he may possess are supposed to be included in the bargain. Although he may feel he is little more than part of a machine, he should remember that he is expected to be an intelligent portion of that mechanism.

BOOKS FOR THE BLIND.

There are at least five towns besides London where a special department of books for the blind is kept up in connection with the free library. These are Liverpool, Birmingham, Penzance, Plymouth and Wick. Liverpool, one of the oldest and most up-to-date of all our free libraries, so far back as 1857 recognized the need of the blind for good literature, and has devoted a fair share of her 200,000 volumes to these people, so shut off from many sources of pleasure.

women tied with Windsor ties of plaid. Others of these coats are fashioned with circular shaped pelpums showing high raised waistline, suggesting the empire modes and as loose fitting as the pony coats. They are consistent with neither, however, and have an individuality of their own. The pelpums are faced with plaided silks while the corset shaped belts, of the same plaid, are, in some instances, supplemented with wide bretelles trimmed with

TINY VELVET BUTTONS.

Sleeves still retain bewildering inconsistencies of length. The cuffs and finishing of these sleeves are as distinctively trimmed as possible and reach the height of elaboration upon the sleeves of the silken gown with the possible exception of those adorning the lingerie frock. A deep violet colored silk bengaline gown noticed at Sherry's recently was made with a long and simply made trailing skirt, edged with the fashionable velvet band to match the material, and having the bodice designed a la empire. The yolk was filmy with lingerie lace and batiste medallions. The entire elaboration of the frock was focused upon the sleeves, that, despite the warmth of the evening, were in mousquetaire length fitting in points over the finger knuckles. The top portion is very full and slashed from shoulder to elbow, revealing a delicate undersleeve of net frilled with Valenciennes lace. This violet colored gown sounds the note of recall for violet colorings.

A long coat suit as smart as the trim linens of like fashioning, was made of deep violet silk and buttoned with big amethyst centered brass buttons. A little lilac colored China silk was devoid of lace affectations and trimmings, yards of tulle plaitings of the silk furnishing the sole garniture. Lavender colored silk parasols with gloves and mitts of lace to match the tint were shown, as well as a variety of hats in lavender tones, composed of white straws showing narrow violet straw edges and trimmed with clumps of lilac blossoms; also violet colored chips and milans of sailor shape and trimmed both with hydrangea and hyacinth blossoms, supplemented with quantities of looped velvet ribbons matching the tints of either flowers.

LIBRARIES IN BATHS.

The Ancient Romans Were Very Fond of Bathing.

The Romans got their notions about the bath as a luxury from the Greeks, and at one time there were nearly 900 public bathing establishments in Rome, some of which were the most beautiful and elaborate structures in the world.

The baths of the Emperor Diocletian covered more than half a square mile, and, contained, besides immense basins and thousands of marble recesses, theatres, temples, halls for feasting, promenades planted with trees, libraries, schools for youth, and academies for the discussions of the learned. The bathers sat on marble benches below the surface of the water, around the edge of the basins, scraping themselves with dull knives of metal and ivory, and taking occasional plunges into the water.

Dissipated Romans would spend whole days in the bath, seeking relief from over-indulgence in eating and drinking the night before. Everybody, even the Emperor, used these baths, which were open to everyone who chose to pay the price of admission.

It was not usual for the old Romans to have baths in their houses, though at a date 1,500 years before that, or 3,500 years ago, the noblemen of ancient Greece had their dwellings supplied with baths of terra-cotta.

Miss Kamara Feend—"I'd like to take a photo of your farm hand at work." Farmer Brown—"All right—ef yew kin spare the time." Miss Kamara Feend—"Oh, this camera will catch him in just one-twentieth of a second." Farmer Brown—"Yes; but it'll take ye two hours ter ketch him workin'."

TERRORS OF THE OCEAN

PLACES WHICH NO HUMAN SKILL
CAN MAKE SAFE.

English Channel Has a Dangerous Race,
and the Mouth of the Thames
Does Damage.

Of all the thousand perils of the seas there are some half dozen which a sailor marks in his mind with a skull and crossbones and of which every master mariner hates the very name. Fatal to seamen and to passengers alike these are the places that no human skill can render safe. One of the worst of them is the Virgin rock, in mid-Atlantic, which has gathered in more lives and ships than any other.

The chief terror of the Virgin is that it never shows itself and there is nothing to tell how near it may be. As no land lies nearer to it than many hundred miles, there is no escape or headland to go by. The rock is completely hidden and its head is some eighteen feet below the surface. It is a sort of pinnacle, rearing up from the seafloor, but not reaching to the face of the waters, and its principal business is to tear the keel right out of any unlucky ship that passes over it.

Lying so deep, it is impossible to build any lighthouse on it, even if any could stand in such a place, and vessels have to take their chance.

Not long ago it sent the 3,000-ton steamer Candia to the bottom, only two hands escaping out of 60, and she is only one of 100 victims. The whole seafloor round the base of the rock is littered with ships' ribs and dead men's bones. Vessels that draw so little water that they might pass over in safety are often dropped on to the rock by the sand of the sea, and the only warning the Virgin ever gives is in a very heavy swell, when the sea breaks with a dull roar over the rock, at long intervals, about once in twenty minutes.

A plague spot which few people but sailors have heard of is the dreaded Portland race, in the English channel. This is not a shoal or rock; the fury of the sea itself constitutes the danger, and the much talked of maelstrom itself is far less perilous.

The race is caused by what is called an overfall, the result of the powerful channel tides sweeping over the Shambles bank and then encountering a sudden drop in the sea bottom, and the effect is that of Niagara rapids, multiplied a few times, in the open sea, and the track of ships. Vessels have gone down here in a single tide during heavy weather, and the last big ship to suffer was the Georgian, a fine American steel sailing bark, which foundered with all hands.

Sable Island is British, lying off Sable Cape in Nova Scotia very near the track of vessels bound to New York from Europe, and the hidden shoals run out for miles. They form a sort of Devil's hand stretched out to pick up unwary ships, and one of the chief dangers is the enormous drift of the gales, which, sweeping over 3,000 miles, send a sea home on the sands that would break up the British navy in an hour if it ran ashore there. Liners, traders, brigs and fishing vessels all are fish to the Sable Island net, and few lives can be saved owing to the surf and the distance from shore.

Eleven vessels have been wrecked here in a single day and sometimes after the scour of an easterly gale dead men's bones are washed up on the beaches as if a real graveyard had been laid bare by the sea.

It is odd that one of the worst plague spots of the ocean should be a river, but a salt-water river, bearing ocean-going ships. The Hooghly, on which Calcutta stands, is more dreaded by shipowners than any part of the open seas. In windless weather and flat, calm water three great vessels have been lost here in a day, one of them with most of her hands as well. The

HEALTH

"GROWING PAINS."

The evil that may be caused by a phrase is well exemplified by the term "growing pains." Many a cripple to-day owes his misfortune to the fact that the first symptoms of his disease were misinterpreted. The recurring pains of which he complained, which caused him to limp at times or to cry out in his sleep, were called by his parents growing pains, and were thought to signify nothing more than the effort of nature to adjust the growing bones and muscles and sinews to each other.

Of course every child has innumerable little aches and pains, the result of fatigue, slight sprains, stone-bruises, and the like, and it is well that fond parents should not take too much notice of them lest they foster a disposition in the child to worry over illness. The cause of such occasional pains is usually apparent and a night's rest or a day in the house will dispel it. But when the pain recurs from time to time without evident cause, or when ordinary romping during the day is followed by a night of aching, and perhaps a limp for a day or two, it is possible that there is some serious underlying cause, and the family physician should be consulted.

Frequent complaint of pain in the knee is one of the signs of beginning hip disease, but examination shows the knee to be apparently sound, and so the home diagnosis of growing pains is made, and the real trouble in the hip overlooked, often until it is too late to prevent permanent lameness.

Although not called growing pains, repeated attacks of stomach-ache in children should not be slighted, for they may be a symptom of early spinal disease. The complaint of pain in the stomach, when not referable to green apples or a surfeit of pastry, especially when the complaint is made at the close of the day or during the night, should excite suspicion, and if often repeated, should indicate the necessity of a careful examination of the spine. Growing pains may be due to rheumatism, which, if not detected and correctly treated, may lead to disease of the heart.

A less serious trouble, but one demanding medical treatment, which may cause an aching in the limbs, is malaria. This is a dangerous diagnosis, for if incorrect it may be as serious in its consequences as that of growing pains, and even if the child has had an unmistakable attack of malaria, the parent should not be content with that explanation of its aches and pains; but should refer the matter to the doctor.

It should always be remembered that growth is a normal process, and should no more be accompanied by pain than digestion or breathing.—Youth's Companion.

HONEY FOR ANAEMIA.

A French journal relates that a young woman suffering from severe anaemia was told by an eminent physician that he could not cure her, but advised a trial of diet of milk and honey, aided by strolls in the woods. This simple treatment, in a few months, restored her exhausted body.

Another case is mentioned in which honey saved the life of a babe. Obligated to resort to the bottle, it was fed on cow's milk sweetened with sugar. But soon obstinate constipation required the constant use of laxatives. This abnormal condition was finally radically modified by the use of honey in place of sugar in the milk.

RULES FOR THE EYES.

When the eyes ache, close them for five minutes. When they burn bathe them in water as hot as can be borne, with a dash of witch-hazel in it. After weeping, bathe them in rose-water, and lay a towel wet in rosewater over them for five minutes. When they are blood-

Supreme in the Commercial
World.

There are 2,461 newspapers published in the United Kingdom.

Dowla is described as the most musical and insanitary town in Wales.

In 1891 the death-rate in this country was twenty per 1,000. It is now 16.5.

Street beggars in London are estimated to make between them £312,000 a year.

The heir to the Hawarden estates, Mr. W. G. C. Gladstone, comes of age on July 14.

It has been decided to form a school of dentistry in connection with the University of Leeds.

The number of vehicles entering and leaving the City of London daily is a million and a quarter.

Mr. Charles Absolom, the oldest cricketer in the world, attained his eighty-ninth birthday on Derby Day.

The average yield of oats per acre in Great Britain is thirty-nine bushels an acre; of wheat, about twenty-nine.

In six years cabs in Manchester have dropped from 750 to 600, in spite of the city's great increase in population.

Sir Willoughby Wade, who, up to a few years ago, was a well-known physician at Birmingham, has died at Rome.

Lord Northbrook has been invested with the office of Lord High Steward of Winchester, in succession to his father.

Loch Lomond and the streams connected with it have been restocked with 312,000 young salmon, sea trout, and trout.

The headland tower at Walton-on-the-Naze is being converted into a signalling station for Admiralty purposes.

The Lancashire Asylums Board has under consideration a proposal for the erection of villa residences for wealthy lunatics.

Worthing's glasshouses for growing grapes, tomatoes, etc., would, if placed end to end, cover a distance of fifteen miles.

A well-known Essex landmark—Rayleigh Windmill—is about to be torn down. It was built in the reign of George II.

In September a choir of 300 singers from Leeds and Sheffield will visit Germany, holding concerts at all the principal cities.

"Licensed to sell crockery, tobacco, and other necessities for animals," is the sign over a general shop in Carshalton, Surrey.

People to the number of 670,000 are engaged in food dealing and cooking in this country, and 146,000 in making or selling drink.

A white sparrow has been caught for the third year in succession in one of the local glove manufactories at Yeovil, Somerset.

There is one public-house for every sixty-eight residents in the City of London, states a return just presented to the London County Council.

The latest return shows that our canal companies carry 31½ million tons of goods yearly, or five times as much as the railways' canals carry.

The Recorder at Bristol says he would hesitate to order flogging at any time, as it is the punishment of a slave, and no Englishman ought to be subjected to it.

Prince Arthur of Connaught, it is reported, will write an account of his recent tour to Japan and Canada, for private circulation among the Royal Family and his personal friends.

In order to improve their marksmanship, Lord Kesteven has invited the members of the Stamford (Lincs) Rifle Club to shoot the young rooks on his estate at Casewick Hall.

YOUNG FOLKS

ALWAYS IN A HURRY.

I know a little maiden who is always in a hurry;
She races through her breakfast to be in time for school;
She scribbles at her desk in a hasty sort of flurry,
And comes home in a breathless whirl that fills the vestibule.

She hurries through her studying, she hurries through her sewing.
Like an engine at high pressure, as if leisure were a crime;
She's always in a scramble, no matter where she's going.
And yet—would you believe it—she never is in time.

It seems a contradiction until you know the reason,
But I'm sure you'll think it simple, as I do, when I state
That she never has been known to begin a thing in season,
And she's always in a hurry, because she starts too late.

MILLY'S LESSON.

I can see the girl run fast.
I can see the girl run fast.
I can see the girl run fast.
When Milly had written it three times on her paper, she put her hand into her pocket to feel of her lemon-drop. It was big and hard and square. Then she wrote twice more:

I can see the girl run fast.
I can see the girl run fast.
Then Miss Preston came up behind her and looked at her paper, and said right out loud, so that all the school could hear:

"Milly Lane is writing very nicely this morning."

That made Milly so happy that she wanted to celebrate. She wanted to taste of her lemon-drop. The teacher was going up toward her own desk. Milly took up the lemon-drop out of her pocket, held it up to her mouth, and nibbled off one little bite. The teacher turned round quickly and saw her.

"Millicent Lane, are you eating candy in school?"

Now, as soon as the teacher turned round, Milly slipped the lemon-drop into her mouth. It was in there now, so she could not say, "Yes, Miss Preston." She could only nod her head.

"Have you any more?"
Milly shook her head.

"You may go into the dressing-room and stay there until I call you."

Now this was the very first time that Milly had been spoken to for doing anything naughty since she began to come to school, and the term was almost over. She felt so sorry and ashamed that as soon as she reached the dressing-room she gave a great sob. The big, square lemon-drop slipped right down into her throat. Another big sob, coming up, met it. The sob and the lemon-drop could not get past each other, and they made Milly cough and choke. The lemon-drop was stuck fast. Milly put one hand up to her throat, and she could feel one sharp corner pricking against the outside. It seemed as if it would make a hole right through. Oh, how she screamed!

Miss Preston sent Annie Bailey, the oldest girl in school, out to see what the matter was. Annie patted Milly on the back hard, and got her a drink of water, but it did no good. Poor Milly was so frightened that she screamed again.

Miss Preston came running out, and as soon as she saw what the trouble was, she picked Milly right up in her arms, as if she were a little baby, and ran with her across the street and into a drug store.

The druggist poured out some milk into a cup, and put in some hot water.

A ship will be sent out of the channel by the current and ground on one of the shoals. It is as though a giant hand reached up through the water and grasped her keel, and the chances are, once she has caught the ground, that she will be careened right over and founder just beyond, for the current forces her on to her beam ends. This happened to the great Indian merchant ship James and Mary, after which one of the worst shoals in the river is named. No master mariner would venture to navigate the Hooghly, but gives up his vessel at the Sand Heads outside to one of the corps of pilots, the most highly trained of their kind in the world. But even they are not infallible and often ground a ship, and the most anxious part of a large vessel's voyage from England to Calcutta is these last few miles in the calm water. It takes six years to train a pilot for this work.

IN A VAST DEATH TRAP.
The worst track anywhere in European waters, far surpassing even Portland race in the matter of ships and property lost, is at the very threshold of England. The Thames estuary, the mouth of which reaches between the North Foreland, near Margate, to Orford Ness in Suffolk, has the blackest record for wrecks in the whole world. It is not such a daily peril as the race, but the enormous network of sands, filling some hundreds of square miles of sea, with only narrow deep-water channels between them, pick up more ships than any other.

Sand is always more dangerous than rocks on account of its great extent and the absence of warning that it is there when covered by the tide. Sunken sand is nearly as bad as pavement and will break a tall ship's back like a carrot in a gale of wind, just as it cracked a splendid bark of 1,200 tons on the Lond Sand last year, in this very district, breaking her in two parts right amidships.

So bad is this Thames mouth tract that in the admiralty wreck charts the black spots that mark the wrecks are so numerous that they cannot be got in places without touching each other and look like a black mass.

The vast death-trap of the district is the Kentish knock, a sand that has certainly accounted in the night time for many a vessel posted missing—broken up in the dark hours, vanished and never heard of. It was on the Kentish knock too, that the great liner Deutschland was totally wrecked. Those who complain when a ship is lost there that the "long-horrenomen do not go to the rescue in their luggers imagine the knock sand to be a sort of beach somewhere on the Kent coast. The knock, as a fact, lies 28 miles from the nearest land, or farther than Calais is from Dover, and when a ship strikes on it she has no lifeboat or lugger nearer her than Margate, nearly 30 miles to the south. Those aboard the stricken vessel find it a death-trap indeed. Many a dripping ghost may well haunt the Kentish knock, for it is a cemetery of ships and men.

ANIMATED FASHION-PLATES.

It is rumored that some firms purpose sending perfectly dressed women to all the principal resorts this summer, says the London World. People will discuss their clothes, and it will be the business of these perambulating fashion-plates or animated dress-stands to deftly descend on clothes with their fellow-guests at the hotels. They will thus be able to drag in the name of the firm they are representing.

The Amateur Gardener—My garden is getting awfully dry. The Humorist—How do you expect it to hold water when you plant leaks in it?

When the eyes ache, close them for five minutes. When they burn bathe them in water as hot as can be borne, with a dash of witch-hazel in it. After weeping, bathe them in rose-water, and lay a towel wet in rosewater over them for five minutes. When they are blood-shot, sleep more. When the whites are yellow and the pupils dull, consult the doctor about your diet.

FOR THE THROAT.

Every morning, before dressing, sponge the neck, throat, and chest with cold water, and rub dry with a large bath towel; not only will this make you less liable to take cold, but it will broaden the chest and fill out the unsightly little hollows. The throat also will soon become round and firm.

VALUE OF WATER.

Water is an invaluable aid to the beauty of the complexion. It should be taken before retiring, as well as in the morning, and between meals in generous quantities. At least three pints a day should be taken, and it may be either hot or cold.

SALT BATHS.

When restless at night and sleepless, a hot salt bath just before retiring will be found most soothing and conducive to sound slumber.

PRINCE OF WALES' "ZOO."

Remarkable Collection of Animals and Birds.

The steamship Tactician recently landed in London the wild animals, birds and snakes presented to the Prince of Wales during his tour in India. It is not a large collection, and most of the animals are quite young. They were trapped by the servants of the many Indian potentates who made obeisance to the Prince of Wales during his tour. Here is a list of the best of the collection:

- One elephant (about a year old).
- One Indian rhinoceros (about a year old).
- One full-grown female tiger.
- Two tiger cubs.
- Two leopards.
- Two Himalayan bear cubs.
- Two Burriel sheep.
- Two Mar goats.
- Two albino barking deer.
- Two Nylghaie antelopes.
- Two swamp deer.
- One Sambur deer.
- Five Indian antelopes.
- One Ghoral antelope.
- One four-horned antelope.
- One musk deer.
- Seven sheep with varying horns.
- One Tibetan mastiff.
- Two ground thrushes.
- Two green-winged doves.
- Two purple pheasants.
- One Impeyan pheasant.
- Two partridges.
- One viper.
- Two Wanderoo monkeys.
- One Gibbon monkey.
- One wild Sondaie ox.

A RARE SPECIMEN.

With the specimens acquired in Calcutta, sixty-two animals, birds and reptiles were landed safely. Some of the pheasants died on the voyage from want of fresh food, probably, and a barking deer and a musk deer succumbed to the changes of climate. But one musk deer survived—a little, cowering thing, with gentle, pathetic eyes. Musk deer are very costly, they are very difficult to transplant.

The wild beasts spent the voyage on the open trading deck, secured in strong wooden cages, iron-barred. The baby elephant only stands about 4ft. high, and it is too young to have acquired the dignity of a name. But he should be very popular at the Zoological Gardens, whence the Prince's collection has been taken, for the sailormen taught him to "salaam" by lifting his trunk high and showing a little red gullet of a mouth.

private circulation among the Royal Family and his personal friends.

In order to improve their marksmanship, Lord Kesteven has invited the members of the Stamford (Lincs) Rifle Club to shoot the young rooks on his estate at Casewick Hall.

The use of motor-cycles in the United Kingdom is largely on the increase (says the "Motor-Cycle"), but foreigners are capturing the trade, as the first English machines are practically failures.

The parish of St. George's-in-the-East, Stepney, has the highest birthrate in the kingdom. According to the report of the medical officer of health for the last fortnight, the rate was 57 per 1,000 annually.

HERE AND THERE.

Interesting Facts From All Parts of the World.

The Church of England has an income of £15,000,000 a year.

Only one couple in over 11,000 live to celebrate their diamond wedding.

All the blood in a man's body passes through his heart once every two minutes.

About 99 per cent. of the tea exported from Asia is consumed by English-speaking people.

The air is so pure in the Polar regions that throat and lung diseases are unknown there.

The potato is a native of Chili and Peru, and was introduced into Ireland by Sir Walter Raleigh.

The highest point to which a human being can ascend without involving injury to health is 16,500 feet.

The title "colonel" is derived from the Spanish. The name is "coronel," which may account for the English pronunciation.

The King of the Belgians makes only one appearance at public worship during the course of the year. That is on the anniversary of his accession to the throne.

The Czar of Russia owns a map of France made out of precious stones. Paris is represented by a huge diamond, Bordeaux by an opal, Marseilles by an emerald, and so on.

The people of the British Isles are now insured by ninety-six companies to the enormous total of £241,879,726. This does not include the figures of Colonial and foreign companies.

The oyster is not much larger than the head of a pin when a fortnight old. At the end of four years' growth it is fit for the market. Oysters live to the age of from twelve to fifteen years.

The latest novelty in vegetables is a black potato, which has been sent to a well-known seed merchant of London. This eccentric tuber came from the Congo, and is said to have an excellent flavor.

The British Government maintains 392 egg-distributing stations in Ireland to better the poultry industry of that country. Over three thousand meetings were held last year to promote Irish poultry interests.

The only country which does not use the red cross as the emblem of her hospital corps is Turkey, which is allowed to use a red crescent in its place, in deference to her soldiers' religious susceptibilities.

At one time the London Zoo had a standing offer of \$5,000 for a good adult male giraffe. Not only are the animals scarce in Africa, but the work of transporting them overseas is the despair of every wild-beast importer.

The Victoria Cross was instituted fifty years ago, January 29th. Since then only 520 persons have received it, 517 of them soldiers or sailors, and three of them civilians, who were acting in a military capacity when they won the cross.

Suitor—"So you will give your daughter \$25,000; that is a small sum." Rich Papa—"Yes; but she will inherit the whole property at my death." Suitor (absently)—"About what time will that be?"

as soon as she saw what the trouble was, she picked Milly right up in her arms, as if she were a little baby, and ran with her across the street and into a drug store.

The druggist poured out some milk into a cup, and put in some hot water. "Drink this, quick," he said.

Milly thought she could not, but Miss Preston said, "You must, quick."

As soon as the hot drink touched the lemon-drop, it began to melt.

Before the drink was all down, the lemon-drop was down, too, and Milly's throat was all right, except that it felt queer for the rest of the day.

"Please 'scuse me for eating candy in school," she said.

Miss Preston kissed her. "I don't think you will ever forget this lesson," she said.

"The lesson?" said Milly. "Why, I remember just how it looks now: 'I can see the girl run fast.'"

BACK TO CROMWELL'S DAY.

The People's League Angered at the House of Lords.

"The House of Lords must be abolished." That is the latest cry among the masses of Great Britain. In labor circles for several weeks there has been outspoken anger and much gnashing of teeth against the Lords for turning down the aliens bill. Now the old People's league has been revived, and already numbers some tens of thousands in all parts of the country. Many members of Parliament on the Liberal side are openly helping the league, and all the Labor members and labor leaders are working hand and glove with it. The one and only aim of the League is to secure the abolishment of the House of Lords as at present constituted.

The petition put in circulation systematically by the League is receiving thousands of signatures daily in London, Ireland and Scotland. The new League may make itself felt in the fall or in the spring of next year. Should there, by any chance, be a fall of Government and a general election within the next year or two, it would not be surprising to find the abolition of the House of Lords the battle cry of the Labor party.

The petition to the House of Commons, now in universal circulation, is in brief as follows:

1. That there is in Parliament a house of irresponsible lawmakers, known as peers.
2. That the members of said house are mostly hereditary, succeeding each other by pedigree, or mere animal succession.
3. That such qualification for serious business of legislation renders Englishmen ridiculous in the eyes of rational persons all over the world.
4. That the said anomalous house has for centuries oppressed the people of these islands by the framing of bad laws and the rejection or mutilation of such laws as have been of the clearest public utility.
5. That, during the happy period of the Commonwealth, your honorable body wisely passed an act abolishing hereditary legislators as "useless and dangerous," and that the nation in consequence reaped the greatest moral and material advantages, at home and abroad.

May it, therefore, please your honorable house to revive said statute of abolition, permitting such peers as the people, in their wisdom, may duly elect to serve them in Parliament to take their seats in your honorable house.

GERMANIC ENGLISH.

On an ashtray which has reached England from Germany, is the following: "Defilement of the room by ash of cigars is forbidden to the severest. Any one who, notwithstanding, makes guilty of such a one will be punished irrevocably by house arrest."

IT AN IMPERIAL KITCHEN

THE INTRICATE TASK OF FEEDING AN EMPEROR.

Francis Joseph is Frequently Compelled to Entertain Two Thousand Guests.

From the days of Marie Theresa, whose splendid entertainments amazed the courts of Europe, the imperial kitchens of Vienna have been regarded as holding first place among their kind.

The capacity of this culinary plant—or several plants, as there is one connected with each imperial palace—may be judged from the fact that one kitchen, recently abandoned and converted into a riding school, contained copper ware alone that weighed nearly a ton.

Until recently at state dinners and court balls a large detachment of soldiers would carry the courses of the meal, in specially made vessels, from kitchen to the door of the dining hall.

Such service is no longer necessary, as the new kitchens are located immediately beneath the state dining rooms. A system of electric elevators transfers food and plate more speedily and with greater satisfaction than would be possible by hand.

Most interesting, perhaps, of the new culinary arrangements is the mundhuche or tasting kitchen, as it might be called; which is directly beneath the Emperor's private dining room.

Here the meals of the private family—in fact, of all gatherings of fewer than thirty persons—are prepared. The cooks in this division are supposed to be especially acquainted with the imperial tastes.

A FOOD CENSOR.

Before each meal is served, a high official of the household enters the kitchen and carefully tastes every dish. This is attended, not only to guard against attempts of poisoning, but to insure palatable preparation of the food.

It is well known that the aged Emperor pays little attention to table joys. His tastes are simple. A strong soup, a juicy bit of beef, with a few ordinary vegetables and a glass of beer constitute his usual dinner. It is not uncommon for him to scarcely touch anything ordering the table cleared almost as soon as the meal is served.

To this private kitchen is attached the pastry department and the department in which ice cream and sherbets are made. When the Emperor's daughter-in-law, widow of the late Crown Prince, and her daughter, the Princess Elizabeth, made their homes at the palace, dainties from those departments were in demand every day, but of late the pastry and confection makers have not been kept busy, except upon especial occasions.

The other important apartments are the ordinary palace kitchen, where the meals are prepared for the general household outside the imperial family, and the great plant needed to provide refreshments upon festival occasions, great banquets and balls, so frequent at the Austrian court.

At a court dinner from 200 to 400 guests may be present; at the palace balls supper is often served to 2,000. So well ordered is the service, however, that a meal of almost any size can be served at comparatively short notice.

In the roast room of the great festival kitchen the ancient pit is still employed. There are six systems of ovens. Four ovens occupy part of the pastry room, in one section of which eight experts do nothing but make cake.

Here, too, is what is termed the olio kitchen, the practical function of which is to prepare

THE REFRESHING CONSOMME.

served in the morning hours of formal balls.

Being made from beef, veal, mutton, hares, chicken, quail and vegetables, and consisting of about eight hours for

must supply the deficiency from his own pocket.

It is the duty of the chef to see that all required dishes are properly prepared, and that suitable wines are sent in with the courses. There is a master in the wine cellar and ten assistants. These men do nothing but buy wine, bottle, label, age and serve it on demand.

While the members of a royal family may be few in number, there are always a great many others who take their meals in the palace.

In the palace of the Grand Duke of Baden, for instance, approximately 120 persons are fed every day. In addition there are more than forty men employed about the stables and grounds who live in their own cottages.

This grand local establishment is by no means as large as that maintained by the Emperor Francis Joseph.

Similar dining-room arrangements are maintained by the Emperor of Austria and the Grand Duke. The tables of both are served by men who have long worn the palace livery and have learned discretion.

Important matters of State may be discussed in their hearing, but nothing ever leaks out.

Nearly every royal palace is under the care of a master of the house, whose title varies at different places. He has the supervision of all the servants and of every detail of household economy.

If a carriage is to be sent for a visitor, he attends to it; should the gardens need special attention, he gives the proper direction. When there is to be a great entertainment, or state function, he sees to the decorations and arrangements. He is a man of importance in the household and not infrequently the bearer of a title.

CUTS WORTH THOUSANDS.

The Operation of Cutting and Polishing a Diamond.

The operation of cutting and polishing diamonds, the hardest of all known substances, demands a large amount of skill on the part of the workman. Diamond is used to cut diamond. Two diamonds are mounted on sticks or holders, and the operator, taking one in each hand, uses an angle of one gem to cut off or reduce the angles of the other, and in this way the natural angles of the stones are removed, the dust being caught up for subsequent use.

Afterwards begins the real process of cutting and polishing, carried out in the mills by steam power. The diamond to be cut is mounted in solder, contained in a brass cup at the end of a piece of copper wire, which is held in tongs on the mill disc. The revolving disc is charged with diamond dust and oil, presenting, so to speak, a diamond surface, upon which the diamonds, soldered in a cup, are cut and polished. The mills run 2,600 revolutions per minute.

The high rate of speed of working gradually wears away the stone being cut, and when the workman considers that the cutting of a facet has proceeded as far as required, the solder is softened and the gem released, ready to be again set in another position for placing in the mill. The cutting thus proceeds by successive stages till the jewel finally assumes the proper form.

Many valuable stones are cut in this way, and a skilled workman frequently has \$5,000,000 worth of precious stones on his bench at onetime.

DEPTH OF OCEAN CABLES.

Some Cases in Which the Wise Men Miscalculated.

Pessimistic prophets sometimes sound sage and logical, but the unreasoning optimist who sees better things despite argument outstrips them.

In the days of Stephenson's early experiments it was predicted that a speed of more than twelve miles an hour by rail would be impracticable, if for no other reason than that the human system would not withstand travelling at a higher rate of speed.

In the early days of steamboats it was declared that transatlantic steam navigation would be impossible, mainly be-

CHARM AND WITCHCRAFT

MEDIEVAL SUPERSTITIONS OF RURAL ENGLAND.

Cures for a Cough—Quaint Scene at a Church Door—Preventive for Fits.

Those who do not happen to have been born in Devonshire or to have spent part of their lives in the fair country will no doubt find it hard to believe what a strong hold the extraordinary superstitions enumerated below still possess over the minds of dwellers in remote parts of the Western shire, writes a correspondent of the London Chronicle. Even people born and bred in Devonshire towns fail to realize to what an extent weird forms of credulity still linger in rural parts of the county.

How strongly some of the strange folk-lore and superstitious beliefs still survive in some of the rural parts of Devonshire is illustrated by the following incident, which took place recently at Sutcombe, and which is thus described by the rector, Rev. F. G. Scrivenor.

"On Sunday the parish church of Sutcombe, a small village between Holsworthy and Harland, was the scene of a revival of an interesting old faith cure. A woman in the parish has of late been a sufferer from epileptic fits, and at the persuasion from a neighbor, who nineteen years ago had done the same thing, and had not suffered from fits since, she went around the parish and got thirty married men to promise to attend the parish church

AT THE MORNING SERVICE.

"At the close of the service the rector desired the selected men to pass out one by one, and as they passed through the church they found the woman seated there, accompanied by the neighbor who had done the same thing nineteen years ago (as many who were present remembered). Each man as he passed out put a penny in the woman's lap, but when the thirtieth man (the rector's church warden) came he took the twenty-nine pennies and put in half a crown. A silver ring is to be made out of this half crown, which the woman is to wear, and it is to be hoped that the result will be as satisfactory in her case as it was on the previous occasion.

"In a small parish (less than 300 population) it was not easy to find thirty married men, but all were willing to help—farmers, laborers and tradesmen—and the whole incident passed off very quietly, and all was done with the utmost reverence and decorum. The woman takes her seat in the porch when the preacher begins his sermon, and from the time she leaves her house until she returns she must not speak a word. We have not heard whether she complied with this condition."

The Rev. Roger Granville of Pinhoe, formerly rector of Bideford, also tells an interesting story of Devonshire superstition. "On one occasion," he says, "a young farmer from the neighborhood of Torrington called on me and asked me to tell him what was contained in a bag which he had worn round his neck since infancy, and which a white witch had given his mother as a preventive against fits. After cutting open several outer cases, well worn and sweat stained, I came upon the original inner one, which contained a number of bits of paper,

EACH BEARING ONE WORD.

"Piecing them together, I found they formed the following sentences: 'Sinner, Jesus died for thee' (thrice repeated), 'Therefore flee that sin.' At the man's request these pieces of paper were reinserted in their several bags, and my maid servant sewed them up again, and he, replacing the charm round his

eye will speedily disappear if a cat's tail is drawn across the inflamed part, or if the sty is stroked with

A WIDOW'S WEDDING RING.

As is only natural, many of the medical superstitions associated with Devonshire are in conformity with the idea laid down in the old proverb which says that "Prevention is better than cure." Thus people carry about with them (when they can get them) double Barcelona nuts as a preventive for tooth-ache; and a small potato or a lump of sulphur to keep them free from rheumatism. To a limited extent this latter course is practised in the Midlands.

The number of Devonshire superstitions regarding cats is extraordinarily large.

If a cat sleeps on his brain

It's a sure sign of rain.

And if puss sits with her back to the fire it is a sign that there will be cold weather. The coming of a stranger may be expected if a cat, when washing her face, puts her paw above either of her ears.

Many Devonian housewives will not on any account allow a kitten to be in the house at the same time as a baby, fearing that in such a case harm would come to the infant. In other households kittens born in May are always killed. The reason assigned for this harsh proceeding is that "May kittens bring home the vermin." Being interpreted, this means that when they grow up they will not be content with killing rats and mice, but capture and carry home all sorts of unpleasant creeping things.

The only time when kittens are regarded as being absolutely essential in a Devonshire household is when thirteen persons are expected to sit down to dinner. In such a case a kitten has to take a place on one of the guest's knees at the table. This makes thirteen at table lucky instead of unlucky.

It is regarded as being extremely unlucky for wild daffodils to be taken into a house. Farmers' wives believe that if this is done they will lose a lot of their chickens. On the other hand, when selling poultry in the market, they believe they will have a good day if they spit on the first coin they take, "for luck."

Between superstition and witchcraft there is not a very wide gulf; but although reputed witches are not nearly so numerous in Devonshire as they were even a dozen years ago, there are a good many modern practitioners of black art in the county.

COURAGE IN MAN AND WOMAN.

Stories Showing How Two Persons Faced Great Peril.

Women display courage in their own incomparable fashion. Typical of woman's method of encountering danger is the story of the woman who observed as she was concluding her toilet for the night the presence of a burglar under her bed, says the Strand Magazine. Without letting the man know that she had perceived him, this woman quietly put on her dressing gown and knelt down at the bedside to say her prayers. She prayed aloud. She made her own personal intercessions to heaven and then prayed for all poor sinners living in the darkness of estrangement from God "particularly this unhappy man lying under my bed, meditating the wickedness of stealing and perhaps of murder." The woman saved the situation.

I cannot imagine a worse situation than that of a certain steeplejack who found himself one day at the top of a church steeple with a madman grinning into his eyes. The madman was his mate. Both men had been at work on this steeple for many days and had talked together while they hung in the saddles with the utmost accord, but on this particular day one of the men looked up to see madness in the eyes of his companion. In that moment he was alone with danger. No shout could avail. From the street below he looked

THE REFRESHING CONSOMME

served in the morning hours of formal balls.

Being made from beef, veal, mutton, hares, chicken, quail and vegetables, and requiring at least eight hours for its preparation, the extent of the kitchen outfit devoted to this soup alone is apparent.

When the late Empress had personal charge of domestic affairs the candy kitchen was an important adjunct to the culinary industry at the palace; but of late not so much attention has been paid to it, although the confections and set pieces manufactured there are still wonders of art in their way.

These immense kitchens with their corps of chefs, cooks and helpers entail only a part of the cares that rest upon the shoulders of the master of the household—usually an official of rank who is related to the imperial family.

There are great storerooms, vaults for wines, linen lockers and strong rooms for the valuable china, silver and gold ware, all of which must be carefully looked after.

One large room is set apart for the storage of the imperial silver, which is infinite in variety and incalculable in value. Another apartment holds the big collection of rare old Vienna porcelain and the imperial service of solid gold.

This gold service is among the most beautiful and elaborate ever designed. It is used only when foreign visitors of royal or princely rank are the guests of the Emperor.

Originally it was intended to meet the needs of only eighty diners, but a few years ago a hundred additional gold plates were added. As each plate weighs something over two pounds, the value of the gorgeous service may be imagined.

Not an item of food from the imperial table is taken back to the kitchen or the storerooms. Whatever is left becomes the property of the servants. Very often entire dishes are removed untouched; bottles of wine are taken away uncorked. In this way the butlers and waiters not only fare as sumptuously as royalty, but their families also.

FLOURISH ON KINGLY FOOD.

One of the most exclusive regal establishments in Europe is that of the Grand Duke of Baden, at Karlsruhe, Germany. The Grand Duchess was a sister of the present Emperor's grand father, and her methods of management are followed to a great extent at the courts of both Berlin and Vienna.

In this kitchen, in addition to the chefs and cooks, there are always four or six apprentices, whose term of service is four years. There are always plenty of volunteers for this service from members of the highly respectable families. Although no wage is paid them, the prestige derived is so great as to be eagerly sought, as it insures profitable employment almost anywhere, especially in the big restaurants and hotels of the cities.

The lives of employers in the royal kitchen are exceedingly pleasant. Each gets his bottle of wine and his beer at every meal, and is otherwise treated with great consideration. When the family is staying at one of its summer homes in the country, the servants are permitted to fish in the preserves, and to enjoy many other liberties.

Even the unsalaried apprentices fare pretty well in a financial way, as nearly all visitors give liberal tips. Such tips are deposited with a trusted official of the household, and at the end of the year the total sum is divided among the employees. One visitor to the palace of the Grand Duke of Baden gave \$1200 to this fund.

THE CHEF'S COUNCIL.

Each afternoon the chief steward confers with the official in charge of the household, and the menus for the next day's meals are made up. Early the next morning the steward gives this to the chef who is on duty for the day, and he at once makes his requisitions for supplies.

Only one hour a day is the storeroom kept open, so that should the chef neglect or forget to provide himself with everything needed during that time, he

either reason than that the human system would not withstand travelling at a higher rate of speed.

In the early days of steamboats it was declared that transatlantic steam navigation would be impossible, mainly because of the inability to provide room aboard ship for the coal that would be necessary for the voyage. The prophet had scarcely done speaking when the news arrived that a ship had just finished a trip across the Atlantic under steam.

So with transatlantic cables. Some promulgated the belief that they could never be laid because the density of the water below a certain depth would be so great that the cable would not sink to the bottom of the ocean. All the wise folk regardless, however, of their prediction, have saw the cable promptly descended to the ocean bed at a depth of 16,404 feet, and within the last year a cable was sunk in the Pacific Ocean in the vicinity of the Lukin Islands at a depth of 26,246 feet.

SENTENCE SERMONS.

Time amends a great many prayers. Upright walking is the strongest talking.

A deaf heart soon makes a dead conscience.

Virtue is none the worse for a few vouchers.

The ruddy eyes do not get the rosiest outlook on life.

Hearts of gold do not come by setting the heart on gold.

No man is civilized until he has learned to live with himself.

The walls of the house of happiness are built of sacrifice.

The troubles we meet are as nothing compared to those we manufacture.

The road that cuts through right to riches has a down grade extension to ruin.

Don't count too much on the virtue of owning up when you know you're on the verge of being found out.

In the kingdom of darkness might makes right; in the kingdom of light might but adds to responsibility.

It's no use talking about the way you bear the cross if you're unduly anxious to get hold of the little end of the log.

BUTTER FAKER.

Mr. Lloyd, an analyst, who gave evidence before a select committee of the British House of Commons, described a very ingenious machine for adulterating butter which was sent to him. It causes the globules of fat and the globules of water to coalesce, and by using it butter could be made from milk which contained 50 per cent. of water. In spite of this, the butter, when cut with a knife, showed no more water than other butter which was adulterated to the extent of only 14 per cent. It would in nearly every case pass the test of the analyst.

MEANNESS AND CAREFULNESS.

Meanness should not be confounded with caution. Everybody should be cautious and wise with regard to money. But that is quite a different thing to being mean. Meanness might be defined as that quality of the mind to which it is a positive agony to part with a single penny. Who does not know that sort of man? The one who counts every cent doles out each ten cents to his wife with a groan and a warning. Pity the poor woman with such a husband! There are hundreds and hundreds of them everywhere.

NO BANK FAILURES IN CHINA.

"It is 900 years since the failure of a bank in China," said a bank examiner. "Over 900 years ago in the reign of Hi Hung, a bank failed. Hi Hung had the failure investigated, and to his indignation found it had been due to reckless and shady conduct on the part of the director and the president. Hi Hung at once issued an edict that the next time a bank failed the heads of its president and directors were to be cut off. This edict, which has never been revoked, has made China's banking institutions the safest in the world."

ner, Jesus died for thee' (thrice repeated), "Therefore flee that sin." At the man's request these pieces of paper were reinserted in their several bags, and my maid servant sewed them up again, and he, replacing the charm round his neck once more, went on his way rejoicing, being now in a position to tell a neighbor, whose child had also fits, a certain cure for them."

In many parishes in rural Devon it is believed that if a lady's surname after marriage begins with the same letter as her maiden surname she will be very unlucky, and there is an old couplet:

Change the name but not the letter,
Change for the worse and not the better.

Ladies who are unlucky in this respect are, however, believed to possess compensating advantages in that they are able to cure juvenile complaints. Whooping cough is included in the category, and when the mothers of Chittlehampton found that dragging their children through three parishes in one day did not effect a cure they promptly took them off to be "doctored" by ladies who had not changed the first letter of their name by marriage. It is claimed that whatever such women give a sick child to eat will cure the complaint.

Other strange cures for whooping cough are heard of in various parts of Devonshire. Many there are who believe that the complaint can be completely eradicated from a child's system by letting the little sufferer wear a long, hairy caterpillar in a small bag around the neck. Others are foolish enough to think that if a hair is taken from a child's head, put between a slice of bread and butter, and given to a dog, the child will recover from its infirmity if the dog coughs, as it very probably will if the hair touches its throat.

Another extraordinary belief still prevalent is that a child will recover from whooping cough if, while the dew is on the ground, it is laid face downward where

A SHEEP HAS BEEN SLEEPING.

Sheep are sometimes driven into the farmyards over night so that the farmers' wives may the more easily try this reputed remedy in the morning.

When, as of course frequently happens, the little sufferers are not relieved, it is said that the parents have not had sufficient faith.

There are cases on record where mothers have taken their offspring and placed them for a few moments in graves prepared for the reception of a body of the opposite sex, in the belief that they will thereafter not suffer any more of the infirmities that children are heir to.

Superstitious Devonians will, when suffering from a cough, put themselves to considerable inconvenience in trying to meet a man driving a white horse. Having encountered a person thus engaged, they ask him what he thinks will cure them, believing that if they carry out his recommendations they will soon be all right again.

To insure that a wound caused by a thorn does not fester, true sons of Devon will eat the thorn. In order to make assurance doubly sure, some repeat these words after eating it: "In the name of the Father, and of the Son and of the Holy Ghost, the prick of the thorn I do defy, and with the blessing of God I shall not ache or smart or give pain."

Toads are supposed by many Devonians to possess remarkably curative properties. Persons suffering from sores of any kind are recommended to wear the corresponding part of a toad tied up in a little bag, or otherwise attached to the person. As a cure for warts there is, according to some people, nothing like a fat sluz, which has to be placed on the pasts affected. To cure an adder's bite the victim has to catch an adder, fry it, and put it on the spot where he was bitten.

Some of the cures recommended for minor ailments are more curious still. Many people believe that a sty in the

saddles with the utmost accord, but on this particular day one of the men looked up to see madness in the eyes of his companion. In that moment he was alone with danger. No shout could avail. From the street below he looked like a spider snoozing in its web. The roofs and chimneys of the houses seemed to be level with the ground. High up in the loneliness of the empty air he was alone with a madman.

The man kept his wits about him, and addressed some cheerful remark to his mate. The madman only grinned. The man bade him look alive, that they might the sooner get below and enjoy themselves. The madman chuckled, and announced that they would get below in double quick time, for that he was going to jump from the steeple with his friend in his arms.

The other laughed as if at a good jest, and turned to his work. Then he began pushing with his feet against the steeple to get a swing into his saddle; he meant to grab the madman and hold him till help came. But the madman was also swinging his saddle, and before the sane man realized his danger the madman's fingers were closing round his throat.

There they swung in the dizzy air, high over the unconscious city. By something of a miracle the man found his hands clutching at his tool box as he swung back. His hands closed on a wrench. He grabbed it, made an upward thrust with his strangled body, and caught the madman a jangling blow across the side of his head. Then he clutched the fellow's body to save it from falling, and, after a moment's breathing, quietly lowered himself and his unconscious mate to the ground below.

FISHING FOR BIRDS.

Caught With Rod and Line in Many Parts of the World.

The pastime is declared to be almost as fascinating as fishing. Gulls in Newfoundland are caught in this way in large quantities. In New England fishing for gulls and petrels is an important industry.

The method of bird-fishing is practically the same as that of ordinary fishing. Two men go out in a dory and throw pieces of cod-liver on the water, when large quantities of birds have been attracted to the spot more cod-liver is thrown out on a hook. This the birds greedily swallow, and thus fall easy victims.

Albatrosses are fished for in the same way off Cape of Good Hope. A piece of pork is attached to a long line and thrown overboard. The bird will eye it for a long time, gradually and cautiously making towards it. Suddenly he will seize it and hold it in his beak. When he discovers that he is caught he will sit on the water and vigorously flap his wings. However, he will be drawn into the boat and made a captive. Albatross fishing is good sport, since the birds require careful handling. So long as he pulls against the line it is easy enough. The moment, however, he swims forward the hook will drop from his beak, unless it is skillfully manipulated, and the bird will find himself free.

THE WORLD.

They tell us in our childhood days
The world is round, and we,
With youthful heedlessness, accept
The doctrine easily.

When we are grown to man's estate
We are so overwrought
With constant struggling we've no time
To give its shape a thought.

At last when we approach the end
And see how small a lot
Of stuff we've gathered as compared
With what some folks have got,

What we are told comes back, and we
Are quite prepared to swear
Whatever other shape it has,
It surely isn't square.

POSSIBLE CATASTROPHE

IF FRANCE AND GERMANY WERE TO ENGAGE IN WAR.

Perhaps by Autumn These Countries Will be on Friendlier Terms.

The business of the world is going on as if peace were assured, as if it were impossible for any nation to commit the mad crime of dragging all Europe into war. Yet among those whose office it is to watch the political horizon for signs of coming trouble there is some uneasiness. Most Continental nations seem to be itching for a fight, says London Answers.

At the moment the season is against the outbreak of hostilities. Nations like to have harvested their crops before commencing war. Perhaps by the autumn Germany and France will be on friendlier terms. If not, it is certainly possible that Germany may attempt to crush France in order to get a free hand in preparing for the predicted tussle with England; or that France, availing herself of the friendly backing of England, may attack Germany before the latter power grows invulnerably strong. The consequences to the world will be terrible.

MISERY FOR 300,000,000 PEOPLE.

It is said that Russia lately asserted her determination to support France, Austria and Italy would, of course, fight with Germany. No one knows what England would do. We may suppose that she will not take part in any conflict which does not threaten her own interests. But we are bound by treaty to preserve the integrity of Belgium, and in 1870-1 we declared our intention to take sides against whichever of the two combatants invaded that little State.

It is, therefore, possible that we may, in the course of the conflict, be forced to take an active part. In that case a declaration of war by either France or Germany is likely to involve the whole of Christian Europe, with the exception of Spain, Portugal, and Greece.

The greatest war that ever has been fought is a mere bagatelle compared with this conflict that we may witness before the year is out. The Franco-German war of 1870-71 filled Europe with horror. Let us compare it with the Franco-German war of 1906-7.

In 1870 the population of the two combatant States amounted to about 75,000,000.

In 1906 the population of the five countries composing the dual and triple alliances—i. e., Germany, Italy and Austria on the one hand, and France and Russia on the other—is, in round numbers 320,000,000.

EVERY MAN A FIGHTER.

Thus, more than four times as many non-combatants—women, children, old and delicate men—would go through all the misery which war necessarily brings in its train. Poverty, want, anxiety for relatives at the front, would be the portion of some 200,000,000 people or more, for a year, or possibly for two or three years.

The men under arms would be far more numerous now than in 1870, proportionately to population. We may suppose that before the great struggle ends every man in Europe—excepting the few smaller states—who is capable of fighting, would take part in the war.

In 1870 France had only 300,000 men to commence with, and Germany 644,000—a total of say, 1,000,000. According to official figures and estimates the five great Powers have now a war strength of about 10,000,000 men ready to take the field at short notice, with as many more who would remain attached to particular localities, man fortresses, etc.

But before the close of the war of 1870, Germany had 1,124,000 men under arms, and France is said to have recruited 1,700,000 men. It would appear that about 10 per cent of the population

bankers would reap rich harvests in the placing of loans. Our investors would get interest undreamed of in relation to Government securities.

BEGGARS' VISITING CARDS.

How They Are Obtained and Used—Profits of Mendicancy.

The modern beggar places a great deal of faith in the visiting card trick. To bring this trick to a successful issue the beggar must be a man of respectable appearance and some address, for it is essential that he should gain access to your drawing-room.

He may come in the disguise of a politician to solicit your vote for the next parliamentary or municipal election, or of a philanthropist to interest you in some charity; or he may come as a needy suppliant with a plausible story for which he gains your ear by mentioning the name of your friend, Mr.—, whose acquaintance with you he has by some means ascertained. If he is fortunate enough to be admitted to the drawing-room, he asks before going, if you would oblige him with a glass of water. Should you leave him for a moment to comply with his request, he takes the opportunity to pocket any visiting cards he may see lying about.

Presently one of the cards comes back to you. It is presented by another caller, says Macmillan's Magazine, and on the back you read, "Bearer is a thoroughly deserving man. He is on his way to (some distant town) to obtain work. I have given him ten shillings. Can you help?" On receiving such a message you probably add your donation, and are surprised when next you meet your friend to learn that he knows nothing whatever of your caller.

Some of the other stolen cards will be similarly presented to other friends of the people whose names they bear. Thus the vicar's card will be presented to one of his churchwardens, and so on.

Visiting cards are a recognized article of commerce in some of the common lodging houses frequented by the begging fraternity, where they are sold at prices ranging up to five shillings, according to the supposed value of the card as a bait. Stamped letter paper is sometimes obtained in the same way; it comes in very handy for writing false testimonials.

Begging pays sufficiently well to deter a good many people from joining the ranks of honest industry. It is a calling in which some men remain for the whole of their lives, and in which they even bring up their children. A good begging letter may be worth as much as £10. There is one practitioner of the art who has a banking account and another who is an owner of house property. On the other hand many begging letters emanate from common lodging houses, which presumably are not the abodes of the affluent. And there is a well-known gang which has its headquarters in the workhouse, sending out batches of letters addressed from various shops in the neighborhood. When good luck rewards their efforts they take their discharge from the workhouse and live in luxurious ease for a while, returning when the money is spent.

About five shillings a day is estimated by the experts of the Mendicity Society to be the average earnings of an ordinary successful street beggar in London; the figure is arrived at by observing the amount of money found on beggars who have been arrested. Last year there were 3,019 convictions for begging in the London police courts alone, and of course those who are arrested are but a comparatively small proportion of the beggars in the streets. It is estimated that in the London police area the enormous sum of £312,000 goes into the pockets of street beggars every year.

WONDER WORKING WHITE COAL.

Thanks to It, Italy Is No Longer an

THE SUNLIGHT WAY

Sunlight Soap is better than other soaps, but is best when used in the Sunlight way (follow directions).

Hard rubbing and boiling are things of the past in homes where Sunlight Soap is used as directed.

Sunlight Soap will not injure even the daintiest fabric or the hands, and the clothes will be perfectly white, woollens soft and fluffy.

The reason for this is because Sunlight Soap is absolutely pure, contains no injurious chemicals—indeed, nothing but the active, cleansing, dirt-removing properties of soap that is nothing but soap.

Equally good with hard or soft water.

YOUR MONEY REFUNDED by the dealer from whom you buy Sunlight Soap if you find any cause for complaint.

LEVER BROTHERS LIMITED, TORONTO

NEW CONSUMPTION CURE MANY BOMB FACTORIES

REMARKABLE RESULTS FROM STRENGTHENING OF BLOOD.

Method of Increasing the Patient's Power of Resistance Where It is Weak.

The new "opsonic" method, adopted in several London hospitals, of carrying on the war against consumption, was fully described to a newspaper representative by Mr. E. W. Morris, the secretary of the London Hospital. The treatment rests on the fact that it is now possible, by testing the patient's blood, to discover his exact power of resisting the disease, and to strengthen that power if it is below the normal.

"To put the matter as much as possible in non-technical language," said Mr. Morris, "if you look at a drop of blood through a microscope, you will see a lot of red corpuscles, and perhaps one in 500 of larger white corpuscles. Thirty years or so ago it was a great puzzle as to what was the exact duty of these white corpuscles.

"Experiment has shown that if a sterilized tubercle culture is added to

A DROP OF FRESH BLOOD,

and the whole placed in an incubator at the temperature of the body for a quarter of an hour, and then a microscopic examination made, the tubercle micro-organisms will have been collected in these white corpuscles, by which they are carried away.

"But this collection of the micro-organisms can only take place after they have been acted on by what is called the 'opsonin,' existing in the serum of the blood, which is the real protective agency. If this protective power is weak, the number of the micro-organisms captured, as it were, by the white corpuscles will be much smaller than in the case of a normally healthy person.

"What is needed, then, is some method of increasing the patient's power of resistance where it is weak, and this is found by injecting tubercle vaccine in a sterilized form. The immediate effect of such an injection is always first to lower slightly the power of resistance, but the decline is quickly followed by an

ANARCHISTS NEVER AT A LOSS FOR SUPPLY OF BOMBS.

The Fact That No Attempts Are Made on English Royalty Not Due to Gratitude.

The outrage at Madrid and the plot at Ancona against King Victor of Italy have once more brought before the public the extraordinary activity of the various "bomb factories" in Europe.

It is estimated that at the present moment there must be many hundreds of bombs—if not thousands—in Russia alone. They are about the size of an orange, and they were at first—until the authorities awoke to the fact—imported into Russia inside oranges, the contents of the fruit having been, of course, carefully removed. Most people who have lived any time in Russia know all about these bombs, and it is not difficult to secure an opportunity of handling them when once one is in the confidence of the possessor. For the most part they are kept under lock and key—ready for emergencies.

GREAT SECRECY OBSERVED.

Owing to the drastic nature of the Explosives Act in Great Britain great secrecy has to be observed in the manufacture of bombs. An official who has had much to do with hunting down Anarchists said recently that it takes place sometimes in sedate suburban villas. The shells are usually obtained from the Continent, and the filling-in is quite noiseless.

"Anyone who has the slightest mechanical skill," he said, "could make the ordinary hand-grenade bomb, supposing he had the shell. Among the Continental Anarchists are many skilled chemists. The bomb used at Madrid, from all accounts, was a hand-grenade containing an explosive of very great 'danger radius'.

"It would be further filled with old nails, links of chain, jagged pieces of metal, ordinary bullets, and a detonator cap. When thrown against a hard

more who would remain attached to particular localities, man fortresses, etc. But before the close of the war of 1870, Germany had 1,124,000 men under arms, and France is said to have recruited 1,700,000 men. It would appear that about 10 per cent of the population of a country are capable of bearing arms at a pinch. In the great struggle that may break out, no doubt every capable man would be called upon to take his share in the fighting. In that case the vast number of 32,000,000 men may take up arms before the war ends. This would mean the financial ruin of Continental Europe. If we suppose that the forces engaged never exceed 10,000,000 men, the war would be at least five times as costly as that of 1870. But in all probability it would also last two or three times as long. That is to say, the cost from start to finish would be at least ten times more, probably twenty times, as great as that of the last Franco-German conflict. Now, that war cost Germany nothing. She made, indeed, a profit of \$750,000,000 out of it.

FRANCE'S LOSS \$3,000,000,000.

But France's loss was terrific. There was her expenditure in carrying on the war, her maintenance of German troops, her repayment of fines levied by the Germans, her loss by non-payment of taxes, and the big indemnity. The total cash payment was \$1,857,000,000. But to pay that sum loans had to be raised at a discount, by which many millions more were lost. One loan, for instance, realized \$160,000,000, and created a debt of \$265,000,000. If we add the destruction of public buildings, of war material, railway rolling stock, etc., France's total loss was about \$3,000,000,000. There was the loss of life—of the best men of the country. There was the further loss of withdrawal of 2,000,000 Germans and Frenchmen from productive work. In all the war must have entailed a loss of \$4,000,000,000 to \$5,000,000,000.

Multiply that by ten or twenty, and we see what the coming war means from the financial point of view. \$50,000,000,000, \$50,000,000,000, or perhaps \$100,000,000,000, will be squandered irrevocably.

RECORD BURDEN OF DEBT.

Even the victor would probably become bankrupt, for how could he collect an indemnity? He would be reduced to taking it in territory—the territory of a bankrupt people. We saw how Russia escaped the payment of indemnity to Japan. She could not have paid it if she were willing. And this would certainly be the state of all Europe after a long struggle under the prevailing conditions.

The great powers would emerge from it with a burden of debt which would perhaps be the best insurance of peace for generations to come. France's debt in 1871 was \$2,500,000,000; in 1876 it reached \$4,000,000,000; in 1905 it was \$6,000,000,000. We may take it that a European war in the near future would add from fifty to one hundred thousand millions to the debt of the Continent, and that would mean an annual increase of taxation of from \$1,500,000,000 to \$3,000,000,000.

WINDFALL FOR BRITISHERS.

What would be the loss of life? Germany lost 46 men out of a thousand in the six months' fighting of 1870-71, according to Mulhall. In a twelve or eighteen months' war the death-rate could not be less than ten per cent. That would give a loss of 1,000,000 lives, at least. But in this great war the hardships in civil life would be extreme. Provisions, clothing, medical supplies would soon become scarce, and deaths from starvation, exposure, and disease would be extremely numerous.

To England and the United States it would probably bring untold wealth. Our exports to Germany and France increased about fifty per cent. in the years immediately following the war of 1870. Still greater would the call be on our manufactures, were all Europe fighting. Every factory would be inundated with orders. Every workman would get work, almost at his own price. Our ships could scarcely meet the requirements of overseas traffic. Our

enormous sum of \$32,000,000 goes into the pockets of street beggars every year.

WONDER WORKING WHITE COAL.

Thanks to It, Italy Is No Longer an Industrial Back Number.

Northern Italy is prospering beyond all record. The product of the silk industry has doubled in the last eight years; one-third of the silk thread used in the world is now produced in Italy.

The cotton mills, scarcely in existence a decade ago, now have an annual output worth more than \$80,000,000. According to The World To-day, textiles have advanced almost as rapidly.

The 6,000 workmen employed in iron and steel foundries in 1881 have become 90,000 and Italy to-day is exporting steel instead of importing it.

Houille blanche, as the French call it, or white coal, has been the chief agent in the transformation. White coal is simply hydraulic power. Strictly speaking, it applies only to the power derived from glacier streams rising in the Alps. The analogous term, houille verte, or green coal, has been adopted to designate the energy provided by streams of humbler source.

Call it what you please, this newly harnessed power is revolutionizing European industry. It is more than a coincidence that the great manufacturing countries to-day are those which are rich in coal—the United States, Great Britain, Germany and Belgium.

Now the tables are turned. By an almost providential compensation those nations which are poorest in black coal are richest in white. Austria is much better supplied with hydraulic power than Germany, France than England, Switzerland than Belgium, Canada than the United States. When it is further considered that the white coal is subject to neither exhaustion nor interruption by strikes the full richness of the promise it offers begins to be realized.

Italy is one of the best endowed of European nations in this regard. The available power her rivers hold is estimated at between nine and ten million horse-power, an amount equal to the total steam power of the world to-day, exclusive of that used on railways and steamships.

Although only a beginning has been made in utilizing this great heritage, more power has been developed than in any other country in Europe. Some of the Alpine lakes, twenty-five miles long and a thousand feet deep, at varying elevations above the sea, form ideal reservoirs of energy.

Wholesale emigration, again, is reducing the pressure of population; every year half a million of Italy's children leave her shores. In some sections, it is true, the drain has been so enormous as to be a danger rather than a relief. When Signor Zanardelli, the late Premier, was making an official tour through the Basilicate, he was surprised on entering a certain village to find no arches of welcome, no effusive deputations, only the Mayor with his pessimistic greeting.

"I welcome you in the name of our eight thousand inhabitants, of whom three thousand have just left for America, and the other five are preparing to follow."

On the whole the emigration has been beneficial. A new Italy has sprung up on the Plateau and in Brazil, furnishing an immense outlet for Italian exports, while the remittances sent home from Italians resident in the two Americas are estimated at \$75,000,000 a year. Nor are all the emigrants lost forever. The official returns put the proportion of temporary emigration at fifty-five per cent.

ANTAGONISTIC FLOWERS.

A French horticulturist has discovered that a rose and mignonette cannot live together. He placed a specimen of each flower side by side in a vase, and at the end of half an hour they had both lost all their freshness and every trace of their scent.

of increasing the patient's power of resistance where it is weak, and this is found by injecting tubercle vaccine in a sterilized form. The immediate effect of such an injection is always first to lower slightly the power of resistance, but the decline is quickly followed by an increase, and it has been found quite possible by a series of injections to bring the patient's power of resistance up to the ordinary normal level.

"With the result that the patient has been cured?"

"Some remarkable cures have been obtained, and this particularly in cases of lupus. Lupus is caused by the same microbe as consumption. We have had cases in the hospital where the Finsen light has produced no effect at all. After endless sittings the patient's condition has been virtually unchanged, or every improvement has been

FOLLOWED BY A RELAPSE.

When the blood of these patients has been tested it has always been found that their power of resistance to the disease has been far below the normal, while in other cases successfully cured, it has been nearly or quite that of the average healthy person. Many of the bad cases have by means of regular injections had their protective power raised, and the light treatment has then been attended with complete success."

"And do you think this treatment will be equally applicable to phthisis and other forms of consumption?"

"I believe it will be helpful. Of course if a man has already a big cavity in his lung it will not give him a new lung; the treatment then will only be helpful in controlling the disease. But if the disease is stamped out it will be by testing the blood in suspicious cases—cases where there may be hereditary tendencies—before there is any actual attack of the disease. If the resistant power is found to be low it can then be raised to the normal level. At present it has been found that an injection once a month will keep up this normal level; and in this direction we must look forward to advance. Better methods will no doubt be discovered."

A POWERFUL CLEANSER.

When any one suggested to Mrs. Herlihy that the extreme whiteness of the clothes which she washed was due to anything besides her exertions, Mrs. Herlihy took fire at once.

"It's the wurrk o' me hands and me arms and me elbows that does it!" she cried, indignantly. "I use all me strenth on thim clothes, and I'm as wake as a rag whin they're done. Soap an' water is all I take to 'em, barrin' the last little bit of a lovely washing-powder that just puts the last touch to 'em."

"Are ye sure it's only a little bit you're using?" asked the prying neighbor in a dubious tone.

"An I sure?" and the wrath of Mrs. Herlihy flamed again. "An' why wouldn't I be sure whin I used a bit more it'd ate the nails right off me fingers!"

THE MEANING OF EMPIRE.

Here is an eloquent picture of the Empire in a few sentences. The King has in Asia more than 300,000,000 subjects; in America, 7,500,000; in Africa, about 43,000,000; in Australasia, over 5,000,000; and in Europe over 42,000,000. Classifying them broadly by religions, there are 268,000,000 Hindus, 94,000,000 Mohammedans, 58,000,000 Christians, 12,000,000 Buddhists, and 23,000,000 of various pagan or non-Christian religions.

USEFUL ARMY HANDKERCHIEF.

The non-commissioned officers of the 1st Volunteer Battalion Bedfordshire Regiment have been supplied with white handkerchiefs, upon which are printed full instructions for all emergencies, hints on first aid, etc. The handkerchiefs belong to the regiment, and must be returned upon the holder leaving the unit. We presume that due allowance will be made for fair wear and tear.

from an account, was a hand grenade containing an explosive of very great "danger radius."

"It would be further filled with old nails, links of chain, jagged pieces of metal, ordinary bullets, and a detonator cap. When thrown against a hard substance it would explode violently enough to blow a house down. I am sure the carriage in which the King and Queen were riding must have been bomb-proof."

"Besides the hand-grenade there are the time-fuse variety and the infernal machine, or clockwork explosive." The official produced from a safe a composition looking like sand and brown sugar. "Now you could pound that with a sledge hammer and it would not explode. But put two ounces of it in a shell with a gelatine cap, and it would hoist this building from its foundations."

CIRCUMVENTED BY POLICE.

"I remember a case several years ago when a group of Anarchists were circumvented by the police. A disguised member of the force met a certain group, and with one other was deputed to manufacture bombs. He had displayed a familiarity with dynamite and other powerful explosives. He furnished a perfectly harmless mixture, with which shells were filled. Most of these were seized by the police, who handled them with impunity. A few, however, were used in an attempt upon the life of a French official, but were as harmless as dough."

"I would make the Aliens Act absolutely inflexible in the case of Anarchists," declared the official. "I know it is said our Royal family is immune from attack because the Anarchists are grateful for an asylum. That is absolute nonsense. I've come in contact with many Anarchists, and I never met one who would not deride the idea of gratitude."

HEAVY WEDDING RINGS.

Women of the Upper Congo Wear Them Round Their Necks.

The Bayanzi, who live along the Upper Congo, have a strange custom which makes life a burden to the married women. Great brass rings are welded around the necks of the wives. Many of these rings worn by the women, whose husbands are well-to-do, weigh as much as thirty pounds.

Frequently one sees a poor woman whose neck is galled by the heavy weight, and in places the skin is rubbed off by the ring. This is a sure sign that the ring has been recently welded around the neck. After a short time the skin become calloused, and then the strange ornament produces no abrasion. The weight is a perpetual tax upon the energies. In every crowd of women may be seen a number who are supporting the ring with their hands, and thus for a time are relieving their weary shoulders of the burden.

A ring is never put around a woman's neck until she is believed to have attained her full physical development. Once on, it is no easy matter to get it off. Women who increase largely in flesh, after the rings have been fastened on their necks, are in danger of strangling to death, and instances of this sort have occurred.

Some of the women regard the curious ornament with pride, imagine it enhances their importance and beauty, and wear their burdens with light hearts.

GERMANY'S LABOR PARTY.

Germany boasts of the strongest labor party amongst modern nations. They form at present the most important political party in the empire. The number of their party organs is seventy-six, and twenty-two of these are dailies.

PAST ENTERPRISE.

"There is one thing in nature which human enterprise and energy has never utilized."

"What do you mean?"
"The hoarse power of a cold."

COOL SHOES FOR SUMMER WEAR!

THE BEST FLOUR. DAFOE'S NONESUCH DAFOE'S MANITOBA PATENT

By numerous tests by the best Bakers the above mentioned grades have been proven to be the best Flours in the market.

When buying Flour ask for Dafoe's, and patronize your home mill, thereby producing Bran and Shorts that you can purchase cheaper than the product of the Western mills, which has to be transported thousands of miles at great expense, and usually, when it reaches you, of inferior quality.

The grocer complains if the farmer or the mechanic sends to Toronto or to outside points for an article he can get at the home store just as good, but he does not hesitate to buy Flour from mills hundreds of miles away, and sell you an inferior Flour for more money than you can purchase the home product for, every bag of which is guaranteed.

CHOICE CORN MEAL and BUCK-WHEAT FLOUR always on hand.

FEED GRINDING a specialty, with the best feed mills known to the trade.

A full stock of the best ANTHRACITE COAL. Also in the market for the purchase of all kinds of Grain.

Ask for prices at the big Mill before purchasing your Flour, Feed or Coal.

NAPANEE,
16th January, 1906.

Berry Boxes, MADOLE & WILSON.

Corn-off takes off Corns and Warts too, no pain, price 15 cents at THE RED CROSS DRUG STORE—T. B. Wallace.

The news was received last week of the death at Youngstown, Alberta, of Mrs. Fred H. Hall, daughter of Mr. and Mrs. Wm. Fox, formerly of Forest Mills.

A man named Ledger, an escaped lunatic, from Brockville Asylum, appeared before the Magistrate on Thursday and was sent back to Brockville Asylum.

The Schooner Katie Eccles, is in the harbor with coal for Rathbun Co., and the Schooner Maggie L. was in with grain for J.R. Dafoe. The steam barge Arctic was also in the river.

Miss Mabel Irving, daughter of Mr. David Irving, passed away on Thursday night of last week after a lingering illness.

Just arrived Another car of LIVERPOOL SALT

Drainage of Farm Lands.

The Department of Physics at the Ontario Agricultural College is endeavoring to emphasize the importance to farmers of proper drainage of their land. This meets with such hearty approval by the Minister of Agriculture that he has authorized the College to send a representative among the farmers where requested, take the levels of their land, locate the drains for them, and give information gener-

QUEEN'S MEDICAL COLLEGE BURNED.

Valuable Documents and Instruments That Will Be Hard to Replace Were Destroyed.

Kingston, June 4.—Fire this morning completely gutted Queen's Medical College building. Little was saved beyond the books of the Secretary-treasurer. Valuable documents and instruments that will be hard to replace were destroyed or so badly damaged as to be useless.

The building and contents were valued at about \$70,000, and upon it there was only an insurance of \$22,000. The walls are standing and likely will be useful in remodelling the structure. The loss will be very serious.

GAS JET THE CAUSE.

The conflagration broke out shortly after seven o'clock and within an hour the fire was under control, but not before the whole interior, comprising three storeys was badly wrecked. The fire, it is thought, caught from a gas jet used in an oven where paraffine molds were in course of construction.

The anatomical and dissecting departments in the cellar will not be affected except through wreckage. The bacteriological and public health laboratories have been destroyed and for a time considerable delay may result in determining examinations.

This is the first fire at Queen's in thirty years. Four years ago an extra storey was added to the medical building at a cost of \$11,000, and this fall it was intended to remodel the place in view of the new biological building to be erected by the Government.

COLLEGE WILL BE RE-OPENED.

Dean Connell said this morning that while the fire was to be deplored, yet it will not interfere with the opening of the institution in the fall. Repairs and remodelling will at once be proceeded with, and everything will be ready for the students in September.

It Kills the Bugs.

Lewis Berger's Pure Paris Green (English) is sure death to Potato Bugs. It will not float on the water, but dissolves readily in it. One teaspoonful of this Green is sufficient for a pail of water. Sold in 1 lb. tins at The Medical Hall—FRED L. HOOPER.

Bethel School Promotion Examination.

II Class to III—Carman Salsbury, Clarence Ruttan, Fred Galbraith.

III Class to IV—Harry Salsbury, Horace Galbraith, Leita Mac Williams, Estella Manion, Adam Hamilton, Erma MacWilliams.

Music

Owing to several cases of misapprehension being recently brought before Miss McHenry's notice, she wishes to state that the opinion, which seems to be maintained, that she receives for instruction ONLY ADVANCED pupils, is erroneous. She will discontinue teaching through July and August, resuming it September first. Residence, Centre St.

Canoe Races.

The Napanee Yacht Club are arranging for a series of Canoe races, doubles and singles and they purpose having the first event on Friday evening, July 13th, starting at 7 p. m. The course will be from a point near the swing bridge, down the river a short distance, and return. This course has been picked upon with the idea that citizens may witness the races from the docks along the route. Prizes will be awarded the winners.

The Races Called Off.

The races to have taken place in the driving Park on Monday, were declared off, the rain making the track very muddy. A very large crowd had gathered in town to witness the sport and but for the rain a splendid day's sports would have been given. A very large assortment of "Jags" were in evidence and the lock-up proved all too small to properly accommodate the number of visitors to Chief Graham's lodging house.

Parish of Camden.

Bishop Mills visited this parish, July 1st and expressed himself as much pleased with the conduct of Divine Service and the services and the attendance of the parishioners. This was the first parish he officially visited after being consecrated Bishop of Ontario, and has always had a warm reception from the parishioners. At Newburgh 10.30 a.m. the Holy Communion Service was rendered with dignity and reverence, in the presence of a congregation that filled the church. The musical portions of the service reflected great credit on both Mrs. Adams, the organist, and the choir. Camden East at 3 p. m., a magnificent congregation greeted the Bishop, who spoke very helpfully to the Confirmation class, composed of eight males and six females. The service was very bright and hearty and the musical portion called forth many complimentary remarks, which the organist Miss Lulu Hinen and the choir which was at its full strength, deserved. Beautiful bouquets of flowers adorned the altar. Yarker, at 7.30 p. m., another splendid Confirmation service which warmed the Bishop's heart brought the happy day to a conclusion. The church was comfortably filled and lighted with electric lights, looked it's very best. Flowers tastefully arranged adorned the altar. All portions of the service taken up by the congregation in their usual hearty and earnest manner and the music showed clearly the care the organist, Miss Gertrude Connolly and the choir had given its preparation. Five candidates received the Apostolic Rite of laying on of Hands. Mr. A. T. Love, B. A., of Bishop's College, Lennoxville, most kindly assisted at all the services. The Rector, Rev. Edwin Radcliffe, B. C. L., and the six Church Warden—Messrs. J. R. Mowbray, and William Ewens, of Camden East, Messrs. Albert Benjamin and Arthur Benter, of Yarker, Messrs. William Sutton and J. J. Shorey, of Newburgh, tender to all who assisted and helped to make Sunday's services so attractive beautiful and spiritually helpful. Mr. and Mrs. Albert Benjamin kindly entertained the Bishop at Yarker.

July 2nd, the three Sunday schools of Camden East, Yarker, Newburgh, and friends held a grand union picnic at Varty Lake, by kindness of Mr. Galbraith. There was a very large attendance. The rain for a while delayed the children's games, but clearing up afforded opportunity for base ball, rowing, etc. There was a good programme of sports graded according to the ages of the children, and nice prizes. Candies were given to the children, who had a very good time, and returning home sang all the popular songs of the day.

An item appeared in the Belleville paper, on Thursday, to the effect that a young girl had been outraged at Napanee. On inquiry the story proved to be without foundation.

The annual excursion of the Bay of Quinte Railway Employees' Mutual Aid Association will be on July 26 from Deseronto to Glenora, Glen Island and Picton, per Strs. Niagara and Ella Ross.

Mr. Richard Ham, a former resident of this county, and brother of Mr. Perry Ham, who was in Napanee last week, died in Kansas city, on Thursday. Dr. Vrooman and Mr. Perry Ham left yesterday to attend the funeral.

The Canadian Order of Foresters will join their Deseronto brethren at Divine Service on Sunday. All Foresters who wish to go will meet at the hall at 8 a. m.

### Painting White.

If you intend painting white either inside or outside, use Sherwin-Williams Gloss White. It will cover more surface, wear longer, remain whiter, and cost you less than any other white paint. It will not chalk off like Pure White Lead. Ask us for prices before painting. The Medical Hall.—Fred L. Hooper, Sole agent for Napanee.

For calendar or room, address,

PRINCIPAL DYER, D. D.  
Belleville, Ont.

## WE HAVE IT

A Business Training Institution conducted along modern and practical lines by a staff of thoroughly competent instructors, thus insuring our patrons a Commercial education of the highest standard.

Frontenac Business College

Kingston, Ontario,

Courses—Shorthand, Typewriting, Civil Service, Bookkeeping, Penmanship, etc.

### Rates Very Moderate

All graduates placed in good situations. Write for Catalogue and particulars.

W. H. SHAW. T. N. STOCKDALE.  
President. Princip.

vale, is home for the holidays.

Mr. and Mrs. Sidney Scott, Napanee, spent a few days last week at A. Clements'.

Mrs. William Gordhouse, has returned home from Toronto, where she spent a few weeks visiting her parents.

George Howell is spending the holidays with his father in Cleland.

Miss Herchmer has returned home from Watertown, where she spent a few days.

Rev. R. Laird, of Kingston occupied the pulpit in the Presbyterian church on Sunday.

The most satisfactory Paris Green is "Berger's," it is soluble in the water and will not clog the sprayer. Get the genuine in 1 lb tin cans at Wallace's Red Cross Drug Store.

### LAPUMS WEST.

Plenty of rain, the grain crop has been destroyed in places by too much water. Haying has started here this week in real earnest.

Mrs. J. Irish, sr., has moved from Yarker here, and is staying at the farm.

Miss M. Hogeboom is much improved in health, after being under the Doctor's care for several weeks.

W. A. Lapum was home for several days last week.

Mrs. Lapum, returned home after staying in Kingston several days and attending the funeral of her sister, Mrs. Henzy.

Mr. R. Reid and daughter Mrs. S. Brown, were in Napanee, on Monday.

Visitors: Mr. and Mrs. B. Vanalstine Napanee, and Mrs. Robt. Sutherland, of Battersea at Mrs. T. Ham's; Mr. and Mrs. O. Cully, Deseronto, Mr. and Mrs. C. Bush, Camden East, at H. E. Bush's, on Sunday.

Use Prism Brand Floor Enamel. It dries quickly, has a varnish gloss, and is true to color. The Medical Hall.—Fred L. Hooper, sole agent for Napanee.

### YARKER.

The Anglican Sunday school of Newburgh, Camden East, and Yarker, had their picnic at Galbraith's grove, Yarker Lake, on Monday. Yarker Methodist Sabbath school will hold their annual picnic next Tuesday at Galbraith's grove.

Rev. Mr. Radcliffe, will entertain the members of the Anglican church choir to ice cream and cake at S. Winter's, Thursday evening.

Jennie Montgomery, Kingston, gave us a call.

Michael Morrison and family, Auburn, N. Y., spent a few days at the home of his parents here.

Yarkerites, to a goodly number, assembled at the home of Mr. and Mrs. Melville Cambridge, and presented them with a sum of money, as a token of regard for them ere their departure for Napanee, where they will for the future reside. They have purchased a business there.

Miss Jessie Winter, a graduate nurse of Kingston, hospital, has returned to Kingston, where she intends to locate and follow her profession.

The Free Methodists hold their quarterly services here next Wednesday, in Ewart's hall. All are welcome.

## Killed on the Track

DORA MORDEN INSTANTLY KILLED THURSDAY NOON AT CENTRE STREET CROSSING.

The deadly level crossing claimed another victim on Thursday, when Dora daughter of Mr. E. B. Morden car inspector of Bay of Quinte railway, was instantly killed by a Grand Trunk engine on the Centre street crossing. The dead girl was on her bicycle coming down town from her home, which is some distance above the Centre street crossing when the accident happened.

A ballast train was going east on the south track, and a freight engine was backing up from the water tank on the north track, and while the dead girl must have been watching the ballast train and endeavoring to cross the track as soon as the van of the train was clear of the crossing, she evidently did not see the freight engine, which backed down on her almost taking the top of her head off, and which must have caused instant death.

The crew of the freight engine claim they did not see anyone crossing the track, and were unaware that an accident had happened until they had backed some distance beyond the crossing, and were about to couple the engine to the train, when they were told by the brakeman that the engine had run over a girl.

Dr. Cowan, the coroner, passed over the track just ahead of the ballast train and was within hailing distance when the body was discovered, and after viewing the remains a jury was empanelled and an inquest held in Paul & Ming's undertaking rooms, where the remains had been moved to be prepared for burial.

The jurors having viewed the remains the inquest was adjourned until this evening at 8 o'clock.

The deceased girl was about thirteen years of age, an exceedingly bright girl, and her sad death has greatly shocked all the friends of the family.

## NEWS IN GENERAL.

"It's Good" if you get it at Wallace's—Napanee's Leading Drug Store.

Two Italians were killed and ten or twelve seriously injured by a collision at Galt.

William Jennings Bryan has offered to accept the Democratic Presidential nomination if it is offered to him.

Fishing Tackle, all the new Baits, Landing Nets, Gaff Hooks, Reels, Lines, Jointed Poles.

BOYLE & SON.

The second reading of the Lord's Day bill took place in the Senate without a division, and it is expected the measure will speedily pass.

Liberal members of Parliament have presented Hon. Chas. Fitzpatrick with a cabinet of silverware, a valuable stick pin and a set of gold cuff links.

The Senate changed the name of the Lord's Day bill to the Sunday bill, and after amending the measure reported it, and it now stands for third reading.

Binder Twine, Plymouth Special and Deering Hay Fork Rope and Pulleys, Binder Covers.

MADOLE & WILSON.

The Steamer Cervona, from Montreal, for London, is ashore near South Point, Anticosti, and the steamer Angola of the Canadian-Mexican line is on the rocks near Louisburg, Nova Scotia.

In Parliament on Tuesday, the bill repealing the pensions to ex-Ministers was reported, the remaining estimates were passed, and the supply bills advanced. The Premier announced prorogation for to-morrow.

In Parliament the House disposed of estimates for the Agricultural and Postoffice Departments on Saturday. Mr. Fielding announced that the anticipated reorganization of the Finance Department would take place on the 1st of November when Mr. Courtney retires.

In Parliament on Monday Sir Wilfrid Laurier denied the rumor that the Governor-General had recommended certain gentlemen for birthday honors on his own responsibility. Good progress was made with the estimates, and Mr. Fielding announced that there was little business remaining for to-day and prorogation would depend on the Senator's disposition of the Lord's Day act.

On page 8 will be found announcement of third annual six day excursion to Montreal and Ottawa per Steamer Aletha. The growing popularity of this event, is evidenced by the numerous enquiries and bookings of former patrons and, many new ones. "Finest Water Trip in America," the verdict of past two seasons. The Thousand Islands; The Rapids of the St. Lawrence; The Grandeur of the Ottawa River; and the marvellous beauty of the Rideau (all to be seen by daylight); with a chance to visit Canada's commercial and political capitals are among the many attractions.

Two dastardly attempts at belt cutting and arson look place recently at Deseronto. On Wednesday last somebody unknown, cut the big belt which runs the machinery of the cedar mill. The belt was not cut through, but would have soon broken, which probably would have caused many lives. The engineer discovered the cut just as he was starting up. The same night somebody started an incendiary fire in the mill which was discovered and extinguished. On Saturday the belt was cut again. A detective is now working on the case, and the town is very much excited. Some enemy of the Rathbun company is believed to be the perpetrator.

Deseronto, July 10.—Mr. Levi Gould an aged resident of Tyendinaga, about two miles from this town, while in Mr. W. H. Stafford's store this morning met with a very serious accident, which will probably prove fatal. He was in the act of assisting one of the clerks to take down some pitchforks from a shelf, when he slipped, falling about thirteen feet to the basement below, fracturing two ribs and sustaining internal injuries. As soon as possible the sufferer was taken to a nearby doctor's, where a further examination showed that he had also fractured his skull. He has not yet regained consciousness. He is an old man of 72 years, and is very highly respected in this vicinity.

Napanee Branch, W. A. BELLHOUSE, Mgr.  
Yarker Branch, E. R. CHECKLEY, Mgr.

CLERK'S NOTICE OF FIRST POSTING OF VOTERS' LIST.

Voters' List, 1907, Municipality of Richmond, County of Lennox and Addington

Notice is hereby given that I have transmitted or delivered to the persons mentioned in sections eight and nine of the Voters' List Act, the copies required by said sections to be so transmitted or delivered of the list, made pursuant to said Act, of all persons appearing by the last revised Assessment Roll of the said municipality to be entitled to vote in the said municipality at elections for members of the Legislative Assembly and at municipal elections; and that said list was first posted up at my office, on the twelfth day of July, 1906, and remains there for inspection.

Electors are called upon to examine the said list, and, if any omissions or any other errors are found therein, to take immediate proceedings to have the said errors corrected according to law.

ABRAM WINTERS,  
Clerk of said Municipality.  
Dated this 12th day of July, 1906. 31b

WILTON

Rev. J. Teasdale addressed the Presbyterian congregation Sunday evening.

Rev. Drew, Montreal, preached in the Methodist Church Sunday morning and will preach there again next Sunday morning. Mr. Drew assisted the pastor on this circuit twenty-two years ago, and therefore found many changes in the faces of the congregation in this his first visit amongst us since that time.

Miss Florence Bradford, Petworth, is visiting at A. Burgess.

Anson Davis and daughter, Eleanor, Hamilton, and Mrs. Huizinga, Verona, N. Y., spent Saturday at Mrs. Owens'.

Auspices Eastern Methodist Church.

### EXPECTS LATE HARVEST.

Speaking of the latest crop reports from the West, on Saturday, Mr. F. W. Thompson, vice-president and managing director of the Ogilvie Flour Mills Company, Ltd., said:

"Our advices from the West are generally favorable. The growth, however, is very rank, and we do not look for the harvest to be general before the last week of August or the first of September. It is also impossible to make any predictions regarding the probable yield at the present time where the growth is running so much to straw, and we certainly do not look for so early a harvest as some people are predicting. Allowing that it will be generally headed out by July 10 or 12, the period of harvest would be then in about six weeks, which would mean from August 21 to 23, under ordinary conditions, but with so much straw this year, it will require from ten to fourteen days longer.

"It will be seen, therefore, that under favorable conditions, based on past experience, it is not reasonable to expect harvesting to be general before September 1, although it is quite possible that here and there favored spots may get started earlier."

Mr. Thompson added that up to date there had been some damage by hail. He noted that 1,200 acres had been destroyed on the night of July 3, at Manitou, Man., 2,000 acres at Grand View, and 1,500 acres at Oakville, but in the aggregate the quantity destroyed by hail did not go beyond the average of past years.

SEALED TENDERS addressed to the undersigned, and endorsed "Tender for Supplying Coal for the Dominion Buildings," will be received at this office until Thursday, August 16, 1906, inclusively, for the supply of Coal for the Public Buildings throughout the Dominion. Combined specification and form of tender can be obtained on application at this office. Persons tendering are notified that tenders will not be considered unless made on the printed form supplied, and signed with their actual signatures. Each tender must be accompanied by an accepted cheque on a chartered bank, made payable to the order of the Honourable the Minister of Public Works, equal to ten per cent of amount of the tender, which will be forfeited if the party tendering decline to enter into a contract when called upon to do so, or if he fail to complete the work contracted for. If the tender be not accepted the cheque will be returned. The Department does not bind itself to accept the lowest or any tender.

By order  
FRED. GELLINAS,  
Secretary.  
Department of Public Works,  
Ottawa, July 5, 1906.  
Newspapers inserting this advertisement without authority from the Department will not be paid for it. 31b

## A TALE OF SOUTHERN CHINA.

### CHAPTER XIX.

The landing was a critical performance.

Plympton anticipated some trouble, if any of the Chinese sailors who had gone overboard rather than face his fierce rushes had managed to cling to the sides of the junk.

Some of them would desire to go ashore, and even though they started the boat upon a second voyage, they could hardly prevent this, such was the advantage which darkness gave the enemy.

It was Hobson's choice with our friends, however, since no other avenue of escape opened to them.

Lord Rackett readily discerned from the progress of the boat that her bows would plunge against the shore line.

Plainly, then, they should be stationed in that section, ready to take advantage of the opportunity when it came.

Quick to act, he jammed the tiller and secured it hard alee by means of a bit of rope.

"It is time we made ready to leave this floating prison. Come, Mrs. Evans—allow me to assist you."

There was both admiration and respect in his voice and manner; once she had feared him as an enemy, but now she trusted him.

Lord Rackett, in standing between this fair woman and the cruel Chinese, had nobly redeemed his past, and proven his right to the name of friend.

They passed to the bow.

"I shall go first," said Plympton, as he picked up a rope and made a hitch of it over a wooden cleat at the stern of the junk, "and while I hold the boat's nose alongside the shore, do you, Larry, assist your cousin over."

Thus all arrangements were made as quietly as though they were preparing for a little excursion, an ordinary picnic, or something of the kind.

As soon as the boat ran up against the big Englishman was over, rope in hand.

Possibly the junk might have recoiled or sheered off only for the strength that was in his arms, but when he once stiffened his figure, it must needs be a mighty power that bent the English oak.

"Now then!" Larry had only waited for the signal, and when it came he led Avis across the little gap.

All were now safe ashore.

Lord Rackett had no further use for the boat, and in order to get rid of her he used his knife upon the cords that kept the matting sail aloft, with the result that it collapsed in a wreck.

Then with his foot he pushed the boat away, the current once more seizing upon the craft, and again her strange voyage was resumed.

It would never do to loiter here. Danger was imminent.

Some of the terrorized Chinamen who had been on the junk had undoubtedly gained the shore and were well aware of their landing.

Indeed, Plympton felt sure he had seen indistinct figures scuttling away on either hand, which he knew to be these fellows.

They had had enough so far as they were personally concerned, but the Chinese character, being vindictive, would not allow them to quit the game while the slightest chance remained to injure

thieving Celestials had taken advantage of that fact and stolen the road, for his opinion of Chinese character was on so low a scale that he actually believed they would crib the moon if given only half a chance.

Lord Rackett, however, begged to differ with his sarcastic little colleague; he believed the road was still there, and that in their wanderings they had possibly more than once been in close juxtaposition to it, but that, owing to the puzzle formed by the multitudes of cottages, they had been moving aimlessly, perhaps in a circle.

"We must hire a guide and take our chances," he gravely announced.

On the whole, the new risk amounted to very little, since Chinamen were abroad, and they had already been seen a dozen times.

So Lord Rackett led the way up to a fairly decent dwelling, such as there are in this over-crowded land of the dragon.

He cudgelled his brains in the endeavor to recall all he possibly could of the native tongue.

This was, no doubt, precious little—still, it might answer his purpose.

Avis had borne herself bravely through all, and won the admiration of her companions; still, they could not have expected less from one who for years had been the companion and mate of such an heroic man as Dr. Jack. So Lord Rackett beat his knuckles upon the door of the cabin, striving to throw as much authority into his summons as possible, for the Chinese have an abject respect for everything that smacks of imperialism, having learned during the centuries how cruel and remorseless the powers that reign may be.

The door was opened and a Chinaman appeared.

At once Plympton saw that he was above the average of his people, and his policy would have been to have used something of flattery when dealing with such a man, knowing full well how potent such a charm usually proves; but, alas, his lexicon was limited to but a certain number of hybrid phrases, and he feared he would be unequal to the task beyond a mere labored description of their condition as lost sheep desirous of being led to the fold.

He was especially careful to declare the fact that he was the representative of Great Britain in Canton, and also that if the other would lead them to the European section of the city they would load him with favors.

That the house-owner understood they could see from the way his features worked during the recital, a lamp within shedding its light in such a way as to give them this privilege.

From the hut came a peculiar odor, which Larry, who had picked up much knowledge during his travels, declared was caused by the smoke of opium.

Lord Rackett entered into a labored conversation with the man, who presently turned and went back into another room, upon which the linguist condescended to translate what had passed.

"I explained our position somewhat. He knows we are in trouble and wish to get back to our quarters in the city. He says he is a silkworm grower, and that these trees around his house are the mulberry, on whose leaves the worms feed while spinning their cocoons. At first he was loth to undertake the task I proposed, but when I made him a modest

## WAR ON THE ANARCHISTS

### FRENCH GOVERNMENT WANTS STRICT ENFORCEMENT OF ACT

#### The Reds Now Have an Easy Excuse When Landing on British Soil.

Special representations have been made by the French Government to the Government of Great Britain on the subject of joint measures to prevent Anarchist outrages.

The French Government is particularly anxious that the Aliens Act passed by Mr. Balfour's Government should be applied so as to exclude all persons suspected of Anarchistic sympathies, and that an understanding should be come to by which the police of both countries should keep in closer touch with one another.

When Sir Henry Campbell-Bannerman's Government relaxed the Aliens Act so that political offenders should not come within its terms, it was stated by a section of the French press that Herbert Gladstone's exemptions would make England the sanctuary of Anarchists compelled to flee from other countries.

#### AN EASY EXCUSE.

As matters now stand, the most notorious Anarchist need only say on reaching England that he is emigrating to escape the penalties of a political offence, and, according to the Government's instructions, the British immigration officers must give him the benefit of the doubt.

An influential officer of the French police the other day said that one of the greatest difficulties his subordinates have to cope with is the want of a systematized method of dealing with crimes of this description. For want of such a system the threads of an incipient plot are lost in four cases out of five.

He declared that if England would only agree to some method of watching the Anarchists she already harbors, and refused to receive others, a great deal of good would result to every country. The police of every capital would then look after their own Anarchists instead of casting them out to hatch fresh crimes unhindered in London.

#### PLOT EASY OF EXECUTION.

The nearness of Paris to London makes the execution of a plot that has been hatched in London an easy matter in the French capital.

The enormous number of travelers who cross the channel between France and England every day makes it almost impossible for French officials to exercise the same scrutiny over suspected persons as they can at frontier points converging from Paris.

The French Government is also heartily seconding the proposal for an international anti-Anarchist congress made by the Italian Government, and is anxious that it should be held with the least possible delay.

#### BUSINESS GIRLS.

#### Need Rich, Red Blood to Stand Worry and Strain of Business Hours.

Business overtakes a woman's strength. Weak, languishing girls fade under the strain. They risk health rather than lose employment and the loss of health means the loss of beauty. Thousands of earnest intelligent young women who earn a livelihood away from home in public offices, and business establishments are silent, suffering victims of overtaxed nerves and deficiency of strength because their blood supply is not equal to the strain placed upon them. Fragile, breathless and nervous, they work against time with never a rest when headaches and backaches make every hour like a day. Little wonder their cheeks lose the tint of health and grow pale and thin. Their eyes are dull, shrunken and weary; their beauty slowly but surely fades. Busi-

## KILLING THE COCKROACH

### BRITISH GOVERNMENT'S LONG HUNT FOR TRADE SECRET.

#### The Problem Was How to Make the Bugs Eat Plaster of Paris With Their Sugar.

Probably few persons are aware that the natural habitat of the cockroach is a British postoffice. Most of the buildings devoted to that purpose are old, all of them are dirty and every one of them is alive with roaches.

There are professional rat catchers and roach killers in all countries, but the methods they adopt are usually trade secrets, and probably no two men follow the same process. The only condition upon which they will work is that they shall have the building entirely to themselves from a certain hour at night until a certain hour in the morning and that no one shall be allowed to spy upon them.

By the time it is necessary to resume business the professional has carefully removed all traces of his work and is ready to depart for dirtier fields and pastures brown. What he has done during the voiceless hours of the night or what materials he has worked with are no one's business. Every roach in the place is dead and that is enough. The charge for such a night's work in England is £5—about \$25.

It must not be supposed that the British Government paid over this amount with regularity and frequency without making some effort to save that item of expense. On the contrary, it tried in every way to find out the roach killer's secret, but for a long time without success.

The only evidence it had to go upon were the dead roaches. When these were swept out it was remarked that the few found after the expert had gone

#### WERE AS HARD AS IRON,

in fact, they might have been intended for bric-a-brac. Their weight, also, seemed to be out of all proportion to their size and number.

One day someone with an investigating turn of mind dissected one of those roaches, and came to the conclusion that it was not a roach at all, there being nothing under his knife proper to a roach but the skin and legs. The interior was apparently a block of stone.

Several specimens of the genus *Cucaracha defunctus* having been submitted to chemical analysis, it was determined beyond question that the interior of the insect was composed entirely of plaster of paris and glucose, and it seemed that the glucose must have originally been sugar, which had been swallowed in conjunction with the plaster of paris, just as human beings swallow whisky in water.

Armed with this discovery, the services of the professional seemed no longer necessary, and plaster of paris mixed with sugar was plentifully sprinkled about a certain postoffice which had been selected as an experimental station or proving ground. So far from the stuff's killing off the roaches in that particular postoffice, it was observed that after the first night's feast there were probably double the number of cockroaches on hand, and that within a week every roach in town had apparently left its usual haunts and taken up its quarters at the postoffice.

Upon asking for scientific advice in the matter, the authorities were calmly informed that the increase was nothing remarkable, and that all the roaches on hand had probably been bred upon the premises, unassisted by immigration, since it was well known to naturalists that a single pair of healthy roaches, if well nourished and preserved from interference and accident would increase to 11,000,000 roaches within a year.

There being already about 1,000,000 roaches on the roving grounds the

either hand, which he knew to be these fellows.

They had had enough so far as they were personally concerned, but the Chinese character, being vindictive, would not allow them to quit the game while the slightest chance remained to injure those with whom they were at enmity. It was a plunge in the dark.

Even Lord Rackett, the best informed regarding the metropolis and its suburbs, had not the remotest idea as to their location, save that the fortunes of war had taken them below the city.

Nor was he acquainted with the roads leading thither, though prepared to believe they would find danger lurking on the route.

Brave hearts do not grow faint at shadows, and Plympton, having overcome tangible perils, was not apt to weaken at the prospect of being compelled to grapple with ghosts.

Like a wise leader, he first of all took their bearings before making a move.

Then, with Avis between her two valiant defenders, the trio walked across the field.

When the river was high this field undoubtedly became flooded, but fortunately at this season of the year it was dry enough to offer at least fair walking.

Beyond it they expected to discover the Canton road that Lord Rackett knew could not be far away.

Thatched cottages would then become plentiful, and the city's walls loom up.

This latter would be a joyful sight to their eyes.

Talk about shipwrecked mariners feeling a sense of exhilaration at sight of a sail, it could not exceed the delight that would come to this trio of storm-tossed waifs when they once more reached a place of safety.

Houses, such as they were, did begin to appear when they reached higher ground beyond the rice field, but as yet had run across nothing in the shape of a road.

Just at that moment they were in a humor to give much for a guide who could lead them, like an Asiatic Moses, out of the wilderness and to the borders of the Promised Land.

Alas! there was no cicerone handy, nor did they at first feel disposed to take the additional chances of trying to get one.

True, Lord Rackett knew a little pigeon Chinese, and could probably have made himself understood, since the natives around the metropolis, having rubbed up against foreigners more or less, were far from being as densely ignorant and bigoted as the people of interior provinces, where the mere sight of a "white devil" mounted on a modern bicycle was quite sufficient to start a murderous riot.

So they stumbled along among the cottages.

These were really so much alike, and abounded on every hand after the manner of a field of mushrooms, that gradually Plympton began to lose his bearings.

Once he grew confused; it was a difficult, nay, an almost impossible task for him to resume his leadership with the same confidence as before.

His was one of those open, frank natures that have no desire for concealment, even when the game has gone against them.

"I've lost my bearings, by Jove!" he announced, in a tone of sheer disgust. Larry had suspected it from the erratic manner in which their leader had moved of late.

Nor was he able to give any specific advice.

The heavens were clouded, so that they could not lay their course by the stars.

In a general way they knew where the city was situated, since it was reasonable to suppose the light in the sky came from the foreign island section of Shanghai, where modern appliances were not scorned when it came to looking after the comfort of those whom the pursuit of pleasure or business took out upon the streets after nightfall.

The obstinate refusal of that road to bob up caused them much anxiety; Larry even declared it to be his opinion that as no one was looking, some of the

He knows we are in trouble and wish to get back to our quarters in the city. He says he is a silkworm grower, and that these trees around his house are the mulberry, on whose leaves the worms feed while spinning their cocoons. At first he was loth to undertake the task I proposed, but when I made him a modest offer his head fairly swam, since it meant a fortune in Chinese eyes. He has gone for his hat and his outdoor clogs. We are in luck, my friends."

Larry hoped it would keep up, for Larry was rapidly becoming something of a pessimist, since misfortune seemed to take such keen pleasure in cutting them down so many times.

He had a secret idea that they were not yet out of the woods, and while uncertain as to what form the new danger might assume, he believed it was too soon to crow.

The Chinese guide presently appeared, equipped for the little journey; possibly he had fortified himself against bitter invectives on the part of his compatriots by a liberal potation of Indian hemp beverage.

Quite a crowd had meanwhile collected, and Lord Rackett surveyed the triple row of ugly yellow faces with a little apprehension.

Nor was this without warrant, for just as they were about to start he saw the crowd give way before a dripping figure, and in another instant the Russian of the drifting junk appeared in view.

(To be continued.)

### KEEP CHILDREN WELL.

Stomach and bowel troubles kill thousands of little ones during the hot weather. Diarrhoea, dysentery and cholera infantum sometimes come without warning and if prompt aid is not at hand the child may be beyond aid in a few hours. If you want to keep your children hearty, rosy and full of life during the hot weather give them an occasional dose of Baby's Own Tablets. This medicine prevents illness and cures it when it comes unexpectedly. And the mother has the guarantee of a government analyst that this medicine is absolutely safe. Mrs. W. J. Munroe, Sinton, S. C., says: "For more than three years Baby's Own Tablets is the only medicine I have given my children, and I think the Tablets invaluable for stomach and bowel troubles." Sold by all medicine dealers or by mail at 25 cents a box from The Dr. Williams Medicine Co., Brockville, Ont. Keep the Tablets in the house.

### BROKEN PROMISE.

"You advertise a homelike air about your place, do you not?" asked the guest.

"I do," replied the hotelman.

"You advertise that special effort is made to give a home atmosphere to the dining-room, don't you?"

"Yes, sir."

"Then how is that I have eaten four meals here and at none of them has anyone told me that the cook is going to omit, that the milkman is cheating us, that the Browns just must keep their dog out of the flower beds, and that I can't expect my dinner to be satisfactory if I do not get home in time for it?"

they work against time with never a rest when headaches and backaches make every hour like a day. Little wonder their cheeks lose the tint of health and grow pale and thin. Their eyes are dull, shrunken and weary; their beauty slowly but surely fades. Business girls and women look older than their years because they need the frequent help of a true blood-making, strengthening medicine to carry them through the day. Dr. Williams' Pink Pills are actual food to the starved nerves and tired brains of business women. They actually make the rich blood that imparts the bloom of youth and glow of health to women's cheeks. They bring bright eyes, high spirits and make the day's duties lighter. Twelve months ago Miss Mary Cadwell, who lives at 49 Maynard street, Halifax, N. S., was run down. The least exertion would tire her out. Her appetite waned and fickle, and frequent headaches added to her distress. The doctor treated her for anaemia, but without apparent results. A relative advised her to use Dr. Williams' Pink Pills, and after using but six boxes she says she feels like an altogether different person. She can now eat her meals with zest, the color has returned to her cheeks, and she felt better and stronger in every way.

Dr. Williams' Pink Pills cure bloodlessness just as food cures hunger. That is how they cured Miss Cadwell and it is just by making rich, red blood that they cure such common ailments as indigestion, rheumatism, headaches and backaches, kidney trouble, neuralgia and the special ailments which make miserable the lives of so many women and young girls. Sold by all medicine dealers or by mail at 50 cents a box or six boxes for \$2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

### YOU DRINK SAWDUST.

A Champion of Pure Food Ingredients and Honest Weights.

During the consideration of the pure food bill in the United States Senate, Mr. James R. Mann, of Illinois, championed the cause of pure ingredients and honest weights in food preparations. Mr. Mann said that medicines now on the market advertised to cure the opium habit, show, on investigation, enough opium to develop the habit. Most foods are not adulterated, he said, and since the pure food agitation, which began years ago, there has been a decided reduction in adulterations.

He read a letter from the German-American extract works, in which they told how to make all kinds of liquors. He said this firm claims to make any kind of liquor out of ethyl alcohol, with no liquor in it. Pepper, he said, is a fruitful source of adulteration, the "filler" being sold in five-ten weights, according to a letter which Mr. Mann read. Pepper berries, he said, were made out of tapioca colored with lampblack.

"The coffee that we drink, Mocha and Java," said Mr. Mann, "is generally adulterated with Brazil coffee and ground coffee with sawdust, and even breadcrumbs." Taking up a bottle marked "Maraschino cherries," he explained that the cherries had been picked green; that they were then bleached and colored with an aniline dye, and holding up a bright bit of cloth, he said, "This cloth was dyed with the same dye." Holding up a bottle with a light-colored liquid in it, Mr. Mann said it was "honey," yet it never saw a hive, much less a comb—it is fresh from the glucose factory.

"Freezine," he said, was a powder sold to preserve meat like cold storage. He admitted that it might keep meats from spoiling, but it was injurious to health, being composed of sulphite of soda and red coal tar dye.

### KEPT TAB ON HIM.

Why, Johnny, what are you doing pushing the cat on to Mr. Nicefello in that fashion?

Papa told me to stay in the parlor and keep Tab on him while he was here.

premises, unassisted by immigration, since it was well known to naturalists that a single pair of healthy roaches, if well nourished and preserved from interference and accident would increase to 11,000,000 roaches within a year.

There being already about 1,000,000 roaches on the proving grounds, the authorities concluded that the building would not hold the 648,000,000,000,000 which would be due within a month, so they sent for the professional and

### GAVE UP ANOTHER £5.

He shut himself up in the building about 9 o'clock that night and he departed with the dawn, and there was not a single living roach left in the place.

Careful chemical analysis of some of the carcasses showed not a trace of any vegetable or mineral poison; nothing but the same old stone interiors, made up of plaster of paris and sugar.

It was observed that when the post-office authorities put down the mixture themselves the roaches evidently liked it, but it appeared that they could pick out every particle of sugar and leave every grain of plaster. When the place was swept out in the morning and the mixture which had been spread the night before had been examined it was found to be absolutely free from sugar and could have been sold for calcined gypsum, commercially pure. What might have been the condition of the mixture used by the professional, if he spread anything, no one knew, because he left nothing behind.

After some years of delay and red tape, during which the professional gathered in his \$25 with regularity and frequency, a postal employee, after thinking the matter over, concluded that inasmuch as plaster of paris was found in cockroaches only after death it must have been introduced to the cockroach's anatomy by the professional. The secret evidently was not what to use, but how to make the insect swallow it.

To make it swallow the sugar was easy. Why was it that the roaches would swallow the plaster of paris laid out for them by the professional and would not touch that offered them by the government?

Mature deliberation led him to the conclusion that the reason was that the cockroach could distinguish between plaster of paris and the sugar, and that the professional must possess some secret drugs which he mixed with the other ingredients in such a manner as to blind the cockroach's fine sense of discrimination in such matters.

This led to a long series of experiments, during which the number of cockroaches in English postoffices increased until it reached the maximum recorded since the days of Rowland Hill. So successful were the British postoffice authorities in breeding roaches that the services of the professional had to be called in twice as often as they were before the postoffice went into the business.

### BUT THIS COULD NOT LAST.

Somewhere, sometime, surely, in the dark byways of official life, there must be found a man fit to grapple with any problem, no matter how immense. This much desired individual happened along about a year ago, hence the retirement of the professional to the undisturbed enjoyment of his well gotten gains.

Inasmuch as no drug or other admixture seemed to have the power to make the cockroach lose its fine power of discernment in the matter of the difference between plaster of paris and sugar, it would seem to be worth while to inquire by what sense or senses the distinction was made. This led to the discovery that the cockroach, while it might be very clever in some respects, has its limits in the matter of differentiation, and that if the sugar and the plaster of paris were absolutely alike in everything but taste, it would swallow both before it knew the difference. Having once swallowed—ah!

Microscopical examination of plaster of paris and sugar led to the discovery that what is known as icing sugar exactly resembles plaster of paris in the

Sunlight Soap is better than other Soaps but is best when used in the Sunlight way. Buy Sunlight Soap and follow directions

## Sunlight Soap

size of grain, the weight and the color. This was tried, but the result was only partly satisfactory, enough, however, to show that the secret was partly solved. The problem seemed to be to mix the two so thoroughly that they should be absolutely inseparable. This was done with machines, which sifted the two powders into the same receptacle with perfect equality, half and half of each.

When this scientifically prepared mixture was taken to the proving grounds and spread upon the floor there were no live roaches left in the morning. But as there was no professional there to clean up, the place was a sight, three barrowfuls of absolutely stone dead cockroaches being carried out of the place before business opened.

And to think that for 30 years they had been paying \$25 a night for every postoffice that had to be cleaned out, just because they did not know that little secret.

### A BANK'S VERY STRONG SHOWING.

The forty-second annual meeting of the Shareholders of the Merchants' Bank of Canada was held in Montreal on the twentieth instant. This institution has an eminent board of directors and has numbered among its officers some of Canada's greatest business men. An able directorate like this undoubtedly influences a bank's business, and this fact is probably in a measure responsible for the splendid accumulation of a rest fund of more than three and a half millions and a remarkably large proportion of assets immediately available. These two points mean great strength from the depositors' standpoint and should be carefully investigated and compared when considering a bank for deposit purposes.

The Merchants' Bank in the year just closed earned in net profits about three-quarters of a million, and carried forward two hundred thousand dollars of this to the rest fund. One hundred thousand dollars was written off the Bank Premises account. The notes in circulation amount to \$3,984,050, an increase of about \$300,000 over 1905. Deposits at call amount to \$11,349,169.99, while deposits subject to notice total \$22,834,055.89. The total assets, however aggregate \$49,541,955.27, and of this \$19,526,486.54 are immediately available. The capital stock is \$6,000,000; the rest fund \$3,600,000, or over 50 per cent. of the bank's capital. The surplus profits carried forward this year after payment of dividends and addition to rest fund and officers' pension fund amount to \$74,596.19. The payment of quarterly dividends, beginning with the current financial year, was decided upon.

These facts and figures, when carefully analyzed, show conservative, though progressive, up-to-date management. One important indication, in particular, of the confidence of the depositing public in this institution is the very marked increase of deposits over last year. It seems that the increase was general throughout the year, and was not the result of any large individual deposits, and, therefore, show special and uniform progress in this department.

Mr. E. F. Hebden has been acting general manager for the past year, and the very satisfactory position of the bank in this year's statement made his permanent appointment as general manager a foregone conclusion. It is safe to say that Mr. Hebden will carry out the safe principles and the large conservative development of this old established institution.

### BIG TRIP TO CLEAR HIS NAME.

Man Returns to Britain When Accused of a Crime.

### VOLTS VS. GREEK.

Sir Frederick Treves' Views on the Future of Education.

"Men are beginning to find that a knowledge of volts and amperes is of more utility than an intimate acquaintance with the Greek Testament," said Sir Frederick Treves on the occasion of presenting prizes at the Leys School at Cambridge, England.

"The advance of science has revolutionized our methods, and the stress of modern life has completely revolutionized our needs," he continued.

"Such is the utilitarian spirit of the age, and such the pressure of modern life, that pure culture has become a qualification of depreciated value, and for the scholarly man there seems not to be the demand or place there formerly was.

"A lad who has to make his way in the world must regard his education with sadly commercial eyes.

"Even as dull a thing as the last Board of Trade returns must be of more value to him in his future life than the odes of Horace.

"It comes to this, therefore—that the schoolmaster of to-day must realize that he has not only to make a man of a boy, but a specific man—a man of business, a man of science, a man with a definite profession.

"The modern cry is for specialized knowledge, and the groundwork which of necessity must underlie that knowledge is a very wide understanding to meet the modern needs.

"The machinery of teaching is being changed. The lecturer is being replaced by the demonstrator, and the lecture theatre by the laboratory."

### THE WALKING PARSON.

Vicar of Fashionable Watering Place Believes in Long Tramps.

The Rev. A. N. Cooper, M.A., vicar of Filey, the fashionable Yorkshire seaside resort, by his long walks in the past twenty years has earned the title of "The Walking Parson." At present the reverend gentleman is engaged on a 600 miles walk in Sweden. These long tramps are Mr. Cooper's ideal way of spending a holiday, and the seeing of other countries. He commenced in 1886, when he walked from Filey to London, but that walk fades into significance when compared with subsequent efforts. In 1889 he had his first foreign tour, when he walked from Hamburg to Paris. In 1890 he tramped across Belgium, and two years later walked round Holland. In 1900 he walked from Filey to Venice in 1903 to Monte Carlo, and in 1904 he footed it over the Pyrenees into Spain. He walks on an average 27 miles a day. He is a tall, well-built specimen of muscular Christianity, and, in addition to being an able writer, is also an interesting lecturer.

It Has Many Offices. — Before the German soldier starts on a long march he rubs his feet with tallow, for his first care is to keep his feet in good condition. If he knew that Dr. Thomas' Electric Oil would be of much better service he would throw away his tallow and pack a few bottles of the Oil in his knapsack. There is nothing like it.

Mistress (soliloquizing): "I'm afraid this hat's rather out of date." Maid: "Oh, no, mum. It's quite fashionable. Cook has just bought one exactly like it."

Weak and Pale Women foolishly keep thin when by the use of "Ferro-China," the best tonic, they could very quickly recover their health and strength. Try it.

Father—"Sarah, I don't like that fellow who comes here to see you." Sarah—"I don't see why not, pa. I'm sure he bears the impress of a gentleman." Father (wriggling his foot)—"If he comes here he'll bear the impress of another gentleman."

A Pleasant Medicine. — There are some pills which have no other purpose

## BIG TRIP TO CLEAR HIS NAME.

### Jan Returns to Britain When Accused of a Crime.

A voyage of 3,000 miles to clear his name from the suspicion of a crime is the remarkable feat of a man named William Fleming, of Scarborough, England.

Fleming is an ex-soldier. Some time ago he went to America to seek fortune, and found what, to a man in his humble position, was a good post. A few weeks ago he received a letter from his wife, saying he was suspected of breaking into a house and stealing \$140. Fleming soon made up his mind what to do. He threw up his work, got on board a cattle boat and worked his way to Liverpool. From that port he went to Hull, and gave himself up to the police. They would not take the charge, so he tramped as far as the police station at Scarborough.

"I am innocent," he said, "but I want to be proved innocent. Arrest me." The other day he was brought before the magistrate and discharged without stain on his character. The mission for which he crossed the Atlantic was accomplished.

There is an element of pathos in the strange story. Fleming's father, who was in New York, was in delicate health and so shocked by the news of the accusation that he died. Another point is that his sense of honor has been his ruin in a money sense. He is now penniless and out of work. But he still looks on life cheerfully, and hopes to be able to work his way back to America soon.

"I have cleared my character," he says, "and that's what I came back for."

## A PLAGUE OF TIGERS.

### Chance for Hunters of Big Game in the Irrawaddy Valley.

The British shikarra need not leave its battery idle, even if big game in Africa has become too scarce to be worth the cost of pursuit. It has only to turn its footsteps to the Irrawaddy Valley to secure quite an amplitude of that most heroic of all field sports, tiger hunting.

For some reason or other Mr. Stripes has begun to colonize that locality on quite an extensive scale, even invading villages at night and taking heavy toll of their inhabitants. The natives, much on their credit, offer all the resistance in their power, but, wretchedly armed as they are, the intruder takes little harm from their fusillades. Here, then, is an excellent opportunity for the well-armed British sportsman.

Burma is more accessible than the African interior, and also a far pleasanter and healthier country to knock about in. And who will deny that tiger hunting affords more exciting sport than potting wild elephants or hippopotami? Those who pursue on foot the great cat carry their lives in their hands every moment, while even from elephant back or from a "mahan"—a platform constructed in a big tree—there is always a possibility of a combat at close quarters.

The strongest argument for the intervention of the British Nimrod is the humanitarian; it rests with him and with him alone to save the lives of hundreds of unfortunates.

# SUPPORT

SCOTT'S EMULSION serves as a bridge to carry the weakened and starved system along until it can find firm support in ordinary food.

Send for free sample.

SCOTT & BOWNE, Chemists, Toronto, Ont. sec. and \$1.00; all druggists.

Father (wriggling his foot)—"If he comes here he'll bear the impress of another gentleman."

**A Pleasant Medicine.**—There are some pills which have no other purpose evidently than to beget painful internal disturbances in the patient, adding to his troubles and perplexities rather than diminishing them. One might as well swallow some corrosive material. Parmelee's Vegetable Pills have not this disagreeable and injurious property. They are easy to take, are not unpleasant to the taste, and their action is mild and soothing. A trial of them will prove this. They offer peace to the dyspeptic.

**Customer** (after ten minutes' chewing in vain)—"Waiter, what's this?" **Waiter**—"Beef, sir." **Customer**—"Well, I've heard of the iron horse and the brazen calf, but I never came across the indiarubber cow before."

**Sunlight Soap is better than other soaps, but is best when used in the Sunlight way. Buy Sunlight Soap and follow directions.**

**With**—"Well, there's one thing about Rington, he's always ready to confess his faults." **Slow**—"Nonsense! Why he's always bragging about being self-made." **"Of course. That's just it."**

**Hard and soft corns cannot withstand Holloway's Corn Cure; it is effectual every time. Get a bottle at once and be happy.**

**Miss Gabbie**—"And she accused me of relaying gossip about the neighborhood." **Miss Sharpe**—"The ideal." **Miss Gabbie**—"Positively insulting, isn't she?" **Miss Sharpe**—"Yes; for you're really a wholesaler."

**Weak and Pale Women** foolishly keep this way when by the use of "Ferrovin," the best tonic, they could very quickly recover their health and strength. Try it.

"My motto," said the new lodger, "is 'Pay as you go.'" The landlady shook her head. "It wouldn't do in my business," she said. "A man might remain a month, and then forget his motto when he went. My motto is 'Pay Saturday night or go.'"

**An End to Bilious Headache.**—Biliousness, which is caused by excessive bile in the stomach, has a marked effect upon the nerves, and often manifests itself by severe headaches. This is the most distressing headache one can have. There are headaches from cold, from fever, and from other causes, but the most excruciating of all is the bilious headache. Parmelee's Vegetable Pills will cure it—cure it almost immediately. It will disappear as soon as the Pills operate. There is nothing surer in the treatment of bilious headache.

## DEEPEST GOLD MINE.

Australia Has Shafts Sunk Over 4,300 Feet.

Australia now possesses the deepest gold mine in the world. Within the last few weeks the shafts at the New Chum Railway at Bendigo, Victoria, have been sunk to a depth of over 4,300 feet, and the quartz there topped has been sampled and crushed, with the result that a yield of gold equal to an ounce per ton has been obtained.

The operations in the mine have been tested by Government officials, in view of the fact that never before in the world's history has gold been obtained from so low a depth as three-quarters of a mile.

The Victorian Director of Geology, E. J. Dunn, in the course of an official report upon a sample from the 4,300-foot shaft of the New Chum, writes:

"This remarkable specimen of ariferous quartz is evidence of the vast stores of wealth in gold possessed by the State. It is a guarantee of the stability and progressive prosperity of Bendigo that such rich ore exists at such great depths. The winning of such ore from a vertical depth of over three-quarters of a mile from the surface is an achievement of which Bendigo miners may justly feel proud."

## CHILD SAVES WOMAN.

### Burglar Bent on Murder Relents and Aids the Victim.

A case has been reported to the police in which the pleading of a girl of 11 softened the heart of a burglar bent on murder at Creteil, France.

Mme. Rollet and the girl, who is her niece, were awakened by an unusual noise and were alarmed to see a man stride into their room. The woman screamed and the burglar gripped her by the throat and struck her with a knife.

The terrified child fell at the burglar's feet, imploring him to spare her aunt's life.

The man thereupon sat on the edge of their bed and told them he had been forced to turn burglar because he could not get honest employment. He assured Mme. Rollet and her niece that no harm should befall them if they kept quiet while two of his friends below collected the "swag."

The burglar then got the water basin and carefully washed the blood from Mme. Rollet's wound. He applied bandages and with a low left the room and went away with his companions.

## YOUR SUMMER OUTING.

If you are fond of fishing, canoeing, camping or the study of wild animals look up the Algonquin National Park of Ontario for your summer outing. A fish and game preserve of 2,000,000 acres interspersed with 1,200 lakes and rivers is awaiting you, offering all the attractions that Nature can bestow. Magnificent canoe trips. Altitude 2,000 feet above sea level. Pure and exhilarating atmosphere. Just the place for a young man to put in his summer holidays. An interesting and profusely illustrated descriptive publication telling you all about it sent free on application to J. D. McDonald, Union Station, Toronto, Ont.

## HIS EVENING IN.

Mr. Jymes was a member of six secret societies. A friend tried to persuade him to join another one.

"No," he said. "I want to spend my Sunday evenings at home."

Nearly all infants are more or less subject to diarrhoea and such complaints while teething, and as this period of their lives is the most critical, mothers should not be without a bottle of Dr. J. D. Kellogg's Dysentery Cordial. This medicine is a specific for such complaints and is highly spoken of by those who have used it. The proprietors claim it will cure any case of cholera or summer complaint.

"Does your wife take any interest in current politics?" asked the earnest woman. "Naw," replied Mr. Farmon, "she don't. But if it's currant jelly or currant pie, why, I believe she could tell you more things about 'em than you ever dreamt of."

## MARTYRDOM DESCRIBED

(Kingston Man tells how he Suffered and How he was Released.

"For years a martyr," is how Chas. H. Powell of 105 Raglan Street, Kingston, begins his story. "A martyr to chronic constipation, but now I am free from it and all through the use of Dr. Leonhardt's Anti-Pill."

**CHAS. H. POWELL.** Many who are now suffering from this complaint will be glad to learn from Mr. Powell's story that there is hope for the most stubborn case. He continues: "I was induced to try Anti-Pill by reading the testimony of some one who had been cured of constipation by it. I had suffered for eighteen years and had taken tons of stuff recommended as cures but which made me worse rather than better. Doctors told me there was no cure for me."

Dr. Leonhardt's Anti-Pill is for sale by all Druggists or by The Wilson-Fyle Co., Limited, Niagara Falls, Ont.

Mr. Powell will verify every word of these statements.

## RAUPEE SUFFERERS REALIZED.

### Had Sold His Body to Medical School for an Annuity.

A miser's hoard was brought to light in a strange way in Paris the other day. A ragpicker named Mace returned drunk to an attic he occupied in the Latin quarter. There he upset a candle, set the place on fire and was burned to death.

While searching among the bundle of rags with which the room was littered the firemen and police found over \$3,000 in bank notes, and also papers which showed that the ragpicker had recently purchased an annuity of \$240.

For years past the man had gained a livelihood by ragpicking and street begging. He possessed a physical abnormality, which he had also turned to account. For a yearly payment of \$120 he agreed that the University Medical School should have his body after death. The deal has proved an unprofitable one for the surgeons, as all that is now left for them are a few blackened bones.

One trial of Mother Graves' Worm Exterminator will convince you that it has no equal as a worm medicine. Buy a bottle and see if it does not please you.

**Wilson's FLY PADS**

**\$5. BUYS A HOME**

Forty years ago you could have bought lots in Denver for \$100 on which now stand stores which bring \$15,000 a year rent.

Denver has a population of 200,000. In five years the population will reach the half-million mark.

Ordinary residence lots in districts already populated are laid out from \$750 to \$2,000 each.

**WE ARE LAYING OUT A NEW ADDITION**  
**Washington Heights**

The highest and most slightly addition in Denver furnishing a perfect view of Pike's Peak and the Rocky Mountains for a distance of 75 miles. Overlooking Washington Park. An ideal spot.

**Lots 25x125 Feet for \$100**  
\$5 CASH - \$5 PER MONTH

These lots are bound to double in value within the next year or two, and before many years are up to be sold at \$1,000 or more. No time to lose. See and fall the moment.

Call here for those who expect property. Home and lot and more about it.

**THE CENTURY LOAN AND TRUST CO.**  
The Century Building " " " " Denver, Colorado  
If you have property to sell in Denver, write us.

# BRITAIN IN PERIL OF HOLY WAR

## A Momentous Statement by the Foreign Secretary.

A despatch from London says: Several weeks ago cable despatches called attention to the unrest in the Moslem world, and the serious possibility of the invocation of a jihad, or holy war. Since then the danger has in no wise diminished, although the public is entirely unaware of it.

Neither in Parliament nor in the press had the matter received the least serious attention until now. Consequently no small sensation will be created in the country by a grave declaration Sir Edward Grey, Secretary of Foreign Affairs, launched with dramatic suddenness in the House of Commons on Thursday night. When it is borne in mind Sir Edward Grey is one of the strongest and least emotional men in the Cabinet, and that he is wholly indisposed to sensational utterances, the significance of his speech will be more fully realized.

The Foreign Minister, in a solemn tone, said:—

"All this year fanatical feeling in Egypt has been on the increase. It has not been confined to Egypt, but has spread along the north of Africa. It was for this reason that a little time ago the garrison had to be increased. The attack on British officers, which happened recently, is something which would not have occurred a little time ago, and would not have occurred to-day but for the fanatical feeling which has spread in Egypt this year.

"Since the attack took place, even before the trial of those condemned, one or two disagreeable and significant attacks had been made on British subjects, at all events on Europeans, by natives. We may be on the eve of further measures necessary to protect Europeans in Egypt, and for the House of Commons to question the decision of

the tribunal in Egypt, composed of the highest English and Egyptian judges, is bound to have the effect of weakening the authority of the Egyptian Government.

### MAY LEAD TO EXTREME MEASURES.

"As things are now, I say, deliberately, and with a full sense of responsibility, that if the House does anything at this moment to weaken or destroy the authority of the Government as it exists in Egypt you will be face to face with a very serious situation, because if the fanatical feeling in Egypt gets the better of the constituted authority of the Egyptian Government, you will be face to face with the necessity for extreme measures.

"I know the House is not going to allow Lord Cromer's work to be swept away by a rush of fanatical feeling. I know the House is determined not to allow the work done in Egypt to be undone, but if we say anything in debate now to weaken the authority of the Egyptian Government they may find themselves at any moment forced to take measures, unconstitutional measures, which we are bound to take in an emergency, and which no one would regret more than the present Government and the present House of Commons, though they might be compelled to do so."

No pronouncement uttered this session, or long previously, has so deeply and painfully impressed the House.

### BRITISH SOLDIERS ROBBED.

A despatch from Alexandria, Egypt, says: A British soldier has been attacked, robbed and permanently maimed by natives in a suburban street. Such an incident would have been at one time inconceivable. The assailants were arrested.

## THE WORLD'S MARKETS

### REPORTS FROM THE LEADING TRADE CENTRES.

#### Prices of Cattle, Grain, Cheese and Other Dairy Produce at Home and Abroad.

Toronto, July 10. — Flour—Ontario wheat patents are quoted at \$3.15 to \$3.20 in buyers' sacks, outside, for export. Manitoba first patents, \$4.40 to \$4.50; second patents, \$4.10, and strong bakers', \$3.80 to \$4. Toronto.

Bran—The market is steady at \$15 to \$15.50 in bulk, outside. Shorts are quoted at \$18 to \$18.50 outside.

Wheat—No. 2 white quoted outside at 81½¢; No. 2 red winter at 81½¢, and No. 2 mixed at 81¢ outside. No. 1 Northern Manitoba quoted at 86 to 86½¢ lake ports; No. 2 Northern quoted at 84 to 84½¢ lake ports.

Corn—No. 2 American yellow is quoted at 59½ to 60¢, to arrive, Toronto.

Oats—No. 2 white nominal at 40½ to 41¢ to arrive, Toronto; at 38½¢ outside west, and at 39¢ east.

Peas—No. 2 quoted outside at 82¢. Rye—No. 2 quoted at 61¢ outside.

#### COUNTRY PRODUCE.

Beans—Hand-picked selling at \$1.75 to \$1.80, and primes at \$1.50 to \$1.60.

quoted at \$4 to \$4.35 per cwt., bucks at \$3 to \$3.50 and culls at \$2.75 to \$3.50. Spring lambs are quoted at 6 to 7½¢ per lb.

Hogs—Local dealers quote \$7.60 per cwt. for selects and \$7.35 for heavies, fed and watered.

### HARVEST TEN DAYS EARLIER.

Will be Well Started in the West Before Middle of August.

A despatch from Winnipeg says: "According to the present indications from all parts of the province, the harvest this year will be ten days earlier than ordinarily," said J. J. Golden, Provincial Commissioner of Immigration, on Saturday night. "If the weather continues favorable we will be in the midst of harvesting by the middle of August, while harvesting will be well started before that. It is calculated that six weeks after the wheat heads out it is ready for cutting, and the grain is all headed, while in some places it has been headed three weeks. Of course, the six weeks' calculation cannot be depended on implicitly. Last year the grain ripened with a rush, and was ready for the binder eight days before it was expected. It ripened in four and a half weeks after heading out, instead of six. I saw bearded barley at Headingly the other day that can be cut this week."

Mr. Golden estimates that it will take 25,000 men to garner the harvest. Last year 30,000 men were employed.

### FOUR MEN KILLED.

#### Accident on Temiskaming Line Near New Liskeard.

A New Liskeard, Ont., despatch says: Four men were killed and several injured on Friday night as the result of the breaking of a coupling on a train on a heavy grade about 35 miles north of this place. The dead are: L. C. Porter, prospector, Yarmouth, N. S.; L. Mills, prospector, probably Detroit; P. Gordon, cook, Carleton Place; G. Stearns, Grand Trunk Pacific agent, New Liskeard.

The accident occurred at a point known as Swanson's Cut, where there is a grade so heavy that an auxiliary engine is kept on hand to push the trains over the rise. A heavy train, under Engineer O'Connor, made a dash at the grade, and the auxiliary, in charge of Engineer Brown, followed, to lend assistance. When the train had climbed a considerable distance, Brown noticed that the two rear coaches had broken away, and were rushing down upon him. He brought his engine to a standstill, but had not time to back away before they smashed into his cowcatcher. The first of the passenger coaches stopped dead.

Meanwhile the engineer of the train, finding that his cars had broken away, steamed after them down the grade, and smashed into the baggage car with the full impact of the heavy train-load of lumber and general freight. The passenger car was thrown on its side, telescoping as it turned into the baggage car. Porter, Mills, and Gordon were standing on the platform between the two cars, and were instantly killed. Stearns, unable to reach the bell-rope on account of the block of panic-stricken passengers, rushed for the forward door but was thrown to the floor and pinched by a mass of debris. His leg was broken in two places, and he was otherwise injured. He was taken to his home in New Liskeard, but died on Saturday afternoon. None of the other passengers were seriously injured, although several were bruised and cut by flying glass.

### SHOT WIFE DEAD THEN HIMSELF.

#### Terrible Deed Committed by Victoria County Farmer.

A despatch from Lindsay says: A horrible tragedy occurred on Wednesday morning a few miles from the Village of Kirkfield. A well-known farmer, Duncan McArthur, aged about 35 years, and his wife, some years younger, were found outside their home, the indications being that McArthur had first killed the woman and then committed suicide.

McArthur and his wife attended a picnic at Glenasm on Tuesday, and appeared to enjoy themselves. They drove home in the evening, and on the way hired a man named Bell to work for them. Wednesday morning Bell walked to the farm to begin his duties. As he approached the house by way of the garden he encountered the body of McArthur with the whole top of the head blown off. An old shotgun owned by McArthur lay at his side and close by was the stick which had probably been used to explode the charge.

Thinking the deed had been done unknown to the wife Bell hurried towards the kitchen, and just outside the door came upon the body of Mrs. McArthur, dead, the entire left side of the face and head having been torn away by a shot. Bell then ran back to the village and gave the alarm.

A note in McArthur's handwriting was found, in which he stated, among other things, that he had stabbed his wife at 7.40 a.m. and intended shooting himself at 8.15.

### CARS CRASH INTO TRAIN SHED.

#### Panic Among Passengers in Depot at the Falls.

A Niagara Falls, N.Y., despatch says: One of the most remarkable freight

## YOUNG FOLKS

### A GUESSING GAME FOR BEDTIME

A little boy once had a horn,  
I think he lived among the corn,  
And wore a pretty dress of blue;  
I've nearly told his name to you.  
Little Boy Blue.

A boy and girl walked up a hill,  
But tumble, tumble down they came,  
And where's the water? Where's the pail?  
Of each poor child you know the name.  
Jack and Gill.

Somebody has a garden,  
We ask her how it grows,  
Such funny things she says are there,  
A-growing all in rows.  
Mary, Mary, Quite Contrary.

It's something about a supper,  
And something about a knife,  
And something about a boy that cried,  
And something about a wife.  
Little Tommy Tucker.

She had a dog and he could smoke,  
And dance and laugh and cry,  
This woman and her dog, you know,  
To find her name please try.  
Mother Hubbard

She sat upon a little stool  
To eat her food one day;  
A spider came and frightened her,  
And quick she ran away.  
Little Miss Muffet.

Who sat down in a corner,  
One Christmas long ago,  
And thought himself a good, good boy,  
While eating pie, you know!  
Little Jack Horner.

### LITTLE MISS BUD.

"Little Miss Bud," as she was called by those who knew her, could not walk; she had never walked. Her lower limbs were so deformed that no doctor on earth could set them right. She did not use crutches. Once a pair had been procured and she sat upon them, but she was so frightened and screamed, that her father lifted her off, and would not try the experiment again. That was before her mother died, and she was left alone with her father. He loved her tenderly and was as gentle in his care of her as any woman could be. "I'll never bring another into the place of the wife who lies under the sod," he said, to himself. "It would be worse than the crutches. Not but that I might get some one who would be good to my poor little bud. Still one never knows what a woman is until he's married to her."

And so it was that Bertha Byrd, as her real name was, reigned alone in the small flat her father rented near the car shops in which he worked, and from which he could get home to dinner. He also engaged a brisk, motherly Irishwoman to come in for an hour or two each day and keep the place in order.

Bertha's mother was French, brought up in a sweet village in Normandy. She had gone to that gayest of gay cities, Paris, as a girl, to earn her bread with an aunt who was a flowermaker. There she met and married a young machinist, who had been sent over from America with others to learn something for manufacturers. Many a tale she told their only child, a helpless cripple, of the simple ways of the peasantry in her early village home, and, later still, of "Paris, the beautiful." The little girl could almost fancy she saw it all, the parks, the boulevards, the flower gardens—though a great ocean rolled between.

But this was not all. As the years went by she taught her darling the art which the French have brought to such perfection, that of making artificial flowers. Oh how it colored and transform

Beas.—No. 2 quoted outside at 82c.  
Rye.—No. 2 quoted at 61c outside.

#### COUNTRY PRODUCE.

Beans—Hand-picked selling at \$1.75 to \$1.80, and primes at \$1.50 to \$1.60.  
Honey—Strained honey quoted at 82c to 9c per lb, and combs at \$1.50 to \$2 per dozen.  
Hops—14 to 17c per lb.  
Hay—Car lots of No. 1 timothy are quoted at \$9.50 to \$10 on track, Toronto; No. 2 at \$7 to \$8.  
Straw—The market is quiet at \$6 per ton.

Potatoes—Ontario stock in small lots from store, \$1 to \$1.10 per bag; East Delawares, \$1.25.

Poultry—Turkeys, fresh killed, 12 to 14c; spring chickens, 15 to 16c per lb, alive; hens, 9c per lb, alive.

#### THE DAIRY MARKETS.

Butter—Pound rolls are quoted at 16 to 18c; large rolls, 15 to 17c, and inferior at 14 to 15c; tubs, 14 to 16c. Creamery prints sell at 20 to 21c, and solids at 19 to 20c.

Eggs—18 to 18½c per dozen for candled stock.

Cheese—New are quoted at 12 to 12½c, the latter for twins.

#### HOG PRODUCTS.

Dressed hogs in car lots are nominal. Bacon, long clear, 12 to 12½c per lb in case lots; mess pork, \$21 to \$21.50; short cut, \$21.

Hams—Light to medium, 15 to 15½c; do, heavy, 11½c; rolls, 12 to 12½c; shoulders, 11½c; backs, 17 to 18c; breakfast bacon, 15½ to 16c.

Lard—Tiers.—11½c; Tubs, 11½c; pails, 12c.

#### BUSINESS AT MONTREAL.

Montreal, July 10.—Grain—Business on the local grain market was quiet today. Oats were still being traded in at 42½c per bushel for No. 4 oats, in store, 43c for No. 3, and 43½c for No. 2. Flour—Manitoba spring wheat, \$4.60 to \$4.70; strong balers, \$4.10 to \$4.20; winter wheat patents, \$4.30 to \$4.40; straight roller, \$3.90 to \$4.10; do, in bags, \$1.85 to \$1.90; extras, \$1.40 to \$1.50. Feed—The demand for shorts and mouille continues good, and an active business is passing in these lines at steady prices. Manitoba, in bags, \$18; shorts, 20 to \$21 per ton. Ontario bran, in bags, \$16.50 to \$17; shorts, \$20.50 to \$21; milled mouille, \$21 to \$25 per ton, and straight grain, \$28 to \$29. Provisions—Barrels heavy Canada short cut pork, \$23; light short cut, \$21.50; barrels clear fat bacon, \$22.50; compound lard, 7½ to 8c; Canadian pure lard, 11½ to 12c; kettle rendered, 12½ to 13c; hams, 14 to 15½c; breakfast bacon, 17 to 18c; Windsor bacon, 17c; fresh killed abattoir dressed hogs, 10.50 to \$10.75; alive, \$7.75 per 100 lbs. Eggs—Straight receipts, 15½ to 16c; straight candled, 16½ to 17c. Butter—Choice salted creamery, at 20 to 21c; unsalted, 21 to 21½c. Cheese—Ontario, 11½ to 11½c; Quebec, 11½c.

#### NEW YORK WHEAT MARKET.

New York, July 10.—Spot barely steady; No. 2 red, 90½c nominal elevator; No. 2 red, 91c nominal f.o.b. afloat; No. 1 Northern Duluth, 90½c nominal f.o.b. afloat; No. 1 Northern Manitoba, 91c f.o.b. afloat.

#### CATTLE MARKET.

Trade continued quiet at the City Cattle Market this morning.

Export Cattle—Choice are quoted at from \$4.80 to \$5.05, medium to good \$4.60 to \$4.75, bulls \$3.75 to \$4, light, \$3.25 to \$3.75; cows, \$3.50 to \$4.

Butcher Cattle—Choice are quoted at \$4.60 to \$4.85; medium to good, \$4.25 to \$4.50; bulls, \$3 to \$3.25; cows, \$3 to \$3.50; canners, \$1.50 to \$1.75.

Stockers and Feeders—Choice are quoted at \$3.50 to \$3.85; common, \$2.75 to \$3.25; short-keep feeders, \$4.60 to \$4.70; heavy feeders, \$4.60 to \$4.70; stock bulls, \$2 to \$2.25.

Milch Cows—Choice, \$40 to \$50; common \$30 to \$40; springers, \$25 to \$40.

Calves—Had a firmer tone at 4 to 6½c per lb.

Sheep and Lambs—Export ewes are

and a halt weeks after heading out, instead of six. I saw bearded barley at headingly the other day that can be cut this week."

Mr. Golden estimates that it will take 25,000 men to garner the harvest. Last year there were 17,000 men from Ontario and the West, and he thinks that the acreage and yield are sufficiently increased to require 8,000 more hands. Men to the number of 15,072 were distributed over the Canadian Pacific last year, and 1,266 over the Canadian Northern, while about 1,000 were required in the Winnipeg district.

#### NEW GOLD FIELDS.

Rich Discoveries in Temiskaming District, Quebec.

A Quebec despatch says: Hon. J. B. Prevost, Provincial Minister of Colonization, Mines and Fisheries, has left for the newly-discovered gold fields of the Lake Temiskaming district to investigate the rich mine discoveries and report to the Government on his return. Mr. J. A. LaRochelle, manager of the Temiskaming Navigation Co., writing on the subject of the new discoveries, says they are located two miles east of the Hudson's Bay Company's post at the north end of Lake Opastica, and the samples of gold shown by the prospectors are exceedingly rich. "The route by which the point of discovery can be reached includes a chain of navigable waters from the south end of Quinze Lake to the north end of Lake Opastica. There is a land portage from Villa Marie to the south of Quinze Lake, and the water route is navigable the whole way, except at one place, where there are rapids about an acre long."

This new discovery, added to that at Cobalt, has aroused fresh interest in the Lake Temiskaming district. The district is by no means a new one. It has simply been rediscovered, for near Villa Marie is pointed out the old Wright silver mine, over a hundred and sixty years old, and shown on a map of Canada made in 1774. It is a great highway for traders and contains millions of feet of timber, and down the lake can be seen old Hudson's Bay posts, forts, etc., and missions established by the Oblat Fathers in quaint old French towns with their large churches and small houses scattered here and there.

#### OWEN SOUND WILL APEAL.

Council's Action in Quashing of Local Option By-law.

An Owen Sound despatch says: The announcement of Mr. Justice Mabee's judgment in the action taken by William Sinclair to quash the local option by-law, carried at the last municipal election, which he gave in favor of the plaintiff, was received with evident signs of jubilation by the anti-optionists in town on Thursday, and with the opposite feeling by the local optionists. The latter immediately took action to appeal against the judgment.

A special Council meeting was held to discuss the situation. On motion of Mr. W. J. Christie it was decided by a vote of seven to one to immediately enter an appeal. Mr. W. H. McClarty, who opposed the motion, did so on the ground that the full text of the decision was not before the Council. The Mayor and Mr. Christie were appointed a delegation to at once wait upon the Provincial Secretary with regard to action respecting the issuing of licenses during the interval pending the hearing of the appeal.

#### TO BE CHRISTENED WILHELM.

King Edward Will Act as Godfather to Young German Prince.

A despatch from Berlin says: The son of the German Crown Prince, who was born on Wednesday, will be named Wilhelm. The christening will take place on Aug. 12.

A despatch from Vienna says that King Edward will go to Potsdam for the christening of the infant prince, and will act as his godfather.

#### CARS CRASH INTO TRAIN SHED.

Panic Among Passengers in Depot at the Falls.

A Niagara Falls, N.Y., despatch says: One of the most remarkable freight wrecks ever known in this city occurred at 2.30 o'clock on Friday afternoon, when eight cars at the rear of a long train jumped the track east of the N.Y.C. Falls Street Station. The derailed cars were pulled along until right in the station, and there they turned in all directions. Some of them ran along under the train-shed, tearing out the posts, so that the roof of half the shed plunged to the platform, portions being left supported by the cars. Three cars left turned to the south and went out in the depot yard, while a car toppled over against a Rome, Watertown and Ogdensburg train ready to start. There was a large number of people on the platform, but they saw the wobbling cars in time to get out of the train-shed before it fell. Women were crushed in the rush, but not seriously hurt. Had it occurred at the same hour of the Fourth hundreds would have been killed. Responsibility for the accident is placed on a broken flange of one of the wheels of a freight car. All tracks were blocked, but by night trains were able to pass.

#### DECOMPOSED BODY IN RESERVOIR.

Residents of an English Town are In a Quandary.

A despatch from London says: The townsfolk of Bradford are riven by a discussion whether to risk dinking their respective shares of the decomposed body of a man found in the reservoir or to empty the reservoir, at a loss of £3,721 to the ratepayers. The engineer of the waterworks declares it is safe to drink the water, because the reservoir contains 1,240,000,000 pounds of water, while the weight of the corpse was about 140 pounds. The contamination, therefore is so minute as to be negligible.

The hygienist view favors emptying the reservoir, pocketing the loss, as there is certainly the risk of ptomaines, which, unlike bacteria, cannot be extracted from the water by filtration or any other means. Moreover, the idea that the products of decomposition are diffused over the whole of the reservoir is a mistaken one. The water around the body would be highly contaminated, while the remainder might be almost free from contamination. Meanwhile the water is being used.

#### BACK FROM THE TOMB.

Hespeler Toad Lively After Sixteen Years' Imprisonment.

A Hespeler despatch says: While repairing the stone tower of the Evangelical Church here on Wednesday, the workmen released a toad which had been built into the wall. It must have been there since the tower was erected 16 years ago. The animal was apparently none the worse from its long confinement, but had assumed the color of the mortar which surrounded it.

#### NEW BRITISH GUN.

Details Reported to be in the Hands of a Foreign Power.

A Paris despatch says: The London correspondent of the Petit Parisien states that considerable nervousness prevails at the British Admiralty owing to the fact that a number of leakages of the highest importance have occurred during the last few months. There are, says the correspondent, several foreign spies in London at the present moment. A document has disappeared relating to a new quick-firing gun of high power from which great results are expected, although the final experiments have not yet been made with it. According to the Petit Parisien correspondent, the Admiralty now knows that all the details of this gun, as well as other important documents, are in the hands of a foreign power.

tens—though a great ocean rolled between.

But this was not all. As the years went by she taught her darling the art which the French have brought to such perfection, that of making artificial flowers. Oh, how it colored and transformed the girl's whole life, making it truly to "bloom and blossom as the rose." She forgot her condition, her physical infirmity, and the artistic taste she inherited and love of the beautiful grew and grew. No more listlessness, no more self-pity, she had an object in life, had found an occupation. Oh, thank God—thank God for work! In mercy God sent forth to till the ground and develop the resources overcoming obstacles. Anything but idleness.

Rosebuds became her specialty—rosebuds, cream, white, pink, yellow; with hearts of gold. That was how she came to be called "Little Miss Bud." Her parents had tried to carry on her education in other ways, too, and afterwards a kind lady who heard of the child, visited her twice a week, as she could not attend school, teaching her to write and sew. She could read already and loved reading, and speak two languages, her mother's native tongue and her own. But flower-making was her chief delight.

Often she would lay the delicate petals against her cheek and lips before placing them in boxes for removal to the great dry goods store. For Miss Bud's flowers, once seen by the head of a millinery department, were in great demand. Of course they were shown as "imported," but so were a great many things manufactured in America. "Just from Paris," customers were assured, without the little artist's knowledge. She might have added, "In a roundabout way"—Her earnings were considerable and comforts increased. Son she was obliged to take in a little orphan girl, Alice May, as assistant. It was a good day for Alice, indeed, for both, as now Bertha had a constant companion. Nor was this all. The kind lady visitor spoke to her of the dear Saviour, the ever-present Friend. Together they read of His works of healing when on earth, how He made the blind to see, and the lame to walk. Then the lady quoted a text: "Then shall the lame lean as an hart—the redeemed shall walk there."

Bertha breathed fast, her eyes grew large and luminous, and her sweet face—a flower-like face, people said it was—flushed.

"Where? When?" she questioned eagerly.

"When he shall come whose right it is to reign."

"But when?" insistently.  
"Bertha, dear," her friend replied, "that portion may refer to a good time—that's coming on the earth, when we cannot tell. But one thing is certain in the heaven we seek the inhabitant shall not say, I am sick. There will be no weakness—no infirmity. There will be perfect healing, perfect service."

There was no immediate answer, but from the lame girl's heart went up that moment a voiceless cry to the Good Shepherd. Did He ever fail to hear such? Never. It was well with the child, so well that she confided it to the rosebuds, for she could not keep the glad secret altogether to herself and was shy of talking about it to others at first. Only a tear of joy blurred a creamy leaf as she murmured, "Oh, I am so happy! It is well."

Yes, even when she faded day by day until the slim white fingers almost seemed transparent. The lady brought a carriage, into which she was lifted, and driven round a lovely lake in a perfect rapture of delight. A charitable society sent a wheel chair, on which Mrs. Mulcahy, the Irishwoman, most faithfully attended. But, ah, balmy breezes and beautiful scenery could not restore the failing vital force.

Propped up by pillows on a couch the delicate fabrics she had asked for were given to her hand.

"This is for Mrs. Mulcahy," she said, holding out a bouquet, the varied loveliness of which was so perfectly natural one could almost fancy it exhaled fragrance. "When first she came here she said she knew when her eyes were set on me I was of royal blood"—and she laughed until she coughed. "Tell her I am the child of a King—and I shall sit

at my father's table, but there will be no lame fable to hide away under it." "And this is for dear Alice"—a few white buds in trailing shields of moss. "A card, please, and pencil." Then she printed very slowly. "The pure in heart shall see God," and attached it to the long stems.

And so loving and thoughtful for others to the last, she drew near the border. As the sun was declining she passed away, whispering faintly,

"The redeemed—shall—walk there." Death has no terrors for those who trust in Christ. Why should children fear it? It is only like the birds when at the approach of winter, they seek a brighter clime. It is the Shepherd calling his lambs home.

"She is better off," said the father, as so many others have said. And the thought brought consolation.

Mr. Cornelius O'Leary of Ottawa, one of the oldest conductors on the C.P.R., was run down by a street car and killed on Saturday.

The Ontario Treasury Department has received applications for participation in the new \$3,000,000 direct Provincial bond issue aggregating \$800,000.

Near Sweetburg, Que., on Thursday, Mrs. Edward Tracey shot and killed a young man named Forest Howard, who, she claims, was assaulting her.

The Canadian agent at Trinidad reports that the entire sugar crop of the island has been obtained for Canadian refineries.

Port Arthur will at once start the development of 1,000 horsepower at Current River, giving a total of 23,000 horsepower for municipal use.

The late John Morrison, of Montreal, who by his careful habits acquired a fortune of about \$150,000, left no will. His girl widow gets it all.

The customs collections at London for the fiscal year ending June total \$855,654.51, an increase of \$48,384.14. The collections for June were \$63,804.69.

Hon. Mr. Hanna told an Owen Sound deputation on Friday that no licenses would be issued there pending the result of the appeal against the quashing of the local option by-law.

A site has been secured on the bank of the Niagara River near Bridgeburg for the smelting plant to be established by the Nicolls interests. It adjoins the Canadian Shipbuilding Company.

It is reported that a company of Antwerp capitalists have purchased 160,000 acres of land along the Canadian Northern and Grand Trunk Pacific lines east of Saskatoon from the Western Canada Settlers' Mutual Land Company.

### SUDAN NATIVES ROUTED.

Three Hundred and Fifty Killed. One Hundred Captured.

A despatch from Cairo, Egypt, says: The punitive expedition, under Major O'Connell, which left El Obeid on June 6 to relieve the garrison at Talodi, drove out the Soudanese tribe after a sharp fight, in which 350 natives were killed and 100 captured.

The force, which consisted of 350 camelry, 200 Soudanese Light Infantry, and several British officers, marched through torrential rains and seas of mud, and frequently crossed torrents waist deep. They reached Talodi on the 14th and relieved the garrison.

The force then marched to Gebel Iliri, where the inhabitants had sheltered the Talodi Arabs. On the 15th a general attack was delivered on their position, and fighting lasted till sunset, resulting in the capture of the village. The force, which sustained no casualties, is now returning to El Obeid.

The British officers reported that the manner in which the punitive force attained its object, despite great difficulties, deserve the highest commendation. It is believed that the outbreak at Talodi was due to the resentment of the tribesmen of a Government post in their midst.

### LAST YEAR'S WHEAT CROP.

Over Sixty-two Million Bushels Were Inspected.

A Winnipeg despatch says: Wheat inspected during the period from September 1, 1905, up to and including June 30 last, the first ten months of the present crop year, was the largest in the history of the country, aggregating no less than 58,002 cars, or 62,062,140 bushels, compared with 35,731 cars and 37,517,550 bushels the previous year, and 35,159 cars and 35,159,000 bushels for the corresponding periods in 1903-04.

### HAILSTONES BIG AS ORANGES.

Phenomenal Storm Visits Southern France.

A despatch from Valencia, Spain, says: A phenomenal hailstorm occurred here on Friday, the stones being of the size of an orange. They pierced the roofs of the houses, compelling the occupants to seek refuge in the cellars. One child was killed and fifteen persons were injured. Immense damage was done to crops and property in the neighborhood of the city.

Severe storms occurred throughout Southern France. The hospital at Hyeres was struck by lightning and destroyed, and a number of other buildings were set on fire. The telegraph lines between Nice and Toulon were blown down. Several small wrecks occurred on the coast.

### COREA'S RULER A PRISONER.

Japs Refuse Entrance Into or Exit from His Palace.

A despatch from Seoul says: The Japanese have virtually imprisoned the Emperor of Korea within the palace. They have established special guards, and henceforth nobody will be allowed to enter or leave the palace without an official order. The Japanese say this step was necessitated by the Emperor's constant intrigues and his attempts to invoke foreign aid against Japanese suzerainty. The Emperor has refused from the outset to surrender his independence. Lately he has vainly asked to be allowed to take refuge in the American Legation.

### WINNIPEG SUNDAY CAR.

The Service Was Largely Patronized on Sunday.

A Winnipeg despatch says: The Sunday car service was inaugurated on Sunday last, and the patronage was remarkable. Owing to the intense heat

### FACTORY FOR HEAVY GUNS.

Negotiations for Establishment in Canada Well Advanced.

An Ottawa despatch says: Mr. Thos. Ahearn, president of the Ottawa Car Company, says that negotiations with the Coventry Ordnance Works for the establishment of a factory near Ottawa for the manufacture of heavy guns, are well advanced. His partner, Mr. Soper, returned from England only last Monday, where he had been conducting negotiations. The fact of the car company having made many gun and ambulance wagons for the Imperial authorities has encouraged them to embark upon the wider field. The Coventry concern will establish itself in Canada only on condition of the Dominion Government giving a guarantee that all new guns required for the Canadian batteries will be obtained from their Canadian factory.

### C. P. R. EXTENSIONS.

Nine Hundred Miles Are Now Under Construction.

A Montreal despatch says: Sir Thomas Shaughnessy, President of the C.P.R., said on Wednesday that, although his company had 900 miles of new roadway now under construction, they were not making much noise about it. He hoped that all of these additions would be railled by the end of this year. By the time this year's crop would be ready to move the double track between Winnipeg and Fort William would be laid to the extent of 150 miles, which would greatly facilitate rapid transportation. Sir Thomas would not confirm the rumor that the C.P.R. intended to go through the Rockies from Edmonton, but he hoped to reach the capital of Alberta direct by the end of the present year.

### PROVES HIMSELF A TRUE HERO.

Rojestvensky Pleads Guilty to Save Staff and Officers.

A despatch from Cronstadt says: In a manly effort to save the surviving members of his staff and the other officers, whom he believed surrendered the gunboat Bedovi on account of their affection for their wounded commander and their desire to save his life, Admiral Rojestvensky on Wednesday pleaded guilty before a court-martial. In a short speech to the court, the admiral declared that he took all the blame on his own shoulders, and asked that he alone be punished to the fullest extent of the law, virtually an appeal for condemnation and death, which is the penalty for hauling down the St. Andrew's Cross to a hostile vessel. All the other defendants pleaded not guilty.

### WAR TO THE DEATH.

Awful Atrocities Perpetrated by Zulus on Prisoners.

A London despatch says: Col. McKenzie's troops, which are operating in Natal against the rebellious Zulus, discovered the remains of a recently butchered white man, whose body had been hacked horribly. A bicycle that had belonged to him was found in Chief Mesini's kraal. Natives said that the man was killed in front of the Zulu army by Mesini's orders. The rebels, one by one, wetted their assegais in his blood and dipped their fingers in it and smeared their lips with it. The story has infuriated the troops. Deep roars of "No surrender, sir!" greeted Col. McKenzie as he rode past the dead body. Newspaper correspondents who have returned to Durban from the front declare that the loyal native levies are treating rebels who surrender with great barbarity. Many prisoners have been wounded and some have been killed.

## DOMINION PARLIAMENT

### SPEECHES MUST BE RELEVANT.

The special committee appointed to revise the rules of the House of Commons reported. A few important recommendations have been made. In the first place it was decided that all speeches must be relevant to the subject under discussion. Before a member can move the adjournment of the House he will have to notify the Speaker in advance, and after he has done this, when it rises on the orders of the day to do so 20 members will have to support him or he cannot proceed. Another recommendation is that every Wednesday the House will meet at 1 p.m. and rise at 6 p.m. This will give the members the night off every week.

The time for presentation of petitions for private bills is extended from three to six weeks and for the introduction of bills from four to eight weeks. The fee of \$200 is retained, but additional charges are made for non-presentation within the time limit, or for suspension of the rules. Additional charges are also made proportionate to the capital stock, or for the increase of the borrowing power of the companies.

### H. J. MOBERLEY.

Mr. Fisher answered a question put by Mr. Lake regarding H. J. Moberley, said to be a census enumerator for a certain district in Saskatchewan, who was alleged to be a man who had been fined \$100 for election irregularities. Mr. Fisher said there was no such person as Moberley in that district. The work was being done by two men, Alex Macbeth and James Flett.

### WILL SAFEGUARD NIAGARA.

When the bill to incorporate the Grand River and Western Power Co. was being discussed in committee, Mr. Hyman said that on the recommendation of the International Waterways Commission, no more water-power franchises would be granted affecting Niagara waters until a further report had been made by the commission. The Department of Railways and Canals was opposed to the proposed bill because it would interfere with the feeder of the Welland Canal. Mr. Hyman asked not to have the preamble accepted.

In reply to Mr. Borden, Mr. Hyman said that he knew of no member of the Government being connected with the proposed company.

Mr. Emmerson opposed the bill, he said, from a departmental point of view, because it would lay upon the department the whole duty of guarding the public and private interests concerned.

### DEPARTMENT OF STATE REPORT.

The report of the Secretary of State for Canada for the year ending Dec. 31 last shows considerable increase in the work of the department. Especially is this manifest in the greatly increased number of companies seeking incorporation. In 1904 206 incorporations were granted, while last year the number was 293. The total authorized capital of these new companies was \$99,910,900 and the capital of existing companies increased by the sum of \$9,685,000, or a total of \$109,595,900, as compared with \$84,000,000 in the previous year.

In accordance with the provisions of the Naturalization Act returns are made to the State Department half-yearly by nearly 400 officers of various courts of law throughout the Dominion, giving particulars of naturalization effected in the district in which the court is situated.

According to the returns received, the total number of naturalizations in the 12 months was over 10,000.

The report gives a synopsis of all letters patent of incorporation issued during the year, a list of the Boards of Trade in Canada, and the names of all the foreign Consuls, Vice-Consuls, Consular agents, and commercial agents in the Dominion.

### INDEMNITY AND ATTENDANCE.

Mr. Bourassa, reading a list of days attendance at the House last session by some members and Senators who are noted for the infrequency of their appearance at the capital. The remarkable feature was that nearly the full

## Canadian Shipbuilding Company.

It is reported that a company of Antwerp capitalists have purchased 160,000 acres of land along the Canadian Northern and Grand Trunk Pacific lines east of Saskatoon from the Western Canada Settlers' Mutual Land Company.

## GREAT BRITAIN.

British imports for June increased \$21,676,500; exports, \$23,269,000.

David Lloyd-George stated on Saturday that the House of Lords should be placed on the scrap heap.

There is a rumor that King Edward will abandon horse-racing at the close of this season.

A clay bed, suitable for the making of porcelain, is reported on the Gatinou near Chelsea.

A large number of signatures of members of the British Parliament have been attached to a message, which will be forwarded to the Russian Parliament, extending to it the congratulations of the oldest to the youngest Parliament, and expressing the hope that some of the members of the latter will attend the International Arbitration Conference, to be held at the end of July.

## UNITED STATES.

At Saginaw, Mich., on Friday, three were killed and six injured by the explosion of a gasoline tank.

Poison was put into the drinking water tank at the Singer Mfg. Company's plant at Cairo, Illinois, on Monday, and four workmen poisoned. It is supposed that a drunken painter who was discharged poisoned the water.

Dr. H. W. Wiley, chief of the bureau of chemistry of the Department of Agriculture, on Tuesday had put into cold storage 150 broilers, which is the first step toward an investigation of the effect of cold storage on food products.

After 8 years illness, during which physicians insisted she could not recover, Miss Markley, of Pittsburg, Penn., arose from her bed on Monday and walked out of the house apparently in good health. She discharged her doctors, and says prayer alone cured her.

Groping his way along a gangway after his light was extinguished by a gust of air, Guido Stanko, eighteen years old, of Mananoy City, Penn., walked into the mouth of an underground shaft at the Primrose mine of the Lehigh Valley Coal Company. He had a sheer drop of 150 feet. Death was instantaneous. Every bone in his body was broken.

## GENERAL.

Business is demoralized at Vladivostok because of rioting.

Appalled by repeated murders at Warsaw, the police have decided to resign. Barbara Krupp, younger daughter of the great gun manufacturer, is engaged to a son of the Governor of Prussian Saxony.

Near Yokohama on Saturday the C.P.R. steamer Athenian collided with the British tank ship Apalechee, and had to put back for repairs.

## POLICEMEN'S GOOD WORK.

Eight Guests Rescued From a Burning Hotel at Winnipeg.

A Winnipeg despatch says: Two police officers, Griffin and Perry, rescued eight people from death in an early Wednesday morning fire at the Farmers' Hotel, conducted by Arthur Finlay. Before the arrival of the fire department the two police constables hurried into the building to arouse the occupants. They secured a ladder and placed it against the upper story, from which eight men crawled in their night clothes.

## NO DYING NATION, THIS.

Great Britain's Imports and Exports Increase.

A London despatch says: The June statement of the Board of Trade shows increases of \$21,676,500 in imports and \$23,269,000 in exports.

## The Service Was Largely Patronized on Sunday.

A Winnipeg despatch says: The Sunday car service was inaugurated on Sunday last, and the patronage was remarkable. Owing to the intense heat the thermometer registering between 90 and 95 for several hours, the citizens sought the parks and suburbs for a breathing spell, and it is believed that the number of passengers carried will equal that of Dominion Day, when the fares paid numbered a hundred thousand.

## QUEBEC HAS SURPLUS.

Provincial Treasurer McKillop Says It Exceeds \$150,000.

A Quebec despatch says: The Provincial Treasurer, Hon. Mr. McKillop, stated on Friday afternoon with regard to the result of the financial year ending June 30 last that he was able to say that he had a surplus. While he did not mention the exact figures, he declared it exceeded \$150,000. Both the expenditure and the revenue of the year exceeded the estimates.

## HOISTED A BRITISH FLAG.

Canadian Girl Roused Wrath of Nebraska Mob.

A Lincoln, Nebraska, despatch says: Miss Anna Tompsett, of 630 South 20th Street, on the 4th hoisted a British flag over her cottage. She came recently from Canada, and did not understand the full meaning of the Fourth of July celebration. A large crowd gathered, and were threatening to haul down the flag, when the matter was reported to the police, and Miss Tompsett was compelled to haul down the flag.

## REVENUE EIGHTY MILLION.

Expected Showing for Year When All the Returns Are in.

An Ottawa despatch says: The books of the Finance Department show that up to June 30th the receipts of the Dominion for the last fiscal year were \$78,006,599, the ordinary expenditure \$54,061,324, and the expenditure on capital account \$12,727,867. When the returns for the year, however, are complete it is expected that the revenue will total close on \$80,000,000, whilst the Finance Minister calculates on a surplus of \$12,500,000 over the ordinary expenditures.

## WAR'S RAVAGES.

31,187 Russians Killed, 37,497 Missing, and 115,885 Wounded.

A despatch from St. Petersburg says: The general staff issued on Thursday final statistics respecting the losses of the Russian armies during the war with Japan. They show that 31,187 men were killed and 115,885 wounded or contused. The number of missing is 37,497, and of prisoners of war 53,897.

## LATEST TUBERCULOSIS CURE.

Lime-Dust Theory Based on Fact That Workers are Immune.

A despatch from Paris says: Tuberculosis and its cure are the all-engrossing topics of conversation in medical circles here at present. At every meeting of the Academy of Medicine somebody propounds a new theory for the extermination of the scourge. At the last meeting of the Academy of Medicine Dr. Brouardel held forth on the benefits to be derived by consumptives from living in an atmosphere charged with lime dust. He quoted a report by Dr. Bordenave, who says that within the thirty years that he has practised he has not seen a single case of tuberculosis among the workmen at the kilns, and that people affected with tuberculosis are soon cured after they live some time in the lime dust.

Newspaper correspondents who have returned to Durban from the front declare that the loyal native levies are treating rebels who surrender with great barbarity. Many prisoners have been wounded and some have been killed.

## NEW BEER FOR COBALT.

People Unable to Drink Water in Wells and Springs.

A Toronto despatch says: A new beer will be brewed for Cobalt. Owing to the fact that the water in both the wells and springs is undrinkable, and that the Act prohibits the sale of ordinary beer, a new beverage will be manufactured, which will comply with the requirements of the law and at the same time quench the people's thirst. The percentage of alcohol in the new beer will be small.

## CAUGHT MASSIVE FISH.

Doyle Fish Company Land 323-lb. Sturgeon.

A despatch from Toronto says: A letter was received on Wednesday by Mr. Bastedo, Deputy Minister of Fisheries, from the Doyle Fish Co., Warton, announcing the catch of a sturgeon weighing 323 pounds. This is a record size, and if the fish had not been partially destroyed would have been mounted by the Government and placed on exhibition.

## ZULU ALARM JOHANNESBURG.

Bands, Shouting Bambata's Praises, Attack Whites.

A despatch from Johannesburg says: A series of native outrages culminated Monday night when a band of desperadoes, shouting the rebel Zulu Chief Bambata's name and terrorizing the southern suburbs of Johannesburg, attacked several white persons, stabbing them with assegais and robbing them. The victims included Mr. Madison, a Wesleyan minister, who, with some others, is in a precarious condition. The residents demand that a special protective force be recruited.

## MUKDEN N CIVIL HANDS.

Japanese Military Authorities Have Transferred Control.

A Pekin despatch says: The Japanese military authorities on July 1 transferred the control of Mukden, Manchuria, to the Japanese civil administration. The latter are arranging for the withdrawal of military control from other interior cities of Manchuria during July and August.

## TOOK POISON ON STREET.

Montreal Woman of Good Family Commits Suicide.

A Montreal despatch says: A sensational case of suicide occurred on Saturday afternoon, when Mrs. Tellefer, a woman belonging to good family, killed herself by swallowing a dose of Paris green. The woman was noticed going along Mount Royal Avenue, and when she came to a drinking fountain she produced a cup and mixed something in it, drinking the contents. She walked a few steps and sank to the ground as if in great agony. Some passers-by observed her and had her removed to the hospital, where she died shortly after admission.

## NATAL REBELS ANNIHILATED.

Over Five Hundred Surrounded and Killed by Loyal Troops.

A despatch from Durban, Natal, says: Natal troops have completely surrounded and defeated a rebel body in the Umvoti district. Five hundred and forty-seven rebels were killed and few escaped. There were no white casualties.

## THE DOMINION.

### INDEMNITY AND ATTENDANCE.

Mr. Bourassa, reading a list of days' attendance at the House last session by some members and Senators who are noted for the infrequency of their appearance at the capital. The remarkable feature was that nearly the full indemnity was drawn by these, resulting in a very large amount per day's attendance. The basis of the discussion was some minor amendments to the bill providing for an indemnity to members of Parliament. Mr. Bourassa's remarks were criticized by Mr. Borden and other members, who spoke of the difficulty of arriving at the exact amount that should be paid.

### RAILWAY ACT.

Mr. Emmerson's bill to amend the railway act was passed, after a lengthy discussion, in which more changes of importance were made. One of these gives unincorporated as well as incorporated villages control over their streets so far as telephone poles are concerned. The clause was also adopted, recommended by the special committee, providing for the protection of level crossings in the discretion of the Railway Commission, where trains exceed a speed of ten miles an hour.

### LORD'S DAY BILL CARRIED.

The third reading of the Lord's Day Bill was carried in the House of Commons at 3.30 on Saturday morning on a strictly party vote, with the exception of Messrs. Bourassa and Armand Lavergne, who voted with the Opposition. The last vote was on an amendment by Mr. R. L. Borden to prohibit, except where authorized by Provincial Legislature, any games on Sunday. Even when not played for reward or gain, and to permit the charging of an admission fee to places where divine worship was conducted. This was defeated by 39 to 77, and the third reading of the bill was carried on same divide reversed.

### MR. COURTNEY TO RETIRE.

Mr. Fielding said that Mr. J. M. Courtney, Deputy Minister, who had been desirous of retiring for some time, would leave the public service of the country November 1st. The new deputy would receive \$4,000 a year, \$1,000 less than Mr. Courtney. It was proposed to abolish the position of law clerk in the department, and to appoint an assistant Deputy Minister, who would be a lawyer. His salary would be \$3,600 a year.

### EXPERIMENTAL FARM.

In answer to a question by Mr. Armstrong, Mr. Fisher intimated that he was thinking of enlarging the experimental farm system in order to provide for experiments in fruit and tobacco growing. Mr. Armstrong had suggested this for the Niagara fruit and western Ontario tobacco districts.

### ALLEGED BEEF COMBINE.

Mr. Herron (Macleod) called the Minister's attention to the alleged beef combine in the West. He believed this combine had its headquarters in Winnipeg. It was said that, as a result of its operations, the Western farmers were losing 20 to 25 per cent. on the value of every animal shipped.

Mr. Fisher said the matter was a puzzle to him. He did not think there was anything on the statute book which would enable the authorities to deal with a combine to lower prices. He would look into the question, and if anything could be done to help the cattle-raiser he would gladly do it.

### REFILLED THE BOTTLES.

Hotelkeeper at Haileybury Guilty of Fraud.

A Toronto despatch says: The first prosecution under the amended liquor act of last session for fraud in the sale of liquor has just taken place at Haileybury. The information was laid by an officer of the License Department, and the offender, an hotelkeeper of the town named, pleaded guilty, and was fined \$20 and costs. His offense consisted in refilling case bottles, which bore a certain label, with bulk liquor, thus practicing deception in selling a brand of goods under false pretenses.

# Help! Help! I'm Falling

Thus cried the hair. And a kind neighbor came to the rescue with a bottle of Ayer's Hair Vigor. The hair was saved! This was because Ayer's Hair Vigor is a regular hair medicine. Falling hair is caused by a germ, and this medicine completely destroys these germs. Then the healthy scalp gives rich, healthy hair.

The best kind of a testimonial—  
"Sold for over sixty years."

SEASON OF 1906.

## WHAT OTHER PAPERS SAY

Toronto Globe

If the reports of the gold discoveries at Lake Opastica in the Temiskaming region, are within the mark, Ontario promises to distance all her sister Provinces in the mining industry.

Kingston News (Conservative)

Other changes have been made in the (Sunday observance) bill as originally drafted, by which it will be difficult of enforcement, and the clauses to be enforced will leave matters little better than now.

Halifax, N. S., Chronicle.

Opposition attacks on the Government during the present session of Parliament have, as we remarked a few days ago, served the very good and useful purpose of showing in bold relief the wisdom and foresight of Sir Wilfrid Laurier and his colleagues, past and present, in dealing with great national questions during the last decade.

Montreal Witness.

As a rule, the bond issue of a modern corporation on this continent represents the actual money invested in an undertaking, while the preferred and common stock are a pure gift to the holders, and are increased at pleasure to conceal the profits of the company.

Woodstock Sentinel-Review

It has cost \$9,000 a head for the settlers placed in the new South African colonies since the Boer war. A great row was raised because Canada was paying \$5 a head for settlers. But then of course, Canada is not South Africa.

American and Canadian Coal Oil and Gasoline. MADOLE & WILSON.

## NEWBURGH.

Bishop Mills preached in St. John's church to a large congregation.

Principal Plack, Napanee, presided at the departmental examinations here last week. Twenty-five candidates are writing. Principal Nesbit presided at Bath.

Miss Pearl Nesbit is visiting relatives in Tweed.

A number from the village spent Dominion Day in Napanee.

E. W. Stickney spent Sunday at his home here.

The Ladies Aid lawn social on Thursday evening was a decided success. The Yarker brass band enlivened the proceedings with their music. A short programme of a chorus, a solo by James Gibson, Napanee, and a solo by Percy Nesbit was rendered. The proceeds amounted to \$60.

Miss Eleanor Deroche, Napanee, and Miss Madelon Deroche, Kansas City, spent Wednesday afternoon with relatives in the village.

Melville Sexsmith, Bath, is visiting Frederick Mears.

Miss Ethel Mears gave a lawn party to her girl friends on Wednesday afternoon.

Dr. Beeman Perth, spent Sunday at Dr. M. J. Beeman's.

Mrs. John Sharp spent Sunday with her husband in Oshawa.

John Patterson spent the holiday with his brother in Stirling.

Miss Beeman, of the N. H. S. staff, left for her home in Kemptville on Tuesday to spend her holidays.

William Bradshaw, Brockville, spent Sunday with his family here.

Misses Franches and Mattie Welbanks, Prince Edward County, and George Welbanks, Gosport, returned home on Saturday to spend their vacation.

Miss Grace Clancy, who has been

# CASTORIA

The Kind You Have Always Bought, and which has been in use for over 30 years, has borne the signature of and has been made under his personal supervision since its infancy. *Chas. H. Fletcher* Allow no one to deceive you in this. All Counterfeits, Imitations and "Just-as-good" are but Experiments that trifle with and endanger the health of Infants and Children—Experience against Experiment.

## What is CASTORIA

Castoria is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. It is Pleasant. It contains neither Opium, Morphine nor other Narcotic substance. Its age is its guarantee. It destroys Worms and allays Feverishness. It cures Diarrhoea and Wind Colic. It relieves Teething Troubles, cures Constipation and Flatulency. It assimilates the Food, regulates the Stomach and Bowels, giving healthy and natural sleep. The Children's Panacea—The Mother's Friend.

MUNN & Co., 361 Broadway, New York  
Branch Office, 625 F St., Washington, D. C.

George Welbanks, Gosport, returned home on Saturday to spend their vacation.

Miss Grace Clancy, who has been teaching at Oxbow, Saskatchewan, arrived on Wednesday to spend her holidays at her home in Wesley.

Wilkie Grange is able to be out again.

Mr. White, organizer for A. O. U. W., spent last week in this district.

A certain strawberry patch in the village has been the mecca of several lovers of this luscious fruit, and these have given the owner much trouble.

George Spinks spent Sunday with his aunt in Toronto.

Albert Dickenson and wife, Utica, paid a flying visit to friends in the village on Sunday.

### DENBIGH.

Miss Mathilda Stein, of Douglas, has spent a couple of weeks visiting friends and relatives at this village.

Miss Martha Marquardt of Renfrew is also taking a few weeks vacation and is enjoying a visit with her parents Mr. and Mrs. E. Marquardt. Her sister Emma of Ottawa, has also arrived home for a good visit at the old home-stead.

Mrs. A. L. Stein, of Brockville and three children, are guests of her mother Mrs. F. Chanson, and intends to remain a few weeks at her old home and visiting her numerous friends in the vicinity.

Mrs. Chas Both is away on a good long visit to New Ontario visiting her brother Samuel Both, of Barwick, and her daughter Mary.

Mrs. M. Rogers and her daughter Nora, have undertaken a trip to Syracuse, N. Y. where they intend to stay a while visiting relatives.

Mr. George W. Lennock has just returned from a visit to New Ontario where he has visited Cobalt, Hailebury, New Liseard and other places. While he found some things to his liking he found others quite the reverse, and does not think that he will ever take up his residence there.

Mr. George A. Snider, during the last term Principal of our Village school has left Denbigh, and has again moved to Napanee.

At a meeting of the Ratepayers of our Section lately held, it was decided to build a new Schoolhouse and to exchange the present site for a more suitable one nearer to the Village. The contract of building it will likely be awarded to Mr. J. S. Lain who has also the job of building a large frame barn for Mr. Conner, the stone basement of which is now under construction.

Mr. A. Lechwood is building a large frame barn for Mr. E. Berndt and Theodore Thompson had a bee on the 4th inst., also raising a large frame barn. In the evening the young people (and the older ones who wished to stay or come to it) enjoyed a dance.

The appearance of our Village will also be improved by Mr. Chas Both who tore down his old Blacksmith shop and is replacing it by a new two storey frame building, the upper storey of which is to be fitted up for a public hall.

Otto Stein got his shoulder and arm badly hurt while working in the bush a couple of weeks ago. Although not quite well as yet he has gone back to resume his work.

Oscar Ruttan came near meeting with a more serious accident a few days ago at the same work. The axe flew out of the hands of another man working near him and struck him on the cheek cutting an ugly gash. Had he been hit a few inches either higher or lower it would likely have put him out of action entirely. As it is he had to adorn his face with a large plaster.

Hammocks a fine assortment.  
MADOLE & WILSON.

## THE ELEPHANT.

He is Good Natured, Docile, Obedient and Long Suffering.

"The elephant is the best natured beast in all wild creation," said a circus man. "Most people have an idea that the big beast is apt to go wrong any time and make all kinds of trouble for everybody. Now, as a matter of fact, I have never but once seen a freak of this kind. Then the result was directly due to the intolerable abuse of flat headed grooms. It seems to me that if some one was putting a steel point or hook into a soft joint of yours or mine many times a day and without any good reason for it we would show temper and tear up things too. The only difference is the elephant has more patience. He is docile, obedient and long suffering. When an elephant gets a little out of sorts there is always some lightweight attendant, it seems, to fly off and say he is 'daffy.' Ninety-nine times out of a hundred the poor elephant has been badly treated, and, as he cannot talk, he does about the only thing he can do and trumpets his disgust or possibly goes a step further and eases his feelings by taking a crack with his trunk at something within reach. Elephants are as kind hearted and tender as women and respond to little attentions the same way, and in the same way, just like a woman, when they get soured, it takes a long while to sweeten them again if it can be done at all."

### An Eye Opener.

"How does your father seem to regard my coming here?" anxiously asked Adolphus of little Bobby, while Miss Maud was upstairs getting ready to present herself.

"He don't care nothin' about it," replied Bobby carelessly.

"So he has no objections, eh? But what did he say, my little man?"

"He said if Maud had a mind to make a fool of herself, why let her."

### The Result.

"My first husband," she sobbed, "was a kind, gentle man, always considerate of me. He always let me have my own way."

"Yes," growled the second, "and look at the result."

"Result? What result?"

"Why, he's dead!"

### Got the Worst of the Bargain.

He (tauntingly)—Your father was in trade when I married you, wasn't he? She (bitterly)—I suppose so. He was sold, in any event.

Whatever situation in life you ever wish or propose for yourself, acquire a clear and lucid idea of the inconveniences attending it.—Shenstone.

### Matrimony.

Matrimony resembles a pair of shears, so joined that they cannot be separated, often moving in opposite directions, yet always punishing any one who comes between them.—S. Smith.

## BURIALS IN CUBA.

Customs That Remind One of the Parsees of Bombay.

Burial customs in Cuba are almost as strange as the Parsee customs and their towers of silence in Bombay. It seems that the reopening of graves in Cuba is the result of a long established custom of burying as many bodies as possible in a single grave. The cemetery routine is like this:

First some one, usually the head of a family, buys a plot. He at once sets to work digging his own grave and graves for all the members of his family. He digs several graves six feet long for adults and one grave four feet long to provide for the possible death of a child. When the entire area of the plot is thus in open graves the digger turns mason and plasterer. He cements each grave, bottom and sides. Then he fills in the cemented graves with soil and goes home with the satisfactory thought that he may look upon his own grave during his lifetime and that it is ready for him at any time he is ready for it.

But the weirdest part of this custom is yet to be told. In the middle of the plot a square grave is dug, a hole about six feet each way. This square hole is cemented like the graves and filled in with soil. It should be explained here that the bodies in the graves are covered with quicklime. When the flesh has disappeared and only the bones are left the bones are taken out of the grave and thrown into the square hole in the center of the plot. Thus the graves are used over and over again until the square hole in the center is filled with the bones of the members of this or that family. Then the hole is sealed over, and that particular family plot is abandoned and a new one purchased.—London Tit-Bits.

## A Valuable Agent.

The glycerine employed in Dr. Pierce's medicines greatly enhances the medicinal properties which it extracts and holds in solution much better than alcohol would. It also possesses medicinal properties of its own, being a valuable demulcent, nutritive, antiseptic and antiferment. It adds greatly to the efficacy of the Black Cherrybark, Golden Seal root, Stone root and Queen's root, contained in "Golden Medical Discovery" in subduing chronic, or lingering coughs, bronchial, throat and lung affections, for all of which these agents are recommended by standard medical authorities.

In all cases where there is a wasting away of flesh, loss of appetite, with weak stomach, as in the early stages of consumption, there can be no doubt that glycerine acts as a valuable nutritive and aids the Golden Seal root, Stone root, Queen's root and Black Cherrybark in promoting digestion and building up the flesh and strength, controlling the cough and bringing about a healthy condition of the whole system. Of course, it must not be expected to work miracles. It will not cure consumption except in its earlier stages. It will cure very severe, obstinate, chronic coughs, bronchial and laryngeal troubles, and chronic sore throat with hoarseness. In acute coughs it is not so effective. It is in the lingering coughs, or those of long standing, even when accompanied by bleeding from lungs, that it has performed its most marvelous cures. Send for and read the little book of extracts, treating of the properties and uses of the several medicinal roots that enter into Dr. Pierce's Golden Medical Discovery and learn why this medicine has such a wide range of application in the cure of diseases. It is sent free. Address Dr. R. V. Pierce, Buffalo, N. Y. "Discovery" contains no alcohol or harmful, habit-forming drug. Ingredients all printed on each bottle wrapper in plain English.

Sick people, especially those suffering from diseases of long standing, are invited to consult Dr. Pierce by letter, free. All correspondence is held as strictly private and sacredly confidential. Address Dr. R. V. Pierce, Buffalo, N. Y.

Dr. Pierce's Medical Adviser is sent free on receipt of stamps to pay expense of customs and mailing only. Send 31 one-cent stamps for paper-covered, or 50 stamps for cloth-bound copy.

## CONTINUE

Those who are gaining flesh and strength by regular treatment with

### Scott's Emulsion

should continue the treatment in hot weather; smaller dose and a little cool milk with it will do away with any objection which is attached to fatty products during the heated season.

Send for free sample.  
SCOTT & BOWNE, Chemists,  
Toronto, Ont.  
50c and \$1.00; all druggists.

# "It's to Laugh"

By M. J. Phillips

Copyright, 1906, by Beatrix Reade

Bob Wentworth tucked his sister and himself snugly into their cutter and started old Dobbin on a brisk trot, for there were three miles of crisp white road to be covered, and it was almost chore time. When they were fairly under way Wentworth turned to his pretty sister, christened Elsie, but known as Toots to all her many friends, and said, "I hear you're going to get married, Toots."

Miss Wentworth's very becoming flush was no doubt due to the weather, for the thermometer hovered about zero. At any rate, she answered very composedly: "Oh, indeed! And who told you, Mr. Smarty?"

"A little bird, Elsie from Chelsea; a little bird." He bent a waggish glance upon her. "I say, which one is it going to be?"

"Ask your little bird," she retorted.

Bob tried a new tack. "Well, Harry Crossman is a nice fellow."

"Indeed he is," replied his sister.

"Good looking."

"Yes."

"Better looking than Luke Cotter, I think."

"Do you?"

"And more money too."

"Yes."

"Romantic disposition too." Bob was warming to his theme. "Any fellow

breathless.

Within half a minute the big bay was running easily in the rear of the prostrate Cotter. Crossman shrewdly anticipated the steer's next turn, grasped the rope midway and set his horse back upon its haunches. Checked in its career, the steer rolled over in the snow.

Cotter scrambled to his feet, freed his arm and secured a firm foothold. Then he and the steer fought it out. In vain the animal threw his weight against the rope; he was conquered, and, accepting philosophically the fortunes of war, he suffered himself to be led back to the sleigh. This time he was tied beyond the possibility of escape.

Beyond a brief word of thanks to his rescuer in the field Cotter had preserved the most profound silence. Crossman rode up to the Wentworth cutter. His black mustache curled back, disclosing pouty lips, like those of a spoiled child, but he smiled modestly at the compliments for his clever action that Bob showered upon him.

When Cotter had finished tying the steer he walked over to the cutter. He surveyed his coat, here and there worn bare from contact with ice and snow and fence rails, in silence; he turned to the field and the circle, marked by bits of fur, around which he had so recently swung. The twinkle in his eye as he caught Miss Wentworth's eye was irresistible. In a moment the whole party was shaken by a gale of merriment, Cotter's care free laughter ringing above all the rest.

"I've decided, Bob," said Toots when they had driven on.

"I thought that would catch you," remarked her brother gloomily. "He rides like a fiend."

"But it isn't he; it's Luke. I guess it's always been Luke. Imagine Harry Crossman laughing after being dragged all over a ten acre lot by a wretched steer! He'd cry with mortification. And it's better to go through life with a man who will laugh instead of cry. Isn't it?"

"You may kiss me, Toots," replied her brother impressively. "I thought I possessed all the brains of this generation; I'm glad I'm wrong. Old Luke was my choice from the start."

## Catherine Built the Palace.

The Petrovsky palace is a charming monument to the more picturesque side of Catherine the Great's character. It was her villa without the walls of Moscow, where she could live at her ease, surrounded by her intimates, the Apraxins, the Volkonskys, the Golitsins, the Razumovs. She would have no soldiers to guard her. She preferred to rest under the protection of her own people, and the people came crowding about the palace, saying: "Make no noise! Do not disturb our little mother!" She loved the fields and woods of Petrovsky, as well she might. It was in this neighborhood that she herself awaited the approach of her coronation, staying in Count Razumov's wonderful villa, which so astonished Lord Herbert and William Cox in 1778. She had the palace built to commemorate the Russian victories over the Turks and intrusted the task to a native architect who knew how to adapt Gothic lines to Russian taste and to combine splendor with comfort. The red walls, with their white stone facings and round towers, seen among the trees, give a delightful impression of elegant seclusion. Since Catherine's day all the emperors of Russia have awaited the day of the triumphal entry in the Petrovsky palace.—London Standard.

## Financial Distinction.

"There goes a man who was once a great bull operator in this town," said a broker as an elderly, listless gentle-

HE BORE DOWN ON COTTER AND THE STEER.

who will go west and be a cowboy for a year must have some romance about him. Now, I don't believe that Luke Cotter has even been out of the county."

"He was in Chicago last summer."

"With a load of stock. He stayed all of twenty-four hours. Seriously, Toots, I approve of your choice. Cotter's all right, but all he's got is a forty acre farm, and that's mortgaged."

He seemed almost dissatisfied with his sister's nod of assent. After a moment's silence he burst out boyishly: "Oh, I say, Toots, be a good fellow!

### DRS. KENNEDY & KERGAN

The Leading Specialists of America. 25 Years in Detroit. Bank Security.

Nine out of every ten men have been guilty of transgression against nature in their youth. Nature never excuses, no matter how young, thoughtless or ignorant he may be. The punishment and suffering corresponds with the crime. The only escape from its ruinous results is proper scientific treatment to counteract its effects.

The DRAINS, either by nightly losses, or secretly through the urine, must be stopped—the NERVES must be built up and invigorated, the BRAIN must be nourished. Our New Method Treatment provides all these requirements. Under its influence the brain becomes active, the blood purified so that all pimples, blotches and ulcers disappear; the nerves become strong as steel, so that nervousness, bashfulness and despondency disappear; the eyes become bright, the face full and clear, energy returns to the body, and the moral, physical and sexual systems are invigorated; all drains cease—no more vital waste from the system. The various organs become natural and manly. We invite all the afflicted to call and consult us confidentially and free of charge. Cures Guaranteed or no Pay. We treat and cure: Varicocele, Blood Diseases, Stricture, Gleet, Emissions, Urinary Drains, Spermatorrhoea, Unnatural Discharges, Kidney and Bladder Diseases.

CONSULTATION FREE.

# A FRIEND'S ADVICE

SAVED SUFFERING AND BROUGHT BACK HEALTH  
—DR. AGNEW'S GREAT HEART CURE AND  
CATARRHAL POWDER DEFY DISEASE AND  
NEVER FAIL IN THEIR MISSION OF HEALING

"I feel so thankful at the restored health of my daughter that if any use can be made of this I shall be pleased." This is what Mr. George Weeks, of Elora, Ont., says in giving his testimony to the wonderful curative qualities of Dr. Agnew's Cure for the Heart. His daughter was a great sufferer from heart disease and nervousness. She was unable to lie on her left side. She ran down in health and her recovery was a source of anxiety. Induced by friends, who had proved its worth, she obtained Dr. Agnew's Cure for the Heart and before one bottle had been taken was able to lie in any position she desired, and when two bottles had been taken, an absolute cure was pronounced. Yes, this great remedy is a cure for all ailments of the heart, stomach and nerves, and the instantaneous relief given by it has snatched thousands from death's jaws. Don't trifle a minute if you have the slightest evidence of heart disorders, such as palpitation, fluttering or uneasiness. This remedy will relieve such troubles immediately and will cure the stomach and nerves.

"When I know a thing is worthy of a recommendation I consider it my duty to tell of it." The Rev. James Murdock, of Harrisburg, Pa., says this after having been cured of a very malignant form of catarrh by Dr. Agnew's Catarrhal Powders. What he can say of its healing powers thousands of others have said and can say of it. Don't neglect "only a little cold" in the head. It may lead to chronic catarrh. Dr. Agnew's Catarrhal Powder relieves in 10 minutes and is easily applied. Keep it near you if you are a "cold in the head" subject.

DR. AGNEW'S OINTMENT cures all skin troubles.  
DR. AGNEW'S PILLS—40 doses 10 cents.

Sold by F. L. Hooper.

# Removed the Growth.

his sister's nod of assent. After a moment's silence he burst out boyishly: "Oh, I say, Toots, be a good fellow! Which one is it, and when is it going to be? 'Tess up now."

Toots reflectively smoothed her muff; then she said cautiously, "Do you promise not to tease me?"

"Cross my heart."  
The girl looked down pensively. "They've both asked me."  
"Good."

"And—and they're both coming to-morrow for their answers."

"Hurroo!"  
"You're not to tease now."  
"I won't, honest."  
"Well, I haven't really decided which it is to be."

Bob chuckled gleefully. "What a beautiful situation! Toots, you're a winner. I've always said it. Peck's Bad Boy wasn't in it with you for getting into trouble. When are you going to decide, for heaven's sake?"

"I don't know."  
Miss Wentworth essayed to say more, but her courage failed her. Bob slapped Dobbin with the reins, interrupting a long drawn whistle to grin expansively.

"Bob!"—  
He raised his hand. "Oh, I know what you're going to say, and my advice is, don't say it. You want me to help you choose, and I won't. I know you, Toots. If I picked one, you'd marry the other, and if he beat you up you'd blame me. No, my dear, a man should select his own neckties and a woman her own husband."

"I think you're just as mean as you can be," pouted Toots.  
"The lady or the tiger," apostrophized Bob, waving a long arm at the horizon. "The gallant cowboy or old Stick-in-the-mud; the heir to—well, thousands and the poor but honest youth; the—hello, what's this?"

A sharp turn in the road had brought them to a most interesting tableau. A team of horses, attached to a sleigh, stood facing them. Behind the sleigh a man in a fur coat clung stubbornly to a long rope. At the other end of the rope an angry steer was plunging and bellowing. Evidently the animal had been tied insecurely to the sleigh, had worked the knot loose and had been about to make a dash for liberty. At this moment the driver had discovered the status of things and taken a hand. The steer swung abruptly to the left.

The man in the fur coat was swept off his feet by the move and sprawled full length on the snow. The steer charged the rail fence by the roadside, scattered the rails as if they were so many matches and galloped into the smooth meadow lot beyond. The man still dangled at the end of the rope. As the animal began moving in a wide circle through the field he attempted repeatedly to rise, but his heavy coat and the plunging of the steer hampered him.

Bob leaped out of the cutter. "Luke Cotter," he remarked. "His arm's tangled in the rope so he can't get up. The beast can't hurt him, but that dragging will play the mischief with his coat."

There was a rapid thudding of hoofs down the road from behind, and a horseman, a handsome fellow, with dark hair, dashed by, with a smile and a nod. He swung his horse through the gap in the fence and bore down on Cotter and the steer. Bob climbed back into the cutter and grinned. "Harry Crossman!" He settled himself to enjoy the denouement. "The plot thickens." His sister sat silent and

"There goes a man who was once a great bull operator in this town," said a broker as an elderly, listless gentleman passed through the lobby of a hotel.

"How long ago?" asked his companion.

"Oh, a good many years. He failed three times and his financial career illustrates a curious trait in human nature. After his first suspension the creditors got together for a conference with him. When it was found that his liabilities ran near the million mark they eagerly helped him resume, for the sake of preserving general business confidence, they said.

"Some years later he went under again. There was another conference of creditors. The liabilities were smaller this time, but ran into the hundreds of thousands. 'We mustn't impede an able financier,' they decided, and he was helped to become solvent once more.

"But after his third failure the liabilities ran up to almost nothing at all—for Wall street—hardly \$25,000. His creditors met and decided that the age showed too strong a tendency toward reckless speculation. So they drove him into bankruptcy."—New York Press.

#### Luminous Plants.

In his book entitled "Luminous Plants" Professor Molisch explains the light which is often seen radiating from stumps of old trees. It is due to microscopic animals, fungoids, which on a diminutive scale have the exact form of mushrooms. These parasites live only so long as sap and strength remain in the wood. Similarly the "phosphorous" light on the surface of the sea comes from the animals which live on the seaweed.

#### A Railway Bull.

The recent intimation of an Irish railway that there would be "no last train to Cork" has apparently induced the Great Eastern Railway company to issue a placard stating that trains to Walthamstow will run "all through the night on week days."—St. James' Gazette.

#### Before and After.

"I think that every young woman should learn to play the piano before she is married."  
"That's right. And forget it afterward."

The secret of all true greatness is simplicity.—Jordan.

#### At Anchor.

A chief of bureau in the navy department tells a good story of the time when one of the secretaries of the navy got the notion into his head that officers should not permit their wives to reside at the foreign stations to which their husbands might be attached. So an order to that effect was promulgated. Soon thereafter considerable perplexity and no little amusement was afforded the secretary when he received the following cablegram from Commodore Pyffe, then in command of the Asiatic squadron:

Secretary Navy, Washington:

It becomes my painful duty to report that my wife, Eliza Pyffe, has, in disobedience to my orders and in the face of regulations of department, taken up her residence on the station and persistently refuses to leave.

#### Mamma's the Baby's Best Friend.

Baby thinks a good deal of his dad, but it takes mamma's kiss to cure a hurt finger.

Look not at thieves eating flesh, but look at them suffering punishment.—Chinese Proverb.

## Removed the Growth.

DOUGLAS & CO., NAPANEE, ONT.

DEAR SIRS,—During year 1890-91 I was troubled with a large lump growing on the right side of my neck near the ear. Had consulted several physicians and used everything I could hear of, all to no use. Was told to use

### Douglas' Egyptian Liniment.

I did, and before I had used half a twenty-five cent bottle was permanently cured. Since then I have used it for everything where outward application is required; am yet to learn of anything in reason that I cannot cure with it. No man has any idea of its value until he has used it; would not be without it under any circumstance

Respectfully yours,

NATHANIEL W. REID.

Enterprise P. O.

## S. BOND & CO., ODESSA

TO THE PUBLIC—

Our Spring Goods have now arrived and we are able to show exceptional values and patterns in Crum's Prints, Sateen Prints, Dress Ducks, Organdies, Priestley's Lustres and Silks.

We have a full supply of Groceries, Flour, and Feed, Patent Medicines, Boots and Shoes, and Hardware, in fact everything kept by a general store.

We are able to compete with any general store in the province

We pay Highest Price for all Farm Produce.

## S. BOND & CO., ODESSA.

Do Not Ignore the Money Side of Your Vocation.

No matter what your vocation may be, you must be a business man first or you will always be placed at a great disadvantage in the practical affairs of life. We cannot entirely ignore the money side of existence any more than we can the food side, and the very foundation of a practical, successful life is the ability to know how to manage the money side effectively.

It is infinitely harder to save money and to invest it wisely than to make it, and if even the most practical men, men who have had a long training in scientific business methods, find it a difficult thing to hold on to money after they make it, what is likely to happen to people who have had practically no training in business methods?

If every child in America had a thorough business training tens of thousands of promoters, long headed, cunning schemers, who have thrived on the people's ignorance, would be out of an occupation.

I believe that the business colleges are among the greatest blessings in American civilization today, because they have saved thousands of homes from being wrecked and have made happy and comfortable tens of thousands of people who might otherwise be living in poverty and wretchedness.

## CASTORIA.

Bears the  
Signature of  
 The Kind You Have Always Bought

# Boils and Pimples

Red Rash, Eczema, in fact any skin disease, disfigures the complexion because the bowels are constipated—or because the kidneys do not rid the system of waste—or because the skin itself is unhealthy.

Ointments, salves and soaps are useless. Because the trouble is with the blood.

Owing to defective action of bowels, kidneys or skin, the blood becomes laden with impurities. It is these impurities—deposited by the blood—that make boils, pimples, and painful, disfiguring skin diseases. It is because the trouble is with the bowels, kidneys or skin, that FRUIT-A-TIVES cure these diseases

## Fruit-a-tives

OR "FRUIT LIVER TABLETS"

act directly on the eliminating organs—correct their irregularities—strengthen them—and thus clear the skin and make the complexion clear and soft.

If you have any skin trouble—or any fault with constipation, liver trouble, biliousness, headaches, indigestion, rheumatism—cure yourself with Fruit-a-tives. They are made of fruit juices and tonics—and never fail to cure.

50c. a box or 6 boxes for \$2.50. Sent on receipt of price if your druggist does not handle them.

FRUIT-A-TIVES  
LIMITED,  
OTTAWA.

### Why Eyes Get Red.

The eyeball contains a high percentage of blood, and why, therefore, is it white? The answer is that the blood vessels which supply its surface are so exceedingly minute that usually they do not admit the little red corpuscles to which the ordinary red appearance of the blood is due. Blood without these corpuscles is colorless, or, at most, of the faintest yellow tint. But occasionally when the eye is irritated or when there is any slight or considerable derangement of the system certain of the little vessels enlarge sufficiently to allow the corpuscles to enter, thereby producing the well known red streaks or inflamed appearance of the eyeball.

### Thanks For Food.

A pretty table observance in Danish families is for children, even little ones who can scarcely toddle, to go gravely after dinner to salute their parents and say, "Tak for mad" ("Thanks for the meal"). Even visitors shake hands with their host and hostess and go through the same formality. In German families that built to tradition the same custom prevails. When the evening meal is ended the party stand up around the table and each shakes hands with the neighbor, saying, "Gesegnete Mahlzeit"—blessing the food.

### Depends on the Man.

"What good is experience?" wailed the man who was looking for a job. "You can't cash it."

"Some people can," said his friend. "I bought some experience once that cost me \$3,000."

## THE PARLOR.

It Is Rapidly Becoming an Apartment of the Past.

The American parlor is a thing of the past, according to architects, says the Cleveland Plain Dealer. No more will there be a room reserved for state occasions, such as the receiving of formal calls, the visit of the minister and for weddings and for funerals.

"We never take the parlor into consideration any more," said a Cleveland architect recently. "The parlor is merged into the living room. The good old fashioned parlor, which was held in so much reverence in the old days, has no place in modern architecture."

"The demand is for a large living room in a small house, together with a dining room and kitchen. In a larger house there is usually a large living room, library, 'den,' dining room and kitchen."

"I had a client yesterday who desired to have a reception room or parlor not connected with the living room. He decided later to have a sort of reception room in connection with the hallway."

"When the parlor idea began to lose ground we did not make a radical change, but reduced the parlor to a small reception room, isolated from the others, where formal calls could be received. Now we make no provision for the parlor."

"In these days the reception rooms do not have to be closed only to be opened on the occasion of the visit of the family minister or the physician."

There may be many who will regret the passing of the old fashioned country parlor, with all its memories of visitors, courtship and occasions which left impressions which have not been eradicated by the strenuous age of today.

## THE LONDON COSTER.

He Is the King of the Curb in the British Metropolis.

London's outdoor man is the coster. He is the Ishmael of the gutters. A very jolly Ishmael, it is true, who is more than content to acknowledge the line of demarcation between himself and the true cockney. But, nevertheless, in a modified, twentieth century way he is still the wild man whose hand is against every man's and every man's against his. He is probably the last remnant of the world's old race of wanderers—the last suggestion of the primitive man—left to the cities. He is to us town dwellers what the gypsy is to the countryside. His descent seems to spring from the same roving stock. And he is regarded, from a safe distance, with the same contempt by those who don't know him. His habits and his impulses still savor strongly of the days when tribe warred against tribe and every man's arm was for himself and his clan. And, although his pitch is below the curb, his caravan a barrow and his beast of burden a Russian pony, a donkey or himself, he is as free and exclusive as any other lusty scion of the people who live under the skies. Ishmael he is, and Ishmael he chooses to remain. And the chances are ten to one that whoever goes a-fishing for information among the barrows will come back with an empty creel or a fine show of fishermen's tales, for your coster knows both how to keep silence and how to use his tongue picturesquely in defense of his jealously guarded traditions and the internal economies of his existence.—Outing.

## FISHING FOR BIRDS.

Catching Gulls and Albatrosses With Rod and Line.

Curious though it may seem, it is a fact that birds are caught with rod and line in many parts of the world. The pastime is declared to be almost as fascinating as fishing. Gulls in Newfoundland are caught in this way in large quantities. In New England fishing for gulls and petrels is an important industry.

The method of bird fishing is practically the same as that of ordinary fishing. Two men go out in a dory and throw pieces of cod liver on the water. When large quantities of birds have been attracted to the spot more cod liver is thrown out on a hook. This the birds greedily swallow and thus fall easy victims.

Albatross are fished for in the same way off the Cape of Good Hope. A piece of pork is attached to a long line and thrown overboard. The bird will eye it for a long time, gradually and cautiously making toward it. Suddenly he will seize it and hold it in his beak. When he discovers that he is caught he will sit on the water and vigorously flap his wings. However, he will be drawn into the boat and made a captive.

Albatross fishing is good sport, since the bird requires careful handling. So long as he pulls against the line it is easy enough. The moment, however, he swims forward the hook will drop from his beak unless it is skillfully manipulated, and the bird will find himself free.

## A CURIOSITY IN BOOKS.

The Famous Chained Library of Wimbourne, Ireland.

Wimbourne, Ireland, is noted for many things, but its famous chained library is perhaps the most notable of its curiosities. The library possesses unique interest as being one of the earliest attempts to disseminate knowledge among the people. The collection was made accessible to the people in 1636 and numbers some 200 volumes. The scarcity of books and the value of the collection are both indicated in the care taken for their preservation, and especially against loss of such treasures by theft. By means of chains and rods the books were securely fastened to the shelves, and these chains, it is rather surprising to learn, were not removed until 1857, when the library fittings were repaired. Among the interesting works of the collection is a copy of the first edition of Sir Walter Raleigh's "History of the World," 1614. It has suffered from fire, and tradition says that Matthew Prior was responsible for its condition, the story being that he fell asleep when reading it once upon a time, and the pages were burned by his candle. It has been neatly repaired, and its mishap now adds to its interest. The oldest volume in the library is a fine old copy in vellum of "Reginum Animarum." It is in manuscript and bears the date 1343.

### First Glimmer of a Star.

A little girl, the French critic Sarcey related, once presented herself at the Paris Conservatoire in order to pass the examination for admission. All she knew was the fable of "The Two Pigeons," but she had no sooner recited the opening lines when Auber stopped her, with a gesture.

"Enough," he said. "Come here, my child."

The little girl, who was pale and thin, but whose eyes gleamed with intelligence, approached him with an air of assurance.

# KIDNEY TROUBLES

Increasing Among Women, But Sufferers Need Not Despair

THE BEST ADVICE IS FREE

Of all the diseases known, with which the female organism is afflicted, kidney disease is the most fatal, and statistics show that this disease is on the increase among women.

Mrs. Emma Sawyer

Unless early and correct treatment is applied the patient seldom survives when once the disease is fastened upon her. We believe Lydia E. Pinkham's Vegetable Compound is the most efficient treatment for chronic kidney troubles of women, and is the only medicine especially prepared for this purpose.

When a woman is troubled with pain or weight in loins, backache, frequent, painful or scalding urination, swelling of limbs or feet, swelling under the eyes, an uneasy, tired feeling in the region of the kidneys or notices a sediment in the urine, she should lose no time in commencing treatment with Lydia E. Pinkham's Vegetable Compound, as it may be the means of saving her life.

For proof, read what Lydia E. Pinkham's Vegetable Compound did for Mrs. Sawyer.

"I cannot express the terrible suffering I had to endure. A derangement of the female organs developed nervous prostration and a serious kidney trouble. The doctor attended me for a year, but I kept getting worse, until I was unable to do anything, and I made up my mind I could not live. I finally decided to try Lydia E. Pinkham's Vegetable Compound as a last resort, and I am to-day a well woman. I cannot praise it too highly, and I tell every suffering woman about my case." Mrs. Emma Sawyer, Conyers, Ga.

Mrs. Pinkham gives free advice to women; address in confidence, Lynn, Mass.

## TRIAL BY ORDEAL.

The Queer System That Exists in the Sinal Peninsula.

In the Sinal peninsula trial by ordeal is still practiced. In all criminal cases where no witnesses are forthcoming the judge, "el mabashaa," tests the suspected person by fire, by water or by dream. In the first the judge places an iron pan in the fire until it is redhot and gives it to the accused to touch three times with his tongue. If marks of burning are shown on the tongue the accused is pronounced guilty. The theory apparently is that if he is not guilty the moisture on the tongue prevents it from being burnt; if guilty his tongue would dry up from fear of being discovered.

The test by water is described as follows: "The 'mabashaa' sits with the accused and the spectators in a circle with a copper jug full of water placed in the center. This jug is then made to appear to move round the circle by means of witchcraft or hypnotism. If the jug returns back to the judge the accused is pronounced not guilty, but if the jug stops opposite the accused

# Losing Your Hair?

And doing nothing to keep it? Most women like thick, heavy hair; long, luxuriant hair. Don't you? Then use Hall's Vegetable Sicilian Hair Renewer. You save what hair you have and get more at the same time. For the whiskers and moustache we make BUCKINGHAM'S DYE. It colors a rich brown or a soft black. R. P. HALL & CO., Nashua, N. H.

## Saves Babies' Lives. DR. WILLIAMS' PINK PILLS FOR PALE PEOPLE. INFANT TABLETS

Destroy Worms, Assimilate the Food, Regulate the Bowels, Sweeten the Stomach, give sound and Refreshing Sleep, Relieve Feeding Troubles, Alleviate Excesses, Cure Indigestion, Harshness, Constipation, Colic, etc. **STOPS WALKING IN THE SLEEP, AND FRIGHTENED AWAKENING. CURES FITS.** Do not contain morphine, Opium, or other narcotic.

**WHAT WE WILL DO**—Any person sending their address can have samples sent free. We want to give you the proper medicine for children. Have the genuine.

**CAUTION**—Do not allow Druggists to substitute these Tablets. If you cannot get Hennequin's send direct to us. Your only guarantee of the genuine Hennequin's is "you will find the letter 'H' stamped on every Tablet."

**PRICE 25c., OR 5 PACKAGES FOR \$1.00.** Pre paid to any address. If after using one package you wish your dollar return us the remainder. We cannot be responsible for moneys unless sent P. O. Order, Registered Letter, or stamps.

## PATRIOTIC PAPERS

In the Western Methodist Sunday School on Dominion Day, the following papers were read by two of the Sunday School's brightest scholars.

### THIS CANADA OF OURS.

A certain loyal Canadian has written thus respecting "This Canada of Ours."

The rudiments of Empire here are plastic  
still and warm.  
The chaos of a mighty world in rounding  
into form.

It is true that there were long weary years during which our progress was slow and uncertain, and our future clouded with gloom and apprehension. Between Upper and Lower Canada there was no strong community of interest and between those provinces and the West there was suspicion and distrust. A common feeling in Ontario was that here people were subjected to inordinate taxation for the benefit of the Eastern Provinces, and as common a feeling in the East was that the colonization of the West was the reckless experiment of designing politicians which must entail enormous burdens upon the country, and possibly end in national disaster. But all this has changed. In the East as in the Old Provinces of United Canada, there has been a marked increase of material prosperity, while in the West, pioneers from every corner of the earth are laying the foundations of the country's outposts. With the increase of material prosperity, the growth of industries and reform in agricultural methods in sympathy with changing conditions and old world markets, there has come also this striking access of national self-confidence and this increasing unity of sympathy and interest between the various members of the Confederation. As the years pass and settlement and cultivation extend, all fear of a general crop failure in the West disappears, the East grows more conscious of its national and industrial value, and sympathy for the new communities widens and deepens in the older provinces. In response, the West feels the throb of a common Patriotism, and accepts cheerfully the industrial conditions necessary to the unification of industrial and political interests through out the Confederation.

It seems hard to explain the extraordinary expansion of the last half a century. From year to year it has seemed that the increase in national revenue, in customs returns, in bank circulation could not be maintained, and possibly in many minds there was a curious notion that some mysterious providential influence was at work which could not be measured by mere human calculation. But the expansions proceeds. Population still pours into the West. The growth of trade for the past few months passes all precedent. All this means that at last Canada has been discovered, that the world has learned that we have resources of mine, and field and forest equal to the most alluring dreams that we have ever cherished, and that the place which the United States held for a century in the imagination of the world has been taken by Canada. We shall have just such a Western movement of our people and just such a steady influx of population from the old World as the United States had for generations, and with similar results. We shall have great mining centres, prosperous industrial communities, a rich prairie population, great Canadian merchantile fleets going out from Atlantic ports to

# PE-RU-NA KEEPS THE FAMILY IN THE BEST OF HEALTH.

This is Only One of a Million of Homes in Which Pe-ru-na Has Been a Blessing. Read This Family's Glowing Testimony.

BABY GERALD

MRS. H. J. CAMPBELL

MR. HENRY S. CAMPBELL.

Mr. Henry S. Campbell, 1737 S. Williams St., Denver, Col., State Deputy of Modern Woodmen, Montana, and Delegate of Builders Trades Council, writes: "Peruna has been a blessing in our home. My wife was in poor health for several years and nothing but Peruna helped her. She gradually recovered her health and became the mother of a boy which blessed our home. We call Gerald our Peruna boy. He is in the finest of health and his mother has never enjoyed such excellent health."

"I have personally found Peruna of great value to me while travelling. Getting irregular meals and often poorly prepared food ruined my stomach, but Peruna toned up my digestive organs and brought fine health to me."  
"We are never without Peruna in our home and know by experience that it keeps us all in the best of health."

### A RECENT LETTER.

A recent letter received from Mr. and Mrs. Campbell is, as follows:  
"We still use Peruna and in addition to our son, Gerald, who is a fat and

saucy lad of 28 months, we have another son, still larger for his age. He is now ten months old and is always healthy."  
"His mother says Peruna has surely made both of our children as healthy as

most loyal subjects of Great Britain.

At the opening of the nineteenth century the population of Canada was small, and its resources only slightly developed. The population did not reach a million until about 1840, though since then a very large number of immigrants have come to Canada, and the population has grown with considerable rapidity. In 1791 the original province of Quebec was divided into Upper and Lower Canada, a political separation which by no means gave satisfaction, but led to severe political conflicts. As a result the Act of Union took place, the provinces being

control of a governor-general appointed by the king, yet the laws of Canada are made by its own men, and an air of independence prevails. Recognizing this, and respecting the liberty-loving spirit of the people, Great Britain does not try to interfere with any question of Canadian policy, or in any sense attempt to limit the freedom of her great Colony.

While Canada is to-day celebrating its 39th Birthday and is therefore a young country, we all feel it is a country of tremendous opportunities. In 1867 Toronto had a population of 50,000, to-day it has 260,000. In 1867

they are, helped, of course by Colorado's healthy air.

"A bottle of Peruna is at all times a welcome visitor to our home."

A multitude of families have discovered that Peruna is their standby.

In all the catarrhal ailments which are likely to beset the various members of the family, Peruna is the remedy that brings quick relief.

No matter whether it be a catarrhal condition of the head or lungs, or a derangement of the stomach and bowels, Peruna is the remedy.

### Blood From a Stone.

The open terrace in front of the Dewani-Khas consists of two thrones, the black one of which, facing the river, was cut out of a single slab of stone in 1603. This black throne, which is about eleven feet long and supported by octagonal pedestals, was built by Akbar in recognition of his son's title to the empire. Here Jehangir used to sit occasionally and see the fight of wild animals arranged for his amusement. The crack on the throne is believed to have been caused by Lord Lake's bullet falling upon it during the attack of 1803. According to

"We Call Gerald Our Peruna Boy. He Is In The Finest Health."

Peruna—Once Used In The Family, Becomes a Permanent Fixture.

results. We shall have great mining centres, prosperous industrial communities, a rich prairie population, great Canadian merchantile fleets going out from Atlantic ports to Europe and from Pacific ports to the orient, and problems in government of tremendous interest and magnitude.

Few of us, perhaps realize how fast problems of the first magnitude are coming upon us, and how loosely our old provincial garments hang upon our shoulders.

The people of Canada are moving faster than the press and the politicians, and down among the masses, there is a more fervent national spirit and a firmer national life than most of us understand. We shall not always be so prosperous as now. There will be failures in the West and industrial depressions in the East. But these will be only temporary checks and minor ailments. We stand to-day in the certain assurance of a great national destiny, and a splendid material prosperity, and we have need to concern ourselves with the things of the mind and the spirit, rather than of the shop and the farm. It is our interest and privilege to maintain amid all the perils of a time of prodigal material luxury respect for industry, reverence for learning, pride in intellectual achievement and zeal for the essentials of human freedom.

These are the only enduring fruits of civilization and the saving salt of free institutions. It is our privilege to rear a Canadian citizen, removed from the inherited prejudices of the Old World, and unspoiled by its social distinctions, sane, simple, serious and modest, hating noise and swagger and cant and pretension, which flourish so rankly on this new continent. It may be that we have achieved nothing in art and literature, but if we develop national character, it will find expression, and if we reverence the past and cherish its traditions, a creative and preservative literature will arise. We shall have an art which will express the sober beauty of northern hills and streams, the robust spirit of a new land, and the ardent temper of a nascent race, and a literature, which if it do nothing else, will tell with simple strength and truth the brave story of the pioneers who reared their rude homes in the Canadian forests and learned patience from the lonely skies and endurance from the granite hills, the best guardians of the sober virtues of the race, and the strong supports of our free institutions.

Shall we not all be one race, shaping and welding the nation?  
Is not our Country too broad for the quarrels which shake petty lands?  
Yea, we shall join in our might, and keep sacred our firm Federation.  
Shoulder to shoulder arrayed, hearts open to hearts, hands to hands!

MISS DOWNS.

#### DOMINION DAY.

Occupying the northern section of North America lies Great Britain's largest colony, the vast Dominion of Canada, which covers an immense area of the earth's surface, surpassing that of the United States, and nearly equal to the whole of Europe.

Canada was first settled by the French in the seventeenth century, and came under British control in 1763. Like the other colonies of Great Britain, Canada possesses a large alien population, principally of French origin. The revolution of 1775 in the colonies to the south failed to gain adherents in Canada, which remained loyal to Great Britain, and to-day the Canadians as a whole are among the

Wyandotte Dairyman's Cleaner and Cleanser. MADOLE & WILSON.

Upper and Lower Canada, a political separation which by no means gave satisfaction, but led to severe political conflicts. As a result the Act of Union took place, the provinces being reunited in 1840.

The population now began to grow more rapidly, and the people were spreading out northward and westward, settling new lands, and stretching far towards the Pacific border. The industries of Canada, which had been greatly depressed by the adoption of free trade in Great Britain, were revived by a treaty of reciprocity in trade with the United States, and the country was very prosperous.

But political troubles were by no means at an end, and much irritation arose from acts of citizens of the United States during the Civil War. Fenian raids were attempted from the United States, and there was much alarm, though nothing of importance arose from the disturbed condition of affairs.

The governments of the different provinces began to discuss the question of local federation. There were various motives that commended the plan of union to the leading men of the provinces. Hon. J. W. Johnston, of Nova Scotia, endorsed the policy because he believed it would "perpetuate for all time to come the character, name, and honor of the country, of which we are all proud to form a part." Hon. Alexander Morris accepted the Confederation policy in order to bring about a fusion of races, a union with the far west, and a future railway to the Pacific, while among the extreme protestants the union was seized upon as a means of overpowering the French Canadian (Roman Catholic) influence.

It was finally decided to unite all British North America into one general union. This was done in 1867, the British parliament passed the British North American Act which created the "Dominion of Canada." The new confederation included Ontario or Upper Canada, Quebec or Lower Canada, New Brunswick, and Nova Scotia. Four years later Manitoba and British Columbia were included, and Prince Edward Island in 1874. Last year Alberta and Saskatchewan were included, also by the British North American Act the Dominion Government was to have control of all matters pertaining to the whole country, and each province was to have a local government having control of all purely local affairs.

Of the fathers of Confederation who drew up forty-two years ago the terms upon which the Canadian and the Maritime Provinces united, Sir Charles Tupper and Senator A. A. Macdonald, of Prince Edward Island, alone remain. Two of the members of this noteworthy group died during the last year, Hon. William Macdougall, and Sir Hector Langevin. Sir Hector, whose death occurred in Quebec this month was the last survivor of the first Dominion Ministry that was formed by Sir John A. Macdonald, who became Prime Minister shortly after the formation of the Dominion, and, with the exception of a few years held it till his death in 1891. He was a man whom it was pretty safe to follow, and who was loved by all his people. The Dominion Ministry that he formed took place on July the first, thirty-nine years ago.

Since Confederation, Canada has been growing faster than any other period of her history. It is estimated that her population will increase half a million during the present year. Her progress in other respects has also been great. The liquor traffic, for instance, is subject to the local option of restriction, religious liberty prevails, education is practically free, and though the government is under the

its 39th Birthday and is therefore a young country, we all feel it is a country of tremendous opportunities. In 1867 Toronto had a population of 50,000, to-day it has 260,000. In 1867 Winnipeg was unknown, Fort Garry standing where the present city of Winnipeg, with a population of 201,000 now stands. Canada is to-day reaching out towards possibilities of which our forefathers never dreamed. Slab villages are being patched upon sites that will in a few years be large cities. The man who says our great northland will remain sparsely settled is not wise. "Where trees will grow, man will thrive," and the time is coming when our front doors and windows will look out into Hudson's Bay, and these older parts of the country will be called the "southern interior."

Only a few days ago a noted surveyor reported an area of fifteen million acres of clay belt, where no such land was supposed to exist.

Our great Canadian poet, Alexander Muir, who died on Tuesday, June 26th expressed our inmost sentiments when he wrote, "The Maple Leaf Forever."

MISS MURIEL PAUL.

#### How's This?

We offer One Hundred Dollars Reward for any case of Catarrh that cannot be cured by Hall's Catarrh Cure.

F. J. CHENEY & CO., Toledo, O. We the undersigned have known F. J. Cheney for the last 15 years, and believe him perfectly honorable in all business transactions and financially able to carry out any obligations made by him.

WALDING, KINNAN & MARTIN, Wholesale Druggists, Toledo, O. Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system. Testimonials sent free. Price 75 cents per bottle. Sold by all druggists. Take Hall's Family Pills for constipation.

#### Warm Weather Goods.

Gas, Gasoline Stoves, Coal Oil Stoves, Refrigerators and Ice Cream Freezers, Screen Doors and Windows.

MADOLE & WILSON.

used to sit occasionally and see the fight of wild animals arranged for his amusement. The crack on the throne is believed to have been caused by Lord Lake's bullet falling upon it during the attack of 1803. According to tradition, however, it cracked when the Jat king of Bharatpur sat on the throne, for it was meant to be used by none but the real descendants of the great mogul. Then, again, when Lord Ellenborough sat on it during the Kabul war in 1842 blood is supposed to have come out of it.

#### Fish For the Brain.

Replying to a "Young Author," Mark Twain wrote: "Yes, Agassiz does recommend authors to eat fish, because the phosphorus in it makes brains. So far you are correct. But I cannot help you to a decision about the amount you need to eat at least not with certainty. If the specimen composition you sent is about your fair usual average, I should judge that a couple of whales would be all you would want for the present—not the largest kind, but simply good, middle sized whales."

#### The Kitchen Autocrat.

"Yes, ma'am, an' now that I'm goin' to take hold here I'll settle th' permit business first of all. You see, I carry me own fountain pen. There, take that an' don't lose it."

"What is this?"  
"That's a permit, ma'am, for you to visit th' kitchen. It entitles you to one visit a week. If you come oftener th' permit will be taken up, an' don't you forget it."

#### Where the Rub Comes.

"Well," said the good natured boarder, "there's one thing about our boarding-house—you can eat all you like there."

"Of course; same as curs," replied the grouchy one. "You can eat all you like, but there's never anything you could possibly like."

## "Let the GOLD DUST TWINS do your work"

## "Your Servants, Madam!"

The Gold Dust Twins are always ready to work; they are certainly artists in the cleaning line. There's nothing cleanable which

## Gold Dust Washing Powder

will not clean—and do it better, more quickly and more economically than anything else can. You are not serving your best interests if you're trying to keep house without GOLD DUST.

OTHER GENERAL USES FOR GOLD DUST: Scrubbing floors, washing clothes and dishes, cleaning wood-work, oil cloth, silverware and tinware, polishing brass work, cleansing bath room, pipes, etc., and making the finest soft soap.

Made by THE N. K. FAIRBANK COMPANY, Montreal, P. Q.—Makers of FAIRY SOAP.

# HELPFUL PRIVATE CITIZEN

## The Health of a Nation Depends On That of the Individuals.

The leaves of the tree were for the healing of the nations.—Rev. xxii., 2.

There are lives so small that they never think beyond themselves; with others the interest widens out to the limits of the home, the business, the city, the state, and with the full-grown man, to the whole universe. This is the measure of a life. It dies itself and carries death to others when it lives only to itself. The interests and activities beyond the individual, in citizenship, in the sense of national and human life, make the whole and healthful life.

The day forever has passed when we can think of the religious man as the one who puts his fingers to his ears and flees from this world to some other and quieter one, as a dreamy enthusiast who knows nothing of the gutters of earth so occupied is he with the glories of heaven. What we need is more religion in our politics and less politics in our religion.

We need more men who are determined that the grace of God shall be applied to our social, industrial and national problems and that for our pious lamentations about the corruption and greed of wicked men we will substitute labor and personal sacrifice for political honesty and civil righteousness.

### PIETY AND PATRIOTISM

are inseparable; he cannot be a good man who is not a good citizen. He who talks of politics as a dirty business and who hopes to enter the delights of the city above by neglecting the duties of citizenship here, never will know what those delights are. For will not the good Judge of all ask him, "What have you done with your life, how much better is your world for you?" and in his silence the voice shall say, "Inasmuch as ye did it not for one of these, ye did it not for me."

Men are not patriotic because they enjoy processions and picnics, or because they applaud fire-eating speeches that revive buried animosities. They glory in the battles they never fought and the victories for which they did not

pay. The most gallant veterans are the men who were drafted and switched around a few times in a box car before peace was declared. And now instead of paying the price of peace by wrestling with the problems and sacrificing for the security of to-day, they are boasting of a past in whose glory they had no part.

The man of religion needs to know that the best way he can serve heaven is by the service of earth, and the man of patriotic spirit that he can best serve his land by that sacrifice and devotion which we call religion. Too long have we gone lamenting the open sores of our national life, while yet carrying all the time the only balm that will heal them, perhaps cherishing that healing medicine as too sacred for such common, secular service.

### THE HEALTH OF A NATION

depends on that of the individuals. The best thing a man can do for his country is to be a clean, honest, true, and helpful private citizen. What he is in his heart is of more importance than what he may say or do in a public way. The glory of a nation is not in possessions, but in people; not in crops, but in character, and that which can set aright the human heart will heal and vitalize the whole nation. The ideals of religion in the individual lie at the basis of the reality of righteousness in the nation.

If men only will do for the affairs of their city and state now the things they expect to do for the city celestial, if they will be now only what they hope to be then, the kingdom of heaven speedily will come to the place and time to which it belongs, here and now. The healing for our woes, rest for our weariness, soothing for our sorrows, and relief for our oppressed cannot come by legislation. All this means new life and new life springs from within. Laws may make right paths, but the touch of the infinite, the dawn of divine love in the heart, and the power of heaven born ideals alone will give the impulse to walk in them.

HENRY F. COPE.

## THE S. S. LESSON

### INTERNATIONAL LESSON,

JULY 15.

### Lesson III. The Good Samaritan.

Golden Text: Matt. 5. 7.

### THE LESSON WORD STUDIES.

Note.—The Text of the Revised Version is used as a basis for these Word Studies.

An Autumn Visit to Jerusalem.—Shortly after his discourse on humility and forgiveness, parts of which formed the lesson texts for the past two Sundays, Jesus attended the autumnal Feast of Tabernacles at Jerusalem which had constituted his field of labor during most of his public ministry. While at Jerusalem Jesus taught in the courts of the temple and delivered among other discourses those on himself as the Light of the World and on spiritual freedom. The seventh and eighth chapters of John's Gospel are devoted to the events and discourses connected with this visit to Jerusalem. After the feast Jesus seems to have returned for a very brief period to Galilee. His final departure from Galilee is recorded in

32. A Levite.—All priests were Levites, that is, members of the tribe of Levi, though not all Levites were priests. Yet both these men, the priest and the Levite, were by profession closely associated with the services of the sanctuary and hence men from whom assistance in such circumstances might well have been expected.

35. Two shillings.—Literally two denarii, about thirty-four cents, which, however, was equivalent to two days' wages for a laboring man.

36. Which of these three.—Only one answer was possible, and the lawyer to avoid adding the charge of insincerity or ignorance to utter defeat in argument gave that answer.

37. Go, and do thou likewise.—The final admonition of the Master to one who knew the way but was not walking therein. There was nothing left for the lawyer to say, "the answer of Jesus was complete."

## PLAINS OF ARGENTINE

IMMENSE LEVEL TRACTS OF FARMING AND GRAZING LANDS.

Where Fortunes are Made—Distinction

otherwise the statement gives a very good idea of the situation. The latter do not return to England every summer on a visit, have fewer fads and fancies, and in many other ways edify more "horse sense" than the born gentleman. Most of these are making money faster than they can count it.

The others are making money, too, but because they cannot help it rather than for any other reason. They farm as gentlemen farm in England, and their kennels and stables and fancy cattle and their imposing but antiquated agricultural machinery are responsible for a substantial deficit every year which however, their thousands of hectares of land rented out to Italian tenantry regularly make good, and with some to spare. Over and above this the steadily increasing value of their lands incident to the growth of the country is doubling and trebling their wealth every few years.

There is nothing like an Argentine grain train anywhere else in the world, and the sight of one on the move is alone worth

### A TRIP TO THE PAMPAS.

They are especially designed for this country and could be used in no other. One of them would be far too wide to pass through an English lane, far too long to turn an ordinary cross-roads corner in the States and far too heavy to be used in any country where horses were not at bedrock prices. A good sized wagon will be from 40 to 50 feet long and from 12 to 15 feet wide. Its hind wheels will be from 12 to 14 feet high and the driver's seat 20 feet or more from the ground.

The horses used appear innumerable, and actually at times run above two and three score. They are driven either by the "jerk line" system or by reins run out to the leading pair. The capacity of one of these vehicles is enormous, and the general rule of "a wagonload makes a carload" will not often be found amiss. The principal idea of so large a wagon is to have something that will not be engulfed by the mud or dust of the bottomless roads of the pampas, but it also has its economic advantages in a country where men are scarce and horses plentiful.

The gaucho of the pampas is the counterpart of our cowboy of the plains, and the "boundary rider of the Australian 'back blocks,'" and he is in many ways quite as active a character as either of his brothers. His worst fault seems to be his extreme carelessness in regard to the lives of those around him, but as he is equally careless of his own I cannot see where this can logically be held against him.

### AS A HANDLER OF STOCK

he is possibly the peer of a Queensland drover, but is certainly not to be mentioned in the same breath with a Texas, Arizona or Montana cowboy, nor with the best of Mexican vaqueros.

I had arrived at this conclusion in my own mind from the first time I had seen what were said to be expert gauchos working out at a roundup, hence I was the more pleased when, not long ago, a bunch of half a dozen Texas cowboys came to this country on an exhibition tour and demonstrated to the satisfaction of everybody that, both in method and execution, in the handling of cattle and horses, the North American is far superior to the South American.

A cowboy would rope and tie a steer in from thirty to forty seconds so deftly that it could be released by a single pull, where the gaucho would spend five minutes smothering the animal in a coil of rope, from which a surgical operation was usually required to release it. Buenos Ayres found the dose a hard one to swallow, but the best of them finally got it down and admitted that their men were outclassed at their own game. The English papers stood up manfully for the worthy Texan visitors—race pride, no doubt—but the Argentines were obdurate to the last continuing doggedly to insist that the natives had all the best of the competitions.

## HOME.

### SOME DAINTY DISHES.

**Stuffed Eggplant.**—Cut the eggplant in two; scrape out all the inside and put it in a saucepan with a little minced ham; cover with water and boil with salt; drain off the water; add two tablespoonfuls of grated crumbs, tablespoonful of butter, half a minced onion, salt and pepper; stuff each half of the hull with the mixture; add a small lump of butter to each and bake fifteen minutes.

**Wined Sweet Potatoes.**—Boil the potatoes and set them to cool. When cold, peel and slice them. In a well buttered baking dish spread a layer of the potatoes, sprinkle with butter, sugar, and a little salt. Then another layer of potatoes, butter, and the other ingredients, and so continue the layers until the dish is full, having laid on top a plentiful supply of butter. Put a little warm water in the dish to prevent dryness, invert over the baking dish another dish that will hold in the steam and set to bake in a moderate oven. After the potatoes are thoroughly heated take off the covering dish, let steam brown a trifle, and just before taking from the oven pour over them a little wine of a flavor agreeing with the potatoes.

**German Potato Cakes.**—This well-known German dish has been made a part of the cookery of our country, introduced by many of our German families. In making it grate the potatoes raw, add butter to enrich it, eggs and flour to hold the grated potato together, a little salt, and season with sugar and cinnamon to taste. The cakes are fried in butter on a griddle or in a flat saucepan till brown.

**Glazed Onions.**—Peel twelve medium-sized white onions and soak them for one hour in cold water, changing the water twice while they are soaking. Drain them on a sieve. Put two ounces of butter in a saucepan, add one teaspoonful of sugar and half a cup of beef broth or stock. Arrange the onions in the pan so they do not touch. Cook over a slow fire until they become tender and the outside is brown. Remove the cover from the saucepan, put a little beef extract on top of each onion. Then place the pan in the oven for five minutes. When the extract melts and a nice glaze forms on the top of the onions they are ready to serve as a garnish or vegetable. If served as a vegetable the sauce they were cooked in may be poured over them.

**Spanish Tomatoes.**—One can of tomatoes, one can of Spanish peppers, two medium-sized onions, two tablespoons of butter. Chop the onions fine and fry in butter until a light brown. Then to the Spanish peppers, chopped fine, add the tomatoes. Mix all thoroughly and cook over a medium fire five minutes, adding salt and white pepper to taste. Pour in baking dish and bake in medium oven three-quarters of an hour.

**English Muffins.**—Dissolve one yeast cake in one pint of warm water; add one teaspoon salt. Add enough sifted bread flour to make a thick drop batter. Stir one tablespoon melted butter, and beat hard; set in a warm place and beat light; then, having the griddle moderately hot, lay on it rings well greased and drop in enough batter to half fill them. Do not turn until almost cooked through, then slip off the rings and brown on the other side.

**Danish Strawberry Preserves.**—In Denmark strawberries are preserved in a very simple and easy way, which makes them equal to the German berries, and they are warranted to keep for years. Get firm, large berries and stem, but do not wash them. Weight three-quarters of a pound of sugar to every pound of fruit and arrange them in a deep porcelain kettle, sprinkling the sugar lightly between layers of the fruit. Cover, and let this

as the Light of the World and spiritual freedom. The seventh and eighth chapters of John's Gospel are devoted to the events and discourses connected with this visit to Jerusalem. After the feast Jesus seems to have returned for a very brief period to Galilee. His final departure from Galilee is recorded in Matt. 19, 1, 2; Mark 10, 1; and Luke 9, 51-62. The period between the time of this departure from Galilee until the final arrival of Jesus at Jerusalem at the time of his triumphal entry is generally known as the period of his Perean ministry, concerning which we shall have more to say in another connection. The first event of this period noted by the evangelists was the Mission of the Seventy, recorded in Luke 10, 1-24, and in the parallel passage Matt. 10, 1-30. The events of to-day's lesson follow immediately after the sending forth of the seventy and occurred somewhere outside of Galilee, probably in some town or village to the south or south-east.

Verse 25. A certain lawyer—Apparently an emissary of the Jews waiting for an opportune moment to engage Jesus in just such a discussion. A lawyer among the Jews was one who by profession was an interpreter of the Mosaic law. His work was closely related to that of the scribe and doubtless the same person often held both offices. What shall I do to inherit eternal life?—A question much debated among the scribes and lawyers, emphasis being laid at all times on the word do, the keeping of the law being considered the only requirement for entrance into life eternal. The question, however, as to just how much it was necessary to do or how much might be left undone and still eternal life be achieved, was a question much debated.

26. What is written in the law?—Since the canon of the Old Testament had been fixed long before the time of Christ, the law referred to can be no other than the Mosaic code as contained in the Pentateuch.

How readest thou?—This counter question of Jesus, since addressed to a professional teacher of the law, must have seemed eminently fair to all present. The burden of answering his own question was thereby thrown back upon the lawyer himself. He could not do otherwise, therefore, than to show by his answer that he really did know wherein consisted the sum and substance of the whole doctrine.

27. This do, and thou shalt live. It is the Master's turn to place the emphasis on the word do. The practice of the scribes, and lawyers, and Pharisees evidently did not always correspond with their theories, and this personal application of the whole matter to the lawyers own practical life must have been to him as unwelcome as it was unexpected.

28. Desiring to justify himself—For raising a question in the first place when had been so briefly and pointedly answered.

Who is my neighbor?—This second question was doubtless asked with a show of sincerity. Since from a lawyer's standpoint here, too, there was room for dispute and difference of opinion.

29. A certain man—unnamed and unidentified as to nationality and social standing, but from the entire setting of the narrative presumably a Jew.

Down from Jerusalem to Jericho—Jericho lay in the deep gorge of the Jordan almost nine hundred feet below the level of the Mediterranean; Jerusalem was a mountain city on the highlands of Judea. The distance between the cities was about twenty miles. Hence the decline of the narrow mountain road was steep. The road itself was rugged and the surrounding hills and narrow gullies offered a convenient place both for attack and for retreat to robbers who then as now infested such highways in great numbers.

Stripped him—Robbing him of his clothes, which in all probability were the most valuable part of his possessions. An Oriental's wealth consists largely in the flocks and herds he possesses and in the clothes he wears.

## IMMENSE LEVEL TRACTS OF FARMING AND GRAZING LANDS.

### Where Fortunes are Made—Distinction Between the Land Owners and Tenants.

The pampas of Argentina correspond very closely to the Mississippi valley of the States and the great plains of the Canadian Northwest, but on a show-down they would prove far truer to the name of plains than anything north of the Isthmus of Panama. Nowhere else in the world is there so large an area that approaches so near an absolute level as do the pampas.

The exigencies of railroad building best illustrate this fact. Look at a railroad map of Argentina and see how the lines radiate from Buenos Ayres like the spokes of a wheel. Whether northwest to Rosario and Cordoba, west to the Andes, southwest to the Pampa Central, or south to Mar del Plata and Bahia Blanca, their course is invariably almost perfectly direct. The Buenos Ayres and Pacific Railway has the longest "straight" in the world, where between Vedia and Mackenna, in the heart of the pampas, the rails run for 175 miles without an inch of curve, and but for an "S" of the former place would continue so for 206 miles. This is indicative of the real thing in level land. To the average inhabitant of the pampas a gentle swell on the bosom of the plain is a thing of interest and a hill a thing to revere. I don't know exactly what his idea of heaven is, but I feel perfectly safe in assuming that it contains mountains.

#### THE PAMPAS OF TO-DAY.

are not the pampas of thirty years ago, says a correspondent of the Los Angeles Times. Then the prevailing pursuits were pastoral; now those horticultural take the lead and are rapidly increasing in importance. Formerly master and man lived alike, both in mud huts and on a diet of carne asado, galletas and mate. Now, all this is for the peons, while the master divides the time between his palatial estancia house, where he lives like a medieval baron, and Buenos Ayres and Europe. Probably nowhere else in the world, certainly not outside of the great cities, is there so great a gulf between the standard of living of the highest and the lowest. Nowhere have I seen such lavishly run establishments as those of these hard kings of Argentina, both native and British, and nowhere among Caucasians have I seen such primitive quarters and such hard living as among the peons and gauchos of the same country.

The eight or ten weeks that I have spent in various parts of the pampas were almost equally divided between these diametrically opposite ways of living, giving me all the advantage of sharp contrast in showing the one up against the other. It is an amusing and rather novel experience to sit with the knees under mahogany and sip French wine from a glass of Mauze crystal one day and the next to hunch up on a horse skull stool and suck mate through a humbilla that has been in a dozen other mouths before it comes to you, or perhaps to have imported English lamb chops and French peas for 11 o'clock breakfast, and for 5 o'clock dinner a hunk of smoky, greasy carne asado, cooked on a steel spike in the midst of an open fire, and eaten by holding in the hands and rending with the teeth. But whatever, and by whomsoever dispensed, it is tendered with a free and unforced kindness that reduces it.

#### ALL TO THE SAME LEVEL.

Talking with an Englishman in Bahia Blanca a while ago he divided his countrymen who owned estancias in the pampas into two classes: Those who were gentlemen when they came to the country, and those who were not gentlemen when they came to the country, but had since become such through the accession of wealth following their foresight and good management. The definition of gentleman herein implied may be somewhat open to question,

—race pride, no doubt—but the Argentinians were obdurate to the last continuing doggedly to insist that the natives had all the best of the competitions.

### USUAL NUMBER OF EARTHQUAKES.

#### Professor Milne Says They Are Not More Frequent.

A fallacy which has not yet been overtaken is to the effect that our world, in consequence of some general but baneful influence, has of late been trembling and quaking more frequently than has been her wont. Evidence to this effect is not forthcoming. If we turn to facts we find that from 1899 to 1905, inclusive, the yearly number of world disturbing earthquakes has been 91, 56, 43, 64, 58, 29 and 55. In the year 1905 we had, therefore, one large earthquake less than the yearly average, which is 56. Since the end of 1905 the large earthquakes have been seven or eight.

In July of last year, the California earthquake was entirely eclipsed as a world shaker by two disturbances which originated in Central Asia. Wandering tribes do not write in the papers, so these, so far as the public are concerned, had no existence. On Sept. 8 Calabria was well shaken, but whether this played any part in freeing Vesuvius is a matter for historical inquiry. The Colombian earthquake shook one, if not three, volcanoes into activity. In March, 1,087 people lost their lives in Formosa; but Formosans are not Europeans, therefore, but little notice was taken of the event. Earthquakes and eruptions have not been more numerous than usual, but their effects have been brought to our door.

### CHILD BRINGS PEACE.

#### Father and Mother Respond to Pleadings and Are Reconciled.

A touching reconciliation has taken place in a house in the Boulevard Voltaire, Paris, between a man and his wife who had long been separated. The husband had divorced his wife owing to a foolish infatuation on her part, and he had been given the custody of the child, a little girl of seven.

The child, deprived of her mother, of whom she was extremely fond, fell ill, and the most careful attention and even change of air did nothing to prevent her from pining away. Her condition became serious. She took no interest in the toys with which her father loaded her, and frequently cried for her mother.

The divorced woman, hearing of her little daughter's illness, succeeded, with the connivance of the nurse, in visiting her, unknown to the father, while he was away at his office. During one of these visits, however, the father came back unexpectedly to see the child, and was brought face to face with his wife.

The pitiful joy of the little girl, who begged that her mamma might not be sent away, and the repentant attitude of the mother, had such an effect that at last the father melted and a reconciliation was effected. They are to be married again as soon as the necessary legal requirements have been fulfilled.

### THE DIFFERENCE.

Jibbs: "Bilkins tells me he is only an amateur politician, but if anybody can tell me the difference between an amateur and the professional, I'll treat."

Nibbs: "All right, treat me. The difference is that the amateur puts money into politics and the professional takes money out."

Hardup—"How deeply I am indebted to you, sir, words cannot express!" Doctor—"No! Well, I can tell you in figures what it amounts to!"

berries, and they are warranted to keep for years. Get firm, large berries and stem, but do not wash them. Weight—three-quarters of a pound of sugar to every pound of fruit and arrange them in a deep porcelain kettle, sprinkling the sugar lightly between layers of the fruit. Cover, and let this stand all night, or, if the weather is very hot and damp, prepare them early in the morning, and let them stand six hours. Heat slowly to the boiling-point, skimming very thoroughly, and simmer fifteen minutes. Take the kettle from the fire at exactly this moment and cover with a thin cloth and stand it away all night without moving. In the morning heat again, very slowly, and skim; let it simmer ten minutes and take from the fire. Strain off the juice from the berries without breaking them, and boil the juice to the thickness you wish; five minutes is the best time to stop, since after this it loses flavor; but if you wish a very stiff preserve you can boil it fifteen. Add the fruit when you take the kettle from the fire, and put into hot glass jars with new rubbers and glass tops. The cans must be sterilized by being baked half an hour, and the rubbers should be put in very hot water for ten minutes. If these preserves are kept in a cool, dark place they will be as good after years as at first.

Steamed Salmon.—This is a good way to make canned salmon tasty, nice for lunch or supper.—One can of chopped salmon, one cup fine breadcrumbs, three eggs, one tablespoon melted butter, one tablespoon chopped parsley, pepper, salt, and a little milk improves; put in a buttered dish and steam one hour. Serve with white sauce or egg sauce made with hard-boiled eggs chopped fine and added to drawn butter. Serve hot.

### HINTS FOR THE HOME.

Peeled vegetables should always be put into cold water till they are wanted for cooking, or the color will be spoiled.

When mixing pastry use the coldest water that you can procure, and if your hands are hot mix it with a knife.

A troublesome cough may often be allayed by dissolving a small lump of borax in the mouth. To make it more palatable mix a little honey with the borax.

Have cisterns cleaned out and entirely emptied about once a year, and more particularly after the summer holidays, when the house has been empty and the water has been allowed to stagnate.

To keep tinware bright wash it inside and out with hot water and soda. Dry with clean cloths, scour with sand and whitening in equal parts mixed with water to a paste.

Permanganate of potash dissolved in boiling water in the proportion of half an ounce to each pint of water makes a very good disinfectant. The same solution applied whilst hot will stain floor boards beautifully.

To boil new potatoes well wash them and scrape off the skin, but never cut them. Put the potatoes into boiling water with salt and a good sprig of mint. When cooked dry for a few minutes, add a lump of butter, and toss all together.

Coffee stains on a woollen blouse may be removed by the use of glycerine. Rub it over the stain, and then wash the place with lukewarm water, and iron the material on the wrong side till it is dry.

Fruit Stains on Linen.—If applied at once powdered starch will take out many kinds of fruit stains on linen. This must be left on the stained part for a few hours so that all the discoloration is absorbed by the starch.

On Pantry Washing Up.—Collect all glasses and jugs that have been used for milk or custards, rinse carefully in cold water, and then plunge into tepid, soapy water. This makes it easier to keep the glasses polished, and prevents any sour curd at the bottom of jugs, etc.

Warts may be removed by wetting once a day with the milky juice that flows from the stalk of dandelion. Let

this dry in thoroughly. Another remedy is to moisten the finger with saliva from the mouth every morning on waking. Apply the finger to the wart, and allow the moisture to dry in.

**To Remove Sunburn.**—Take equal parts of fresh lemon-juice, rosewater, and rectified spirit. Mix together and then leave till next day, when the clear part should be strained off through muslin. Bathe the face night and morning with this lotion, and dry the skin with a soft cloth.

Chalk may be used as a cleansing agent in many ways. Rub it into grease spots on dresses, wall-papers, or anything of a like nature requiring to be cleaned. When cleaning garments with it, rub on the chalk overnight, hang up the garment till next day, when it should brush clean. A tablet of prepared chalk can be bought cheaply in any small town.

Your papier-mache trays and box should never be washed with soap and hot water, as this treatment causes cracks. Just wipe them with a sponge wrung out in tepid water, and sprinkle flour over the surface. Then dry and polish with soft dusters or flannel. This substance is much prized nowadays, especially when inlaid with mother-of-pearl.

#### SERVING DISHES IN SUMMER.

One of the best hot weather reminders to housekeepers is that food intended to be served hot should really be hot, and should be served on warm plates in summer, as well as in winter. Even on a warm day meat juices, such as the gravy of mutton chops, etc., tend to stiffen if served on a plate that is not sufficiently warm. The flavor of soup is preserved better when served in quite hot plates, and the breakfast toast is much more tempting on a plate that keeps it warm than one on which it quickly cools and toughens. The plates in summer may be warmed by lighting one gas burner and turning it low under the oven, or by letting hot water run over them and polishing them ready to be sent to the table. On the other hand, the salads, and cold desserts, needing chilled plates, can be accommodated by placing the dishes on a shelf in the refrigerator for some time, taking them out a few minutes before they are needed that they may lose the cold, clamminess that the delicate sense of touch finds on china fresh from the ice-box. It must be remembered that fine china is injured by sudden changes, and should not be subjected to either rapid heating or rapid chilling.

One housekeeper, who is very fond of flowers on the table at all times throughout the summer, uses them frequently as garnishes, with sometimes rather absurd effect. There are plenty of ways of beautifying the table with flowers without utilizing them as garnishes. Indeed, there are very few kinds of blossoms that do not seem quite out of place in the immediate decoration of edibles. A garnish should be something edible itself, like hard-boiled egg, lemon, cress, parsley, candied fruits, with desserts, etc. The nasturtium has ornamental leaves with a sharp, spicy flavor, and is not unsuitable for garnishing meats and salads; if one sighs for a floral decoration at all. A long-stemmed pink rose or two placed at the side of a dish on which is a jellied or frozen dessert fresh from the mould, makes it pleasing to the eye. Sometimes a few freshly-gathered pansies may be used, but lavish floral garnishing is apt to suggest tiny insects to the mind of the imaginative beholder, and at best gives the effect of "over-doing it."

#### A NOBLE STOCK.

Pride, Dignity and Beauty of the Modern Spaniards.

You may see to-day in any church portal in Spain the sombre dignity of expression immortalized in the portraits of Velasquez: the stately coat of arms

## About the Farm

#### MILK FOR CHEESE FACTORIES.

So much has been written and said on this question that no doubt the men who are patrons of the cheese factories are tired of the subject, writes one who knows. But after attending between thirty and forty annual meetings of cheese factories last winter, and discussing the care of milk and the patrons, I am of the opinion that a very great number do not quite understand the necessity of keeping the milk clean and cool. I also found that a great many were of the opinion that the milk should be exposed to the air by dipping to get the animal heat of it. Now, if the air is absolutely pure, I do not think the milk would be injured by being dipped up in it or exposed to it; but where can you get the air free from odors around the average farm, where manure is being drawn out, stables being cleaned, and the cows standing around the milking yards over night.

It was a fact that during the years aeration of the milk was advocated the quality of the milk delivered at the cheese factories was getting worse because people were dipping and exposing the milk to the air in many cases right beside the hog pens and in the barnyards, and the longer they dipped it the more bad flavor it took in.

Now during the last four years we have been trying to get the patrons to stop exposing the milk to the air, and have advocated cooling with water or water and ice, and instead of dipping the milk up into the air, stir it in the cans or pails, without lifting it up into the air.

At one of the annual meetings I attended last winter, a good old gentleman, whose hair was getting white, said: "I have been taking care of milk for a great number of years; this is a new doctrine, are you sure you have the right method now?" We can say without any hesitation, that, by getting the patrons to adopt cooling, instead of aerating, the quality of the milk has improved very much; it is sweeter because cooler; being colder the bacteria, which may be in it do not develop so rapidly.

Exposing the milk to the air under the ordinary conditions at the farm, will simply load it with gas-producing bacteria and bad odors. The air will not cool the milk low enough to prevent the growth, and the result is very bad milk. Two or three cans of such milk may spoil the whole of one day's make of cheese, hence the necessity of every patron having clean and cold milk.

The past 2 summers have been remarkably cool in Ontario. If this season should prove as warm as some people predict, we will see very large amounts of milk returned, as many patrons have become careless about cooling the milk during the two years.

I trust the makers will exercise more care in selecting the milk, as it is the only way improvement can be made in the quality.

One of the most encouraging features about the milk supply is the number of new cans that have been purchased during the past two years, yet the instructor still reports rusty cans at some factories. At several annual meetings a committee was appointed to examine the cans with the Instructor this season, and notify those having rusty or unclean cans that they would have to remedy the defects.

I hope the Instructors will be able to do considerable visiting among the patrons this year, and when they call on you, endeavor to get all the information possible from them. None of us know it all, but there is always something to learn, and if a man is looking for information, he sometimes gets an idea worth many dollars by talking a few minutes with another person interested in the great dairy industry.

We read quite a lot about turkey-raising, and as we had a piece of rough land where turkeys could range at will, without having access to the growing crops, we decided to give them a trial. Late in the fall we bought a trio. They have succeeded with us very well indeed. Of course, as beginners, we made some mistakes, but we try not to repeat them. The better we get acquainted with their habits the more successful we are in coping with their difficulties in raising them. We would not be without turkeys now for anything. There is money in them when properly handled. They must be allowed to range. But do not attempt to raise them if they have access to growing crops. If you do you will regret it.

I would advise every person interested in poultry to take some reliable farm paper which discusses poultry problems, and give experiences of different poultry raisers. In this way we get ideas from time to time which are beneficial to us and which otherwise might cost us by experimenting ourselves. Many times the subscription price of the journal.

#### LIVE STOCK NOTES.

Heifers require a larger amount of feed for the production of milk than do older cows.

There is no such thing as colored or parti-colored breeds being more hardy than white ones. All depends upon the condition of the breeding stock, and the care they receive.

In the flush of the pastures it may not be necessary to feed much grain to the cows, but do not allow them to shrink in their milk flow. If they are allowed to fall off for any length of time the milk secreting glands shrink, and no after feeding will enable them to perform their full functions until they are fresh again.

If you have good horses keep a close watch on their teamster. If he handles the horses brutally, or with poor judgment, pay him off at once and get another man. It is easier to get another teamster than it is to get another team. Don't fail to keep an eye on mischievous boys, for they will tease and torment a horse for the fun they may see in it, which may result in a horse developing the habit of kicking, striking or biting.

## OLD SCOTCH VOLCANOES

#### REMARKABLE FINDS OF THE NEW RAILWAY AT ROSYTH.

#### Convincing Evidence That the Inside of an Old Volcano Has Been Discovered.

A rock section of some geographical interest may be seen on the new railway of Rosyth in a cutting that has been driven through the ridge at Limplineth on the west side of St. Margaret's Bay. The rock in the immediate vicinity is whinstone; one is surprised after penetrating the whin a short distance to find strata of a totally different character. At the west side of the section nearest Rosyth Castle there is a large mass of whinstone; abutting against this is a thick bed of volcanic tuff which dips to the east, and passes under a seam of limestone. The latter in turn is overlapped by a bed of shale, while the outer facing of the east side of the ridge is a sloping bed of trap rock. From its harsh feel, coarse texture, and mixed ingredients, this tuff may be at once recognized as a very characteristic example of volcanic tuff of agglomerate. It is made up of scoriae, pumice, and other fragmentary materials, such as are discharged by volcanoes, and are often found filling up old volcanic necks. Lines of stratification indicate that the constituents of the tuff owe their arrangements in part to the action of waves or currents; they must, therefore, have been thrown out of a submarine volcano or fallen in showers into water. At the deepest part of the cutting, where the ridge is highest, in-

## GREAT BRITAIN'S GIFTS

HAS PRESENTED \$5,000,000,000,000 TO FOREIGNERS.

#### Enriched the World More Than All the Gold Discoverers That Have Ever Lived.

The foreign press is much given to reminding Englishmen of all the wealth they have acquired by seizing other people's territory. It never acknowledges the converse fact—that England has given to the world a thousand times more than she has got back, says London Answers.

What has been the value of the steam engine to the nations of the earth? Since its invention it has probably increased the wealth of the world by more than \$5,000,000,000,000. But for it, neither England, nor Germany, nor Belgium, nor Holland—nor even France—could support one-third of the population they contain. All Europe would still be in pretty much the same condition as China or India. It would be impossible to transport perishable food in large quantities from one country to another. Here at home meat would be double the price it is now sold for. Bananas, grapes, oranges, apples, tomatoes, and other such modern necessities would be the luxuries only of the rich. Cotton goods and woollen goods made by hand-power would be 1/23 per cent. more expensive. Books, newspapers, furniture—almost every commodity we use—would be beyond the means of all but the well-to-do.

#### RICHES WE HAVE WOVEN.

It would be difficult to calculate the value to the whole world of the various inventions by which the spinning and weaving by machinery of cotton, flax, wool, etc., have been brought about. And these inventions have conferred as much benefit on the least civilized as they have on the most highly civilized people. That the Chinaman of the Indian or the African can clothe himself at a trifling cost is a fact due entirely to the inventive genius of Englishmen.

Drawing-rolls in the spinning-machine were the invention of Richard Arkwright in 1769. Samuel Crompton invented the mule-spinner in 1774. In 1785 Richard Arkwright invented the wonderful power-loom. William Horrocks was the author of the application of steam-power to the loom in 1803. The knitting-machine was the invention of Brunel in 1816. In 1850 mercerized cotton was invented by John Mercer, lately deceased. And, while dying with the old vegetable colors was brought to great perfection in England, the aniline dyes, which have placed beautifully-colored fabrics within reach of the poorest, were discovered by Mr. Perkins in 1856.

#### IRON AND STEEL.

If England had done no more for the world, she would have enriched it to a far greater degree than all the gold discoverers that have ever lived.

But the catalogue of her service is a long one—much too long to reproduce here. Let us run over a few more of the inventions of chief importance in making the civilized world so comfortable to live in.

In 1621 iron furnaces were invented by an Englishman named Koster. It was another Englishman—Henry Cort—who introduced the system of puddling iron in 1784. The galvanizing of iron, an idea of incalculable value, was invented by Henry Craufurd in 1837. Bessemer steel was the discovery of Sir Henry Bessemer in 1855. And the open-hearth steel process—a most important discovery—was introduced by Messrs. Martin and Siemens in 1866.

Then the circular wood-saw, a source of much wealth to the United States, Russia, Scandinavia, Germany, and other lands, was invented by a Mr. Miller in 1877; the grain-threshing machine by Andrew Meikle in 1788; the wood-planing machine by Samuel Benham in 1792; Portland cement by Jos-

## A NOBLE STOCK.

### Pride, Dignity and Beauty of the Modern Spaniards.

You may see to-day in any church portal in Spain the sombre dignity of expression immortalized in the portraits of Velasquez; the sinister cast of countenance of Philip the Second; the nose and proud bearing of a Roman centurion, says the Nineteenth Century. In the Basque provinces the dignity and pride of the peasantry are reflected in the graceful carriage and symmetry of movement for which the men of that coast and the girls carrying pitchers on their heads are justly celebrated. There is no trace of awkwardness in a Spanish peasant, on whose features is stamped the pride of Rome, who will talk to you with the ease and volubility of a Spanish courtier. It is a noble stock.

Though to-day the glory of Spain has departed, and the modern Spaniard favors a Western "bowler," and the women wear Parisian hats, the national type of Spain persists with all its dignity and characteristics. Living types of Murillo's street urchins may be seen in any Spanish village. A group huddled together in some shady retreat; brown, chubby, curly-headed, merry little rascals, lurching off a watermelon picked up in the market, happy as princes in their hempen rags and with their meagre morsel. Or you may see the sunny side of Spain as Goya painted it. A dance in the open square, a bridal feast, a bull-fighters' carousal, a brawl, an elopement; the apparel is less gaudy to-day, but the sun and the types and the spirits are the same.

The brawny picador, with his wide-brimmed sombrero, his swarthy countenance, aquiline nose and raven locks, looks for all the world like a Roman gladiator. The lad at his side, with his finely chiselled features, might have waited on Poppaea. And that young girl in her white lace mantilla and the red roses in her warm black hair—such a one Goya would have delighted to portray as she stands there with her delicate head defiantly thrown back, her lustrous eyes aglow with mischief, that graceful line of figure and those pursed and pouting lips.

### SEEN IT ALL.

An Irishman had trouble with his eyes and consulted a doctor. The doctor told him to take his choice—he must either stop drinking or go blind. The Irishman turned the proposition over in his mind, and then said:—"Well, I'm forty-two years old now, and belave I've seen iverrything worth seein'."

the year, and when they call on you, endeavor to get all the information possible from them. None of us know it all, but there is always something to learn, and if a man is looking for information, he sometimes gets an idea worth many dollars by talking a few minutes with another person interested in the great dairy industry.

I am receiving from the instructors weekly reports of the amount of money being expended at each factory this year in improvements. The amounts ran from \$50 to \$60. This shows that our factorymen are making a splendid effort to keep up-to-date. Will the patrons not make an extra effort this year to send to the factories color and finer-flavored milk than they have ever done.

Keep the milk cool and it will be sweet, keep it clean and away from bad surroundings and it will be fine flavored.

### IMPROVING THE FARM POULTRY.

A few years ago the only poultry we had on our farm consisted of about a score of small scrub hens, writes a correspondent. These hens would lay only when they took a notion and very often this notion was rather late in coming and did not last long. So we decided that some change must be made or else we should go out of the hen business altogether. We read about some of the improved breeds and after a careful study of our needs, our choice fell on the White Wyandotte. Early in the spring we sent away to two different breeders for settings of eggs. Our idea in sending for two settings in this way was that we might mate the pullets of one lot with the best cockerels in the other. The eggs arrived in good season, were hatched out under hens and the chickens were reared successfully. We sold the extra cockerels to neighbors and realized more than enough from them to repay us for the cost of the eggs and the rearing of the whole bunch of chicks.

We found that these pullets were much better layers than the scrubs, and also were nice market birds if we so wished to dispose of them. We have since purchased an incubator and brooders, and found that it was a good investment, since we can raise more birds for the market and can get them ready quite early in the season when the prices are high.

A farmer can, in this way, add many shining dollars to his income and often the little boys and girls, or ladies, will look after them, and the men will not need to lose time from the other work.

We have started a nice flock of Pekin and Cayuga ducks, and have followed the plan of introducing new blood every year. They are easily raised and are ready for market at from 10 to 12 weeks of age. There is a ready demand for all of them that we can raise and as the supply is increased, the demand will also increase.

canic necks. Lines of stratification indicate that the constituents of the tuff owe their arrangements in part to the action of waves or currents; they must, therefore, have been thrown out of a submarine volcano or fallen in showers into water. At the deepest part of the cutting, where the ridge is highest, irresistible evidence convinces the observer that he is here practically inside an old volcano. Scoriae and other loose materials brought to the surface and piled up in cones afford proof of the explosive character of an eruption.

### VOLCANIC EXPLOSIONS.

are caused by steam; geysers and volcanoes are in all their essential characters alike, except that the geyser discharges hot water instead of lava. As molten rock reaches the surface volumes of steam escape, because of the diminished pressure. The bursting gas bubbles also dissipate the fluid rock into impalpable powder, which may be projected to a great height, and becomes widely distributed by the wind. Volcanoes of the explosive type discharge comparatively little lava, and in some cases none at all.

Bearing in mind that the volcanic tuff is a superficial deposit of materials produced by explosions, we can form some idea of the conditions under which it was accumulated. The explosive eruptions must have been long continued to furnish materials for a deposit of this thickness, but the period of quiescence which ensued after they ceased was probably of much longer duration, for in the immediately succeeding layers of strata no trace of volcanic action can be discovered. One of the peculiarities of volcanic agencies is its Rip Van Winkle character. Vesuvius remained inactive all through Roman history down to 79 A.D., when the eruption occurred by which Pompeii and Herculaneum were overthrown. But 700 or even 1,000 years would not go very far to account for forty feet of sedimentary rock.

The time of tranquility, however, came to an end at last; the volcanic forces once more awoke, but their character was altered, the explosive being exchanged for the effusive type; instead of showers of stones and ashes great streams of lava were now sent up from the interior of the earth. One feature in the section is the

### REMARKABLY EVEN OUTCROP

of the sedimentary beds, which look as though their ends had been planed off to make a perfectly horizontal surface. The most probable explanation is that it formed part of the internal surface of the volcanic vent, and that the ends of the beds were sawn off by explosive blasts issuing from the mouth of the volcano.

Up this inclined surface, too, the stream of lava has been forced, and intruded over the shale. In any case the displacement has been subsequent to the intrusion of the trap; the upheaval has affected tuff, limestone, shale, and trap alike. The cause of this upheaval is perhaps to be found in the upward pressure of a great body of molten rock, which at a much later date found vent for itself through the loose materials forming the old volcanic funnel, and at the same time greatly enlarged that opening. The mass of whinstone at the west end of the cutting is a memorial of this later outburst. Rising vertically through the tuff as an irregular column of unknown depth its intrusive origin is obvious. Without doubt the whinstone here is simply a plug of lava left in the pipe or fissure through which long before the materials of the tuff and trap beds were ejected. The funnels of many ancient volcanoes are found to be plugged with lava in this way.

### NEVER AGAIN.

"Ah," she sighed, "I shall never hear his footsteps again; the step I have listened for with eager ears as he came through the garden gate, the step that has so often thrilled my soul as I heard it on the front porch. Never, never again!"

"Has he left you?" asked the sympathetic friend.

"No; he has taken to wearing rubber boots."

Martin and Siemens in 1860.

Then the circular wood-saw, a source of much wealth to the United States, Russia, Scandinavia, Germany, and other lands, was invented by a Mr. Muller in 1877; the grain-threshing machine by Andrew Meikle in 1788; the wood-planing machine by Samuel Benham in 1792; Portland cement by Joseph Aspdin in 1825; the steam-hammer by a Scotsman—James Nasmyth—in 1842.

These few ideas have enriched the world by hundreds of millions. But there are many more.

Stereotyping, that has so cheapened literature, was the invention of William Ged, a Scotsman, in 1731; a rotary three-color printing press was invented by Messrs. Platt and Keen in 1763; the first idea of a rotary steam-power printing press was evolved by William Nicholson in 1790; the first fireproof safe was made by Richard Scott in 1801; the steel pen was the invention of William Wise in 1803; the miners' safety-lamp was devised by Sir H. Davy in 1815; water-gas, now so much used for its cheapness, was discovered by Mr. Imbison in 1823; the first portable steam fire engine was constructed by Mr. Brathwaite in 1830.

### FOUNDED IN BRITAIN.

Even those recent inventions, chiefly by foreigners, which have startled the world, had their forerunners in England long ago. Dr. John Wall was the first to produce the electric spark in 1708. The conversion of the electric current into mechanical motion was accomplished by Michael Faraday in 1821. The first incandescent electric lamp was made by Grove in 1840.

In 1801 a steam coach, forerunner of the automobile, was made by Richard Trevithick. The hobby-horse, which gave the Frenchman, Micaux, his idea for the bicycle, was invented in 1870 by an Englishman.

The first photographic experiments were made by Wedgwood and Davy in 1802. The percussion or detonating compound was discovered in 1807 by A. J. Forsyth, a Scotsman. The calculating-machine, which the United States has so greatly developed, was invented by an Englishman, C. Babbage, in 1822. Chloroform was discovered by a Scotsman, G. L. Guthrie, in 1831, and applied as an anesthetic by another Scotsman, Dr. Simpson, in 1847.

### OUR COLOSSAL GIFT.

The steam-whistle—a small, but valuable, invention—was George Stevenson's idea, first used in 1833. And the rotary steam-turbine, that is going to revolutionize ocean travel, is the recent invention of an Irishman, the Hon. C. A. Parsons.

This is a list to be proud of. And when we are told that we have become a great and wealthy Empire mainly through grab, and that we are a selfish nation that does no good to anybody but itself, we have only to point to it. It is the men named above who have not only made Britain wealthy, but enriched the whole world probably to the amount of \$5,000,000,000,000.

### THE POLITE BURMAN.

In the cities of Burma, where the natives have been long in contact with Europeans, says the author of "Burns, Painted and Described," they have lost some of their traditional politeness; but in the country districts old-school courtesy is still the custom.

An English gentleman who had bought a new pony was trying him out on a Burman road, when the animal bolted, and ran at top speed down a narrow road.

In the way ahead was a native cart, in which was a family party out holiday making.

The pony dashed into the back of the cart, threw his rider into the midst of the merry-makers, and severely injured the Burman who was driving. Before the Englishman had an opportunity to explain his unexpected onslaught the Burman picked himself up and bowed low.

"My lord, my lord," he said, "the cart should not have been

### AFTER THE ACQUITTAL.

"O, these lawyers! they'll talk to the jury three hours at a stretch about what an honest man you are, and then when they meet you on the street they won't speak to you!"

# THE BIGGEST BATTLESHIP

**DREADNOUGHT THE MOST POWERFUL BRITISH WARSHIP.**

**Embodies Lessons Taught by Russo-Japanese War — of 18,000 Tons Displacement.**

Not for many years has the building of a man-of-war excited such widespread interest as that of H. M. S. Dreadnought. In many respects this ship has assumed a sensational character—she is the largest vessel ever constructed for any war fleet; she was the first to be commenced after the recent great struggle in the Far East; her design, which embodies many new features, has hitherto been kept an official secret, and the work of construction has been pressed forward with so much success that it is hoped she will be in commission within fourteen months of the laying of the keel plates.

All these facts, says Cassier's Magazine, have contributed to arouse curiosity, particularly as it is well known that British naval attaches were accorded special privileges by the Japanese, and were enabled to watch the progress of the war to greater advantage than the representatives of other powers.

The essential feature of the Dreadnought which distinguishes her from all battleships now in commission in the world's fleets is that she is of huge size and mounts only one type of gun for use in battle.

The war between Japan and Russia conclusively showed that the intermediate armament carried by vessels flying European flags was not effective at modern battle ranges. It has been calculated that the effective ranges for battle have been raised from 3,000 yards to 7,000 or 8,000 yards.

## CAREFUL CALCULATIONS

show that at such a distance the striking power of 7.5 inch and 6 inch guns, which have been the favorite intermediate weapons in the British Navy hitherto, is comparatively useless.

Prior to the war Great Britain was mounting in each of the King Edward VII. class four 12 inch and four 9.2 inch guns, but since the battle of Tshushima she is inclined to depend altogether on the 12 inch gun.

It is understood that originally the Dreadnought was to have carried twelve guns of the 12 inch type, but it was eventually decided to drop out two of these weapons in order to mount effectively ten pieces of this colossal striking power so that eight of them could fire on the broadside, six ahead and four astern, without endangering either the stability of the ship or running undue risk owing to the blast.

The armament of the Dreadnought has encountered some criticism on account of the slowness of fire of the 12 inch gun in comparison with the rapidity which can be obtained by the 7.5 inch and 6 inch weapons. With the best gun crew the 12 inch gun or the 9.2 inch gun can fire only about two rounds a minute, while the 7.5 inch weapon can discharge as many as three or four, and the 6 inch gun can discharge in the same unit of time as many as eight projectiles.

It has been urged that though the smaller guns may not be able to pierce the armor plates of battleship or cruiser at modern ranges, the effect of a series of 100 pound shells falling on a ship is of great value in demoralizing her, driving the crew from exposed positions and bringing down top hamper of one kind and another, thus frequently setting up local fires.

On the other hand, it is urged that the rapidity of fire claimed for the smaller guns is largely imaginary at the range which will obtain in future battles. Owing to the limited supply of ammunition which can be carried in a modern man-of-war.

## THE FLIGHT OF EACH SHELL

the bottom of the Dreadnought, with a view to minimizing the effects of mine explosions. The Russo-Japanese war showed that the greatest danger was from attack not directly at the bottom of the ship, but at the sides.

The magazine and shell rooms have been placed as far as possible from the skin of the ship and have been provided with armor protection, so that although the Dreadnought might be seriously endangered by mine explosion under the very elaborate cellular bottom, the detonation of a torpedo or surface mine at her side would not have serious effects.

The Dreadnought has been designed for Parsons turbines, calculated to propel her at the

## RATE OF 21 KNOTS AN HOUR,

two knots more than the speed of any existing British battleship. There are to be two high pressure and two low pressure turbines and four propellers.

In settling the lines of the Dreadnought great care was exercised to obtain a hull which would be handy in evolutions. The stern of the Dreadnought is probably more cut away than that of any big ship hitherto launched, and naval officers who have seen the vessel in dock say that in spite of her great size—she displaces nearly 18,000 tons—she will prove the handiest battleship in the British fleets.

The simplification of armament has led to the reduction in the weight of spare parts and to the installation of a more simple and effective method of fire control from a high platform on the ship's mainmast.

It has resulted also in a great reduction of the personnel. The complement of the Dreadnought will be far smaller than that of any battleship now serving in the British fleets.

Another gain has been the rearrangement of the quarters for the officers and men. The Admiral, Captain and commissioned officers instead of being at the after parts of the ship, whereas their work is mainly forward, will in future have their cabins and messrooms almost directly under the forward and only bridge.

The Dreadnought has been fitted with windows as large as those of an ordinary house. She resembles American built ships in arrangements for the comfort of the men of the lower deck.

The best possible systems for heating and ventilating have been adopted. A commodious bakery has been installed so as to provide bread at all times in place of the hardtack which has hitherto been served out in British ships.

In cost the Dreadnought will be one of the cheapest battleships built for many years past.

Besides her ten 12-inch guns she carries twenty 12-pounders of a new and powerful type for defence against torpedo craft. She is expected to attain a rate of over 21 knots, with a radius of action sufficient to carry her twice across the Atlantic.

In fighting strength she is equivalent to any two battleships built for the British fleet prior to the construction of the King Edward VII., yet her total cost, complete with guns, will be only £1,797,497, while the ships of the King Edward VII. class, carrying only four 12-inch guns and the same number of 9.2 inch guns, represent an outlay of just under a million and a half sterling.

## CIRCUMSTANTIAL EVIDENCE.

**A Case in Which the Jury's Foreman Saved the Accused.**

Very eminent legal authorities agree that as to the facts of a case the jury is more likely to be right than the judge, says the London Standard. This week, however, we have had another addition to the lengthy list of instances of the judge censuring a jury upon its finding. "As clear a case as had ever come before him," he said, as he ordered the jury to go home. Possibly the judge was right. It was well to remember, however, that had all the cases which have appeared so clear to the

# THE FELLAH'S YOKEMATE

**OCCUPATION OF THE EGYPTIAN GIRL AND WOMAN.**

**The Lot of the Peasant Baby Girl is Not Cast in Pleasant Places.**

Her lot has improved vastly since those dark days of superstition when, in order to propitiate Serapis, the deity who presided over the waters of Father Nile, she was liable to be given as a sacrifice to the flood—a custom which was until quite recently commemorated at the annual cutting of the Khaleeg at Cairo by the erection of an earthen "bride," which was swallowed up by the rushing waters, says the Fortnightly Review. Albeit the fellah's lines have never been cast in pleasant places, very early in her existence does her round of drudgery begin, for while still a tiny child she is allotted a variety of tasks. In the clover season one sees peasant baby girls posted as sentinels over the horses and cattle tethered in the vividly green berseem fields; mere children placed in authority near a harshly creaking water-wheel, following with toddling steps the wiry little donkey or gaunt ugly buffalo harnessed to a wooden prop which is attached to the cogged wheel of the sakeyeh. The little mites by voice and whip urged the weary blindfolded beasts to keep jogging along the worn circular track, that the slowly revolving earthenware pots cease not to pour the fertilizing water into the trough.

## THE SAME LITTLE MAIDENS.

their hair generally plaited, and the wisps and braids decked the coins, are often seen tending small herds of goats. At times, too, they are sent to forage for rare windfalls of firewood (rare, because in the Delta wood of any sort is scarce), which, if they find, they carry homeward across the fields on their heads, the strings of beads and glass bracelets on their fat little necks and arms glistening in the bright sunshine; while those who dwell in woodless provinces are employed to collect manure, which, mixed with chopped straw, is pounded into round cages and, when dried in the sun, forms the staple native fuel called "gelleh." Active little maidens carry diminutive hods or baskets of mortar or bricks when building operations are in progress, or are sent to destroy caterpillars at seasons when these pests threaten destruction to the maize or other crops.

Should their village be within easy distance of a railway, girls of tender age are sent to hawk gobblers of cool water, hard boiled eggs of fresh dates, figs or oranges up and down the countryside stations; and these bright, glancing, smiling, pearly toothed maidens, who often innocently expose their shapely little limbs when making a lap of their one colored cotton garment wherein to catch the coins thrown to them in payment of their wares, are pleasantly familiar little figures to all travellers through the Delta. The bigger girls in time of wheat harvest will join with the older women in field labor, which is very fatiguing, as in many districts not only do they pluck and bind the corn, but afterward carry the sheaves to the threshing place. Not infrequently a bevy of women laborers who have the leisure will proceed at harvest time from village to village, and so add a few more snailings to

## THE MODEST FAMILY CHEST.

Few Egyptian village scenes appeal more forcibly to the cultivated taste or artistic sense than that of the village-maiden fetching water from the river or the well. The lithe, elastic, well-developed figure of the peasant damsel seems singularly noble in its homely simplicity, draped in its loose dark blue garment, the beautifully moulded earthenware pitcher poised gracefully upon the shapely head. Her long veil of coarse crepe, it is true, is probably half

# TOPICS OF DIPLOMATS

**APPROACHMENT BETWEEN BRITAIN AND RUSSIA.**

**Germany's Attempt to Play Off England Against the Muscovite Empire.**

Three prime topics will occupy European Chancelleries this summer, which, in their development, seem calculated to make history. The Pan-Islamic movement in Egypt, the rapprochement between Great Britain and Russia, and Germany's attempt to secure a British or a Russian understanding by playing off one country against the other.

Seemingly minor events have been rapidly succeeding one another in Egypt, revealing that the withdrawal of the Turkish troops from Tabah and the consent of the Sultan to negotiate the Sinai boundary line were merely surface matters, and that their passing left undisturbed a genuine cause for alarm in Egypt. In the last few years Pan-Islamism has been surreptitiously substituted for the narrower and more obvious "nationalism" of Egyptian opposition to British domination and the vulnerability of the country has increased by the consolidation of the Turkish power in Syria and the construction of the Hedjaz Railway, which, although convenient for pilgrims can also well serve strategic purposes. The other day the emissaries of the Senussi sect attacked the British-Egyptian garrison at Talodi, in Kodofan, southwest of Khartoum, and murdered

## FORTY NATIVE SOLDIERS.

This was described in an official report by the British Foreign Office as a disturbance which was "apparently premeditated and purely local." From Cairo comes the intelligence that isolated garrisons have been subjected to similar attacks, and that English and Egyptian officers on hunting or exploring expeditions have been ambushed and slain. There have also been mutinies among Egyptian troops. The Cairo informant declares that a wave of fanaticism, the force of which no one is aware of, will presently break upon Egypt, propagated by the Senussi, who believe that they have received divine authority from—somewhere.

It is significant, in the light of the frugal cable despatches which now-a-days emanate from Cairo, that the British troops sent to Egypt and the Sinai hinterland to force the Turk from Tabah have not yet been withdrawn.

Although the terms of the Anglo-Russian understanding are still incomplete, there is little doubt that statesmen in St. Petersburg as well as in London are agreed that the present is the psychological moment for a rapprochement on grounds of expediency because it cannot be hoped that, if things are allowed to slide, the interests of Great Britain and Russia in Persia will long remain the only interests very seriously involved there. On this point M. Robert de Caix intimates that he

## SPEAKS WITH AUTHORITY.

in an article in Le Journal des Debats of Paris:

"That an arrangement will be accepted in principle no longer admits of any doubt. For more than a year the whole attitude of England has tended toward it. The British press which has enough political sense to change its tone now that the factors of the international situation have themselves changed, no longer treats Russia as it did before the Russo-Japanese war and during a great part of the conflict. Further, it is no secret that the King of England is bringing to bear on the rapprochement between his country and Russia that firmness of purpose and political tact of which he has given constant proof since his accession."

Germany possesses two enticing habits which she thinks should strongly appeal respectively to Russian and Brit-

will be obtained in future battles, owing to the limited supply of ammunition which can be carried in a modern man-of-war.

#### THE FLIGHT OF EACH SHELL

must be carefully watched, with a view to correcting the range before another is discharged.

This operation of watching each shell find its billet severely limits the rapidity of fire and experienced artillerymen say that in battle action not more than two shells a minute can be fired from any one gun with any hope of making good firing. Under these circumstances the advantage of the 6-inch and 7.5 inch weapons disappears.

The 12 inch gun which is to be mounted in the Dreadnought is not, however, the weapon hitherto carried by British men-of-war. As the result of long experiment a 12 inch weapon of 45 calibre has been evolved, which is claimed to be the best yet constructed for use afloat.

It may be noted that the newest 12 inch gun of the British navy, though it fires the same weight of projectile as the gun which is being mounted in the American ships of the Connecticut and New Hampshire classes, does not attain quite as high a velocity by about 100 foot seconds.

The new 12 inch gun, like all of those mounted in recent British ships, has been built on the wire system, the advantage of which is held to be so considerable in Great Britain in assuring the strength and soundness of material as to outweigh all the advantages which have been urged by foreign gun manufacturers. Many early 12 inch guns built on the wire system gave some trouble, but the newest weapons are being made with a shoulder, so as to prevent the inner tube from slipping forward under the great pressure to which it is subjected, and increased care is being exercised in the testing of material.

The principle adopted in the design of the Dreadnought has been to construct five entirely separate redoubts, each carrying a revolving turret fitted for two 12-inch guns. Each of these circular redoubts will be heavily armored over its full length, and for fighting purposes they will be entirely distinct.

Around these five fortresses the ship has been constructed in such a way as to place two of the 12 inch guns on the fore-castle 28 feet above the water line, two redoubts in the after part of the ship and two others on the broadside. The effect of this arrangement is to keep six of the ten guns on the centre line, but the arrangement has the disadvantage of causing two of the guns to be masked for fire astern. The Dreadnought, however, has

#### NOT BEEN BUILT TO RUN AWAY.

The Dreadnought is the first battleship without a ram constructed for the British navy since the battle of Lissa, in 1866. The British Admiralty has finally decided that no British Captain would ever think of employing such a weapon. In view of the danger which any ship incurs when it runs full tilt at a foe.

The bow of the Dreadnought, in view of the elimination of the ram, has been greatly strengthened, and the ship is provided with an armor belt running practically its full length, and varying in thickness from 6 to 11 inches. This belt is carried some distance below the water and rises very high, to give ample protection to all the vital parts, and an armor deck is provided of a thickness of two inches.

It turns out that there is no truth in the statement that the Dreadnought would not carry torpedoes. As a matter of fact, she will have five submerged tubes.

For the first time in any British ship the bulkheads have not been pierced by doors. In the Dreadnought there is no communication of any kind between the several compartments; but elevators have been constructed, and officers and men in one compartment who desire to pass to another, will, it is contended, be able to do so with little loss of time and at very slight inconvenience in comparison with the great advantage due to the invulnerability of the bulkheads.

An unusual amount of attention has also been devoted to the construction of

come before him," he said, as he ordered the jury to go home. Possibly the judge was right. It was well to remember, however, that had all the cases which have appeared so clear to the judges gone as their lordships desired, more than a few innocent men would have been sent to the gallows. An instance comes to mind, one of the most extraordinary in the history of our legal system, the account of which we owe to the man who tried and presided over the trial, Lord Chief Justice Dyer. This was a "clear case" of murder. The victim was found stabbed death in a field wood. By his side the pitchfork with which the deed had been done. The man who owned the fork was arrested, and the blood-stained suit he had worn was found hidden in a mattress.

Short of testimony from any one who had seen the crime actually committed, there was not a link missing from the chain of evidence against the prisoner. It was in vain that he pleaded not guilty; everything was so conclusively clear against him. A verdict of guilty was expected immediately from the jury but the foreman asked that as "the life" of a fellow creature was at stake the jury might be allowed to retire. The judge did not understand why they should do so in so simple a case; still, the jury had its wish. It did not return. The court adjourned for luncheon; the jury did not come back in the afternoon, and, in spite of several anxious inquiries from the bench, it had not made up its mind when the court rose for the day—there was one man holding out. The jury was locked up for the night, and in the morning was brought into court to return a verdict of not guilty! This was a poser, and the judge dismissed the jury, saying, "The blood of the deceased lies at your door."

Private inquiry by the judge elicited the fact that the foreman, a man of unblemished reputation and of considerable estate, had been the cause of the verdict, which the rest had been starved into accepting. The judge sent for this gentleman, and in his private room begged him to explain the mystery of his obduracy and the amazing finding of his fellows, first pledging himself to preserve inviolate any confidence which the other might repose in him. Then the foreman told how he himself had met the victim for whose murder the prisoner had been tried, how this man had sought to take advantage of his official position and exact unjust filth, how they quarrelled and fought, how the man had attempted to kill him with a fork, and now he (the foreman of the jury) had killed his antagonist with his own pitchfork, then fled. The prisoner, coming along, had found the man dying, and in endeavoring to succor him had got blood upon his clothes, and in his confusion had taken the dead man's fork and left his own in its place. This was why the foreman had held out, and why the prisoner escaped.

#### DO STRIKES PAY?

Cold Figures Seem to Indicate That They Do Not Pay.

Measured in days of labor loss, the antiracite coal strike of 1902 would probably head the list of all strikes. About 110,000 men were idle for approximately 140 working days, or a total loss of 19,000,000 days of labor. With the exception of the great coal strike in England in 1893, the losses caused by the European strikes are for the most part, much smaller than the losses in the great strikes in the United States. The losses entailed on workmen and employers by the building strikes in New York city three years ago are placed at over \$66,000,000, more than half of which represents the loss in wages. In the United States the average number of days lost as a result of strikes in each year from 1881 to 1900 was 7,100,000. The average annual loss in wages during these years was \$12,500,000. If to all these figures could be added the total number of persons killed, maimed and deserted in the course of these conflicts we would have a total that might well prompt the question, Does it pay?

simpli-city, draped in its loose dark blue garment, the beautifully moulded earthenware pitcher poised gracefully upon the shapely head. Her long veil of coarse crepe, it is true, is probably half drawn to conceal her face from prying eyes, or, when she wears no veil—and often, owing to the exigencies of field labor, the burko (face veil) is dispensed with—its office is performed by gathering a fold of her head covering into a corner of her mouth. Yet the very poor are not always punctilious about keeping their faces hidden from strangers, and so sometimes one sees the indigo or greenish blue tattoo designs on the forehead or below the under lip. On reaching the river, where her shadow seems to kiss the ripples, the modern Rebekah tucks her skirts of her raiment between her knees, enters the water to cleanse and fill her water jar (balass), and then, with a last feminine touch of adjustment to the folds of her dress, she raises the heavy burden into position and bears it away, spilling nothing of its limpid contents. She never loses her balance, having made a practice from early childhood of carrying all burdens on her head and having thus acquired a naturally upright carriage and statuesque gait.

#### THE JAPANESE AS GARDENERS.

Many Vegetable Delicacies Cultivated by Them.

The Japanese excel as much in gardening as in warfare. This has long been recognized in Europe, and, seeing how similar the climate of that country is to our own, it is a little remarkable that some of the Japanese "specialties" in vegetables have not been introduced more freely over here, says the London Globe. For instance, they grow a kind of bean known as "Munyo," each pod of which contains a dozen beans of different colors. Among other ways of using them is that of pounding up the beans and making of them a delicious preserve, known as "kokau," the necessary consistency being obtained by the addition of a kind of gum produced from seaweed. Another kind of climbing vegetable, the "kudzu," is used both for its roots and its fibre, from the former a kind of flour being obtained, and from the latter a species of cloth which is absolutely waterproof. The bulbs of certain lilies are a favorite fruit in Japan. After being carefully peeled and washed, they are blanched in boiling salt water and cooked either in butter or in a gravy sauce. The flowers are treated as vegetables or used as a flavoring for soup. A large white melon indigenous to Japan, when cut into slices fried in butter, and powdered with sugar, is esteemed a great delicacy, tasting somewhat like pineapple. Other Japanese vegetable delicacies, which may be mentioned are the edible flowers of a kind of garlic much used for salads; the young shoots of bamboo, which are eaten as we eat asparagus; and the "naikon," which resembles our small red radishes.

#### A WHALE'S UNWELCOME GUEST.

The whale's huge body forms a convenient camping ground for innumerable smaller animals, and sometimes they are a source of great annoyance to their host. The whales try to get rid of them by rolling in the sand in shallow water, or rubbing themselves on reefs, and one of them once made use of the sharp plate which projects from a bridge keel for this purpose. The boat was lying off the coast of Brazil, when a continued tremor, varied by bumps, was felt. Soon a huge whale rose slowly out of the water alongside the boat, and the tremor ceased. It descended, and the tremor was again felt. Then the crew noticed barnacles and shellfish coming to the surface, and the secret was out. The whale had been using the vessel's bilge as a back scratcher. But the captain did not care for such neighbors and before the huge creature could resume his toilet, a shower of potatoes and coal fell around him. He paid no attention to the missiles, until a piece of coal went into his mouth. Then he turned tail and steamed away, having first spouted a flood of sea water over the steamer.

ness of purpose and political tact of which he has given constant proof since his accession."

Germany possesses two enticing habits which she thinks should strongly appeal respectively to Russian and British impressionability. If the revolution in Russia does not progress too far or rapidly, a word from the Financial Minister of Germany will be sufficient for Berlin bankers to advance large amounts to the tottering dynasty. The fact that German syndicates are buying Russian crown lands should not incidentally be lost sight of. As to the Bagdad Railway, its financing is no longer held out to Great Britain; it is taken as a matter of course that Great Britain desires the road built, and will place no political obstacles in Germany's way if only satisfactory agreement could be reached. This change of front was recently marked in

#### AN INSPIRED ARTICLE

in the Grenzboten, a political weekly of Berlin:

"Great Britain desires the Bagdad Railway to run into Koweit, a port on the Persian Gulf, and she must, therefore, in the comparatively near future, enter into negotiations with Germany. The question must be settled soon, for the termination of the line at a seaport will necessitate the construction of works, custom houses, etc. A German post-office must also be established at the end of the line."

Another pointer is to be found in the following paragraph in the same article: "Germany is now certainly entering an Asiatic sphere of interest, but in a purely economic, not a political capacity. On the other hand, however, the line is of political and military importance to Turkey, for which it will open up vast tracts, and for which, in case of war, it will facilitate the mobilization of the troops stationed in Asia Minor."

In other words, the construction of the Bagdad Railway signifies the strengthening of the Mohammedan world, with which Great Britain has principally to reckon.

In the meantime communications are being exchanged between the British Admiralty and the French Ministry of Marine to see in how far the French Navy may, according to the Anglo-French entente, be represented in the approaching visit of the British fleet to Cronstadt. And the German Baltic squadron of twenty-six battleships and cruisers, under command of Grand Admiral Von Koester, although uninvited to this full dress rehearsal of a drama, is off Frederickshavn, Denmark, and will find itself "accidentally" in the vicinity of the Anglo-Franco-Russian demonstration of good fellowship.

#### ORIGIN OF THE STOVE.

The most important uses of fire were taught by fire itself. As the primitive man stood near the flames of the burning tree and felt their pleasant glow, he learned that fire may add to bodily comfort, and when the flames swept through the forest and overtook a deer and baked it, he learned that fire might be used to improve the quality of the food. The hint was not lost. He took a burning torch to his cave or hut and kindled him a fire on his floor of earth. His dwelling filled with smoke, but he could endure the discomfort for the sake of the fire's warmth, and for the sake of the toothsome of the cooked meats. After a time a hole was made in the roof of the hut, and through this hole the smoke passed out. Here was the first stove. The primitive stove was the entire house; the floor was the fireplace and the hole in the roof was the chimney. The word "stove" originally meant "a heated room." So that if we should say that at first people lived in their stoves we would say that which is literally true.

#### NEVER GREW UP.

In consequence of the death of her mother, the Omagh Poor Law authorities have upon their hands a woman who, although forty-five years of age, is in size and appearance like a child of seven or eight years. The woman was wrapped in a blanket and carried by one of the officials in his arms to the infirmary.

## CHEQUE RAISING DODGES

**SAFEST WAY IS TO DUPLICATE  
WITH RED INK.**

**Cheques Written in Flowing Round  
Hand Are Very Easy to  
Change.**

Among the casual patrons of the average bank there is a superstition that in presenting a check at a teller's window the amount of the check shall be determined by the amount spelled out in the body of the check, without regard to the figures written at top or bottom of the slip.

Nothing could be further from the facts as they are accepted at the bank window. As a matter of fact, when a check made out in this erroneous way comes to the teller's window he is most likely to refuse to pay either amount. There is no law, written or unwritten, to justify the paying of the amount spelled out in the body of the check, regardless of the group of figures on its face. This figure group is designed merely to check and justify the written amount, but if there is a discrepancy between the two amounts there is nothing to indicate that it is not the written amount that is wrong and the figure group that is right.

### TO PROTECT DEPOSITOR.

Under such circumstances the chief duty of the teller is to protect the depositor who has drawn the check on his bank. The person who presents the check for payment manifestly has been a party to the mistake in not having read over the check carefully before receiving it. If the payee is unknown to the teller and the discrepancy is at all the drawer and have the error corrected.

In many cases of discrepancy between the two amounts on the face of a check material, the teller turns the check back with the advice that the payee look up the sum involved in the fractional part of the dollar at the end of the chief figures. This comes about through the drawer's concern over the main figures in the check. He is likely to write the amount in letters on the centre line of the body of the check, affixing the fractional part of the dollar in the form of 100th parts of the unit. In writing the checking group in figures at the upper or lower corner of the slip, his chief concern is with the dollars and in his care he is likely to overlook the odd cents first entered on the face of the paper. Or if he attempts to write the figures "74" cents in repetition, it is likely that they may be transposed to "47" cents in the operation.

### CINCH FOR EXPERT.

How to write this check in order that it may be tampered with and "raised" is something that has held the attentions and invited the inventive talents of many people, in and out of business. Even when the best of the chemical papers are used in the blank check the drawer of the paper may have not the slightest protection from "raising" at the hands of an expert. The manner in which the written and figure amounts on the face of the check are placed makes the material alteration of the amount easy beyond question.

For instance, the man who writes with a free, flowing hand and leaves roomy spaces everywhere between words and figures becomes an easy mark for the expert. This man is called upon to draw his check book and in the dollar line writes the word "four" in his rounded hand, simply filling in the rest of the lined space with the plain flourish of his pen. Then in the upper corner of the check he writes the attesting figure \$4, with a dash after it. That makes it a cinch for an expert check raiser to make it \$40 or \$400 or \$4,000.

### WORTHLESS PRECAUTIONS.

Manifestly the only safeguard for such a check as this, even if it be drawn upon chemical paper, is for the drawer

# SUNLIGHT SOAP

**\$5,000 REWARD** will be paid to any person who proves that Sunlight Soap contains any injurious chemicals or any form of adulteration.

is equally good with hard or soft water.

If you use Sunlight Soap in the Sunlight way (follow directions) you need not boil nor rub your clothes, and yet you will get better results than with boiling and hard rubbing in the old-fashioned way.

As Sunlight Soap contains no injurious chemicals and is perfectly pure, the most delicate fabrics and dainty silks and laces may be washed without the slightest injury.

## GERMS BANISH DISEASE

### MYSTERY OF OPSONINS AND MEDICAL SCIENCE.

**The New Department Is In Full Swing  
At the London (England)  
Hospital.**

No sooner is a discovery in medical science announced than a hundred busy brains are hard at work trying to apply it towards the alleviation of human suffering or the increase of human knowledge.

Opsonins—those mysterious organisms in the human body whose mission is to help the white blood corpuscles to kill off and devour hostile micro-organisms that cause disease—have already fallen into their place in medical science, and, as was announced at the last meeting of governors of the London hospital, an opsonin department is in full swing at that institution, where some 90 tests are made every week.

### GERM STANDS POOR CHANCE.

Tuberculosis or consumption, it was announced, was more readily cured when the opsonin test was employed, and the following explanation of the methods in use was given to a London Daily Mail representative.

When opsonins are present in strong numbers a disease germ stands a poor chance, for these bodies prepare it for assimilation by the guardian angels of the blood—the white corpuscles. Where the opsonins are weak the process of assimilation is slower or at a standstill, and the disease makes headway.

By microscopical examination it can be determined whether the patient's power of resistance to micro-organisms—i.e., richness in opsonins—is above or below the average. If below the average, serums made from dead bacteria of the same variety as those causing a disease are injected, with the result that the patient's own body is stimulated to manufacture the opsonine in which it is deficient.

An opsonin chart is in use, and the improvement or otherwise of the patient's resisting powers can be noted from day to day if necessary. At first the chart will indicate a "dip," but a reaction sets in and continues until the proportion of opsonins is above the normal. With fluctuations, this condition of the blood can be maintained until

### THE DISEASE IS EXPELLED.

Without the test for opsonins the doctor works more or less in the dark, and his injection of vaccine may be doing harm instead of good. With its help

### WHAT GERMANY EATS.

#### New Food Tariff Makes Nation Depend More on Dog.

"Two sorts of animals for slaughtering purposes, namely, horses and dogs, have never until now reached so large a consumption as in the fourth quarter of 1905."

This is a startling sentence from an article in the Badische Landes-Zeitung, of Mannheim, discussing the effect of the new German tariffs on foodstuffs.

The rates of increase, too, are startling. The number of slaughtered horses rose from 44,659 in the first quarter of 1904 to 52,584 in the first quarter of 1905.

"According to the official records," concludes the article, "there were 2,405 dogs slaughtered during the fourth quarter of 1905. Here are reckoned only the common species of dogs, which, under official inspection, were compelled to give up their lives and allow themselves to be eaten. Hence it will be seen that our nation's food depends more and more on the dog."

### GUNS.

The Germans were the inventors of the first gun. About 1378, Schwartz, a German machinist, manufactured numerous crude guns which were brought into use by the Venetians in 1392. It is a strange fact that cannon were made before small firearms. At Amberg there is still a piece of ordnance marked with the date 1303. Cannon were first used in war at the Battle of Crecy in 1346. It was not until 1544, however, that they were made in England.

### GOLD.

The first mention which we have of gold is in the eleventh verse of the second chapter of Genesis, or in other words four thousand and four years before Christ. Gold was used as money by the ancient Egyptians at a very early date. Herodotus tells that the invention of the coinage of gold belongs to Lydia, about 750 B. C. Authorities conflict about the first coinage of gold. Some say it was Miletus, and some the Phoenicians, but there are no records to show just when.

### SENTENCE SERMONS.

Kindness makes all kin.  
Character is made in conflict.  
Every loss met by love leads to gain.  
All we get from heaven we owe to earth.

The proof of the cathedral is in the kitchen.

People who are always in a pickle soon get soured.

Pain is a small price to pay for the joy of sacrifice.

A strong breath often indicates a weak backbone.

You never get your rights by advertising your wrongs.

There are too many people playing poker in their prayers.

Packing water on both shoulders makes a slippery trail.

He who gives on feeling generally begrudges in fact.

He alone is faithful to old truth who will forsake it for the new.

The immodest may be virtuous, but no one ever accuses them of it.

The man who tries to humiliate others is not the best friend of humility.

A good many men never will take a stand on a question unless it be a band stand.

The pessimist always picks out a broken chair before he attempts to sit down.

The admiration of virtue may be rewarded by a chance to admire heaven from afar.

The man who has crawled under the fence usually wants to umpire the church game.

No man can escape responsibility for the sins of the city by ignoring their existence.

No man ever sowed wild oats and succeeded in keeping them confined to his own field.

The only reason many people are praying for the victory is because they want to get out of the fight.

The Master puts most of us to school learning to make bricks before he sets us to building houses.

Sufferer—"Do you extract teeth without pain?" Dentist—"Not always. I sprained my wrist on one a couple of days ago, and it hurts yet."

# Union Bank of Canada

## 41st Annual General Meeting

### STATEMENT OF YEAR'S BUSINESS.

The Forty-First Annual General Meeting of the Shareholders of the Union Bank of Canada was held at the Banking House, in Quebec, on Monday, June 18th. There were present—Messrs. Andrew Thomson, Hon. John Sharples, Wm. Price, E. J. Hale, Wm. Shaw, Wm. Brodie, T. C. Aylwin, Lieut.-Col. Turnbull, Arthur E. Scott, C. P. Champion, Peter Johnson, Geo. H. Thomson, J. P. Casgrain, H. E. Dupre, Capt. W. H. Carter, T. H. Norris, J. H. Simmons, C. A. Pentland and Jules Roy (St. Anselme).

On the motion of Hon. John Sharples, seconded by Wm. Price, the President. Mr. A. Thomson, took the chair, and requested Mr. J. G. Billett to act as Secretary.

raiser to make it \$40 or \$400 or \$1,000.

#### WORTHLESS PRECAUTIONS.

Manifestly the only safeguard for such a check as this, even if it be drawn upon chemical paper, is for the drawer to follow close upon the written "four" with the blocking "No-100th" dollars, using the same fraction as closely after the figure "4" in the corner of the check. To leave no possible room after a final written or figure amount on a check is the best possible precaution against raising it. For with many checks the printed warning "Not good if drawn for more than one hundred dollars," is a worthless precaution. In the above example it is so, for the reason that raised as it is the amount still is within the limit. Had the check been drawn in the same style for "six" dollars, it would have been more easily and profitably raised to "sixty." In the same general manner a slovenly "two" may be raised to "twenty," "three" may be "thirty," "five" is made "fifty," "seven" becomes "seventy," "eight" becomes "eighty," and "nine" becomes "ninety"—all without erasures and without leaving telltale marks upon a chemical paper.

#### "PAYABLE TO BEARER."

In this way the average check which is made payable "to bearer" may be a potential menace in a slow course through a dozen hands. While a bank may require the holder of a "bearer" check to indorse his name on the back, that indorsement means nothing to him. The check is payable to the bearer and the teller must pay it if it appears all right and he is certain of the signature at the bottom.

For the average man who may write his checks at a desk, and who may be willing to observe some system in the writing, perhaps the safest and cheapest protection for his paper is to repeat in red ink figures the amount for which the check is drawn, placing those figures on the signature line at the bottom in such a manner that the black ink signature will be woven through the red ink group. Virtually there is no way of getting around this form of duplicated amount. The red figures show plainly through the signature and cannot be changed without affecting the form and character of the signature itself. To affect a signature in this way is to call attention to the fraud instantly. A man may make a shaky mismove of the pen somewhere in the body of the check, and if it is not too prominent a teller may take a chance and pass it; but he will shy at a signature which isn't what it ought to be—that subtle sixth sense of the old teller prompts him to it before he knows why.

#### THE CROWN AND WORKING CLASSES

There is, in fact, no barrier to-day between the crown and the working classes, says the London Times. If there ever was one, Queen Victoria may be said practically to have broken it down by her unfeigned courtesy to all ranks and her constant readiness, so often shown at Osborne or Balmoral, to enter into personal intercourse with the humblest of her subjects. King Edward and Queen Alexandra have gladly followed that example. Thus comes about the welcome result that the crown is, politically speaking, as near to the working class as to any other in the country, and that no class cherishes a more lively or spontaneous loyalty towards its sovereign.

#### STANLEY AND THE BANANA.

Sir Henry Stanley was a firm believer in the banana. He went so far as to advise that its consumption would cure rheumatism, gout, and all liver affections. When lying at the point of death from gastritis a light gruel of banana flour mixed with milk was the only food he could retain and digest. The secret of the banana as a health and strength-producing food lies in its high percentage of proteins and the great number of its calories, respectively 80 and 391.71. It is a perfectly balanced ration if sliced for breakfast and served with milk and sugar.

#### THE DISEASE IS EXPELLED.

Without the test for opsonins the doctor works more or less in the dark, and his injection of vaccine may be doing harm instead of good. With its help he can scarcely go wrong.

Every disease having a definite bacillus which has been isolated and cultivated can be benefited in this way. Boils disappear as if by magic, securing to melt away. Lupus, the facialis of which has been identified with that of tuberculosis, succumbs more easily to the risen light, and Malaria fever, pneumonia, and many other troubles are also benefited.

In the case of consumption the opsonin test should prove invaluable, and the results are said to be most encouraging. A person not actually suffering from the "white scourge" can be definitely pronounced to be liable to it if his opsonins prove to be deficient in the power to tackle the tubercle bacillus, and judicious injections of serum will restore the power of resistance to the blood.

#### GIRL COURTS DEATH.

##### Saturates Shavings With Oil and Perishes in Fierce Flames.

An extraordinary story of a suicide by fire comes from Gossall, a pretty rural village near Wolverhampton, England. Mr. and Mrs. Archibald Walker, of Woodfield Oaken, in Gossall, were awakened at an early hour the other morning by a smell of smoke. They saw fierce flames in the yard, which Mr. Walker extinguished with a garden hose. The fire appeared to be in a heap of wood and shavings that had been saturated with paraffin.

The village policeman was called, and Mr. Walker's household mustered, when it was discovered that the cook, Eliza Davies, was missing. An examination of the remnants of the fire disclosed charred human remains, which were identified as those of the missing cook.

It appeared that the young woman found paraffin in the kitchen and made her exit by a window to the yard, where she built and ignited her funeral pyre. The reason for her act is a mystery. She had been in Mrs. Walker's service two years and was well conducted.

#### SILVER BATHS.

At the Czar's palace of Tzarstoe Selo, the nurseries provided for the care of children consist of eleven rooms. One feature is described by Miss Egar, the children's governess, as follows: "In the bathroom is a stationary bath of solid silver, used for the bigger children. There is a small silver bath for the use of whatever baby reigns. Each child's name is engraved upon it, so it forms a historical record. It was apparently bought for Nicholas I., and bears his name and those of his family. We also find the names of Alexander II. and of Marie, afterward Duchess of Edinburgh. The last name added was that of Alexis, the little baby who was born in August, 1901."

#### DON'T KILL THE HAWK.

Man has sinned more than any other animal in trifling with nature's balance. Clover crops and the killing of hawks are apparently unrelated, yet the hawks eat the field mice, the field mice prey on the immature bees, and the bees fertilize the clover blossoms. The death of a hawk means an over-increase of field mice, and a consequent destruction of the bees.

#### METAL DOES NOT RUST.

Metal does not rust in Lake Titicaca, South America. A chain, an anchor, or any article of iron, if thrown in this lake and allowed to remain for weeks or months, is as bright when taken up as when it came fresh from the foundry.

Bank of Canada was held at the Banking House, in Quebec, on Monday, June 19th. There were present: Messrs. Andrew Thomson, Hon. John Sharples, Wm. Price, E. J. Hale, Wm. Shaw, Wm. Brodie, T. C. Aylwin, Lieut.-Col. Turnbull, Arthur E. Scott, C. P. Champion, Peter Johnson, Geo. H. Thomson, J. P. Casgrain, H. E. Dupre, Capt. W. H. Carter, T. H. Norris, J. H. Simmons, C. A. Pentland and Jules Roy (St. Anselme).

On the motion of Hon. John Sharples, seconded by Wm. Price, the President, Mr. A. Thomson, took the chair, and requested Mr. J. G. Billett to act as Secretary of the meeting, and Messrs. C. P. Champion and Arthur E. Scott as Scrutineers, which was agreed to. The Chairman read the report of the Directors, which was as follows:—

The Directors beg to submit a statement of the Assets and Liabilities of the Bank at the close of the financial year ending 31st May last, also the following statement of the result of the business for the past year:

#### PROFIT AND LOSS ACCOUNT, MAY 31st, 1906.

|                                                                                                                                                                                                                                       |               |

| Balance at credit of account, May 31st, 1905 | \$ 1,106,000 00 |
| Premium received on New Capital Stock        | 200,000 00      |
| Amount transferred from Profits              | 200,000 00      |
|                                              | \$ 1,506,000 00 |

Average Capital in use during year, \$2,823,800.

The Capital of the Bank was increased during the year by the sale of 5,000 shares of its Stock, at \$10 per share. The Premium of \$200,000 was added to the Reserve Fund, which now amounts to \$1,500,000, or 50 per cent. on the Capital of the Bank. The net earnings of \$482,930.24 show 16.04 per cent. on the average Capital in use during the year.

New Branches or Agencies have been opened in the following Provinces:—Quebec, 1; Ontario, 7; Manitoba, 4; Saskatchewan, 11; and Alberta, 2.

Your Directors recommend that authority be given to them to make such provision for a Pension Fund for the Officers of the Bank, as they may from time to time deem desirable.

The Directors have to record with much regret the death during the year of Mr. E. Giroux, a much esteemed member of the Board. The vacancy was filled by the election of Mr. R. T. Riley, of Winnipeg.

The customary inspection of the Branches has been made during the year.

Quebec, June 18th, 1906.

A. THOMSON, President.

C. H. BALFOUR, General Manager.

Quebec, May 31st, 1906.

It was then moved by Mr. A. Thomson, and seconded by Hon. John Sharples—"That the Report submitted to this meeting be adopted, and printed for distribution among the shareholders."—Carried.

Moved by Captain Carter, and seconded by Lieut.-Col. Turnbull—"That authority is hereby given to the Directors of the Bank to establish Guarantee and Pension Funds, at such time and on such terms and subject to such conditions as the Directors may by resolution of the Board determine, and for the purpose aforesaid, the Directors may contribute thereto out of the funds of the Bank such sums as they may deem proper for the due carrying out of his by-law."—Carried.

The Chairman having asked for an expression of opinion from the Shareholders assembled as to the advisability of the Bank paying quarterly dividends in future, instead of half yearly, as heretofore, it was moved by T. H. Norris, seconded by Lieut.-Col. Turnbull, and carried unanimously, that the practice of paying half-yearly dividends be continued.

Moved by Mr. A. Thomson, and seconded by Mr. T. H. Norris—"That the meeting now proceed to the election of Directors for the ensuing year, and that the ballot box for the receipt of votes be kept open until one o'clock, or until five minutes have elapsed without a vote being offered, during which time proceedings be suspended."—Carried.

The Scrutineers appointed at the meeting reported that the following gentlemen were elected Directors of the Bank for the ensuing year:—Messrs. Andrew Thomson, Hon. John Sharples, E. J. Hale, Wm. Price, Wm. Shaw, E. L. Drewry, John Galt, F. E. Kennaston, R. T. Riley, and M. B. Davis.

At a subsequent meeting of the new Board of Directors Mr. A. Thomson was re-elected President, and Hon. John Sharples, Vice-President.

Mr. Mortimer B. Davis, of Montreal, who has been elected a Director of the Union Bank of Canada, is President of the American Tobacco Company of Canada, Limited, Montreal; the Empire Tobacco Company, Limited, of Granby, P.Q., and Montreal, and the H. Corby Distillery Company, Limited, of Belleville, Ontario.

## THE BEST FLOUR. DAFOE'S NONESUCH DAFOE'S MANITOBA PATENT

By numerous tests by the best Bakers the above mentioned grades have been proven to be the best Flours in the market.

When buying Flour ask for Dafoe's, and patronize your home mill, thereby producing Bran and Shorts that you can purchase cheaper than the product of the Western mills, which has to be transported thousands of miles at great expense, and usually, when it reaches you, of inferior quality.

The grocer complains if the farmer or the mechanic sends to Toronto or to outside points for an article he can get at the home store just as good, but he does not hesitate to buy Flour from mills hundreds of miles away, and sell you an inferior Flour for more money than you can purchase the home product for, every bag of which is guaranteed.

CHOICE CORN MEAL and BUCK-WHEAT FLOUR always on hand.

FEED GRINDING a specialty, with the best feed mills known to the trade.

A full stock of the best ANTHRACITE COAL. Also in the market for the purchase of all kinds of Grain.

Ask for prices at the big Mill before purchasing your Flour, Feed or Coal.

NAPANEE,  
16th January, 1906.

Gas and Gasoline Stoves, motor and stove Gasoline for sale.

MADOLE & WILSON.

T. B. WALLACE, Phm. B.  
The Prescription Druggist.

## THE BEST SLEEP.

It Is That Which One Cannot Avoid Without a Struggle.

When debating the question, How much sleep is needed? one must keep in mind that the best sleep, indeed, the only healthy kind, is that which one cannot avoid without a struggle. It is the sleep that always follows on weariness; it is not that which is obtained by difficulty. If a person slept for three hours right away and then awoke refreshed—that is, with no further inclination to sleep—he would not then be in need of it. His proper course would be to arise and engage in work. But he must be prepared to sleep at any time in the day when the longing occurs. To the latter rule there is one

## Plymouth Binder Twine.

There is no twine as good or as even, more feet to the pound in Plymouth than any other twine made. Be sure to buy Plymouth from

BOYLE & SON

## It Kills the Bugs.

Lewis Berger's Pure Paris Green (English) is suredeath to Potato Bugs. It will not float on the water, but dissolves readily in it. One teaspoonful of this Green is sufficient for a pail of water. Sold in 1 lb. tins at The Medical Hall—FRED L. HOOPER.

## Half Holidays Excursions.

The third excursion of the series will leave the Reindeer dock at 1.30 p. m. sharp, running to Picton, Friday July 20th. We are going to try and make these outings just as pleasant as we can. Come and enjoy a nice trip. Popular price 25c.

FOR SALE.

Steam Coal and Blacksmith Coal also on hand.

**CHAS. STEVENS,**  
1-11 Office, West Side Market Square

## How Much for your Eyes?

Who would voluntarily part with their eyes, or even dispose of them at any price?

Very few enjoy perfect vision: with the majority one or both eyes are defective. Many eyes are ruined by inferior or misfitted glasses.

Be careful to whom you entrust your precious eyesight.

We give you the highest scientific test, and our lenses are the best science can produce.

**Smith's Jewellery Store**

**H. E. SMITH,**  
Optician.

with \$1,000 with which to erect a new public library building. Mrs. Ham's maiden name was Breden.

Mrs. Collins, a former resident of Piety Hill, now of St. Catharines, who has been in the St. Catharines hospital for a number of weeks, underwent an operation in that institution recently, and is now recovering though she has lost the use of her arms and limbs and is still very weak.

### Royal Hotel Block.

F. S. Scott's shop strictly up-to-date in every respect. A call solicited.

### The Salvation Army Emigration.

Blank application forms for farmers who wish to apply to The Salvation Army for farm help may be had at this office.

### Cheap Screen Doors.

For what sizes we have left in plain doors, all complete for 75c., while they last.

BOYLE & SON.

### Extra Session.

An extra session of the Council of the Township of Richmond will be held at Selby, on Monday, July 16th, at the hour of 10 o'clock a. m. Persons having business to bring before the council, will please govern themselves accordingly. By order of the Reeve, Z. A. GROOMS.

### Music

Owing to several cases of misapprehension being recently brought before Miss McHenry's notice, she wishes to state that the opinion, which seems to be maintained, that she receives for instruction ONLY ADVANCED pupils, is erroneous. She will discontinue teaching through July and August, resuming it September first. Residence, Centre St.

### The Imperfect made Perfect.

The special work of the expert optician in charge of the new optical department at THE MEDICAL HALL is to correct imperfect vision. Are your glasses satisfactory? Do they cause pain in the eyes? Are they restful to the eyes? Do you see perfectly? If not it will cost you nothing to have your eyes tested. We guarantee satisfaction. FRED L. HOOPER.

### Matched Race for Purse of \$400.

A matched race for \$200 a side has been made between Dr. Johnson's Harry Direct, of Peterboro, and Robert Coyle's, Muriel Wilkes, of Colborne, to be trotted at the Napanee Driving Park, Wednesday, July 18th. Race is mile heats best 3 in 5. As both horses are very fast and both owners are sure they can win the race should be a very interesting one. A matinee race between local horses to buggy is also being arranged. This speaks well for Napanee track, when horses will come from Peterboro and Colborne to settle their disputes over a good track.

Hot weather to be thinking about Furnaces. But now is the time to place your order for a furnace. Have it properly installed by people who know how. Boyle & Son will be pleased to give you an estimate. Ask BOYLE & SON.

### Fatal Accident at Kennebec.

A fatal accident occurred at the home of John Steel, farmer, of Kennebec, about three o'clock, Tuesday afternoon. His boy, about six years old, took a rifle from some corner. It was heavy and he laid it on a bed. It did not appear to have been noticed until it suddenly exploded, the ball striking his sister, Blanche Steel, in the side and passed nearly through her body. The poor girl died in about half an hour. She was thirteen years of age. The funeral took place on Wednesday at 2 p.m., at the Methodist church.

A. S. KIMMERLY has just got in a car of Potatoes, Roses, Hebsons, Seed Peas and Mandscheuri Barley in stock and all kinds of garden and field seeds. I buy clean Timothy Seed, Vetches for sale.

by difficulty. If a person slept for three hours right away and then awoke refreshed—that is, with no further inclination to sleep—he would not then be in need of it. His proper course would be to arise and engage in work. But he must be prepared to sleep at any time in the day when the longing occurs. To the latter rule there is one exception. Let us suppose that one has acquired the habit of sleeping half the night and lying half awake during the remaining half. Such a habit can be best broken by rising after the first sleep and refraining from a nap in the day. When the bed hour arrives the chances are that the victim of insomnia will be so sleep hungry that he will not wake until the proper hour for rising.

In any case it is a great mistake to turn over on the other side and remain in a half conscious state. Indeed, it is a more serious mistake than many would believe, says Home Notes. The brain is now in a peculiar state, more closely resembling the hypnotic than would be possible under any other normal conditions. Quite a lot might be written about the peculiar dangers and powers of this half waking state.

### Not to Be Found In the Reports.

A prominent Philadelphia lawyer was narrating to a younger advocate some of the delays and complications of a chancery suit in which he was engaged. "Bless me," said the junior advocate, "I never heard of anything parallel to that except Jarndyce versus Jarndyce." The other at once looked thoughtful and pretty soon, pleading an engagement, went off. The next morning he went into the younger man's office with an air of great vexation. "Look here!" he said. "Why can't you remember names accurately? Here I've spent the whole night trying to find that case of Jarndyce versus Jarndyce that you mentioned, and there isn't any such case in the Pennsylvania law reports at all!"

### TOWN COUNCIL.

Council Chamber,

Napanee, July, 18th 1906.

Council met in regular session, Mayor Lowry in the chair.

Councillors present—Simpson, Williams, Graham, Kimmerly, Normile and Meng.

The minutes of the last regular session were read and confirmed.

### COMMUNICATIONS.

The following communication was read by the clerk, from T. F. Rutan, late tax collector :

"I am in receipt of your letter of the 4th inst. and have noted the contents. All my books and papers are now and have been, since on or before the 18th day of June last, in the custody of the town council or its officials, and from these books or papers all the information required by the resolution of the council, can be obtained. I distinctly deny the right and authority of the town council to rescind what was done on the 18th of June last, when resolutions were passed authorizing the payments to me of my commissions on the extra collections and expressing the council's satisfaction as to the explanations, that I then made to the council. I have settled with the town council and have paid them in full, and have received my commissions and salary in full, in pursuance of the resolution of the council, and I do not propose consenting to have the matter, in any way, opened up anew. The town council, I believe, are to have the books of the town audited by the Government officer, and when that Government audit takes place, I expect to be in town and available to appear before the auditor and make any and all explanations, which may require from me, but as the facts, relating to the matter referred to in your letter, have been fully gone into before the council, and the whole details are known to the individual members of the council I cannot see that any good can arise from my trying to make any further statements in connection with the matter, and as I have been threatened in more than one way in connection with this matter, I do not propose doing anything more. This letter, of course, is written without prejudice to my rights and must be treated as so written."

On motion of Councillors, Williams and Simpson, the communication was referred to the Finance Committee to consult solicitor, and report.

The G. N. W. Telegraph Co., in a communication, stated they had notified the mortgagees of the old Electric Light Co., to remove all their wires from the poles of the G. N. W. Tel. Co., otherwise the said G. N. W. Tel. Co., would do so at the expense of the Electric Light Co. The writer also asked the council to suggest some way of storing wire, provided they had to remove it. The clerk was instructed to answer and state the council had no suggestion to offer.

The Fire Water and Light Committee asked for further time to report in reference to electric lights asked for by the residents of South Napanee, in the vicinity of the suspension bridge; also as to the matter of Mrs. Bartlett asking storage rental. Granted.

The Street Committee asked for further time to report in reference to cement sidewalk on Dundas street, from Campbell House west to Public Library corner; also as to cement approach to fire hall. Granted.

The Street Committee also reported

# SATURDAY, A DAY FOR RIBBONS.

# MADILL BROS.

### Gettin' Wisdom

is a comparatively easy task if you start it while you are young. Don't allow your children's eyes to be ruined for all time because "they look too 'ded' with glasses."

"We'll tell you the truth as to whether they need glasses or not, and charge you nothing for the telling."

Headaches in children are suspicious.

We are also the best people to guarantee the quality of our frames, it being part of our jewelry business to acquire that ability and knowledge.

The high character of the college is a guarantee of thoroughness.

Catalogue with specimen of penmanship free. Address **PRINCIPAL DYER, D. D.,** Belleville, Ontario.

### CLERK'S NOTICE OF FIRST POSTING OF VOTERS' LIST.

Voters' List, 1903, Municipality of Richmond, County of Lennox and Addington

Notice is hereby given that I have transmitted or delivered to the persons mentioned in sections eight and nine of the Voters' List Act, the copies required by said sections to be so transmitted or delivered of the list, made pursuant to said Act, of all persons appearing by the last revised Assessment Roll of the said municipality to be entitled to vote in the said municipality at elections for members of the Legislative Assembly and at municipal elections; and that said list was first posted up at my office, on the twelfth day of July, 1903, and remains there for inspection.

Electors are called upon to examine the said list, and, if any omissions or any other errors are found therein, to take immediate proceedings to have the said errors corrected according to law.

**ABRAM WINTERES,**  
Clerk of said Municipality.

Dated this 12th day of July, 1903. 31b

A few good Hammocks left, at a bargain, don't wait.

**AT BOYLE & SON.**

The Street Committee asked for further time to report in reference to cement sidewalk on Dundas street, from Campbell House west to Public Library corner; also as to cement approach to fire hall. Granted.

The Street Committee also reported that Mr. Alf. Knight had offered the town the stone left over from repairs to the Leonard block, provided they would have same drawn away. Coun. Normile, as chairman of committee, stated he had accepted Mr. Knight's offer, and the stone would be used in making granolithic walks, etc.

## Oddfellows' Excursion to Ottawa

on Wednesday, Aug. 8th, Civic Holiday.

Special train both ways. Fare \$2.00.

Tickets good to return until following day, 9th.

Mr. Samuel Smith and other residents of Water street west, petitioned the council for an electric light to be placed on the corner of Hesford and Frederick streets. Referred to Fire, Water and Light Committee.

Coun. Normile reported that Mr. Geo. Perry had been considerably troubled with the drain leading from his cellar. He had opened the drain to make repairs but when he came to the town drain he found it all caved in and stopped up. Mr. Perry wanted a grant of about ninety feet of 4 inch tile to carry the drain across the street and into another drain, he to do all the work in connection with said drain. Granted.

Coun. Meng informed the council that quite a number of complaints were being made about the refuse or coal tar from the gas house, running into the river, and if the council had the power to compel the Gas Co. to stop this nuisance it should be done.

Moved by Couns. Meng and Normile that the clerk write the Gas Co. to have this matter attended to immediately. Carried.

Moved by Coun. Normile seconded by Coun. Meng, that the clerk prepare petitions, as in former years, for street watering, and that the Chief of Police circulate same and get the signatures of those who wish the streets watered in front of their properties.

Moved in amendment by Coun. Graham, seconded by Coun. Simpson, that the cost of street watering be paid out of the general tax.

Amendment lost on following division:

Yeas—Graham, Simpson, Lowry. Nays—Kimberly, Meng, Normile, Williams.

The original motion carried on the following division:

Yeas—Kimberly, Meng, Normile, Williams.

Nays—Graham, Simpson, Lowry.

Coun. Kimberly, speaking of the said accident last week at the Selby railway crossing, said he thought it about time the council woke up in reference to this matter. Where there was such a nest of tracks to be crossed by the public, as there is at this crossing, he thought the G. T. R. should

erect a gate with a man in attendance to avoid accidents.

Coun. Meng said he fully agreed with the opinion of Coun. Kimmerly; it was time something decisive was done in this matter, but he thought it wise to wait until after the Coroner's Jury had finished the inquest.

Coun. Simpson informed the council that Solomon Snider was very much in need of assistance. He is suffering from a tumor, and is unable to work.

Referred to the Poor and Sanitary Committee with power to act.

The following accounts were ordered paid: P. Gould, goods for poor, \$12.88 cost of suits. Knight against Town of Napanee, \$208.56; Napanee Gas Co. gas for town buildings \$27.20; Dominion Rock Drill Co., \$5.05; Geo. Sampson, drawing gravel, \$2.00; G. T. R. freight, \$0.44; G. T. R. freight on wire \$13.42; I. Vanalstine, cartage on freight, \$1.05.

The following accounts were referred Madole & Wilson, street supplies, etc. \$75.94, Street Committee with power to act; Dominion Rock Drill Co., work at power house, \$17.47, Fire, Water and Light Committee, with power to act; Hose Section Fire Co., hanging up hose, etc., \$4.00, Fire Water and Light Committee.

Council adjourned.

## STELLA.

There are no men out of employment for every man and boy is making hay while the sun shines, which for the past week has been very warm. There is a heavy crop to handle, and help is hard to obtain.

While unloading hay with the horse fork, one of the pulleys became detached, striking F. Henderson a severe blow on the face. Fortunately no bones were broken.

W. Brown is laid off work with a sprained ankle.

The many friends of A. W. Hitchins are pleased to hear that his condition is improving. He underwent an operation in Kingston General Hospital.

There were two deaths last week John Brown, a very old resident of the Island, passed away on the 9th. George Wemp, Emerald died on July 12th. Both bodies were laid to rest in Glenwood cemetery.

The Orange brethren, of the Island, held an ice cream treat on Thursday evening, July 12th, in Victoria hall. The Prentice Boys were also in good attendance, and all had a jolly good time.

Glenwood cemetery.

The Orange brethren, of the Island, held an ice cream treat on Thursday evening, July 12th, in Victoria hall. The 'Prentice Boys' were also in good attendance, and all had a jolly good time.

Visitors: W. D. Sanders and Miss Elma Sanders, Buffalo at John Sanders' Edwin Patterson, Cleveland, spent a few days with his mother, Mrs. R. Patterson; Miss Watson, Kingston, at Mrs. R. McCormick's.

**Use Prism Brand Floor Enamel**  
It dries quickly, has a varnish gloss, and is true to color. The Medical Hall.—Fred L. Hooper, sole agent for Napanee.

#### DENBIGH.

The residents of Denbigh and vicinity have been for some months badly in need of a resident medical practitioner. This want will be relieved now by Dr. A. T. Spankie, formerly of Tweed, becoming our resident Physician. He will occupy the Office and rooms formerly occupied by his predecessor, Dr. J. Chant. whose stock of medicines and drugs, he will also likely assume.

Mrs. Geo. Exley, of Napanee, has returned to that town, after enjoying a good visit with her parents, Mr. and Mrs. Wm. Lane.

Mr. A. Mayer and Miss Susan Mayer, of Philadelphia, are guests of Rev. and Mrs. Daechsel at the Lutheran Parsonage. They came nearly to grief however, on their journey north from Cloyne. Driving down a rather steep hill, the neck yoke happened to break, the buggy shoving the horses, caused them to run away. The tongue of the buggy running into the ground threw the occupants out, with the result that Rev. G. Daechsel and his son Fred, received some serious and very painful bruises, while Mr. and Miss Mayer escaped with a bad scare. Nowithstanding this alarming beginning the visitors are enjoying their visit very much, and have invited some more of their friends to spend part of the summer with them in our romantic hills and valleys.

Mr. Thomas Dool had one of his hands badly injured by the explosion of a rifle cartridge, which he was trying to pick out of the rifle, with his pocket knife.

Strictly pure Paris Green and Bug Death. MADOLE & WILSON.

Peterboro, Ont., July 16, (Special.)—Great excitement among prospectors has been created here over the report that gold has been discovered at Apsley, a small village in the north of this county. The hidden treasure is supposed to be located on the farm of Mr. Zaccheus Tucker, who has already been made a good offer for his property.

Prospectors are travelling north through the city every day and it is expected that the rush to this new-found gold field will soon be as strenuous as that to the Cobalt.

Belleville, July 14.—What looks like a swindling transaction has come to light in this city. A man, who has given his name as Tremaine, has been travelling among the farmers representing himself as an agent of the Mason Campbell Co., manufacturers of fanning mill machinery. One farmer gave him a note for \$13 which he has since paid; but he has not received the note, only an anonymous letter telling him he should not transact business in that way. Now the farmer is trying to see if the authorities can help him get his mill, note or money.

All by daylight and within six days. For particulars see page 8.

Binder Twine, Plymouth Special and Deering Hay Fork Rope and Pulleys, Binder Covers.

MADOLE & WILSON.

With the chubby hand of her two-year-old child clinging to her, Martha Austin, a young woman, whose frame seemed utterly wrecked through a life of hard, slavish work, was ushered into court, in Kingston, on Tuesday. She was sparsely clad. She had been arrested, that morning, near Cataragui on a warrant, by Police Constable Bateson. She was charged with the theft, July 14th, at Ernesttown, of a lady's hat, skirt and waist, from Mrs. Hartman, and was remanded until Friday for trial. The story of the poor forsaken-looking young mother, is that she worked on the farm of Hartman for \$5 a month. Saturday they all drove to Odessa, and she was given these clothes in question to wear. At night the others drove home and left her. She wandered to friends of hers near Cataragui, and was taken in. She claimed she had every intention of returning the clothes when they should come for her, she also states her employer still owes her one dollar. It would seem evident that the kindest treatment had not been meted out to the young woman.

The most satisfactory Paris Green is "Berger's." It is soluble in the water and will not clog the sprayer. Get the genuine in 1 lb tin cans at Wallace's Red Cross Drug Store.

The great curative powers of this remarkable remedy is attracting much attention and everywhere it has been introduced it is winning its way among the people. It is a powerful, penetrating oil which we believe has a larger percentage of cures of rheumatism to its credit than any other remedy ever offered for this dread disease. It acts directly on the bone—the lodging place of rheumatism—dispels the poisonous acid from the joints to be carried out of the system in the natural way and by its splendid work has proved that the surest and quickest method of getting relief from the torturing pains of rheumatism, as well as the common sense way, is by a direct attack on the affected part. For the small ills of life it is invaluable.

Mrs. W. H. Thomas of Lombardy writes as follows:—I was subject to stiff neck, suffered for years and have been as long as two weeks at a time not able to turn my head without turning my whole body. I doctored and got relief only to have the trouble return again. In August last I had a severe attack and I tried Tuck's Rheumatic Bone Oil having been reading in the papers about how good it was for rheumatism &c. Three applications completely cured me and I have had no return of the trouble since. I recommend Tuck's Bone Oil to everyone.

Mrs. W. H. Thomas, Lombardy, Ont.  
For rheumatism, lame back, neuralgia, sprains, coughs, colds, quinsy or bronchitis, in short for any and all kinds of inflammation there is nothing to equal Tuck's Bone Oil. A bottle should be on the shelf in every home. For sale by all medicine dealers at 50c. a bottle or sent prepaid by the Tuck Bone Oil Co. Limited, Smith's Falls Ontario.

For rheumatism, lame back, neuralgia, sprains, coughs, colds, quinsy or bronchitis, in short for any and all kinds of inflammation there is nothing to equal Tuck's Bone Oil. # SIN OF EXCESS IN GOODNESS

## Men Over-Emphasize a Good Thing Until It Becomes an Essential Evil.

Dr. Newell Dwight Hillis, of Plymouth Church, Brooklyn, N.Y., preached from the following text: "Be not righteous overmuch."—King Solomon in the Book of Proverbs.

Last week a handsome youth, built like a giant, and known as two continents for his medals gained in athletic contests, was detained at Ellis Island, with all the probabilities that he would be deported to his old home in Ireland. Murphy came to New York as a first-cabin passenger, and brought with him his silver cup that he won in the walking race, the medal he received for a running contest, and various tokens that published his career as an athlete. But, strangely enough, when the youth passed the examining physicians there was something in his pallor and walk that attracted the attention of the United States Marine Physician, who ordered young Murphy to be sent to Ellis Island for careful physical examination.

The Board of Physicians reported that in over-developing his heart and his speeding muscles he had atrophied the other muscles of his body, and worn the heart out by compelling it to force the blood through the great, thick bunches of muscles in the legs and arms. It seems that there is a type developed called "the over-athletic type."

His excess ruined him. By forcing all the blood and food to one part of the body he slowly robbed the other organs. Yet all the time Nature was storing up her penalties. At last the retribution has come; the sword of Damocles has fallen. Nature whispers "too much." The two-hundred mile run has ended in a hospital. That is a brief resting place in sight of the graveyard.

### ALL EXCESS FATAL.

The world is full of examples of excess. Men over-emphasize a good thing until it becomes an essential evil. The wise man said even of goodness: "Be not overmuch righteous." Moses saw that it was a good thing to keep the Sabbath for brooding, song, prayer, worship, family love. Being a good thing, the old Hebrews straightway began to extend the law, until they would not wear shoes on Sunday lest they thresh out the grass seed in walking across the lawn. They would not kindle a fire to warm the broth for a dying invalid, lest they break the law of work.

Moses said to a man who had stolen some sheep that it was a good thing to sacrifice one of his own lambs as an outer sign of his inner sorrow, and also to send home all the sheep he had stolen. But, it being a good thing for a bad man to sacrifice a lamb to show that every sin costs something, in a little while the Hebrews became so overmuch righteous that one day a Hebrew king killed 20,000 sheep and burned them, and every time a rain-storm came up the Hebrew farmer began to say: "How many lambs must I kill to keep God from sending a cloudburst to the hillside?" Prayer was a good thing in reviewing the events of the day, so, running to an excess, the Pharisees began to make long prayers on the streets and carry around a cane on which they cut notches every time they said a prayer an hour long.

Finally the religion of outer sign and symbol had developed into a complex system of rules and sacrifices, and kneelings and risings that broke faith down by its very bulk. In outer observance they were overmuch righteous. One day Jesus told the Pharisees that the spiritual heart was dying, the in-

gentle friendship, a simple style, unobtrusive and quiet manners, a few books, a small house full of love, a song, a prayer—and the heart is full of peace. Too much—that excess stands for the tropics; too little—that excess stands for the arctics of poverty; somewhere between lies the temperate zone and the golden mean, where joy and peace have set up their tents. And, lo! all the happy ones who dwell therein have hearkened to these words: "Be not anything overmuch."

## SOME HOUSEHOLD FOES

### CONNECTION BETWEEN PARASITES AND DISEASE.

Royal Institute of Public Health Investigating Disease Responsibility of Various Forms of Life.

A man's foes are those of his own household. To be healthy he must live alone. His cat—calm, majestic, mysterious creature—must be banished. Flies must be killed as soon as they appear, before they reproduce themselves in countless millions. Mice must die the death. The inmates we do not want transmit disease to those we do, and those we do pass it on to those we cannot dispense with, says the London Gazette. From the mouse to the cat, from the cat to the cow—that is, to the beef which lies in the larder—the elements of disease run their direful course, till they enter the body of man and make short work of him.

For this warning thanks are not due to the medical press. The Lancet, for once at least, is innocent of intention to frighten us out of our lives. Responsibility rests with the Royal Institute of Public Health. That useful body is just now making a close inspection of the foes of our household. Bottled rats, mice, flies, cockroaches and other fearsome wild-fowl decorate the shelves of the new laboratories in Russell Square and the workers are engaged in discovering the connection between parasites and disease. Some maladies are already traceable to

### CRAWLING AND FLYING THINGS.

but others have to be looked into. Almost every animal comes under suspicion. If its honor be not cleared, we can see no future for it.

The mouse, for instance, is suspected of conveying cancer. As it suffers from malignant tumor, it may conceivably be an active agent of evil. So with others. It would be easy to make a nice, readable, horrific, nerve-shaking article out of the war innocently waged on man by the creatures he calls his own—the members of his household. We prefer, however, to hold our hand. The laurels so gracefully worn by those weekly tormentors of mankind, the medical journal, are not for us. Let it be our task to suggest remedies rather than dwell with fiendish glee on the possibilities of evil.

There comes the rub. How can the householder—supposing the charge be definitely proved against his mice, his cockroaches, and his flies—do more than he does at present, and has been doing for years, to clear his dwelling of things he never invited to live with him? Mice are his wife's chief terror—

## THE POVERTY OF RUSSIA

NEW ERA BEGINNING IN 1895—  
ENDED IN DISASTER.

Out of 130,000,000 Population 125,000,000  
Are Poor—Scarcity of Foreign Capital.

Until some nine or ten years ago the industries of Russia were confined practically to the cultivation of the soil, even this being carried on in a haphazard fashion, writes a St. Petersburg correspondent. Agriculture was the only possible industry under the political and national conditions which then held. Each of the serfs, at the time of his emancipation, in 1861, received from the Government a strip of land to serve as a means of support, the land to be paid for in instalments.

These men, then lately set free, had little initiative toward the acquisition of modern methods of agriculture, and under the primitive attempts at cultivation the land did not yield enough profit to pay the taxes imposed by the Government, and also support the farmer and his family. At the same time, this land was a burden of which the peasant could not be rid, in order to devote himself to becoming skilled in some trade. Bound to the soil, the peasant met the heavy financial obligation imposed by the Government by emigrating to the cities during the lengthy winter months when the farms were necessarily unproductive, and there hiring out as a driver, servant, messenger, or at any unskilled employment which he could gain.

... this time Russia was completely lacking in skilled workmen.

The year 1895 witnessed the beginning of a new industrial era. At this time in Russia there were some small factories for weaving cloth in the larger cities; also scattered efforts at the manufacture of iron. On the coast were unimportant industrial cities, whose trade was carried on mainly under the leadership of German and English firms. Neither the capital nor the skilled mechanics of these enterprises were Russian, and this served as an excuse for the refusal of these foreign interests to move inland when pressed to do so by the Russian Government.

The foreign captains of industry refused to move too far from the base of supplies, true to the tactics of all warfare. An inland factory might be closed down for weeks for lack of a skilled machinist to patch some temporary breakage of the boilers or other similar mischance. The interior of Russia continued as a vast farming community, the farming being carried on not as a means of gain and advancement, but merely to wring from the soil the bare necessities of living.

### GOVERNMENT AIDS.

Failing the effort to induce foreign capital to forward the industrial advancement of the nation, the Government attempted the task under the wise and capable administration of Sergius Witte, whose profound knowledge of economics and of Russian conditions made him the man needed for such a gigantic undertaking. Witte raised enormous sums of money in foreign countries. The railroads throughout the colossal Russian Empire were enlarged and new ones were built, this work necessitating the production of supplies, which necessity, in turn, caused the founding of factories everywhere. The iron industry, one of the few native to the country, received additional impetus. The mineral interests of Russia, rich in coal and ores, began to be adequately worked.

In five years, from 1894 to 1899, the Russian Government chartered almost one thousand stock companies, with a capital estimated at over \$1,400,000,000. Industrial production increased by 50 per cent. The steady advancement of

## The Home

### DOMESTIC RECIPES.

**Raspberry Sponge.**—Two boxes of raspberries, two cups of sugar, juice of one lemon, one tablespoonful of gelatin, the whites of three eggs; wash and mash the fruit and put it through a sieve, add the sugar and lemon juice. Soak the gelatin in a cup of water and when dissolved pour into the mashed berries and let it stand until it is as thick as jelly, then add the beaten whites and beat all together. Pour in a mould and place on ice.

**Raisin Pie.**—One cup of seeded raisins, chopped fine; one cupful of sugar; one cupful of hot water; the juice of one lemon, one egg, one rounding tablespoonful of corn starch, a small pinch of salt. Bake between two rich crusts. This recipe will make one large or two small pies. I have made my raisin pies like this for twenty years, and have never found another recipe equal to it.

**Fried Cream.**—In a double boiler scald one pint of milk, adding to it an inch of stick cinnamon. Beat together two eggs, add one-quarter of a cupful of cold milk, one tablespoonful of flour, two tablespoonfuls of corn starch, a quarter of a teaspoonful of salt, and a half cupful of sugar. Add to this the scalded milk (first removing the cinnamon), mix together, return to the double boiler, and cook for fifteen minutes, stirring frequently. Lastly, add one teaspoonful of butter, two tablespoonfuls of blanched almonds chopped fine, and one teaspoonful of vanilla, and pour into a shallow, square pan, which has been well greased. When cold and stiff, turn out on a board, cut it into strips, dip in slightly beaten egg, roll in fine dry bread crumbs; do this twice. To cook, plunge into smoking hot, deep fat until golden brown. Drain on soft paper and dust with powdered sugar before serving.

**Russian Sauce.**—In a saucepan melt and mix together two tablespoonfuls each of butter and flour. Cook, without browning, for five minutes; then gradually stir in one pint of strong veal stock. When smoothly thickened, simmer for five minutes, stand over hot water, add the strained juice of half a lemon, four tablespoonfuls of freshly grated horse radish, and cook for five minutes longer. Season to taste, add a scant tablespoonful of butter cut in bits, stir until absorbed; then take from the fire. Put a spoonful or two on a hot platter; on it arrange the hot broiled slices of tenderloin, garnish with slices of lemon and a little watercress, and serve the remainder of the sauce separately.

**Lemon Pie.**—Two cups of sugar; two tablespoonfuls of flour. Mix well; add two well-beaten eggs and one pint of milk; the grated rind and juice of two or three lemons. Pour at once into pie-plates; line well with paste, turning a high rim. This makes two pies.

**Green Gooseberry Tart.**—Top and tail the gooseberries. Put into a porcelain kettle, with enough water to prevent burning, and stew slowly until they break. Take them off, sweeten well, and set aside to cool. When cold, pour into pastry shells and bake with a top of puff paste. Brush all over with beaten egg while hot; set back in the oven to glaze for three minutes. Eat cold.

**Raspberry Mousse.**—Whip a pint of cream until perfectly stiff, mix with it a cup of raspberry pulp carefully drained and mixed with sufficient pulverized sugar and of the same consistency as the whipped cream. A dash of vanilla is frequently added. Place in a mould, cover it carefully with paper,

system of rules and sacrifices, and kneelings and risings that broke faith down by its very bulk. In outer observance they were overmuch righteous. One day Jesus told the Pharisees that the spiritual heart was dying, the intellectual muscles were full of deterioration, worship had 'all but perished, faith was death-stricken, like this Irish athlete. As over-exercise ruined the youth, excess in religious form destroys the soul.

#### INTELLECTUAL EXCESS.

Not less ruinous is over-intellectual development. Not all knowledge is of equal worth. Much culture, indeed, is over-culture and represents a mass of selfishness. We have no criticism for the scientist who spends his whole life studying grasshoppers and has discovered 3,841 species of these long-legged creatures—some day his knowledge may help us to destroy the locusts that threaten the corn fields.

But what we do object to is that form of selfish culture now found so frequently. How many scholars are now pulling down their blinds, closing their doors, and withdrawing themselves from the vulgar crowd? One of them said to me the other day: "I only want a little handful of select friends." He sneered and scoffed at the ignorant multitudes. He has old paintings and rare muskets; he has marbles and curios; he prides himself on his first editions and rare bindings; but he has built a wall about his house that not a breath of the perfume from his garden may be permitted to go forth to bless any working man who passes by.

Able innocently to give up work, he lives and breathes for his own study and culture. Meanwhile his affection have died up. All sympathy with the poor has perished. His interest in the problems of democracy and the common people has waned to the vanishing point. His intellectual polish is as true as a mahogany finish. His culture is as clear as crystal, but as cold as ice. His intellect has absorbed everything. Essentially he is dying in all that makes a man to be a man. This stricken athlete over-developed his body; this scholar has over-developed his mind. He showed me one of his books bound in calfskin going back to the fifteenth century, but the poor man himself could be stuck up on the shelf, for he is just as dry as his old vellum, and a few years either the pigeon or the library skin could be a match for him. He needs to hear Solomon say "Be not overly a overman."

#### FINANCIAL SUCCESS.

There are also men need to listen to Nature, who wilderness. "Be not overly a overman." Manhood means all-round character. But there are business men who have converted everything in life to a goal. To get money they have defied worship on Sunday; to get money they have denied themselves friendship; to get money they have denied the eye and the ear music; to get money they have even denied themselves justice and an approving conscience, and converted their very sense of right into folly.

They know that an over-supply of food in the stomach means poison; they do not seem to know that an over-supply of unbridled passions means death, their unbridled possessions and unbridled millions are as hideous as a tumor on the body.

Meanwhile, by excess, the athlete ruins himself physically and comes to a hospital and a grave. Over-developing his intellect, the scholar becomes a mere intellectual dagger and sword. Over-developing the acquisitive faculty, the practical man ruins his life. The sin of the hour is excess. Women over-dress, men over-eat and overdrink. Automobiles overdrive. Editors over-write. Authors who become successful over-publish. Orators speak too long and too often. One drop of aniline is believed to leave one speck of red in each drop of water in Lake Michigan, which is a figure full of suggestion. A little travel, a little conversation, a

definitely proved against his mice, his cockroaches, and his flies—do more than he does at present, and has been doing for years, to clear his dwelling of things he never invited to live with him? Mice are his wife's chief terror—that is why he keeps a cat. If he dispenses with the one propagator of disease, the other will swarm. Let the guinea-pig go, and the cockroaches flourish. Kill the spider, and you contribute in some small measure to the prosperity of the fly. The householder increases his establishment, or his menagerie, for the purpose of preserving a balance of power in the animal kingdom. Already he helps his cat against what might otherwise be overwhelming odds by setting mousetraps and scattering vermin powder, his terrier by the employment of that useful weapon known as "death on rats." His sideboard is made hideous by flypapers and flycatchers of various designs. He wars to the extent of his ability against

#### THE FOES OF HIS HOUSEHOLD.

What more can he accomplish? How on earth can he banish cat and mice at one fell swoop?

We would answer these questions if we could, but we confess they are beyond us. After all, the poor man who pays rent likes to be as comfortable as possible. He will not consent—no, not in the face of disease and death—to change his walls completely from the environment of a home to the boundaries of a torture-chamber. He will decline, to go no farther—to sell his pictures in order that room may be found for flypapers on every available inch of space.

The best advice we can offer is that the householder, before agitating himself unduly, should wait and see what the Royal Institute of Public Health can tell him for certain. Their investigations may be valuable to the pathologist. They may throw light on the source and dissemination of diseases which have been hitherto wrapped in obscurity. The householder will be glad to know whether his cat or his mice must be accounted the more dangerous enemy of his health, and when he does know he will be able to take measures according to the peculiar cast of his philosophy. The most difficult point to decide will be: Whether it is better to suffer and keep the cat, or kill the cat and run the risk of suffering still.

#### BOGUS LORD WANTED.

Polished Englishman With Six Wives Kept on the Run.

The police throughout the United States are trying to discover the whereabouts of a notorious bigamist calling himself John Cavendish and Lord Sholto Douglas.

Under these aliases the unknown miscreant, a good-looking Englishman of polished manners, is reported to have contracted numerous marriages, subsequently deserting his wives, in some cases robbing them, and even threatening to murder them.

Last December, posing as John Cavendish, a wealthy Englishman, the bigamist married Miss Josephine Hood, a beautiful young Southern lady, highly connected, at New Iberia, Louisiana. The couple started for the honeymoon shortly afterwards, the bride telling her mother that she and her husband were going to Mexico, where he had a large estate.

Since then the bigamist has not been heard of. "Cavendish" ordered letters to be sent to the care of the British Consul at Vera Cruz, whence they have returned marked "Unknown." When shown a photograph of the bogus Lord Douglas, Mrs. Hood immediately identified him as her daughter's husband.

The State Department have been requested to search for "Cavendish" and his bride, Douglas, or Cavendish, is known to have taken at least three wives to Mexico, having married two under the name of Cavendish and four as Douglas.

In five years, from 1894 to 1899, the Russian Government chartered almost one thousand stock companies, with a capital estimated at over \$1,400,000,000. Industrial production increased by 50 per cent. The steady advancement of values went on until by 1897 it amounted to some \$1,816,000,000. The new-born industry of the nation was largely dependent on these Government railroads. In time prices were depressed through a new policy, the Government contracts being reduced in the prices paid for building supplies. The factories, which had grown up in a night at Minister Witte's bidding to supply these materials, ceased to be paying ventures. In buying supplies the Government gave preference to high-priced native manufactures, rather than buying more cheaply in England and Germany, thus adding to the financial confusion of values which was steadily increasing.

The exports of the country did not keep pace with its productivity, the former averaging \$28,000,000 yearly, while the latter aggregated \$1,800,000,000. The appalling poverty of 125,000,000 out of the 130,000,000 of Russians prevented their purchasing the native manufactures. The great industries were either directly controlled by the Government or were fed by its patronage.

#### INDUSTRIAL CRISIS.

The first serious industrial crisis came in 1899, when many large failures took place owing to a scarcity of capital coming from outside sources. At this time there were 146 foreign corporations in Russia, the capital coming from France, Belgium, Germany, and England. A greater financial crisis followed hard upon the first in 1900. Political complications, connected with the Boxer troubles in China, combined to embarrass the Ministry of Finance, and, owing to the paternalism of the Russian industrial system, the private banks of the empire became involved in the difficulties of the Government.

The artificial inflation of Russian industrial values fell like a pricked balloon. A terrible financial panic ensued. In 1901 the loss to Belgium investors alone approximated to \$36,700,000. Twelve million dollars were lost by the Ministry of Finance by the stoppage of building operations for which the Government had no further use. Interests to the amount of \$1,000,000,000 (approximately) were closed out. Factories were closed, mines ceased to be worked, blast furnaces shut down. Men were thrown out of work by the thousands, and the distress multiplied from day to day.

The efforts of the Government to retrieve this situation were, in the main, unavailing. Millions of dollars have been lost, and the country's industrial advancement set back at least fifteen years. The present political situation in Russia is partly the outcome of these Russian versions of "frenzied finance." The present situation is not so much a struggle between the Emperor and his subjects as the first manifestation of the spirit of new Russia.

#### A WRONG INFERENCE.

"See that old chap?" remarked the clubman, pointing out the window to a peddler, who carried a basket of shoe-laces. "Well, he came to this country from Russia ten years ago. He borrowed some money to purchase a basket and began to peddle shoe laces. How much do you think he's worth today? Just make a guess."

Several large sums were mentioned expectantly.

"Wrong," said the clubman. "He isn't worth a cent, and he still owes for the basket."

#### FOR EXAMPLE.

Mabel (studying her lesson): "Papa, what is the definition of volubility?"

Mabel's Father: "My child, volubility is a distinguishing feature of your mother when, on account of urgent business affairs, I don't happen to reach home until after two in the morning."

cream until perfectly stiff, mix with it a cup of raspberry pulp carefully drained and mixed with sufficient pulverized sugar and of the same consistency as the whipped cream. A dash of vanilla is frequently added. Place in a mould, cover it carefully with paper and pack in ice and salt for three hours.

To Get Out Stoppers.—The best way of getting a refractory stopper out of a bottle is to take a turn around the neck with a stout string, hold the bottle firmly on the table with one hand, grasp one end of the string with the other, and get a friend to pull the other end. A little sawing will soon heat the neck sufficiently to expand it and loosen the stopper. I have extricated broken stoppers in this way, with nothing to lift them out by but a little bit of sealing wax melted into the broken surface. Try rubbing stopper with paraffin wax.

Transparent Rhubarb.—Cut rhubarb into pieces one-half inch long, spread on plates, and sprinkle with sugar, allowing one-half cup of sugar to each cup of fruit. Let all stand over night. In the morning pour off the juice and boil it ten minutes. Drop in the rhubarb a small portion at a time and cook tender. Remove from the syrup as soon as done to preserve shape. Put into a pretty dish. Pour over the syrup and set away to cool. Though it takes longer to prepare rhubarb in this way one is amply repaid by the result.

#### MUSHROOMS.

The cook should be well acquainted with the different sorts of things called by this name by ignorant people, as the deaths of many persons have been caused by carelessly using the poisonous kind. The edible mushroom first appears small and of a round form on a small stalk. They grow fast, and the upper part and stalk are white. As the size increases the under part gradually opens and shows a fringed fur of a fine salmon color, which continues more or less till the mushroom has been picked, when it turns to a brown. The skin can

But what we do object to is that form of selfish culture now found so frequently. How many scholars are now pulling down their blinds, closing their doors and withdrawing themselves from the vulgar crowd? One of them said to me the other day: "I only want a little handful of select friends." He sneered and scoffed at the ignorant multitudes. He has old paintings and rare missals; he has marbles and curios; he prides himself on his first editions and rare bindings; but he has built a wall about his house that not a breath of the perfume from his garden may be permitted to go forth to bless any working man who passes by.

Able financially to give up work, he lives and breathes for his own study and culture. Meanwhile his affections have dried up. All sympathy with the poor has perished. His interest in the problems of democracy and the common people has waned to the vanishing point. His intellectual polish is as fine as a mahogany finish. His culture is as clear as crystal, but as cold as ice. His intellect has absorbed everything. Essentially he is dying in all that makes a man to be a man. This stricken athlete over-developed his body; this scholar has over-developed his mind. He showed me one of his books bound in calfskin going back to the fifteenth century, but the poor man himself could be stuck up on the shelf, for he is just as dry as his old vellum, and a tear from either the pigskin or the human skin could be a miracle. This man needs to hear Solomon say "Be not scholarly overmuch."

#### FINANCIAL SUCCESS.

In riches also men need to listen to Nature, who whispers, "Be not over-much rich." Manhood means all-round character. But there are business men who have converted everything in life into gold. To get money they have denied worship on Sunday; to get money they have denied themselves friendship; to get money they have denied the eye color and the ear music; to get money they have even denied themselves justice and an approving conscience and converted their very sense of right into gold.

They know that an over-supply of food in the stomach means poison; they do not seem to know that an over-supply of undigested millions means death. Their unspritzalized possessions and unassimilated millions are as hideous as a tumor on the body.

Meanwhile, by excess, the athlete ruins himself physically and comes to a hospital and a grave. Over-developing his intellect, the scholar becomes a mere intellectual dagger and sword. Over-developing the acquisitive faculty, the practical man ruins his life. The sin of the hour is excess. Women over-dress, men overeat and overdrink. Automobilists overdrive. Editors over-write. Authors who become successful over-publish. Orators speak too long and too often. One drop of aniline is believed to leave one speck of red in each drop of water in Lake Michigan, which is a figure full of suggestion. A little travel, a little conversation, a

Mother—Now, Tommy, what do you say? Tommy—It depends upon the pie.

be more easily peeled from the real mushroom than the poisonous kind. A good test is to sprinkle a little salt on the spongy part or gills of the sample to be tried. If they turn black they are wholesome; if yellow, they are poisonous. Give the salt a little time to act before you decide as to their quality.

**Mushrooms a la Creme.**—Cut the mushrooms in pieces and toss them over a brisk fire in butter seasoned with salt, a little nutmeg, and one bunch of herbs. When they are done enough and the butter nearly all wasted away, take out the herbs, add the yolk of one egg beaten up in some good cream; make hot and serve.

**Mushrooms Stewed.**—Gather those that have red gills; cut off that part of the stem which grew in the earth; wash and take the skin from the top; put them in a stewpan with some salt; stew them till tender; thicken with one spoonful butter and browned flour.

**Broiled Mushrooms.**—Choose the largest sort, lay them on a small grid-iron over bright coals, the stalks upward. Broil quickly and serve with butter, pepper, and salt over.

**Mushrooms Baked.**—Pare the top and cut off part of the stalks; wipe them carefully with a piece of flannel or cloth and a little fine salt. Then put them into a baking dish and put a piece of butter on each mushroom. Sprinkle with pepper to taste, and bake for twenty minutes or one-half hour. When done serve on a hot dish with the gravy poured over the mushrooms.

**Mushrooms Fried.**—When peeled put them into hot butter and let them heat thoroughly through; too much cooking toughens them. Season well with butter, pepper and salt. Serve on buttered toast. A teaspoonful of wine or vinegar on each mushroom is a choice method.

#### CANNING TOMATOES.

It may be merely a superstition, but I have always imagined that tomatoes kept better in tin, writes a correspondent. I have a way of putting them up that I prefer to any other, both on account of its speed and its ease. This is when I have a large quantity to do up at once. We do not like our tomatoes put up with sugar, as we like to eat them all sorts of ways without anything, or with salt, etc. So when I get a sixty-pound box of this fruit, I prepare things for a speedy putting of them up.

I want a couple of kettles of hot water, plenty of clean cans, wax and lids handy. A sharp, well-pointed knife, a large pan in which to scald the tomatoes, a clean board on the table, and several holders or large cloths to use in lifting the cans about, are all useful.

I put a layer of even sized tomatoes in the pan, pour over them just enough boiling water to nicely cover, and then get ready a second pan with cold water. When I see that the peel is beginning to loosen, I lift each tomato out with a perforated spoon or skimmer and transfer it to the water in the other pan. Then I turn the hot water back into the kettle over the fire. I have a good steady fire during all my operations.

Now as fast as I can do so, I peel and cut into four pieces all large tomatoes; the little ones I can whole. I put them as I have them prepared right into the can in which they are to stay. When a can is full I set it on the back of the range, and when the tomatoes are all ready and in the cans, I move them forward where they will have a chance to boil up. If the tomatoes are all small ones, I add a little hot water, but if they must be cut up, they give enough of their own juice. As I pack them into the cans, I shake them down well to fill all space to best advantage. The lids are laid on top when I have filled a can, so the warmth of the fruit from the scalding helps them to a quick

## LONDON A HIDING-PLACE

MANY FOREIGNERS IMPRISON THEMSELVES SECRETLY.

One Man Lived in Chelsea for Years, Hiding From His Own Family.

London is full of hidden secrets, of which the outside world knows nothing and among the most curious and dramatic of these secrets are those concealed in private prisons, which are scattered all over the great city—prisons which are never suspected to be anything of the sort by the thousands of people who hasten past them from one year's end to another, says Pearson's Weekly.

A great many people think that no foreigner who seeks refuge in England will ever be given up to the authorities of his own country, no matter what offence he has committed. This, of course, is a delusion. Purely political offenders are never surrendered, but murderers and other criminals are liable to be handed over to their merited punishments if they once fall into the hands of the police. And they know it, too.

So it has been the object of many undesirable "strangers in our midst" to get safely to London, and then hide themselves, and sometimes they have decided that they cannot do this unless they sentence themselves to what amounts to nothing more or less than perpetual imprisonment.

#### PREMATURELY OLD.

A French nobleman who committed a murder in Paris fled to London. The police and detectives were on his track, and he took refuge in a dreary boarding-house in Bloomsbury, the proprietor of which was an ex-servant of his, who had reason to be grateful to him, and who did not betray him. But the murderer dared not venture into the light of day, nor mingle with his fellow creatures.

It was given out that he was an invalid, and he kept to his own rooms, being waited on only by the master of the house. Year after year dragged by, and at last he died, a prematurely old and white-haired man. He had cheated the guillotine, but the close imprisonment to which he had doomed himself had killed him at last—that, and the terror and remorse which had haunted him night and day.

Some of London's lodging-houses are far oftener prisons than outsiders could easily suppose. Men and women steal into the great city and wish to hide themselves from the world. So they take rooms in lodging-houses, the landlords or "deputies" of which care nothing about them, one way or the other, as long as their rents are punctually paid.

#### FOUND DEAD IN HER ROOM.

In a house in Soho, which has since been pulled down, there lived a woman who was never known to cross the threshold for twenty years, save when she stole out now and then at dead of night. She lived alone, except for an old woman, who looked after her, and through whom she carried on her intercourse with strangers. She was very beautiful when she first came to her self-chosen prison, and she was very stately to the end. One morning she was found dead in her room. Her servant had fled, and was never found.

Nothing was ever known about her for certain, but it was whispered that she was the wife of a very exalted person on the Continent, that she had been treated with horrible cruelty, and that she had vainly tried to revenge herself by taking part in a palace plot against her husband. The other conspirators had been put to death, and she had fled and hidden herself in her London prison, terrified lest, if her identity were discovered, she should be handed over to her old tyrant.

## The Future Queen of England

Personality of the Princess of Wales—Reserved and Retiring, a Careful Housekeeper, a Good Mother and a Devoted Wife.

Among all the royal ladies of Europe there is not a more interesting personality than that of the present Princess of Wales. Some day, when her husband wears the crown of his forefathers, she will share a great throne as the consort of King George V. of England. Meanwhile she is very little known even to the British public, before whom she will eventually appear as first lady of the land, for the present Princess of Wales bears slight resemblance in either temperament or appearance to her immediate predecessor in the title, her mother-in-law, now Queen Alexandra.

From the first hour of her arrival in Great Britain Queen Alexandra has been considered one of the most beautiful and popular women who ever appeared at the English Court. Naturally and gracefully she has always accepted and enjoyed the publicity of her great position and has done much to adorn and dignify it.

Her daughter-in-law, on the other hand, is neither a beauty nor a favorite. She possesses only the simple good looks that are the result of superb health and of keen intelligence and she is rather too reserved and retiring to win the hearts of the show loving public.

But underneath her cold and stiff manner and bearing lies, so say the friends of this Princess, an extraordinary amount of fine, individual character. What is even more interesting and to the point is their assertion that when she comes to the throne she will show to the world how very strong a resemblance, both moral and mental, she bears to her own cousin, the late Queen Victoria.

Her love of a quiet and domestic life goes in a measure to prove this. The Princess of Wales, unlike Queen Alexandra, shirks whenever it is possible all the pomp and circumstance and social functions necessary to her position. Yet, in common with Queen Victoria, she cherishes a sense of duty that carries her through the ceremonies in which she is required to participate. Duty, indeed, is the watchword of her existence and the guide to most of her actions, and in no way does she prove this more clearly than in the ordering of her family life.

The greater part of the year she and her husband and her children live by choice in Marlborough House in London, which at one time was the ducal residence and consequently is less formal and inconvenient in its arrangements than the average royal palace. It is quite big enough for stateliness, is modern in its fittings, its broad rear windows look out on a charming garden and also on the beauties of St. James's Park, and the only indications given that royalty dwells within its walls are afforded by the red cottage guards who occupy little boxes to the right and left of the gates.

These sentinels are an approved formality to which the Princess yields, but inside the doors of her city residence she has made a refuge for herself and her family that is as nearly like the simple, orderly, middle class English home as it is possible for the dwelling place of royalty to be. Everywhere throughout the house comfort and cosiness are allowed in the fittings and furnishings to take precedence of elegance, no more servants are employed than are absolutely essential to princely dignity, and unlike most ladies of exalted rank the mistress of Marlborough House personally directs and oversees the upkeeping of her big establishment.

Every morning she is up and about at a surprisingly early hour. She not only knows the duties of every employee, but she sees to it that they are

rule, for perusal, and though the Princess often drifts off to sleep under the soothing influence of her voice, she always continues gently at her task until the full time for his nap has expired, by this means she insures to him his midday rest and meantime pursues her one form of recreation.

Unlike most of her family, she is passionately fond of books, and good ones. She has read widely and with so active and retentive a memory that a statesman who once had the courage to penetrate through the trying silence of excessive diffidence that she preserves in public found her possessed, he declared, of a marvellously well stored mind, and what was more astonishing to him, profoundly ambitious one.

The first and greatest ambition of her life is centered in her husband and his future, but his health keeps her in a constant state of alarm. One day last November when fog had crept up thick and white through the streets of London the Prince and Princess of Wales drove through Hyde Park in the wake of the King and Queen of Portugal, who had been luncheon solemnly and sumptuously with the Lord Mayor.

Court etiquette exacted that the royal folk should drive in four horse open carriages, and it was a fine sight to see her sitting very erect, bowing stiffly, her cheeks glowing June roses and her blue eyes glinting with health and vigor. Beside her was the Prince, pale, smiling, wrapped in a fur-lined coat and saluting constantly, but when for a moment the gay procession halted near the park gates he coughed once or twice.

Then it was easy to note how quickly the Princess could forget everything if her wifely anxiety and how clearly through all the noise and shouting, she heard those two restrained little coughs. Turning in her seat, she gave her husband a look of tender solicitude and then bending over pulled up and tucked in the fur rug that lay over his knees.

Her stern face relaxed as she did this and the Londoners evidently liked the very human touch of loving concern she betrayed, for they burst into a hearty cheer. Their compliment, however, she only answered with a deep blush, for, in spite of her birth and rearing and position and the fact that her mother was one of the best poised most talkative and self-confident women of her time, the Princess of Wales is almost painfully shy.

When, for example, she was travelling incognito on the Riviera and at Nice she came out on the lawn to see a tennis tournament and a tall, pretty American girl stepped to one side gracefully, in order to give her good position to the Princess. She received no thanks for her courtesy. The royal lady merely blushed, looked confused and hurried away. Later the astonished young American was stopped in the grounds by an English Countess, who begged her to accept the Princess's belated thanks for her kindly action.

Shy and even haughtily severe as she seems in public, the Princess of Wales is, in her nursery, an ideal mother. No children are brought up more sanely or simply than hers.

Unless her official engagements are too long and too many she eats one meal every day with them, bathes her babies with her own hands, nurses the little ones when they are ailing and gives the strictest care to their diet. Before starting off for a trip round the world with her husband she wrote out the menu of every meal to be served in the nursery drew up a long list of precautions and rules to be observed by her nurses, and finally added a series of little tasks to be fulfilled by each one of the young

them into the cans. I shake them down well to fill all space to best advantage. The lids are laid on top when I have filled a can, so the warmth of the fruit from the scalding helps them to a quick boil.

I then treat another pan of fruit to a scald, and by the time I have shifted them into the cold water the cans on the stove need attention. I set them off one by one on to the board, and shake them down again, filling each from one of the other cans. It generally takes one can to fill up four others. Then I set them back on the stove, but not so far forward, and hurry to fill the next batch. As an ordinary dishpan will not give bottom space enough to allow of tomatoes enough to fill more than four or five quart cans, you will see that this makes very rapid work. The tomatoes will be ready to seal after ten minutes on the stove, as all they need is the sterilizing that comes from the entire contents boiling up good.

After the third batch is under way a stop has to be made now and then to lift off cans, press the lids firmly in place, and wax them. As I use the string wax, this is a short piece of work and a sure one. For quick work, when I am ready to seal up a few jars, I open the oven, lay in it a folded paper, and on this paper a couple of strings of wax. By the time I can lift from the stove to the board a couple of cans and press the lids down the wax is warmed enough to allow of instant curving into position. I find a bit of greased rag held in the hand and pressed quickly around the wax-string the best thing to make sure it is down in place at every spot. Then the cans are pushed back on the board, and the work goes on. I find by this method I have fruit so nearly like the fresh that I can lift it from the juice and serve it in salads, or even slice it and so serve. We like it almost as well as when fresh from the vines.

Packing firmly in the cans will leave even a little extra juice in the filler can, so you need not worry about having to pour extra hot water into the cans when they are full.

**THE EATING.**  
 "You say when you get a piece of pie?"

spirators had been put of death, and she had fled and hidden herself in her London prison, terrified lest, if her identity were discovered, she should be handed over to her old tyrant.

**FLED FROM THE FATHERLAND.**

That was the story, anyway. Perhaps it was true, perhaps it was nothing more than a romance. But there was no doubt at all that a miserable, grimy old wretch, who skulked out his life as a prisoner in a London doss-house, was a Berlin banker, who had netted millions, and brought thousands to ruin by his colossal swindles. His ill-gotten gains, far from doing him any good, had slipped from his hands like water, and he fled from the Fatherland for ever.

In London he had been practically a beggar. Pretending to be a helpless cripple, he had taken a wretched room in the doss-house, and made everybody believe that it was impossible for him to do more than crawl across the floor. So nobody wondered that he never went out, day or night.

No punishment of the law's inflicting could have been so bad as the wretched existence he doomed himself to; but he had left a daughter, whom he loved, in Berlin. For her sake he wished to avoid being publicly branded as a convict. Therefore, to escape a German prison he sentenced himself to live and die in a far worse one in London.

All people who so sentence themselves however, are not disposed to surrender all the joys of life. There were some rooms over a large hall, which was used for religious and political meetings. These rooms were let to a meek, inoffensive old man, who professed to store furniture in them. He paid his rent like clockwork, and gave nobody a right to go into his rooms. No strangers saw them for years. And nobody knew until long afterwards, that during those years the rooms were occupied by

**A TRIO OF CRIMINALS,**

for whom the police of two hemispheres were vainly seeking.

To avoid arrest the trio imprisoned themselves in the rooms over the hall, where their presence was not suspected, so quiet and circumspect were they. But they had ample funds at their disposal, and the old man was their servant, ready to do anything for them in return for the heavy bribes they gave him. Therefore, while they had to give up their liberty, they found it possible to enjoy a life of luxury and idleness, which was better than, for example, occupying chilly cells and breaking stones at Portland.

It is not only criminals who are self-doomed to live in private prisons in London. A man had reasons to hate and fear his own wife and all his children, except one daughter. Helped by this daughter, he took a house in the neighborhood of Chelsea, and never once quitted it for years, until he was carried out in his coffin.

In another instance a husband believed that a wicked action of his own had caused his wife's death. There was no evidence to prove this, and everyone thought him crazy with grief when he accused himself. Finding that the law would not touch him, and tortured by remorse, he sentenced himself to a prison of his own devising, and spent the remainder of his life in a cheerless, poverty-stricken den in the slums, from which he refused to emerge to breathe the free air and enjoy the sunshine.

**MORE COSTLY THAN GOLD.**

The value of glass may far exceed that of gold when made up into microscopic objectives. The front lens of a micro-objective (costing about \$5) does not weigh more than about 0.0017 gramme (which weight of gold is worth about one cent), and so the value of a kilogram of such lenses would be about \$3,000,000. The cost of the raw material for making this weight of glass is from 5c to 8c, and thus, when worked up into the shape of a lens, the glass has been increased in value about 50,000,000 times. Such disparity between the cost of the raw material and the manufactured article is probably a record in industrial techniques.

the upkeeping of her big establishment. Every morning she is up and about at a surprisingly early hour. She not only knows the duties of every employee, but she sees to it that they are fulfilled, and woe betide the servant who thinks to hide a mistake or careless action from her quick glancing, bright blue eyes.

The Princess is wonderfully prompt to see and to reprimand. An artist who was called to Marlborough House in order to paint the portrait of the Prince gives an amusing little bit of evidence as to her housewifely care and thrift.

The Prince in full uniform was posing in one of the big drawing rooms when a call from the King came. The artist said that he could paint in the tall, shiny military boots if the Prince would leave them behind him. Accordingly a valet soon returned with the stately objects and quite on his own responsibility placed them in one of the satin upholstered chairs that adorned the long saloon.

It was in the opinion both of artist and valet a splendid position from which to view and paint the boots, but not so did it seem to the Princess. At that very hour, unfortunately for these masculine culprits, she was making her daily rounds of inspection, and on entering the big fine room her sharp glance lighted on the boots in one of her most costly chairs.

It was the wrath of the careful housekeeper that flashed in her eyes while she ordered the boots down on the floor, a duster brought forth and in no uncertain tones reprimanded the crestfallen valet for his ill treatment of one of her choicest pieces of furniture. She has little or no patience with carelessness, and if the Prince of Wales were a mere salaried bank clerk instead of the son of a king no keener care could be taken of his expenses and his income by his wife.

In all her big and complicated and costly household not a penny of recklessness expenditure is permitted and, like Queen Victoria, she believes in wise economy and safe investments. Every year out of her allowance she saves enough to entitle her to the reputation she bears at court of being an excellent manager, and it is significant of her character that she has profound detestation for an unpaid bill.

Until the time of her marriage she knew a great deal too much of these documents. Her mother, the gay, witty, popular Duchess of Teck, was as noted a spendthrift as she was famous for her wit and her kind heart. Once upon a time long suffering creditors even tried to attack the Duchess's jewels.

To this brilliant, buoyant, spirited, gayety-loving woman these periods of storm and stress and these years of financial uncertainty made little difference. Her only daughter, Victoria Mary, felt, however, very deeply over this painful situation.

She was desperately proud and sensitive and when the romance of her girlhood ended with the death of her fiancée, the Duke of Clarence, and her marriage to his brother, Prince George, she set about ordering her home and her life on a basis that would simply not allow of extravagance in matters of money.

In other ways besides her love of thrift and order is the Princess almost unique among royal ladies. She does not affect any fads whatever.

Wifemood and motherhood she says give her little or no time for pets and accomplishments. She is too busy to collect fans, little dogs or priceless cats or to study photography, and it is an open secret in London that while she is not an easy hostess nor fond of society and shows rather poor taste in dress she has made her husband absolutely devoted to and contented in his home.

No Darby and Joan ever lived in more charming accord than these two quiet folk, and if it is possible the royal wife always accompanies her husband on his trips away from home, whether he spends only a few days at some nobleman's country place or circles the globe.

When visiting or travelling they always manage to slip away, usually after luncheon, for a full hour together. Then the Prince lies down and his wife reads aloud. History they select, as a

every meal to be served in the nursery, drew up a long list of precautions and rules to be observed by her nurses, and finally added a series of little tasks to be fulfilled by each one of the youngsters before the date set for her return.

Now, so well during her absence did the children respect and obey her commands, that upon one occasion they even ventured to oppose the wishes of their adored and adoring grandmother, Queen Alexandra. This was when the Queen brought them a box of bon bons.

To one child after another the sweets were offered, but by them all they were gently, respectfully and firmly refused. The eldest Prince frankly confessed he liked sweets, but that his mother had forbidden them.

"Never mind," soothed the indulgent Queen, "I will make it right with mamma and you can have the sugar plums if I say you may."

Little Prince Eddie stood his ground like a hero. Greatly annoyed, the Queen put the bon bons on the nursery table, and there for months they stayed untouched, or until the Princess came home and her permission could be asked.

Taus surrounded in her home by much love and respectful devotion, given by her husband and children, the Princess of Wales is quite indifferent to society and careless of its estimation, and the saying is that when she does come to share her husband's throne her court will be a model of dignity and the highest proprieties.

The daughter of the ease and leisure and laughter loving Duchess of Teck holds no way at all with easy going manners or morals. She is as great a stickler for the observance of public etiquette as was Queen Victoria, and as determined to hold scandal makers and scandal mongers at arm's length. Across the threshold of Marlborough House none of the card playing, gossiping and frivolous spirits who haunt the present court at Windsor or Buckingham Palace finds his way.

In spite of her diffidence the Princess of Wales is quite appallingly frank and repressingly haughty when the need arises to show not only that her disapproval is aroused, but that she is every inch a princess and a woman whose duties as a wife and a mother and a guardian of a home come first and foremost in the list of great obligations which she owes to her position, to the state and to the public over which her husband and her son will in turn some day rule.

**BETRAYED BY APPLE.**

**Telltale Teeth Marks Result in Capture of French Burglars.**

A clever capture of burglars has been effected by a gendarme at Fismes, in the Department of the Marine, France.

The gendarme searched the house which had been robbed, for traces of the burglars, and found a basket containing apples, which he examined one by one. One of the apples showed marks of teeth, evidently unusually bad and deformed.

Next day the gendarme met two suspicious looking tramps on the road, and asking them where they were going, offered each of them an apple. Before they had taken more than a bite, however, the gendarme snatched the apples from them, and to his delight found that one of the apples showed marks of teeth exactly corresponding to those of the apple he had found in the burgled house.

The men were arrested, and confessed that they were the perpetrators of the burglary.

**A HARD JOB.**

The inspector asked the boys of the school he was examining: "Can you take your warm overcoats off?" "Yes, sir," was the response. "Can the bear take his warm overcoat off?" "No, sir." "Why not?" There was silence for a while, and then a little boy spoke up. "Please, sir, because God alone knows where the buttons are."

## IN THE YOUTH OF GOOD QUEEN BESS

BY J. WINSTON SPENCER.

Ah! could you have seen her in those days—saw her—a slender maid of twenty-six, with pale, fair face and glorious golden hair, clad in all her gorgeous robes of majesty amid the splendours of her noble court—you should have seen our good Queen Bess only to admire, and to love. For a gallant Queen was she!

And among all the courtiers that surrounded her there was none more courtly than my master.

I was then in the service, as I have been all my life, of my Lord John Brompton, the cadet of a noble house, whose grandfather, after whom he was named, had fought with valor under King Hal, and he had been a playfellow of our noble Queen from her early girlhood.

He was always John to her—her John—and the way she plagued and ruled it over him was only as a fine girl can do, and though she nearly always had her own way, and ruled tyrannically, there were times when my Lord John would not be trifled with, and was equally as proud as she.

At these times there were high words for boy and girl, and then perhaps for days they would not speak; but they knew each other too well for this to last long, and after their first shyness at playing again they would be as good friends as ever before, and the way they would romp I often like to remember and think upon.

After my Lord John finished at Oxford we went to foreign parts, so that he might see something of the world, and it was not until the coronation of his old playfellow that we returned, and when they greeted one another, for old companions, they were very shy.

My Lord John kissed her hand and spoke of his allegiance to her, and she greeted him as a true and loyal subject! And there was not much else.

My master was at first more bashful and shy, but the Queen, bless her, she was much as of old, and just as haughty; but after they had quarrelled once they seemed much the same as ever, only it made my Lord John look more serious.

"And what can I do for you, John? In the world, I mean," she would sometimes ask him. But he would always pass it over, and said he wished to be no greater than he was. The ambitions of the boy seemed to have lost themselves in the man.

But I remember one day, when the June roses were blowing their perfume through all the gardens, and the meadows were sweet, that my Lord John and I had come riding to the castle, when, some way out, just at the beginning of one of the paths over which they were wont to stroll, we spied Queen Bess, all alone and unattended, and we drew up sharp.

"An' for want of better is it thou, John?" cried the Queen merrily as we dismounted and bowed. "Faugh, but I am wearied of councils and matters of State; I have had naught else this day. Come and walk with me and Jason here"—with a kindly nod toward me—"may follow with the horses."

So my master and the Queen walked through the woods, whilst I followed on behind.

I could hear their chatter and the Queen's merry laughter through the stillness of the forest, for they seemed in high spirits that day.

Suddenly, when they had gone some distance, the Queen spied a young hare in a thicket, and all in a moment, "S death!" she cried, for she could take no oath like a man. God bless her!

far nobler in the land who sued her hand, and were she to bestow it upon any one of them, even her own Lord John, her dear loved England would soon become a battle ground, and bloody strife and warfare again tear the land asunder.

For in those days each noble house was jealous of its power, and a King from one might not rule it peaceably over another.

And at last came the end. In a moment of passion in the lonely forest my Lord John, feeling the load heavy on his heart, gave bride to his tongue, and, bursting forth into a torrent of speech, said:

"And what carest thou or I if the whole land drips in blood if otherwise we must part? I used to say, sweet Bess, that I should some day be the General-in-Chief, and fare forth for thee to fight our England's foes, and if the need be such I'll buckle armor to my breast and fight even now all traitors who turn their faces from thee, their rightful Sovereign; and, by my faith, we'll conquer them and put them down!"

I was by, and I alone knew our good Queen Bess had not half the heart for the part she played, for she turned round upon him and said:

"For shame upon thee, my Lord John!"—and her voice had a ring of haughty grandeur in it. "I fear thou hast not due respect for England's people, nor what our duty is toward them. For who art thou, or even I, that war should come upon the land, and blood run streams because we two in all our selfishness should think but of ourselves? I take it ill from thee, Lord John, and—our good Queen never wavered, but said on, though her voice was somewhat lowered—and 'twere better for ourselves, and for our England, that we part."

But as my Lord John bent over and kissed her hand the tears came unbidden to her eyes, and her voice broke; and she said:

"But I shall ever be a maiden Queen, John: ever!"

And I stood by that even at the parting, and it seemed like burying one's dead, for it was into a living grave they were putting away their youthful love.

And so we left and journeyed far. In yonder cottage where the ivy creeps, dwells my old master, amid his books and the quiet of the country, but perhaps still in his heart he cherishes a past that has gone long before—when our good Queen Bess was young.

Heigho! For all the years, the thought still makes me sad! But who am I that I should sigh—an old servant!—Pearson's Weekly.

## CAMEL AND ELEPHANT CAVALRY.

Can Be Seen Nowhere in the World Outside of India.

It is at the commencement of the cold season that King Edward's army in India arouses itself from the lassitude that has crept over it during the long sweltering months when everything in the shape of drills and exercises is reduced to a minimum and any work outdoors carries with it the risk of sunstroke or heat apoplexy, unless it be done in the cool hours of the dawn or nearing sundown. Then begins the busy time for the British and native soldier. Drills, musketry and camps of exercise are the order of the day, and the ceremonials of military pageant are forgotten. The Christmas review is almost as regular an institution at every military station, from the smallest to the largest, as is the similar ceremonial always observed on the King's birthday, and the moment selected for pressing the button is when the elephant battery is passing the saluting point.

This feature of military review can be seen nowhere in the world outside of King Edward's Indian dominions, and it adds to an Indian review an essentially Oriental character that is as pic-

## IN MERRY OLD ENGLAND

NEWS BY MAIL ABOUT JOHN BULL  
AND HIS PEOPLE.

Occurrences in the Land That Reigns  
Supreme in the Commercial  
World.

Fred Porch, an able-bodied pauper, who was ordered fourteen days' hard labor at Marylebone Police Court, for idleness, refused a pair of trousers because he would have had to sew buttons on them.

The Exeter Watch Committee introduced a by-law forbidding policemen to marry without the consent of the chief constable. It was stated that young policemen were inveigled into matrimony by cooks.

Mr. George Meredith is progressing favorably towards the complete recovery of his health and strength. It will be remembered that some months ago the great writer suffered the fracture of both legs.

Six constables were employed in overpowering Jules Buchi, who came from Dublin. He suddenly went mad at Crewe railway station and commenced running about the platform with passengers' luggage.

A committee of clergymen, representing the Milkmen's Sunday Rest Society, is canvassing the householders of Horsaey to learn whether they will consent to a trial of one delivery of Milk on Sundays.

General Sir Henry Landor Thuillier, who died at Richmond in his 93rd year, entered the Bengal Artillery in 1832, and was appointed to the survey in 1836. He was the godson and brother-in-law of Walter Savage Landor.

Daisy, the giraffe, with the longest neck ever known, has just died at the Zoo from consumption. She was captured on the Sabi River when three years old, bought for the Zoo for £260 and kept for eleven years at a cost of £400.

Sir William Dunn, Bart., has given £50,000 to the Presbyterian church of England.

Northampton licensing magistrates abolished 12 licenses and granted compensation amounting to £4,858.

At a Norwich funeral, while the sexton waited at the graveside, his four sons bore the coffin, and his wife tolled the bell.

At Hayward's-heath the diamond wedding was celebrated of old George Willett, a Crimean veteran, aged 88, and his wife, who is 84.

The body of Thomas H. Chalton, secretary to the London Lightermen and Watermen's Association, was found hanging from a gaspipe at East Ham station.

Mr. T. Southgate Sands, of Lynmouth, Curzon Street, Slough, for 53 years in the service of Queen Victoria as coachman, who died recently, left £801 8s. gross.

The freedom of the city of Leeds was on the 23rd ult. conferred on Sir James Kitson, M.P.

A London company has failed, whose assets consisted of 600 automatic pianos, which were let out at 1s. 6d. per week.

The passengers of all nationalities leaving the United Kingdom last season for places out of Europe was 459,917, against 453,877 in 1904.

In accordance with one of the last requests of an itinerant tradesman of Little Stukeley, Hunts, his donkey was led behind his coffin.

The 1st Border Regiment, stationed at Bordon, Berks, has been placed under orders for Gibraltar as a reinforcement of the Mediterranean garrison.

The London Gazette announces the retirement from the army of General Sir George B. Wolseley, K.C.B., on retired pay. He is a brother of Field Marshall Viscount Wolseley.

Maintaining that every child should

## JERRY-BUILT BRAINS.

Eminent Scientist Warns Man Who  
Wears a Big Hat.

What do we mean by "the new phrenology"? A lecture delivered by Sir James Crichton-Browne, of London, throws light upon the subject. Civilization, the speaker described as simply "brain-building on a big scale."

For example, examine the liver of a low-class savage, and it is impossible to distinguish it from that of his European brother; but his brain differs much in the same way as his wigwam does from a modern dwelling house. "Education," we are told, is just supplementary brain-building, Jerry-building or a solid lasting structure, according to its kind.

In fact, the brain's development may be arrested by injudicious interference, enlarged, extended, adorned by wise guidance, or altogether ruined by neglect. "In the brain," the lecturer declared, "we live and move and have our being."

That being so, how can we judge the intelligence indicated in the individual case? The first, and most important, criterion, is mass and weight. Instinctively we associate big-headedness with mental power. Accurate measurements, scientifically taken, confirm the popular impression.

A striking fact in proof of this was given. Not merely is skull-capacity greatest in men of pre-eminent intellect, and in its average highest in the most advanced races, but, taking the same race, and watching its advance in civilization, we find definite increase of the size of the skull keeping pace, as it were, with the higher attainments. But then there are curious exceptions.

Sir James has a crumb of comfort for what he calls the "small-hatted man," and a word of warning for his big-hatted neighbor, lest his conceit should become intolerable. Great scholars there have been with small heads, for a brain of small size may contain more active "brain-stuff."

This brings us to a second important test. The convolutions or fissures in the brain are deeper in higher than lower intellects. Deep fissures, situated in certain regions, may more than compensate for lack of bulk. But where they are placed is a matter of importance.

In fact, the "new phrenology" is demonstrating that the brain is not a single organ, acting as a whole, but a number of parts freely intercommunicating.

## THE BENEFIT OF HOSPITALS.

Bishop of London Draws Lessons From  
The Mystery of Pain.

The Bishop of London, preaching on Hospital Sunday at St. Mary's Church, Bryanston-square, Marylebone, London, said that pain was as great a mystery to-day as ever it was; but they were learning more and more how better to sooth and allay that pain, so that at the present time surgeons were able to perform most difficult operations by the aid of anaesthetics, whilst the person operated upon experienced little or no pain. There were many who believed that pain was sent by God, that it was an act of spite on His part because the persons suffering were not Christians. That he did not for one moment believe, for God was love. In creation, in the sunshine, and in many other ways the action of God was in direct opposition to cruelty. The fact that there were so many living to-day was a sign that God desired to spread happiness throughout the world. They had no right to ascribe pain to the direct action of God; it was the result of iniquity and the power of Satan. Why did Jesus weep if He did not recognize suffering as suffering, and pain as pain?

It was an object lesson to go, as he did the other day, into one of the great London hospitals, and see a poor man

distance, the Queen spied a young hare in a thicket, and all in a moment, "S death!" she cried, for she could take an oath like a man, God bless her, and away like the wind she was after it, my Lord John following her.

The chase was a fruitless one, so far as the catching the hare was concerned, as well it might be, but when they had run their distance, the Queen, between her gasps, said:

"I high outstripped it; but thou, John, thou lagged far behind. I fairly believe I could outrun thee!"—and, without waiting to recover her breath in full she was off again like the calf of an unlamed deer, this time back over the way she had come, and as she passed Lord John I heard him cry out:

"Not this time, Bess, for when I catch thee now by the ford I shall keep thee!"—and, with a flash of his eyes and a flush in his cheeks, he beat after her as he had never run before, and as their laughter sang merrily on to me through the trees there was such a note in it as I had not heard before in their voices; but it was a happy note.

When my Lord John shortly overtook her, instead of keeping on or crying herself beat, she half crouched away from him, as a pretty woman will do, and as she gasped for breath laughed timidly, and looked to each side of him, as though to escape from his catching her. But my Lord John was too quick for her, and all in a moment had hold of her hands, and in the next he had his arm around her waist and had kissed her.

Then they both laughed, and two happier turtle doves than these two that afternoon may never be found, I take my oath on that. Never!

It was a day that must have lived long in their memories, as single days sometimes will, and after all these years it seems to me so real that it might only have been yesterday.

When they parted that even ere the Queen must return to the castle, and I stood not far by holding my Lord John's stirrup, I saw our good Queen Bess put both her fair hands on my master's shoulders, and, looking earnestly and tenderly up into his face, say:

"Promise me, John, that thou shalt ever be my John; that whatever may happen in after days thou wilt ever think well of me, And tell me once again, dear lad, that thou lovest me."

And my Lord John bent over and kissed her, and promised; and told her again and again how much he loved her.

And though in the gathering dusk I could not see the tears in their eyes, I could hear them in their voices. And my own eyes were not unmoist.

As we rode away, so long as our eyes could see that far and we faced back, we could see the Queen still standing where we had left her, looking after the youth with whom she had spent mayhap what was to be the happiest day of her life. But at last the evening shadows came between, and then indeed had the sun gone down.

It was some days after this before my Lord John saw the Queen again, but in the weeks that followed, when Her Majesty's loyal subjects prayed that their gracious Queen would take a husband, and royal suitors began presenting themselves, only each in turn to be refused, my Lord John passed his hours between capture and torment.

But he was not so witless a knight in statecraft as not to see the wherefore of things.

He would gloomily sit through the summer evenings, with neither light nor comfort, and confide to me, as in his boyhood days, the fear that he should never have his Bess.

It was not the King he wished to be; he had no care for power of State. It was only of his love he thought; and perhaps there were two hearts then that liked to think they would be glad to change their estates with even the lowliest.

For the Queen had crafty councillors about her, and they knew, and did not fail to tell her, that there were others

seen nowhere in the world outside of King Edward's Indian dominions, and it adds to an Indian review an essentially Oriental character that is as picturesque as it is imposing. Nowhere do animals form so striking a feature of military, or, indeed, of any great ceremonial, as in India.

While it is only in the imagination of a camp song writer that bombardiers besride elephants, and sergeants curvet past the saluting point on Kangaroos, yet a spectator at a big Indian review sees many military novelties. Cavalry and infantry he can see anywhere, elephant batteries and gun bullocks, mountain batteries, European and native, with handsome well groomed mules carrying their deadly little popguns, or batteries of camel guns, and the same ungainly, but most useful, mounts besridden by mounted infantry.

#### HE CAN SEE ONLY IN INDIA.

For the big brutes, the elephants and the camels, it must be said that they are far more useful than ornamental, while the oxen and the mules are both patient and picturesque. One is accustomed to connect the horse with battle scenes, and the gallant and dashing field artillery of the British army is famous for its rapid movements and skilful handling, the horses appearing to know almost as much about it as the gunners and drivers. Yet the elephant is not a bit behind the horse in this respect; there appears to be very little which he does not understand, and for the transport of siege trains one cannot imagine a more valuable animal.

Dr. Russell says, when with a wild camel corps:—"There was an aggregate of prolonged angry grumbling grunts, swelling by degrees into a storm of furious sound, which raged far and wide over the camp. I had never heard the like before; but the cause was not doubtful. In the rear of each tent were crouched three or four camels, which had been brought up noisily from their own part of the world, and were now expressing their resentment at present and their apprehension of future wrongs. The moment the dood-wallah pulls the string, which is attached to a piece of wood passed through the cartilage of the animal's nostrils, the camel opens its huge mouth, garnished with hideous blackened tusks, projecting like chevrons de-frise from its lips, and from the depths of its inner consciousness of its wonderful hydraulic apparatus starts up groans and roars, full of plaintive anger, the force of which can only be realized by actually hearing it.

"When used as beasts of burden the nose rope of one camel is fastened to the tail of another all along the long line."

#### QUALIFICATIONS.

Mr. Wholesale—"Your former employer tells me you were the quickest bookkeeper in the place."

Young Applicant (dubiously)—"Does he?"

Mr. Wholesale—"Yes. He says you could throw the books in the safe, lock up, and get ready to go home in just one minute and ten seconds."

#### ALMOST OUT.

"Well, Uncle Josh," asked the fair debutante, as she came down arrayed in all her finery, "what do you think of me?"

"My land!" cried the old uncle from the country, "what's this?"

"This is my coming-out gown."

"By trackey! You do look 's if you wuz."

#### STRONG CHEESE.

Farmer—Do you mean to say that is a photo of my prize cheese?

Photographer—Yes; only it moved while I was taking the picture.

#### A COMPLETE REFORMATION.

He—"If I give up all my bad ways, will you love me then?"

She—"How could you expect me to love a perfect stranger?"

Sir George B. Wolseley, K.C.B., on retired pay. He is a brother of Field Marshal Viscount Wolseley.

Maintaining that every child should be taught a trade, the Bishop of Carlisle, speaking at Brampton, Cumberland, said that when he was a boy he learned to knit stockings and make shirts.

Marsh Hill—which is 300 years old, and a former rendezvous of Dick Turpin—was decided by the North London magistrate to be a "new street" within the meaning of the Local Management Acts, having been widened and houses built on both sides.

#### SUMMER ACCIDENTS.

**They Are Not Planned and Foreordained By the Creator.**

If it were possible to make a complete list of all the casualties of a whole vacation season—say from the first of July to the first of October—the showing would be so alarming as to shock careful parents and to call into existence a host of reform societies. The fact that summer accidents are reported as they occur, singly and in widely separated places, accounts in large measure for the slight and transitory impression they make on the public mind.

The old meaning of the word accident, as something that "just happens," and could not have been prevented, still clings to it. Most of those who read these words may hold that view of it, and some of them are almost certain to find out by experience, before the summer is over, whether it is true or not. The purpose of this article is to change their minds.

Accidents do not "just happen," nor is any one justified in calling them "dispensations of Providence," planned and foreordained by the Creator for some good but inscrutable purpose. Accidents are due to definite, material and usually preventable causes. The Creator does not deliberately decree that a certain canoe shall glide out from under a certain man and drown him, but He does establish immutable laws which the canoe obeys, and which the canoeist also must obey, if he would live.

On sea or land, in yacht, automobile, mountain camp or on foot, the immutable laws hold good. Those who observe them go free, those who disobey are punished. The need for care, for caution, for common sense is more urgent in the summer than at other times only because it is then that a larger number of persons are engaged, for purposes of recreation, in doing things which are new to them, the laws of which they have not learned.

Study the rules of the game, then obey them.

#### WHAT HE GOT.

A teacher had been trying to make clear to her class in reading the meaning of the word "heredity" and its fellow word "inherit," and emphasizing that it meant "what we get from parents." Feeling that she had used up enough energy in the effort to clarify the significance of the two words, she asked a boy of moderate brightness to give a sentence containing the proper use of the word "inherit." Quickly he answered: "I inherit hard spankings from my father and easy ones from my mother."

#### A MAN OF DOUBTS.

"Do you think that municipal ownership would eliminate graft?" "I am not quite sure," answered Senator Sorghum, "whether it would eliminate it or simply originate a new kind."

#### CYNICAL.

Miss Passe—I have had many chances to marry. Only a short time ago a man told me of his love.

Miss Pert—Did he also tell you the name of the lady?

becoming as suffering, the pain of pain?

It was an object lesson to go, as he did the other day, into one of the great London hospitals, and see a poor man brought in there suffering awful pain, and who had an operation performed upon him free of charge by one of the best surgeons of the day, whose fee outside the hospital would have been a hundred guineas. The man was given the best of nursing, by efficient nurses, without stint. He (the Bishop) would for one deeply regret the day when their great hospitals were run without charitable aid. He felt that the moment contributions were enforced by the rate collector half the enthusiasm and love for hospital work would go. It would be a bad day for London when that method of securing contributions came into vogue. Hospital Sunday inspired brotherly love, and raised a halo of mercy, generosity and self-sacrifice, and made them feel that they were fel; low-workers with God in the allaying of pain and suffering.

#### BREAKING THE NEWS.

Foreman (at the door)—Did yer husband hov a new suit av clo'es on this mornin' Mrs. O'Malley?

Mrs. O'Malley—He did.

Foreman—They're ruined entirely.

Mrs. O'Malley—How did ut happen?

Foreman—He was blowed up be a charge av dynamite.

#### THEIR THEORY.

"What do you suppose these anarchists expect to accomplish by throwing bombs at the rulers?"

"I suppose they are going on the old theory of bringing down a reign."

#### FITNESS OF THINGS.

"They are very particular in that establishment, I believe."

"So particular that they press all their mourning suits with sad irons."

#### RESTRAINING HIS FEELNGS.

His Grandmother—"Well, Tommy, what do you feel like eating to-day?"

Tommy—"I feel like eatin' a whole pie, grandma, but mamma wouldn't like it if I was to eat mor'n half a one!"

#### LINGERING DEATH.

Wearly Wrags—"Mudder, I've come home ter die!"

Wearly Mother—"Ye have, have ye? An' ye want ter take about 15 years to do it, like yer father did? No, yer don't. You go off to the next village an' do yer dyin'."

#### READY FOR BUSINESS.

"Mr. Jones, I want your daughter. She is worth her weight in gold."

"Wa-al, figger her out an' gimme a cheque. I kin use th' money."

#### HS EXPERIENCE.

Singleton—"What is your opinion of woman as a bread winner?"

Wedderly—"I'm not familiar with the subject, but my experience with woman as a breadmaker wouldn't look well in print."

#### A MAN OF PROMISE.

"That tailor is very unreliable about delivering orders, isn't he?"

"Yes; his are mainly breeches of promise suits."

Mrs. Suburb—"Are you acquainted with her personally?" Managersess of Managress of Servants' dk frt fhwmfwv Servants' Registry—"Yes, indeed. She is a good girl. I have known her for years. She comes in here almost every week for a place."

# TOMMY ATKINS GROWLS FROM ERIN'S GREEN ISLE THE 42ND HIGHLANDERS

## SOME GRIEVANCES OF THE BRITISH SOLDIER.

Many Complaints From the Men About Some of the Rules of the Army.

"Disadvantages of the Army." What a consternation a public notice like this would create! Yet, as matters stand just now, a good deal might be written that would justify the headline.

In the first place, there is really no contract between the Government and the soldier, such as exists between a civilian employer and his workmen. Tommy joins under printed promises which, under existing conditions, cannot be more than partly fulfilled. Hence the discontent we are hearing so much about.

Take the question of "stoppages." Tommy considers it pernicious, and, to a certain extent, nobody can blame him, seeing that he heard nothing of it until he entered the ranks. There are stoppages for clothes, repairs, clubs, etc., all of which, presumably, are voluntary, but which, as a fact, are compulsory. And the soldier never knows beforehand when these stoppages are going to operate. It might be argued that Atkins ought to pay for his clothing and repairs just the same as anybody else, or, at any rate, assist to. Very well. But why should he be compelled to join clubs of which he has no desire to be a member?

### DOMINEERING DISCIPLINE.

And what a time of it he would have if he took it into his head to grumble! Then there is the vexed discipline—so-called—when off parade, when away from barracks; in fact, military policemen, who are invariably selected by reason of their sour tempers and lack of comradeship, have an irritating habit of frequenting railway-stations and other public places, and there, in full view of everybody near, ordering soldiers to produce their passes.

Another grievance that every soldier would like to see promptly remedied concerns the qualification for service pay. This service pay is an extra sixpence, and is awarded—or supposed to be awarded—for efficiency. Tommy does not complain about the sixpence. What he says is that there is no standard of qualification for it. The award rests solely with the commanding officers, and as one officer may be just as unlike another in his mannerisms and methods as are any two average business men trading in the same commodity, you have a condition of things that is far from pleasing.

Some commanding officers make the gaining of the award practically impossible. For instance, with one officer, in order to get this sixpence, a soldier must be able to run five miles. Another, equally well known to the writer, demands that the candidate must swim four hundred yards with all his clothes on. There was actually, in a certain regiment, a soldier wearing the distinguished service medal who was not awarded service pay.

### THAT DEFAULTER-SHEET!

There is the defaulter-sheet grievance—a grievance which has aroused so much attention, and directed so much disgust at the system behind it, that one can only hope that it will soon be shelved for ever.

Upon these defaulter-sheets is recorded every L-die offence Tommy is guilty of, and the sheets are produced as evidence against him upon every opportunity. His "crime" of to-day will be raked up as evidence against him fifteen years hence, even though, in the meantime, his conduct may have been exemplary.

## NEWS BY MAIL FROM IRELAND'S SHORES.

Happenings in the Emerald Isle of Interest to Irish-Canadians.

"Ian MacIaren" was the preacher in a Belfast church on a recent Sunday. The edifice was crowded.

The Dublin City Council has decided that in future all the correspondence of the corporation and its several offices should be addressed in Irish.

Moderation seems to be the chief characteristic of the Irish burglar. In County Kilkenny one of the fraternity broke into a house. He took a £5 note and left then.

Epizootic lymphangitis is devastating the stables of the South of Ireland, and has stopped hunting for the time. It was introduced into the country by the horses of a battery from South Africa.

The remains of the Rev. James S. Green, rector of Donaghmore and Morellan, who died recently, were removed from his residence at Woodlands, Killygordon, for interment in the burying ground of Morellan church. The funeral cortege was one of the largest witnessed for many years.

Captain the Earl of Wicklow, who has resigned his commission in the Second Life Guards, is one of the representative peers of Ireland. He succeeded to the title, at the age of 14, on the death of his father in 1891, and entered the Life Guards in 1898.

Sir Donald Currie, who last year gave £20,000 to Queen's College, Belfast, has written to President Hamilton, of the college, from Venice, offering £2,000 to the Royal Academy, Belfast, for the foundation of scholarships, and also £1,000 to the Royal Academical Institution, Belfast, at which he received his early training.

The corpse of a young man, Wm. Martin, aged 23, the son of a farmer, was found at Carrickfergus, about eight miles from Belfast, in one of the streams running into Copeland Reservoir, and forming part of the Belfast water supply. The body was lying face downwards in about a foot of water, and bore a number of severe wounds. He was the finest athlete in the whole district, and a man of immense physique. At Carrickfergus, two days later, Wm. Hart, a young man, surrendered to the police. He said he and Martin had fought together.

Wm. O'Neill, of Annaghmore, dealer, was found drowned in the canal, Coalisland. He has been absent from home for the past fortnight, but it was believed he was in Scotland.

The death took place with great suddenness of Mr. Hugh Templeton, for the last twenty-eight years manager of Messrs. George McFarland & Co.'s mills at Carrigans. Mr. Templeton was about sixty-three years of age.

The condition of the police force in Belfast has been engaging the attention of Mr. Bryce and his colleagues for some weeks, and there appears to be some reason to believe that a very grave view is taken of the recent changes.

The body of the wife of Mr. W. H. McConnell was found in the River Tennon, near to the home of deceased at Ramelton, County Donegal. Up to the present the matter is a mystery, and the greatest sympathy is expressed for deceased's relatives, who are well known and respected in the district.

### FINE GHOST STORY.

This Irishman Has No Doubt About the Matter.

The London Daily Express has been

## SOMETHING ABOUT THE FAMOUS BLACK WATCH.

Have Brought Honor to the British Army in Over a Hundred Bloody Battles.

No Scottish historian, in describing the splendid achievements won for the British Empire in almost every part of the world, can well afford to leave out of consideration the heroism and conspicuous bravery of the 42nd Royal Highlanders, writes the Rev. John J. Munro. Although the early history of the Black Watch is somewhat fragmentary and chaotic, it is very clear that it came into being through the timely suggestion of Duncan Forbes of Culloden.

After the defeat of the young Pretender of the Stuart dynasty in 1715-6, the Scottish Highlanders were in a state of unrest and sullen rebellion. Armed mobs marched from mountain to glen in search of plunder, and for a time sheep and cattle-stealing became a profitable industry among the Highlanders. To use a Yankee phrase, Christian ethics did not "cut much ice" with the clans in those days. Rob Roy's doctrine seemed to have a peculiar fascination for them—"He who hath the power let him keep who can." In the northern fastnesses of Inverness-shire every man seemed to be

### A LAW TO HIMSELF.

Since the Union of Scotland and England in 1707 the Highlanders had little or no love for the house of Hanover, nor the doings of the British Government at home or abroad. George II. and his advisers were in a dilemma. The one man in Scotland who knew the situation thoroughly at this time was President Forbes of Culloden. When his advice was sought he recommended that a constabulary or national guard be organized for the protection of life and property in the Highlands. When this was submitted to the leading clansmen they approved of it. Although the exact date is unknown, somewhere in the year 1729-30, three companies of citizen-soldiers were organized at Inverness and called the "Black Watch" on account of their dark-colored clothing, to keep the peace of the Highlands. The first company was formed by Colonel Fraser of Lovat, the second by Colonel Grant of Strathspey, and the third by George Munro, the laird of Ross, but the real organizer was his brother, Colonel Sir Robert Munro of Fowls, a soldier of great experience, who had seen service under Marlborough on the Continent.

The Black Watch soon put the thieving clansmen out of business, and won for itself a name all over Scotland. In 1740 three more companies were added, making them

### TWELVE HUNDRED STRONG.

As soon as George II. heard of their valor and the work they had done in stamping out disorder in the Highlands, he invited them to London, where he could see them for himself. After they had given several exhibitions of agility and prowess the King fell in love with them, and then had them organized into a regular British regiment of the line. When they were ordered to Flanders, where they would see real service, about two hundred rebelled and started for Scotland on foot, but were brought back by a company of English Dragoons, court-martialed and two of the leaders shot and the others pardoned.

On May 9th, 1745, the Black Watch took a leading part at the battle of Fontenoy, where they were commanded by Sir Robert Munro of Fowls, whose singular tactics commanded the respect of Marshall Saxe, the French commander. Colonel Sir Robert Munro

## Sunlight Soap

is a perfect cleaner and will not injure anything.

Best for all household purposes, Sunlight Soap's superiority is most conspicuous in the washing of clothes.

Common soaps destroy the painted or varnished surfaces of woodwork and take the color out of clothes.

Even the daintiest linen or lace, or the most delicate colors may be safely washed with Sunlight Soap in the Sunlight way (follow directions).

Equally good with hard or soft water.

Your money refunded by the dealer from whom you buy Sunlight Soap if you find any cause for complaint.

Lever Brothers Limited, Toronto

### A POLICEMAN'S EXPERIENCE.

British Constable Actor in a Comedy of Errors.

A constable of the K Division of the London Metropolitan Police, who was very tired, was deputed to conduct a prisoner to Palistow. The two took a train from the city. The constable was not very young and the cushioned seats were comfortable. Besides, the prisoner was musical, and whistled a seductive waltz. So the constable fell into a gentle sleep.

At Barking Mr. A. E. Wood, urban councillor of Milton, Sittingbourne, entered the carriage. His advent did not disturb the dreaming member of K Division.

raked up as evidence against him fifteen years hence, even though, in the meantime, his conduct may have been exemplary.

Military law, too, causes a deal of discontent. The young soldier discovers to his surprise that in the Army a man may be court-martialled for an offence which in a civil court would be satisfactorily expiated by the payment of a fine. A regimental court-martial need only be composed of two officers, and they need have no more than twelve months' service; yet such a court-martial has the power to sentence a man to twenty-eight days' imprisonment.

Two years' service qualifies an officer for a seat upon a district court-martial, a tribunal which has power to sentence a soldier to two years' imprisonment.

One requires an imagination exceedingly elastic before one can credit men possessing so short an experience with the ability necessary to dissect evidence upon which a man stands to lose his character.

"Why not have the law of the land in the Army as well as out of it?" asks Atkins.

Are all the fatigue duties necessary? Men who have served in the ranks answer no—emphatically no. They complain that twenty-five per cent. of Tommy's time is taken up in the discharge of housemaid's duties.

"Sarah Jane" Atkins.

Cleaning windows, scrubbing floors, whitewashing walls, cutting grass, carrying coals, pulling the road rollers—these are some of the things the soldier is called upon to do. All necessary, of course, in their season; but—well, question our defenders upon the subject. The floors don't need labor, but they get it; so do the walls and the windows.

"It is discipline—the thing that has made the Army," says commanders.

"And which will unmake it," mutters the private.

It is good to go to these barracks sometimes, and see things for oneself. The subject is always more convincing than the story.

Watch Tommy Atkins at his meals. It would cost the nation nothing worth mentioning to serve out his tea in cups instead of great, ugly mugs, and to allow him the use of a tablecloth. But the tables are long, bare boards, just like those in our workhouses; for seats there are forms like those in the London night shelters.

Clean, you say? Yes, but are not prison tables clean? Are not prison forms spotless? Does not the convict have his bread handed to him in chunks, and his tea and soup in a rude mug? Where is the difference?

Tommy Atkins wants a little more consideration; a little more homely comfort. It is no consolation to him, sitting there at the bare table, eating his food in a desolate, whitewashed room, to hear the regimental band playing for the officers as they dine. Instead of making him realize to what a tremendous power he belongs, it only serves to remind him of his lowliness, and widen the gulf that divides the canteen and officers' quarters.

#### FULL UP.

To borrow money is a selfish, mean practice. The chronic borrower reminds us of a certain little girl at an Easter feast.

"This little girl ate at the feast a great quantity of chocolate eggs, and bananas, and cakes, and peanuts, and things of that sort, and finally the time came for her to go.

"But you will have a little more cake before you go?" her hostess said, politely.

"No, thank you, ma'am. I'm full," said the little girl.

"Then," said the hostess, "you'll put some nuts and candies in your pockets, won't you?"

"The little girl shook her head regretfully.

"They're full, too," she said."

#### This Irishman Has No Doubt About the Matter.

The London Daily Express has been publishing letters on the question of Spiritualism and the reality of ghostly visitations. The most remarkable of the series is the following, which The Express leads its readers to believe was sent recently and published in good faith:—

Sir,—May I relate my own daily experience, which has become not only a matter of satisfaction, but a pleasant duty? I am a housekeeper in an old mansion in Ireland. I had served my master faithfully for forty-two years, when he died after a few days' illness. He left in his will directions that his old house should be let every season to tourists, and the yearly income devoted to the local cottage hospital.

The morning after my master's funeral I went into his private sitting-room to pull up the blinds, when I found him sitting in his accustomed chair, reading his paper, as I had found him every day for over forty years.

For one moment I forgot, and said "Good-morning, sir"; then I ran in terror from the room, but not before he turned a look of surprise and sorrow on me.

A little later I went back, and found his spirit had disappeared, but I could not forget the sadness of the look he cast at me as I ran away. The next morning I determined to be brave, and went in. The master was sitting there. I said: "Good-morning, sir," pulled up the blinds, and left the room. Every morning since I have found him there, and it is now eighteen months since his death.

The families who rent the house have often questioned me about the tall old gentleman whom they sometimes meet in the passage, and I always say that it is a friend of the old master's, who felt his death very deeply, and likes to come back.

One or two young gentlemen who had heard that there was a ghost came during the fishing season last year. "I never have any luck," one of them said to me. "I shall never see the ghost."

Just before they left he came to my room.

"Well," he said, "you see I was right. I have not seen a ghost of a ghost; only a gloomy old man—some friend of the servants, I suppose—who shuffles along the stone corridor."

I did not say that the "gloomy old man" was the ghost he was hoping to see.

Dublin.

#### COSTLY CONVERSATION.

It fell to the lot of a young man who "ranch" in a Western State to journey for the purpose of closing a cattle deal, to a central country capital, where, investing in a new bicycle on the strength of the profits, he proceeded to test its merits after the manner of his kind by furiously scorching down one of the main thoroughfares, and ended by over-throwing and damaging an old negro, who, being deaf, did not hear either his bell or his wild whoop of warning.

He was forthwith arrested and haled before the local tribunal, where his defiant behavior and equally vigorous speech promptly resulted in his being fined \$5 and asked if he had anything more to say.

"No," he replied, "except that I wish I had crushed the nigger outright."

"That observation," said the dignitary on the bench, "will, I opine, cost you another two dollars. Hev yew any further remarks to offer?"

"Conservation," rejoined the Westerner, whose temper was not improved by this latter manifestation of justice, "appears to run pretty high in this one-hoss old court of yours."

"Yew air now," responded the angry justice, "guilty of contempt and air fined another five dollars. Wish to orate some more?"

"Nary orate," quoth the cow-puncher. "Guess I'll stop right here. Yew air tew strong for me in repartee!"

took a leading part at the battle of Fontenoy, where they were commanded by Sir Robert Munro of Fowls, whose singular tactics commanded the respect of Marshall Saxe, the French commander. Colonel Sir Robert Munro, who stood six feet six in his stocking soles, was a giant soldier. While the battle was in progress he left his horse and went into the midst of his men to give personal direction to the fighting. The tactics used on this occasion were those of Sythian warriors in the days of Alexander the Great. The Highlanders would fall on the ground, then fly at their enemies like a cyclone. All through the battle Sir Robert kept calling to his men,

#### "UP AT THEM AGAIN, HIGHLANDERS,"

till one of the best of the French legions was almost decimated.

In 1758 the Highlanders were sent to America to take part in the French Indian war. The Black Watch were present in full force at the battle of Ticonderoga, which lasted from July 5th to 8th. Through the jealousy and stupidity of the English commander the Highlanders were sent into the woods to fight the Indians, instead of being kept in the open, where they could have met them with cold steel. As a result, during those three days one half of the regiment was slaughtered. The remains of Lord Howe, who was killed at this time, were found in the village of Ticonderoga, and identified about fifteen years ago. At that time I went over the battlefield, where so many of the brave Highlanders were killed nearly a hundred and fifty years ago, and wondered how any of them ever escaped alive.

In 1808 the Black Watch were with Sir John Moore at Corunna, and would have conquered had their allies, the Spanish, been of the same vigorous spirit, but the Highlanders had to do most of the fighting as usual. They fought the French six to one, but their commander, General Moore, a native of Glasgow, was killed, whom "they buried at the dead of night, the sods with their bayonets turning." From Fontenoy to South Africa the Black Watch fought over a hundred bloody battles, in which they brought glory to the British arms in every part of the world. And the monument which was unveiled at Ticonderoga to their memory on July 4 is a worthy tribute to the brave body of Highland soldiers.

#### SURGICAL MARVELS.

##### Boy Has Stitches Placed in His Heart and Still Lives.

A remarkable operation has just been performed at Dundee, Scotland, Infirmary. A boy, 13 years of age, was admitted to the infirmary with an ugly wound in the wall of his heart, caused through the lad falling on a hay fork. Carefully following the course of the wound, the surgeon sewed up the puncture, and the stitched heart is now reported to be doing its duty successfully.

The operation is not quite wholly without a precedent, for there have been a few cases of somewhat similar character in England within the last ten years.

In June, 1903, the surgeons at the London Hospital accomplished an operation which became famous. They placed three stitches in the heart of John Long, who had been terribly wounded. Though at first the local doctor gave Long only half an hour to live, the operation proved successful, and Long recovered.

Twelve months later Dr. Somerville, of Leek, sewed up the wounds in the heart of a man who had stabbed himself twice with a penknife. Here, again, the patient recovered.

A few successful operations of the kind have been reported in Paris, Berlin, and St. Petersburg. In November, 1903, in Berlin, a doctor extracted a bullet from a young girl's heart.

At Barking Mr. A. E. Wood, urban councillor of Milton, Sittingbourne, entered the carriage. His advent did not disturb the dreaming member of K division, whose snores now drowned the soft notes of "Dream Faces," which came from the prisoner's lips.

The whistling ceased at Palistow, but the snores continued. The prisoner looked at Mr. Wood, then, leaning across the carriage, touched his guardian on the knee. "We get out here," he said in an apologetic voice.

The constable continued to sleep. He looked so gentle, so beautiful almost in his dreams, that the prisoner had not the heart to be rough with him, and softly opening the door he left the train. He has not yet been found.

The slam of the closing door awoke the constable. "Palistow!" he cried. "Come on!" and, seizing Mr. Wood, he tried to force him out of the carriage. Mr. Wood resisted, and he was still resisting and protesting when the train having moved on, drew up at Bromley. Here the constable was very much awake, but, as Rip Van Winkle forgot the appearance of his friends, so he forgot the appearance of his prisoner, and all Mr. Wood's protests were useless.

"I have heard that tale before," he said, and, rubbing the sleep out of his eyes, he placed his prisoner on a tram bound for Palistow.

At the police station there a detective who knew the original prisoner secured Mr. Wood's release.

#### CRATER THIS JAP'S TOMB.

##### Left a Letter Decrying Life Before He Made the Leap.

Yamada Nokuma, grandson of Baron Yamada, who committed suicide by throwing himself into the Aso volcano, left behind a remarkable letter, which was found in his pocket on the edge of the crater.

He wrote: "The strongest will is his who can go down to a death that makes men shudder even to hear. The cowards to be vehemently denounced are the multitude who dare not die, be their circumstances what they may."

"Society is but a battlefield of sorrow and suffering, and throughout life men are as hungry demons fed on torturing scepticism. Alas! for the infinity of it all! The tall mountain peaks pierce the sky, the broad ocean spreads out its unending azure, but human life is as the dew of morning, as the flash of the lightning."

"It waxes but to wane, increases but to decline. All are plunged in darkness and know not what to look for. Mercy and benevolence are as the fleeting sentiments of a dream."

"Why should man torment himself with limitless painful thoughts? Why should he wander in the paths of contaminating sin?"

"Is not the most blessed ending of human life to be received into the bosom of pure nature, and forever to quit the dust of existence?"

"Thinking these things, I pass into the smoke of Aso's crater."

#### PROWLERS OF PARIS.

A wild scene with burglars and their sympathizers was recently witnessed in Paris near the Place Voltaire. Two burglars had been caught in a house, but escaped by brutally assaulting the inmates. In the streets they were joined by straggling night prowlers until their numbers swelled to about 30, between whom the police, assisted by several soldiers, there was a running fight several times renewed before the two burglars could be secured. Had it not been for the opportune arrival of the soldiers the police would have been outnumbered and the thieves would have escaped. As it was, one or two of them had their uniforms ripped to tatters.

She—"I love all that is grand, noble, majestic, and beautiful." He—"Thank you very much, Miss Wilkins, but—really, you embarrass me."

## My Hair is Extra Long

Feed your hair; nourish it; give it something to live on. Then it will stop falling, and will grow long and heavy. Ayer's Hair Vigor is the only genuine hair-food you can buy. It gives new life to the hair-bulbs. You save what hair you have, and get more, too. And it keeps the scalp clean and healthy.

Write for terms now to  
THE PELHAM NURSERY CO.,  
Toronto Ont.

SEASON OF 1906.

Recently quite a number of petitions have been handed into the council asking that electric lights be placed in certain parts of the town. For the information of the public generally, and also those who have already petitioned the council, we might say the council's intentions are (judging from remarks heard at the council board) to go ahead and build the electric light plant as per plans and specifications; then if there are funds enough left these outlying sections of the town will receive due consideration.

The amendment of Councillors Graham and Simpson at the meeting of the council Monday evening, to have the cost of street watering paid out of the general tax, seemed somewhat out of tune with the opinion of the majority of the council. While, no doubt, the public generally would not object to the cost of watering the streets of the business section being paid out of the general tax (as every citizen receives some benefit from that) they would certainly object to paying for street watering in residential section of the town. The amendment was knocked on the head, and quite right, too.

Now that the drowning season is in full swing we observe that most of those rescued from a watery grave were "just going down for the third time." It is strange now this hoary old juvenile tradition about the fatal "third time" survives through each succeeding generation. It is still commonly supposed that drowning persons have to go down the regulation three times before staying down, and it might appear that the rescuers stand there counting the submersions—"One! Two! Three!"—And then reach for the victim. As a matter of fact people may drown the first, second, third fourth or any other time they go under water according to circumstances. And it is hardly likely that the rescuers are calm enough to count how many times the drowning man has sunk.—Brockville Times.

The town council at its meeting Monday evening made reference to the extremely sad accident which happened last week at the Grand Trunk Railway crossing on Centre Street, otherwise known as the "Selby crossing." They propose taking such steps as will bring the matter before the railway commission and which may ultimately lead to the placing of some kind of a safe guard at this dangerous point. In the past few years several accidents of a serious nature have occurred at this crossing, and when one considers the nest of traps which have to be crossed by the travelling public the wonder is that accidents do not more frequently occur. The council should not allow this matter to be delayed, but should put forth their best efforts to have it brought before the proper authorities and the evil remedied.

Kingston Freeman.

A large number of Canadian Indian braves are on their way to England to interview King Edward. As a still tongue shows a wise head they should have brought along a few cigar store Indians.

Toronto Star.

The case of Mr. J. S. Webster, chief clerk of the Fisheries branch, will not be dealt with until Premier Whitney returns from England. Meanwhile it is hoped that the public will suspend judgment long enough to forget the matter entirely.

Ottawa Free Press.

The members of the Opposition who complained so loudly because the flag did not fly from the Parliament buildings on July 2, observed as the Dominion Day holiday, may be reminded that the flag was not raised on the Legislative buildings, Toronto, on that day either. But, of course, that is different.

Toronto Globe

The prospect of another enormous wheat crop in the west is matter for congratulation. One more great crop will put the farmers there in such a position that if they fail financially they will have themselves to blame for their bad luck. The danger is that people, instead of keeping a reasonably safe back account, will buy more land on margin than they can pay for, and thus leave themselves exposed to danger from a bad year, which is sure to come sooner or later.

Montreal Star.

While the Commons is revising its rules, it should deal with the "scrap book orator." He is an expensive nuisance. He fills up pages of Hansard and wastes hours of time. He could never think of keeping his feet for a tenth of the time he wastes if he were compelled to speak from memory, but permit him to load up his desks with blue books and fill his pockets with newspaper clippings and he is good for an afternoon. His sort of speaking is not debating—it is dictating campaign literature to the Hansard staff.

Striking Coincidence.

Mr. Gotsum—Maria, how long has that young Smoothie been coming here to see Nellie? Mrs. Gotsum—Let me see. You remember when the papers published that story about your having sold a gold mine for half a million? Yes? Well, as nearly as I recall it, that's the time when he began coming.

Hard Hard Luck.

"You've spent most of your life in a circus?" asked the reporter.  
"Yes," said the freak. "I started out as the fat man, then I married, and now I'm the living skeleton."

Hammocks a fine assortment,  
**MADOLE & WILSON.**

## A DRAMATIC ARTIST.

The Winning Ways of the Man Dressmaker of Paris.

The dressmaker is a slim young man with a long nose and big, winsome eyes. Wearing a gray frock coat and patent leather shoes, corseted and powdered and perfumed, he is more than a man; he is a dressmaker. He is saturated with dandyism. It is not of an offensive kind. His manners are a strange mixture of humility and insolence, for he is at once a salesman and an artist. And he talks, talks, talks, bending his slim body into polite curves, gesticulating with his thin white hands, rolling his eyes in their painted orbits, the while he fumbles silks and velvets and satins and lace and wool.

The mere man who comes into a dressmaker's shop of an afternoon—in Paris no one goes to the dressmaker's save only in the afternoon—begins by sneering at this fantastic creature. That mood does not last long. Contempt gives way to admiration. There is something marvelous in the way this lord of lace and ribbon dominates the women, the royal highness as well as the spoiled actress. He is charming; he is frivolous. Then of a sudden his face darkens, he becomes serious, he stares at her royal highness, studying her form from head to foot; he smites his brow and cries despairingly: "No, no! I can't see you in that gown—to-day I can't see you in any gown—I will study—an inspiration will come—you must wait." And royalty goes away flattered, she knows not why.—Vance Thompson in Woman's Home Companion.

Landon's Prose.

No poet has ever been a bad prose writer, whenever he cared to drop from poetry into prose; but it is doubtful whether any poet has been quite so fine, accomplished and persistent a prose writer as Landon. "Poetry," he tells us in one of his most famous passages, "was always my amusement, prose my study and business. I have published five volumes of 'Imaginary Conversations,' out the worst of them through the middle, and there will remain in this decimal fraction quite enough to satisfy my appetite for fame. I shall dine late; but the dining room will be well lighted, the guests few and select." Without his prose Landon is indeed but half, if he is half, himself.—Arthur Symonds in Atlantic.

Paul Jones' Promise.

After the great fight in which John Paul Jones in the Bouhomme Richard made splinters and shreds of the British vessel Scerapis the English government generously decided that, though vanquished beyond a question, the captain of the lost vessel had behaved with becoming bravery and deserved promotion to the rank of commodore. John Paul Jones heard of this promotion and its cause and said, "Well, by George, if I ever meet that chap again I'll make him an admiral."

No Time For Surgery.

The average woman thinks the sun and stars would cease to shine sooner than that she could interfere with the regular routine of household duties. A Sabetha woman was recently informed by her physician that she would have to have an operation performed. She said she didn't see how she could; that Monday was washing day, Tuesday ironing day, Wednesday the missionary society met, Thursday was the day to clean up, Friday to bake, Saturday to give the children their baths and mend. If he could get it in Sunday after dinner and before evening services perhaps she would try it.

The Sardinians.

Sardinia was a wild place in the middle of the last century. A traveler says: "The men are clothed in goat-skins, one before and another behind, without breeches, shoes or stockings, and a woolen or skin cap on the head. The women have no other habiliments than a long woolen gown and a woolen cap. The peasants always go armed to defend themselves from one another, so that traveling in the interior is extremely unsafe without an escort, and it is even dangerous for ships to send their people on shore for water unless they are well armed. In short, the Sardes are the Malays of the Mediterranean."

Nature's Methods.

When one is sick there is usually something in the stomach that nature wants to throw up. When one has diarrhea nature is striving to remove offending material from the system. When one perspires profusely nature is getting rid of blood poisons through the skin. One should never attempt to check any such effort without being sure that its arrest will be beneficial.

## Treating Wrong Disease.

Many times women call on their family physicians, suffering, as they imagine, one from dyspepsia, another from heart disease, another from liver or kidney disease, another from nervous exhaustion or prostration, another with pain here and there and in this way they all present alike to themselves and their easy-going and indifferent, or over-busy doctor, separate and distinct diseases, for which he, assuming them to be such, prescribes his pills and potions. In reality, they are all only symptoms caused by some uterine disease. The physician, ignorant of the cause of suffering, encourages this practice until large bills are made. The suffering patient gets no better, but probably worse, by reason of the delay, wrong treatment and consequent complications. A proper medicine like Dr. Pierce's Favorite Prescription, directed to the cause would have entirely removed the disease, thereby dispelling all those distressing symptoms, and instituting comfort instead of prolonged misery. It has been well said, that "a disease known is half cured."

Dr. Pierce's Favorite Prescription is a scientific medicine, carefully devised by an experienced and skillful physician, and adapted to woman's delicate system. It is made of native medicinal roots and is perfectly harmless in its effects in any condition of the system.

As a powerful invigorating tonic "Favorite Prescription" imparts strength to the whole system and to the organs distinctly feminine in particular. For overworked, "worn-out," "run-down," debilitated teachers, milliners, dressmakers, seamstresses, "shop girls," house-keepers, nursing mothers, and feeble women generally, Dr. Pierce's Favorite Prescription is the greatest earthly boon, being unequaled as an appetizing cordial and restorative tonic.

As a soothing and strengthening nerve "Favorite Prescription" is unequalled and is invaluable in allaying and subduing nervous excitability, irritability, nervous exhaustion, nervous prostration, neuralgia, hysteria, spasms, chorea, St. Vitus's dance, and other distressing, nervous symptoms commonly attendant upon functional and organic disease of the uterus. It induces refreshing sleep and relieves mental anxiety and despondency.

Dr. Pierce's Pleasant Pellets invigorate the stomach, liver and bowels. One to three a dose. Easy to take as candy.

Disease takes no summer vacation.

# SARAH, HUSTLING HEROINE

By  
DONALD  
ALLEN

Copyright, 1906, by Beatrix Reade

"Look here, Jim" began Colville one evening, when her brother James came home to supper, "in walking past the tavern this afternoon I saw a strange young man."

"Yes, there is one there," was the reply.

"Who is he?"

"I can't tell you much about him. His name is Ripley, I believe, and he's come down from the city for a four weeks' vacation. He was asking me about boating and fishing."

James Halliday was a carpenter of the village of Branchville. His sister Sarah kept house for him.

Sarah Halliday had lived for thirty-three years and no man had hinted of matrimony to her. She never pretended to good looks, but she always insisted that she was tender hearted and had emotion sufficient to make a great actress. Her failure to bring men to the point had rankled, and she had finally made up her mind to do a little hustling for a husband. She had seen the young man sitting on the hotel veranda with his feet cocked up on the railing, and he had at once been marked down. He had looked after her in an eager way, and she flattered herself that she had made an impression.

"If Mr. Ripley is all alone down here he must be lonesome," she said to her brother Jim after supper.

"Yes, he may be."

"Then you'd better saunter up to the tavern and show him that you want to be friendly. You can bring in, if you want to, that I noticed him this afternoon. We've got the mill pond here, and we've got a boat and fishing tackle, and it seems our duty to make the stranger's stay as pleasant as possible. You know how you'd feel if you were away from home."

The brother dutifully obeyed orders. He found Mr. Ripley smoking a cigar on the veranda. He mentioned Sarah, the mill pond, the boat and the black bass waiting to be caught, and Mr. Ripley replied that he should surely take advantage of the situation. He didn't set any date, however, and when he came home to supper on the following evening the brother observed to the sister:

"What do you think, Sarah? That Susan Jones has somehow managed to

the two had boated and fished every afternoon, and all was going well.

"How's it coming out, Sarah?" asked brother Jim one morning at the breakfast table.

"There's only one thing needed," she replied. "Haven't you noticed that he is always talking about heroes and heroines?"

"Yes."

"If I were a heroine he'd pop the question inside of twenty-four hours."

"But how can you be?"

"I can't say just now, but I'm going to think it over during the day."

That afternoon she received a note from Mr. Ripley excusing himself from calling on the ground of a slight illness, and two hours after she had read the note she learned that he was sitting on the piazza with the Widow Phelps, who had had two husbands and wanted a third.

Sarah planned fast from that time on. Sarah had learned that Mr. Ripley arose and breakfasted at 8 o'clock. He then spent an hour on the veranda smoking and reading. The mill dam was not a hundred feet away and in plain view.

Next morning as the young man on a vacation sat smoking, he heard some one calling his name. He looked up, and there was Sarah Halliday in an oarless boat floating down upon the dam. She cried to him again and again, and it was plain to him that she must be swept over the falls and drowned. The best thing he could do, however, was to fall over his rocking chair and roll down the steps. Right under his eyes the boat went over the dam, and right under his eyes a sawmill man, who had never longed to be a hero, fished Sarah out with a long pole. She was a heroine, but insensible. They rolled her on a barrel. They dragged her around in the sawdust. They carried her home on a slab and sent for Jim and the doctor. She was wrung out and put to bed, and it was two days later when Jim was permitted to ask:

"Now, then, what in the old Harry were you doing in that boat at that hour in the morning?"

"Rowing," she answered.

"How came you to lose the oars?"

"I wanted to be rescued."

"Oh, I see. You wanted to be a heroine, eh, and you wanted to give Ripley a chance to play the hero?"

"Has he sent me any flowers?" she asked, avoiding a direct reply to his question.

"Now!"

"But he surely called?"

"How could he call when he took a skate that very forenoon?" bluntly replied the brother.

"Did he see me all wet and wopsy?"

"Of course, and that's why he skated!"

Poor Sarah! She had hustled, but she had lost.

## A Mediaeval Bill of Fare.

A fourteenth century manuscript still extant records the festivities attendant on the marriage of Violante Visconti with the Duke Lionel Plantagenet, son of Edward III. of England, at Milan, Italy. The wedding dinner consisted of eighteen courses, as follows: First course, sucking pigs wrapped in a thin coating of gold, fish with their mouths giving forth fire; second, hares roasted and gilded; third, veal roasted and trout incrustated in gold; fourth, quails, partridges and again trout, roasted and gilded; fifth, ducks, game and more fish; sixth, beef and capons unadorned; seventh, capons, meat and fish done in lemon; eighth, beef and fish of different kinds; ninth, eels and more meat; tenth, galantine of meat and fish; eleventh, lamb roasted; twelfth, hare and

## BLOOD POISON

On account of its terrible effects, blood disease is called the king of all diseases. It may be either hereditary or contracted; so while it may not be a crime to have the disease, it is a crime to permit it to remain in the system. It may manifest itself in the form of Scrofula, Eczema, rheumatic pains, stiff or swollen joints, itchiness of the skin, eruptions or blotches, ulcers in the mouth or on the tongue, sore throat, falling out of hair, disordered stomach, and a general depression of the system. If you have any of these symptoms don't neglect yourself. You have no time to lose. Beware of "old fogey" treatment—beware of mineral poisons—beware of Quacks and Fakirs. OUR NEW METHOD TREATMENT is guaranteed to cure this disease, never to return. Bank Bonds will protect you. Our treatment is not injurious in any way, but reaches the very root of the disease and eliminates all poison from the system. The symptoms of disease gradually disappear. The blood becomes pure and enriched, the whole system is cleansed and purified, and the patient feels prepared anew for the duties and the pleasures of life. CURES GUARANTEED OR NO PAY. 25 Years in Detroit. 250,000 Cured.

Consultation Free. Question Blank for Home Treatment and Books Free.

# MARTYR DAYS ARE NOT YET PASSED!

GREAT ARMIES OF MEN AND WOMEN GO UP AND DOWN THE EARTH IN BONDS MORE IRKSOME, IN SUFFERINGS MORE INTENSE, IN SHACKLES MORE SECURE THAN WERE THE IRON MANACLES OF SLAVERY DAYS, AND YET THE "LINCOLN OF EMANCIPATION" FINDS IN THESE LATER DAYS HIS COUNTERPART IN

## Dr. Agnew's Catarrhal Powder

whose mission it is and which mission it fills in freeing thousands from the bondage of dreaded, disgusting, discouraging, distracting catarrh, that cruel, relentless master that is no respecter of persons. How do you know you are in its thrall? Note the symptoms—headache, watery eyes, pains over the eyes, deafness, buzzing in the head, dropping in the throat, offensive breath, dryness in the nostrils—any or all of these symptoms are forerunners of catarrh, and catarrh in the head and throat can be relieved in 10 minutes by Dr. Agnew's Catarrhal Powder and the sufferer may be saved the suffering that comes with the chronic stage and the distress and maybe fatal results when catarrh takes hold on the lung tissues.

Take catarrh in time with this wonderful cure, which, as thousands have said and thousands more could say, "works like magic," and you will have struck the chord that is the keynote to health and happiness.

ALL DRUGGISTS AND MEDICINE DEALERS SELL IT.

DR. AGNEW'S CURE FOR THE HEART gives relief in thirty minutes. DR. AGNEW'S OINTMENT relieves eczema, scrofula and all skin eruptions with first application—25 cents.

Sold by F. L. Hooper.

# Removed the Growth.

SHE CRIED TO HIM AGAIN AND AGAIN.

get acquainted with the stranger, and he's over at her house playing croquet." "Jim, you don't tell me that for a fact!" she gasped.

"Of course I do!"

"Humph! The freshness of Miss Susan Jones must be seen to at once."

And it was. Miss Sarah speedily donned another dress, fixed up a bit, and, leaving her brother to eat alone, she started for the Jones house. Mr. Ripley and Susan were just finishing their last game. Sarah walked up to Susan and whisperingly asked for an introduction and forced the issue. When she returned home Mr. Ripley accompanied her, and he didn't leave the house until 10 o'clock. He had made himself very agreeable, and when he had departed Jim observed:

"By thunder, Sarah, but 'sposh' you could marry a feller like him!"

"I mean to!" was Sarah's laconic reply.

The next day Jim was left out of it. Sarah and Mr. Ripley took the boat and went fishing, and before they returned she thought she knew her man pretty well. He was romantic. He was inclined to be a hero. He quoted poetry. He sighed to find and love a heroine. When Jim came home that evening there was a twinkle in his eye, and after hearing about the fishing trip he said:

"Mr. Ripley seems to be a feller who gets acquainted with folks pretty fast. I just saw him walking home with Tillie Graves."

"You don't mean it!" exclaimed Sarah as she paused in the act of pouring out the tea.

"That's what I saw. She was at the tavern to see the landlord's wife, and I 'spose she was introduced."

"Well, I'll put a stop to that pretty sudden. I told Mrs. Graves only last week that Tillie was altogether too conceited."

Again Jim was left to eat his evening meal alone while the sister started

out with aggressive steps. She saw Tillie and Mr. Ripley at the gate while she was yet a long way off. She walked straight up to them and observed that it was a beautiful evening for seeing the mill dam and bore the stranger away. When the pouring waters of the dam had been sufficiently admired the young man was walked to the Halliday homestead and kept busy quoting poetry and drinking cider until 11 o'clock.

In the course of a couple of weeks at least half a dozen girls were introduced to Mr. Ripley by the landlord's wife, and each and every one of them set out for a flirtation with him. Each and every one of them came to grief, however. Sarah was in evidence, and when she butted in the others had to butt out. At the end of a fortnight she felt herself as good as engaged. Mr. Ripley had praised her strength and skill in rowing, her luck in fishing and her emotional temperament, and she had several times caught him glancing at her as a man only glances when his admiration is aroused. He had been asked to tea three or four times, and

tenth, galantine of meat and fish; eleventh, lamb roasted; twelfth, hare and wild boar with onions; thirteenth, venison; fourteenth, capons and chickens with red sauce of apples and lemons; fifteenth, peacocks with beans, salted tongue and roasted carp; sixteenth, peacocks again, this time boiled in spices; seventeenth, cheese, and eighteenth, cherries.

#### Wit Used as an Ax.

An honest old Pennsylvania farmer had a tree on his premises he wanted to cut down, but being weak in his back and having a dull ax, he hit upon the following plan: Knowing the passion among his neighbors for coon hunting, he made a coon's foot out of a potato and proceeded to imprint numerous tracks in the snow to and up the tree. When all was ready, he informed his neighbors that the tree must be filled with coons, pointing to the external evidence made with his coon's foot. The bait took, and in a short time half a dozen fellows with sharp axes were chopping at the base of the tree, each taking his regular turn. The party also brought dogs and shotguns and were in ecstasies over the anticipated haul of fat coons. The tree finally fell, but nary a coon was seen to drop.—Germantown Telegraph.

#### Canals and Roads In France.

It is curious that the French, who have done more than most nations to cultivate the graces of life, should be the people to boast the most perfect system of canals and roads in the world; more curious still that, when most practical, they are still careful not to sacrifice the purely graceful or decorative. The roads and canals are built for use, but between their serried ranks of poplars they become so many stately groves and avenues, crossing the country from end to end.—Century.

#### COPPERPLATE ENGRAVING.

The Art Was Discovered Through the Merest Accident.

Every one has noticed on his visiting card the extremely delicate lines of his name, and almost every one knows that they are produced by printing from an engraved copperplate. Like many other things of use and beauty, this art of copperplate engraving was discovered through the merest accident by the goldsmiths of Florence in the fifteenth century. It is a historical fact, however, that one day an engraver on gold, wishing to take a proof of his work, made the usual sulphur cast and then filled up the lines with lampblack, thus enabling him to see exactly how his work looked. While occupied in doing this it occurred to him that possibly the same results could be obtained by filling up the original engraving with lampblack instead of making an impression of it and filling up that. Struck with the idea, he put it into practical use, and with a little damp paper succeeded in getting a fair impression from the engraving.

The discovery was communicated to other workers in the art, and they hailed it with joy, as it saved all the arduous trouble of making sulphur casts, but they never saw the full value of the discovery, and consequently the art of plate engraving lay for almost a century before its true import was discovered and brought out in all its great and beautiful results. Today collectors of plate engravings rave over the crude results of earlier times and search the world for examples of these early masters to add to their collections. Many of these collections have been presented to museums, where they may be seen and appreciated by the people.

## REMOVED THE GROWTH

DOUGLAS & CO., NAPANEE, ONT.

DEAR SIRS,—During year 1890-91 I was troubled with a large lump growing on the right side of my neck near the ear. Had consulted several physicians and used everything I could hear of, all to no use. Was told to use

### Douglas' Egyptian Liniment.

I did, and before I had used half a twenty-five cent bottle was permanently cured. Since then I have used it for everything where outward application is required; am yet to learn of anything in reason that I cannot cure with it. No man has any idea of its value until he has used it; would not be without it under any circumstance.

Respectfully yours,

NATHANIEL W. REID.

Enterprise P. O.
